Mr. President, I have advocated the jobs tax credit since 1965 when it was termed a "human tax credit." During the last two sessions of Congress, I have introduced my own bill to establish an employment tax credit. It is an idea which deserves a chance to prove its potential which I believe is great. The amendment that I will offer should increase that potential even more. A target jobs tax credit will focus our limited funds on structural unemployment, have a greater impact on reducing unemployment, and be less inflationary. For these reasons, I urge favorable action by the Senate on this amendment.

Mr. CURTIS. Mr. President, will the Senator yield for a few questions?

Mr. DOLE. Yes, I am happy to yield.

Mr. CURTIS. I want to be sure that I understand as well as to establish the record as to just what is involved in the distinguished Senator's amendment.

The Senator would, for one thing, raise the tax credit from what the committee provided, or 25 percent of the first $4,200, to 50 percent of that?

Mr. DOLE. The Senator is correct.

Mr. CURTIS. The amendment also differs from the Haskell amendment in that the Senator has no ceiling?

Mr. DOLE. There is no cap, no ceiling on the credit for anyone business.

Mr. CURTIS. The committee bill says that the credit is allowed when the Federal Unemployment Tax Act taxes exceed 103 percent of the previous year; is that right?

Mr. DOLE. That is right.

Mr. CURTIS. And the Senator would make it 100 percent?

Mr. DOLE. The amendment of the Senator from Kansas would make the employment base 100 percent, yes.

Mr. CURTIS. Now, the committee bill, as proposed to have been amended by the distinguished Senator from Colorado, relates to any new employment; is that correct?

Mr. DOLE. That is correct, as the Senator from Kansas understands it.

Mr. CURTIS. If the amendment of the Senator from Kansas is adopted, is the credit available for any new employee that is hired?

Mr. DOLE. The credit is available only for those who have been unemployed 26 weeks or longer, and there are about 1.3 million people in that category.

Mr. CURTIS. In other words, the committee amendment would provide a credit of 25 percent for any new employee that they hire, but if the proposal of the distinguished Senator from Kansas is adopted, the only way you can qualify for the credit is by employing someone who has been unemployed for 26 weeks or longer?

Mr. DOLE. The Senator is correct.

Mr. CURTIS. Would the Senator tell us how it is determined whether or not someone has been unemployed for 26 weeks? I will illustrate the question in my mind a little farther: When someone who has been employed and then becomes unemployed is eligible to draw benefits, there is a provable record; but I am thinking of young chaps 25 years and under who have never had a job and never been on anyone's payroll, and have never been on anyone's unemployment compensation beneficiary list. In what manner will someone prove he has been unemployed for 26 weeks in that situation?

Mr. DOLE. The Senator is correct in the first part of his statement. Of course, the easiest way, if they have been enjoying unemployment benefits, there will be a record that can be ascertained very easily. If they have not been receiving benefits and not employed, I assume it is necessary to check with the last employer and verify it through that process. Of course, where they have drawn and exhausted their benefits, and there is some record of the time they were unemployed, it will be very easy to ascertain.

Mr. CURTIS. Yes. But it would be my hope that it would work out so that the youth who has never had a job, who really wants one, and someone hires him, and they take him through the experience of having a job and training him what to do, that the benefit would not be denied to someone who had never had a job because of his inability to prove that he had been unemployed for 26 weeks.

Mr. DOLE. I think the Senator from Nebraska has a good suggestion. The way the amendment is drawn at this point, the term "eligible employee" means, as defined by the bill, that immediately prior to his employment, the taxpayer was unemployed for at least 26 consecutive weeks.

Mr. CURTIS. Is it 26 weeks or months?

Mr. DOLE. Weeks.

Any reasonable reading of that language would include what has been referred to by the distinguished Senator from Nebraska.

Mr. CURTIS. In other words, is it the intent of the distinguished Senator from Kansas that the facts shall be ascertained if the individual involved has truly been unemployed, and, by observing the facts in the case, he comes under the benefit of the Senator's proposal?

Mr. DOLE. That is the interpretation the Senator from Kansas places on it. I appreciate the underscoring of that by the distinguished Senator from Nebraska. There will be cases where someone has never worked. As the Senator indicated, some are coming into the work force. They cannot find a job and they have not had a job. We should not require that they had a job, lost a job and then were unemployed for 26 weeks.

Mr. CURTIS. Is it the intent of the distinguished Senator from Kansas that the benefits of this proposal go for people who, in the due course, want a job and would like to have one?

Mr. DOLE. That is the sole purpose of the amendment, the sole intent.

Mr. CURTIS. In other words, a housewife whose husband may be of high income, who had no thought, desire, or intention of going to work, and who has not worked in the last 26 weeks may have some friend employ her because half of the check will be picked up by the Government. It is not the intention to cover such a case, but only to cover those people who are actually seeking work and have not found any in the last 26 weeks.

Mr. DOLE. Those who have been seeking work for a long period of time and have not found that employment for 26 weeks will be eligible. The Senator from Kansas and many others believes this is a safeguard. It tailors the program to those who want work and have been truly unemployed. People who are looking for productive employment and want to become taxpayers again. That is the purpose of the amendment.

Mr. CURTIS. Is it not true that without the amendment offered by the Senator from Kansas which grants this credit or this subsidy for any new employee, there is more danger that we would be paying a subsidy for increased employment that was going to occur in the natural course of things than under the Senator's amendment?

Mr. DOLE. That is the hope of the Senator from Kansas. That is the intent of the Senator from Kansas.

Mr. CURTIS. Is part of the reason for the credit that the Senator is offering an inducement for the employer to do something for an unfortunate person who has not had any work at all?

Mr. DOLE. That is precisely the intent of the amendment. The intent, first of all, is to look at those unemployed men and women who have been without work and who are looking for work, who cannot find work. This creates an opportunity for the employer and an opportunity for the employee.

Mr. CURTIS. If the Senator will yield further, it is always difficult to determine the net cost of a program, but is it not true if we gear our efforts in this regard to finding jobs for the hard core unemployed, we are more apt to have a greater saving in less unemployment compensation, less general welfare, and less other public expenditures than if we were dealing with all new employees?

Mr. DOLE. Again, may I say to the distinguished Senator from Nebraska, that is the hope of the Senator from Kansas. That should be the result.

Mr. CURTIS. I think it would be. I think if we took an average of all new employees, we would get many who had not been the recipients of some Government program before. They were just new employees, that was all. But if it is directed toward the hard core, in all

probability a greater percentage of them would have been recipients of various Government programs that make up part of the cost of Government.

Mr. DOLE. That would apply whether the person has received unemployment compensation, food stamps, or any of the various programs available to unemployed workers. The only purpose of the amendment is to get that person back to work, to make him self-sufficient, and at the same time give the employer enough incentive to come into the program. Sufficient incentive is needed for the employer to go out and find somebody who has been unemployed for a long period of time and bring that person into the program.

Mr. CURTIS. In support of the general proposition of a job credit proposal, I would like to ask this question: Even though this new employee may not receive enough wages in light of the number of his dependents to be an income taxpayer, he will be paying social security taxes; will he not?

Mr. DOLE. Yes.

Mr. CURTIS. His employer will be paying social security taxes; is that correct?

Mr. DOLE. That is correct.

Mr. CURTIS. And in most States his employer will be paying the Federal unemployment tax; is that correct?

Mr. DOLE. That is correct.

Mr. CURTIS. So, in these days when we are dealing with a unified budget, which was not adopted by any motion of mine but it is here, these unemployment taxes do assist in the budget problems and the cash flow of the Government; is that correct?

Mr. DOLE. The Senator is correct. I might add that if we look at the cost of hiring an employee for 1 year under the proposal of the Senator from Kansas and the proposal of the Senator from Colorado with a 50-percent tax credit, the cost to the Federal Government will be about $2,100, which is a lot less than unemployment benefits, food stamps, and welfare programs. In addition, there are the benefits the Senator just referred to. The employer is paying the social security tax; the employee is paying a social security tax. It just seems to this Senator it is a much better program all the way around.

Mr. CURTIS. And one of the important benefits is that it leads that hard core unemployed individual through those first difficult months or a year and a half to learn a job so he can go out and get one that does not involve a subsidy; is that correct?

Mr. DOLE. That is correct. There are a great many unemployed people who have been unemployed 26 weeks or more. I think the latest figure is about 1.3 million. So it is a very substantial number. If we could add that number to the work force we would reduce unemployment considerably.

Mr. CURTIS. Does the Senator have any cost estimates, either on net cost or direct cost, on his proposal in the light of the way it has been offered at this time? I realize the particular form of the amendment is changed to meet the particular situation on the floor. Does the Senator have any information on that?

Mr. DOLE. Yes. The Senator from Kansas can inform the Senator from Nebraska that the targeted jobs credit proposal which the Senator from Kansas offered would be less expensive than either the Finance Committee bill or the House jobs tax credit. The Joint Committee on Taxation has estimated the revenue loss at $.7 billion for fiscal year 1977, $1.9 billion for fiscal year 1978, and $2 billion for fiscal year 1979. This compares with a reduction in budget receipts from the Finance Committee bill of $.9 billion, $2.4 billion, and $2.4 billion for 1977, 1978, and 1979, respectively. So it is less exepnsive over the 3 years by something in excess of $1 billion.

Mr. CURTIS. It is less expensive than the Finance Committee proposal, the Haskell proposal, or both?

Mr. DOLE. My amendment is less expensive than the Finance Committee proposal and less expensive than the House jobs tax credit. There would be some difference in the Haskell proposal because we eliminate the cap.

Maybe the distinguished Senator from Hawaii has a figure on that. By removing the cap, I believe we increase the cost about $300 million.

Mr. MATSUNAGA. Six hundred million dollars.

If the Senator will yield, under the 50 percent, it would increase by $1.1 billion. Under the 25 percent, it would be about a $600 million increase.

Mr. DOLE. So we are adding about a half billion dollars.

Mr. MATSUNAGA. Yes, about a half billion dollars.

Mr. CURTIS. I have a question of the distinguished Senator from Kansas.

If this program is directed at the hard-core unemployed, is it not true that, very likely, it will benefit many handicapped people, particularly those with a slight handicap, who are capable of doing work but, in the ordinary course of things, have been passed over?

Mr. DOLE. That is the intent. In the near future, this Senator might be offering an amendment later to deal more specifically with handicapped workers, where there would be an even more clear-cut benefit to the handicapped and a benefit to the employer and would cost very little money.

Mr. CURTIS. This would cost about how much a year per employee?

Mr. DOLE. Twenty-one hundred dollars as my amendment now stands.

Mr. CURTIS. What would it cost if we went into a jobs program and made work in Government-directed projects? What would it cost the Treasury to give one of these men a job for a year?

Mr. DOLE. The Senator from Kansas is not certain what public jobs cost.

Mr. CURTIS. $8,500 and up.

Mr. DOLE. $8,500 or $9,000 a year. As the Senator from Nebraska knows when the Federal program ends, the job ends. I say to the Senator from Nebraska, when the jobs tax credit ends, the man will have a job, and there will not be any continuing subsidy to business and he will be back on the tax rolls and not back on the welfare rolls.

Mr. CURTIS. I commend the distinguished Senator from Kansas upon his amendment. It is my hope that it will be accepted. It reaches the objective here of going to 50 percent. It does not impose a cap and, as this is an experimental program that has never been tried before and is going to run for about a year and a half, it seems to me that this experimental trial should be directed toward the hard-core unemployed. I earnestly hope that the Senators on both sides of the aisle will support the amendment of the Senator from Kansas.

I thank the Senator for yielding.

Mr. DOLE. I thank the distinguished Senator from Nebraska. It is the hope of the Senator from Kansas that we might reach some agreement. I would appreciate it, if anyone has any comments about any provision or any question about any provision, if those might be discussed.

The distinguished Senator from Hawaii, as I understand it, had planned somehow to amend the Haskell amendment to remove the cap. The perfecting amendment of the Senator from Kansas removes the cap. If the Senator from Hawaii is satisfied in that area, perhaps we could discuss other aspects of the bill and end up with his valuable support for this proposal.

Mr. MATSUNAGA. If the Senator will yield, I shall have to oppose the Senator's amendment, for the reason that he has a provision which gives preference or limits employment under the joint tax credit to those who have been unemployed for 26 or more weeks. This would take so much bookkeeping effort, for one thing, and employers are not going to trouble themselves in a situation where they have to ask each employee who applies, or each prospective employee who is asking to be employed, to prove that he has been unemployed for more than 26 weeks. That, I think, is an unworkable feature.

If the Senator will simply offer an amendment which will lift the ceiling, raise the 25 percent ceiling to 50 percent, as is proposed under the Haskell amendment, I would certainly support the Senator's amendment. I feel strongly that the Senator's amendment is simply unworkable for all practical purposes.

Mr. DOLE. I thank the distinguished Senator from Hawaii.

The Senator from Kansas is under the impression that, based on the cost estimates given by the Joint Committee on Taxation, it would not be too difficult, because even though the cost of the proposal of the Senator from Kansas is much less, it will still be quite substantial. I assume the costs are based on participation. As I suggest it, the cost of the first fiscal year receipts, 1977, would be about $700 million; fiscal 1978, $1.9 billion; fiscal 1979, $2 billion. So there is a strong indication that it is not going to be too difficult, that the employers will take advantage of the program. It does provide an incentive, it does help those who have been unemployed for 26 years or more.

Mr. MATSUNAGA. The cost here should not be the determining factor, for this reason: To begin with, there would be no cost to the Government unless an employer employs. That cost is not subject until the employer employs a new employee.

I wonder if the Senator follows what I am trying to say?

Mr. DOLE. I do see the Senator's point.

Mr. MATSUNAGA. The cost to the Government will not take place until the employer actually employs another person and, if and when the employer does employ to a total of 1 percent, or even less than that, inasmuch as we do not need that much—let me take that back.

Let us assume that, under this program, we shall reduce the unemployment rate by 1 percent. We shall increase the Federal revenues by as much as $16 billion. We shall save, in terms of unemployment compensation and welfare, a sum of about $4 billion, making a total of $20 billion, so that what the Haskell amendment and my amendment propose will be easily taken care of by the increased revenues. The total estimated cost of the Haskell and Matsunaga amendments is $5 billion.

Considering that we withdrew the $50 rebate provision and saved $10.7 billion initially, it seems to me that we are well within the projected budget on this bill. I strongly urge that the Senator from Kansas modify his amendment to exclude that portion which pertains to hiring only those who have been unemployed for 26 weeks and I shall support the Senator's amendment.

Mr. DOLE. I thank the distinguished Senator from Hawaii.

The Senator from Kansas introduced a bill in the House in 1965, called the human investment credit, so this is an idea that has been kicking around for a long time. I confess to the Senator from Hawaii that, as recently as last year, I had the same idea. I felt, that we ought to just open the doors and let anybody who is newly hired qualify. But I recognize that this is a new program and money itself is not the solution. It is not how much we spend or how little we spend. It has to be the quality of the program.

It seems to this Senator that if we are concerned about the hardcore unemployed and concerned about unemployed youth and concerned about areas that have high unemployment, we ought to look at some targeted approach. That is the reason for the change. The reason is not just to reduce cost for the sake of reducing cost.

Let me point out one other problem with the idea that I once had that the Senator from Hawaii now advances. One significant problem with all the nontargeted jobs tax credits is the windfall profits that it would give to many business people. Businesses will just hire somebody they are going to hire anyway, and still receive a subsidy. We suggest there would be fewer abuses, even with reducing the base from 103 to 100 percent, if we target the credit to those who are unemployed for 26 weeks or longer. I think that, for many, many reasons, this approach makes a great deal of sense.

I do not quarrel with the Senator's approach. I quarrel with how much we can spend in a new program to test it. There are enough people out there who have been unemployed for 26 weeks or more to fill up the program; 1.2 million to 1.3 million are eligible right now. To suggest there would not be participation, I think, is not totally accurate.

With reference to the 100-percent base instead of the 103-percent base, which of those does the Senator from Hawaii prefer?

Mr. MATSUNAGA. I would prefer the 103-percent base for this reason, that it would insure, to a degree, that an employer would be hiring new employees over and above what he had the previous year, and while——

Mr. DOLE. If that were the case, I am advised that would not help Hawaii at all, if we go to 103.

Mr. MATSUNAGA. I did not hear the Senator.

Mr. DOLE. If we leave the base at 103, it does not help the State of Hawaii at all.

Mr. MATSUNAGA. It would.

Mr. DOLE. If we lower it to 100, they get some relief under my amendment.

Mr. MATSUNAGA. How would that be? I cannot understand the conclusion of the Senator from Kansas.

Mr. DOLE. There was only a 0.7 percent growth of employment in Hawaii last year. Businesses must have a growth of 3 percent to qualify. So if we reduce the base to 100 percent, then Hawaii, New England States, and other areas where businesses do not have a big growth in employment, can qualify.

We are trying to broaden the bill so far as necessary to bring in those areas of high unemployment. Second, to bring in those that have been unemployed for a long time.

We might be able to work out some accommodation on that provision, then we would be down to just the one provision that we could discuss at some length and compromise that.

But the Senator from Kansas states that even with the lower 100-percent employment base, the windfall gains for certain businesses is less without the targeting mechanism.

Employers will employ an eligible person in addition to, rather than instead of, the employee they originally intended to hire. Those persons who are not eligible are those generally most capable of securing employment even without a subsidy benefit. Their job search may be prolonged only slightly because of the preferential treatment of long-term unemployed.

Under any of the proposals considered so far, at least 80 percent of the benefits to businesses are windfall, according to a Congressional Budget Office memorandum.

In other words, they will hire someone anyway. Why not let the Government pick up part of the tab?

According to the Budget Office, 80 percent of that cost would be a windfall. Targeting may reduce the windfall portion by 20 to 30 percent. This is a significant gain in real new employment.

There is still some windfall and some will take advantage of the Government, but it will be less.

This amendment, as with the amendment of the Senator from Colorado, has a credit equal for hiring a worker, and as I indicated before, would increase it from $1,050 to $2,100.

It just seems to the Senator from Kansas, if we are concerned about unemployment, if we are concerned about too much stimulation and embarking on a new program, we ought to be a little restrictive and read some signs about the improving economy and perhaps the need for less stimulus.

We should take a look at those unemployed for 26 weeks or longer. That is the thrust of the amendment of the Senator from Kansas and of those concerned about the long-term unemployment.

I hope the amendment will be accepted.

Is there any objection to accepting the amendment?

Mr. LONG. I must object to the amendment.

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, JR.). The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a 10-minute time limitation on the amendment by Mr. DOLE to be equally divided between Mr. DOLE and Mr. LONG, and then that a vote occur.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. LONG. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. LONG. Mr. President, I cannot support this amendment for a number of reasons. First, this amendment would limit the benefit of the jobs credit to the hardcore unemployed. If a person employed someone who had been out of work for 26 weeks he would get the credit of 50 percent. But, on the other hand, if he employed someone who is looking for a job, who has been out of work for 20 weeks, the person would not get the credit. I find that objectionable. An unemployed worker is still an unemployed worker.

Furthermore, this amendment has some technical problems that just should not become law. For example, under this amendment the base which the Senator uses is the base number of hardcore unemployed that the person is employing rather than the number of workers. So that under this amendment a person could fire a good employee, and he would find it tempting to fire a good employee, and then hire someone unemployed for 26 weeks so that he would get a tax credit of $2,100. That I find to be objectionable.

Our purpose ought to be to give the employer the option of hiring all the unemployed we can make available to him. So when you provide an incentive to fire one good employee and replace him with another one who is not as satisfactory as the one he fired in the

first instance, that presents what I believe to be an insurmountable objection to this amendment.

Because of the fashion in which this discriminates in favor of some unemployed and against others, and the fact that it encourages dismissing existing employees, this amendment should not be agreed to, and I hope the Senate will reject this.

In some respects I agree with the amendment, in that it provides a 50-percent credit but the objections I have stated would cause me to feel we would have a far better arrangement if we simply went to the Haskell amendment which is being proposed or even the committee amendment which, I believe, has been far more thoroughly considered and is not subject to the objections I have stated here.

The PRESIDING OFFICER. Who yields time?

The Senator from Kansas has 5 minutes remaining.

Mr. DOLE. Mr. President, will the distinguished Senator from Louisiana support the amendment reduced to 13 weeks?

Mr. LONG. The same problems would exist. We would still be discriminating as among the unemployed. It seems to me we should not be doing that.

Mr. DOLE. What about 60 days? It seems to the Senator from Kansas there ought to be some barrier. You ought to be employed for a week, 3 weeks, or 30 days or 6 weeks before you can take advantage to avoid the windfall. It seems to me that business can have a big windfall, approximately 80 percent, unless we somehow structure the program to target it on the long-term unemployed. Could we arrive at some accommodation, because the other three points of the Senator's amendment I think the distinguished chairman agrees with?

Mr. LONG. There are points in the Senator's amendment that I do not find objectionable, and I would hope that the Senator would renew those aspects of it at some subsequent date because there are some things in the Senator's amendment as to which I would not object.

But I have stated my objections. Limiting this to the hard-core unemployed and discriminating against other unemployed adds a needless complication and involves a discrimination which I believe is not justified. That is why I cannot support the amendment.

Mr. DOLE. I am glad to change it to soft-core unemployed and talk about 30 days or 60 days.

Let the Senator from Kansas point up quickly that it is not only the hard-core unemployed to whom we address this amendment. We reduce the base from 103 to 100 percent to help those Northeastern States and other States and small businesses everywhere with very little growth and very high unemployed. It also adds a 50-percent credit, as the amendment of the Senator from Colorado has a 50-percent credit, requires 26 weeks or longer unemployment, and reduces the base to 100 percent and also removes the cap. So the Senator from Kansas believes it is an amendment that covers nearly every wish that has been raised except for the one area, and the Senator from Kansas would hope that the amendment would be adopted.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. DOLE. I yield to the Senator from New York.

Mr. JAVITS. It seems to me that the point made by our colleague, Senator LONG, is precisely the reason why this amendment should be adopted. The danger of exploitation of this particular proposition, which has always bedeviled this field, is much worse if the field is limited, and that is what this amendment would be left with if we did not have this restriction to some qualification for people who have been unemployed for some substantial period.

That is a way to restrict it. That is a reasonable provision to hold it down and see it is not abused. Otherwise, it is as wide as a barn door. If the Senator is right, that they will fire good people and hire unemployed people, all he is doing is giving them more customers in order to further subvert what the purpose of this amendment is. Indeed, frankly, I am against the Haskell amendment for that reason, and besides it is going to cost a fortune. $1 billion is the price tag for the Haskell amendment. That is without the cap, and the Senator is against the cap.

So I think that the proposition offered us by the Senator DOLE is a far more proper one for the fact that we are trying to target our remedy with the greatest economy to the things that ails us, and I hope very much that the Senate will see the Dole amendment that way.

Mr. DOLE. I yield back the remainder of my time.

Mr. LONG. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER (Mr. HATHAWAY). The Senator from Louisiana has 2 minutes remaining.

Mr. LONG. Let me summarize my objection.

The amendment is not as tightly drawn as the Haskell amendment or the committee amendment. It sets a mere 100-percent base rather than a 103-percent base. Furthermore, the base is applied to the percentage of hard-core unemployed that you have on the payroll rather than the percentage of all the people you have working, so that if a person had no hard-core unemployed working for him and he hires one hard-core unemployed person—even though he dismisses a loyal, reliable employee in order to hire that one—then he gets the tax credit, for doing something that we do not want to encourage at all. He could actually add two people to the ranks of the unemployed and still get a tax credit because he is hiring one hard-core unemployed, and that just does not make sense.

Mr. President, the Senator has some good features in his amendment, and I hope later on he will consider offering the parts as to which I have not objected. But this part of the amendment should be rejected, that is the idea of limiting the credit to hard-core unemployed and also limiting the base to the hard-core unemployed.

UNANIMOUS-CONSENT AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that immediately upon the disposition of the amendment by Mr. DOLE the Senate proceed to vote on division 1 of the Haskell amendment and that immediately upon the disposition of that division the Senate proceed to the vote on division 2 of the Haskell amendment. This has been cleared with Mr. HASKELL.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the vote on each of the two backup votes be limited to 10 minutes each. That means there will be 15 minutes on the first rollcall and 10 minutes each on the next two rollcalls.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment of the Senator from Kansas. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Kentucky (Mr. FORD), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Maine (Mr. MUSKIE), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that the Senator from Hawaii (Mr. INOUYE) is absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Michigan (Mr. RIEGLE) would vote "nay."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Maryland (Mr. MATHIAS), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The result was announced—yeas 35, nays 54, as follows:

[Rollcall Vote No. 103 Leg.]

YEAS—35

Bartlett	Griffin	Pearson
Bellmon	Hansen	Percy
Brooke	Hatch	Roth
Case	Hatfield	Schmitt
Chafee	Hathaway	Schweiker
Curtis	Hayakawa	Scott
Danforth	Heinz	Stafford
DeConcini	Javits	Stevens
Dole	Lavalt	Thurmond
Domenici	Lugar	Wallop
Garn	McClure	Young
Goldwater	Packwood	

NAYS—54

Abourezk	Eagleton	McClellan
Allen	Eastland	McGovern
Anderson	Glenn	McIntyre
Bayh	Gravel	Melcher
Bentsen	Hart	Metcalf
Burdick	Haskell	Metzenbaum
Byrd, Harry F., Jr.	Helms	Morgan
	Hollings	Moynihan
Byrd, Robert C.	Huddleston	Nelson
Cannon	Jackson	Nunn
Chiles	Johnston	Pell
Church	Kennedy	Proxmire
Clark	Leahy	Randolph
Cranston	Long	Ribicoff
Culver	Magnuson	Sarbanes
Durkin	Matsunaga	Sasser

Sparkman	Stone	Zorinsky
Stennis	Talmadge	
Stevenson	Williams	

NOT VOTING—11

Baker	Humphrey	Riegle
Biden	Inouye	Tower
Bumpers	Mathias	Weicker
Ford	Muskie	

So Mr. DOLE's amendment was rejected.

The PRESIDING OFFICER. Under the unanimous-consent agreement, the vote occurs on the first division of the amendment of the Senator from Colorado. It will be a 10-minute vote. The yeas and nays have been ordered and the clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

The PRESIDING OFFICER. The clerk will suspend until the Senate is in order. Will Senators please take their seats or retire to the cloakrooms for their conversations?

Will the Senator from Louisiana, the Senator from Minnesota, and the Senator from Florida please take their seats?

The clerk may resume.

The second assistant legislative clerk resumed and concluded the call of the roll.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Kentucky (Mr. FORD), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Maine (Mr. MUSKIE), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that the Senator from Hawaii (Mr. INOUYE) is absent on official business.

I further announce that, if present and voting, the Senator from Michigan (Mr. RIEGLE) would vote "yea."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Maryland (Mr. MATHIAS), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The result was announced—yeas 48, nays 41, as follows:

[Rollcall Vote No. 104 Leg.]

YEAS—48

Abourezk	Hart	Morgan
Allen	Haskell	Moynihan
Bayh	Heinz	Nelson
Bentsen	Helms	Nunn
Burdick	Hollings	Packwood
Byrd, Robert C.	Huddleston	Pell
Cannon	Jackson	Randolph
Chafee	Johnston	Ribicoff
Chiles	Laxalt	Sasser
Church	Leahy	Schweiker
Cranston	Long	Sparkman
DeConcini	Magnuson	Stennis
Dole	Matsunaga	Stevens
Eagleton	McGovern	Stone
Eastland	Melcher	Talmadge
Gravel	Metcalf	Williams

NAYS—41

Anderson	Glenn	Metzenbaum
Bartlett	Goldwater	Pearson
Bellmon	Griffin	Percy
Brooke	Hansen	Proxmire
Byrd, Harry F., Jr.	Hatch	Roth
	Hatfield	Sarbanes
Case	Hathaway	Schmitt
Clark	Hayakawa	Scott
Culver	Javits	Stafford
Curtis	Kennedy	Stevenson
Danforth	Lugar	Thurmond
Domenici	McClellan	Wallop
Durkin	McClure	Young
Garn	McIntyre	Zorinsky

NOT VOTING—11

Baker	Humphrey	Riegle
Biden	Inouye	Tower
Bumpers	Mathias	Weicker
Ford	Muskie	

So, division 1 of the amendment was agreed to.

Mr. LONG. Mr. President, I ask unanimous consent that I might address myself to the second half of the amendment for 1 minute, with 1 minute for the Senator from Colorado to respond.

The PRESIDING OFFICER. Is there objection?

Mr. JAVITS. Mr. President, before we do that, do you not think we ought to have 2 minutes on this side to respond?

Mr. LONG. I am on one side; he is on the other.

Mr. JAVITS. I know, but that is kind of in the family. So let us make it 4 minutes, with 2 minutes there, 2 here.

The PRESIDING OFFICER. Is there objection to 4 minutes, to be equally divided?

Mr. ROTH. I object.

Mr. HASKELL. Reserving the right to object.

The PRESIDING OFFICER. The objection has already been heard.

Under the previous order, the vote occurs on division No. 2 of the amendment of the Senator from Colorado. The yeas and nays have been ordered.

Mr. LONG. Mr. President, I wish to renew my request for just 1 minute to explain the committee position and 1 minute for the Senator from Colorado to explain his.

The PRESIDING OFFICER. Is there objection?

Mr. METZENBAUM. I object.

The PRESIDING OFFICER. Objection is heard.

The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. METCALF (after having voted in the affirmative). Mr. President, on this vote I have a pair with the Senator from Michigan (Mr. RIEGLE). I voted "yea." If he were present and voting, he would vote "nay." I, therefore, withdraw my vote.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Kentucky (Mr. FORD), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Maine (Mr. MUSKIE), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that the Senator from Hawaii (Mr. INOUYE) is absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "yea."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Maryland (Mr. MATHIAS), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The result was announced—yeas 59, nays 29, as follows:

[Rollcall Vote No. 105 Leg.]

YEAS—59

Abourezk	Bayh	Brooke
Bartlett	Bellmon	Burdick
Byrd, Harry F., Jr.	Hansen	Metzenbaum
	Hart	Morgan
Cannon	Haskell	Nelson
Case	Hatch	Nunn
Chafee	Hatfield	Pell
Chiles	Hathaway	Proxmire
Church	Hayakawa	Roth
Clark	Heinz	Sarbanes

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY RECORDED—1

Metcalf, for.

NOT VOTING—11

Baker	Humphrey	Riegle
Biden	Inouye	Tower
Bumpers	Mathias	Weicker
Ford	Muskie	

So, division 2 of the amendment was agreed to.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which division 2 was agreed to.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I take it that I am on solid ground in stating that there will be no more rollcall votes today.

ORDER FOR RECESS UNTIL TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 12 o'clock meridian tomorrow.

The PRESIDING OFFICER (Mr. ANDERSON). Without objection, it is so ordered.

ORDER FOR RESUMING CONSIDERATION OF H.R. 3477 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after the two leaders or their designees are recognized on tomorrow the Senate resume consideration of the pending measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

TAX REDUCTION AND SIMPLIFICATION ACT OF 1977

The Senate continued with the consideration of the bill (H.R. 3477) to provide for a refund of 1976 individual income taxes, and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

Mr. JAVITS. Mr. President, are we still in debate on this bill? May I have

an idea as to how long the majority leader wishes to run tonight? We are prepared now to take up the discussion of the amendment for a permanent personal income tax cut.

As I have already explained to the majority leader, we have quite a considerable number of speakers. We can go right ahead with it. We will in the course of the discussion lay down the amendment. We will explain it.

If the majority leader wishes to try to arrive at a unanimous-consent agreement for a vote we are certainly willing to lend ourselves to that. I am at his disposal.

Mr. ROBERT C. BYRD. Mr. President, I have already announced there will be no more rollcall votes tonight, but there certainly would be no objection to Senators staying as long as they desire to talk about the amendment to which Mr. JAVITS has referred or to address their remarks to other amendments or to the bill itself. It is entirely up to the Senator and those supporting him and the manager of the bill as to how long they want to discuss the matter tonight, of course.

Now, as to a unanimous-consent agreement on a vote on the amendment proposed by Mr. JAVITS, I would have to confer with the manager of the bill, Mr. LONG, and it may be that tomorrow would be a better time to discuss that proposition.

Mr. LONG. I think so.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GLENN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, I ask unanimous consent that a member of my staff, Lyle Morris, be granted privileges during the consideration of this bill and votes thereon.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE $50 TAX REBATE

Mr. BUMPERS. Mr. President, a few days ago I circulated a "Dear Colleague" letter in support of my amendment No. 180 to H.R. 3477, the proposed Tax Reduction and Simplification Act of 1977. This amendment would strike almost all of title I of the bill, including the $50 tax rebate. The letter stated, among other things, that "the Budget Committee" had estimated that an $11 billion rebate would produce an 0.3-percent reduction in unemployment by the last quarter of 1977, and an 0.1-percent reduction by the last quarter of 1978.

The matter is now academic because of the President's action, but I would nonetheless, in the interests of accuracy, like to make a correction. The unemployment estimate should have been attributed to the Congressional Budget Office, rather than to the Budget Committee. On January 24, 1977, the director of CBO, Dr. Alice M. Rivlin, testified before the House Budget Committee. Among other things, Dr. Rivlin said that a $16 billion personal tax rebate paid out in the third quarter of calendar year 1977 would produce an estimated reduction of four-tenths percent in the unemployment rate by the fourth quarter of 1977, and of one-tenth percent by the fourth quarter of 1978.

ORDER FOR THE RECOGNITION OF SENATOR JAVITS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that tomorrow, when the Senate resumes consideration of the pending bill, Mr. JAVITS be recognized.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, the nomination of the distinguished former majority leader, Mike Mansfield, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Japan, has been reported out of the Committee on Foreign Relations today unanimously, and the distinguished chairman of that committee, Mr. SPARKMAN, has asked that I call up this nomination at this time. I have discussed it with the distinguished minority whip, Mr. STEVENS, and others, and they are agreeable, not only agreeable to calling it up at this time, but feel that it would be very appropriate to proceed with this nomination in view of our great respect and affection for the former majority leader and not have it wait to go over on the calendar tomorrow.

Therefore, I ask unanimous consent that the Senate go into executive session to consider the nomination of Mr. Mansfield to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Japan.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The nomination will be stated.

DEPARTMENT OF STATE

The second assistant legislative clerk read the nomination of Michael J. Mansfield, of Montana, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Japan.

Mr. JAVITS. Mr. President, on today when Senator Mansfield appeared before the Foreign Relations Committee I was engaged in the Chamber in respect of the tax bill. I wish to record now, which I would have done before the committee, my great admiration, friendship, and affection for Senator Mansfield.

I think it is extraordinary that this be so, after the wonderful labors which he gave to the country and Congress and the example, indeed almost the model of rectitude and sterling integrity which he always represented to all of us. Indeed if he made any mistake it was because of an excess of those very qualities and the fact that he found it very, very difficult to compromise them, even if many of us would not have recognized what he was doing as a compromise, so strict was the man with himself in terms of personal discipline and high moral tone.

I know what we are getting in Mike Mansfield as an ambassador. I hope very much the people of Japan know what they are getting. If they do not know yet, I think they will soon find out. He is one of the finest examples of the culture and development of our country, coming from very humble origins, rising to the highest places in not only Government and office but also in the confidence and love of the people. And I am confident if the Lord allows him to serve, as I hope He will, for years in Japan, the Japanese will come to exactly the same conclusion that we have here.

Mr. President, I hope very much for him and Maureen that they have a beautiful life, and certainly our country will benefit enormously from his willingness to again take up the burdens and the joys of public service.

Mr. STEVENS. Mr. President, I think it is most fitting that the former majority leader's nomination be taken up out of order and be given special treatment.

I commend the President for sending this nomination to us not only because of the remarks the Senator from New York has made and each of us our own individual affection for Mike Mansfield, but also on the basis that my State is closer to Tokyo than it is to Washington. We have probably more direct relationships with the people of Japan than any other Americans, and I know that Mike Mansfield, with his great devotion to our way of life and our country, will be a great representative for the Nation and a great friend for our State in our relationships with Japan. But beyond that I know of no one who has taken more time as a Member of this body to study the complex situation of the People's Republic of China and our total relationships in Asia than Mike Mansfield. He has literally spent his vacations and his personal time in traveling throughout the People's Republic of China, and his presence in Japan I think ought to be a signal to the people of that republic that this Nation is intending to continue on our part toward normalization of relations with mainland

China, and that we have sent one of our most distinguished, elderly, and capable statesmen to Japan not only to maintain relationships with that country but to maintain our total balance of relationships in all of Asia.

I really sincerely believe that this is a most wise choice on the part of President Carter.

Mr. HANSEN. Mr. President, I will not unduly delay the deliberations of this body, but let me join in associating myself with the remarks of the distinguished Senator from New York, the distinguished Senator from Alaska, and all others who may earlier have spoken in saying that I think the President is to be commended for having chosen one of America's finest citizens, a person who by his training, dedication, integrity, understanding, and humanism cannot help but expand the influence and respect this Nation hopes to make its hallmark as we undertake further actions throughout the world theater.

As a former neighbor of mine, because the States of Montana and Wyoming have a common border, I have had nothing but the most splendid opportunity to benefit from the counsel, consideration, and helpfulness of Mike Mansfield as majority leader.

I know that he will serve this Nation well, and I commend the President. I wish Mike Mansfield and his lovely wife, Maureen, the very best.

Mr. ROBERT C. BYRD. Mr. President, when the mocking bird sings all the other birds in the forest remain silent.

There is nothing I can add to the encomiums that have been expressed here by my friends on the other side of the aisle.

I know that our friend Mike Mansfield would appreciate the good wishes and the expressions of esteem that have been made here. I am delighted that the Senate has the opportunity at this time in history to give its stamp of approval, as it is about to, to the confirmation of the nomination of Mike Mansfield, a great Senator, a great man, and a great American.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS FROM TOMORROW UNTIL 10 A.M., MONDAY, APRIL 25, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business on tomorrow it stand in recess until the hour of 10 a.m. on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will come in at 12 o'clock noon tomorrow, and after the two leaders or their designees have been recognized under the standing order will resume consideration of the pending measure, the Tax Reduction and Simplification Act of 1977, H.R. 3477.

At that time, under the order previously entered, Mr. JAVITS, the distinguished senior Senator from New York, will be recognized.

I anticipate rollcall votes tomorrow on amendments and/or motions in relation to the measure, H.R. 3477.

I also anticipate that the Senate will likely take up the conference report on the supplemental appropriation bill, and I would further anticipate that the Senate would likely be in session until 5 o'clock or 6 o'clock tomorrow.

RECESS UNTIL 12 MERIDIAN TOMORROW

Mr. ROBERT C. BYRD. That having been said, and not necessarily received with great approval, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 12 o'clock noon tomorrow.

The motion was agreed to; and at 6:20 p.m., the Senate took a recess until tomorrow, Friday, April 22, 1977, at 12 meridian.

NOMINATIONS

Executive nominations received by the Senate April 21, 1977:

DEPARTMENT OF DEFENSE

John Patrick White, of the District of Columbia, to be an Assistant Secretary of Defense, vice David P. Taylor, resigned.

DEPARTMENT OF JUSTICE

Frank M. Tuerkheimer, of Wisconsin, to be U.S. attorney for the western district of Wisconsin for the term of 4 years, vice David C. Mebane, resigning.

J. Jerome Bullock, of Georgia, to be U.S. marshal for the District of Columbia for the term of 4 years, vice George K. McKinney, resigning.

NATIONAL SCIENCE FOUNDATION

Richard C. Atkinson, of California, to be Director of the National Science Foundation for a term of 6 years, vice H. Guyford Stever, resigned.

IN THE AIR FORCE

The following officer under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

To be lieutenant general

Maj. Gen. Arnold W. Braswell, [redacted] FR (major general, Regular Air Force), U.S. Air Force.

IN THE ARMY

The following-named officers for promotion in the Army of the United States, under the provisions of title 10, United States Code, sections 3442 and 3447:

ARMY PROMOTION LIST

To be colonel

Glock, Howard G., [redacted].
Keilman, Richard A., [redacted].
Rodgers, William E., [redacted].

ARMY PROMOTION LIST

To be lieutenant colonel

Black, Joseph W., Jr., [redacted].
Caldwell, Robert C., [redacted].
Colston, Raymond C., [redacted].
Couvillion, Donald A., [redacted].
Danielsen, Theodore S., [redacted].
Elliott, George A., Jr., [redacted].
Kaufman, Patrick S., [redacted].
Nagle, Bruce D., [redacted].
Negrea, Samuel E., Jr., [redacted].
Owens, Bobby L., [redacted].
Patellis, Nomikos M., [redacted].
Sluka, Sylvester D., [redacted].

CHAPLAIN CORPS

To be lieutenant colonel

Helman, Rayfield D., [redacted].

MEDICAL CORPS

To be lieutenant colonel

Hamlin, Elvin R., [redacted].
Jordan, William P., [redacted].
Kang, Isamu Y., [redacted].
Kwan, Marcus R., [redacted].
Privitera, Charles R.,, Jr., [redacted].
Restituto, Reyes N., [redacted].
Schwartz, Michael L., [redacted].
Trout, Hugh H. III, [redacted].
Yook, Jong Y., [redacted].

MEDICAL SERVICE CORPS

To be lieutenant colonel

Berchin, Richard J., [redacted].
Braun, Erwin G., [redacted].
Coleman, Terry B., [redacted].
Gray, John W., [redacted].

VETERINARY CORPS

To be lieutenant colonel

Pope, Conrad R., [redacted].
Seedle, Clyde D., [redacted].

ARMY PROMOTION LIST

To be lieutenant colonel

Springmier, Joyce T., [redacted].

ARMY MEDICAL SPECIALIST CORPS

To be first lieutenant

Laubscher, Sonya R., [redacted].

The following-named officers for promotion in the Regular Army of the United States under the provisions of title 10, United States Code sections 3284 and 3298:

ARMY PROMOTION LIST

To first lieutenant

Daniels, Steven H., [redacted].
Warren, Roy H., [redacted].

IN THE MARINE CORPS

The following-named officers of the Marine Corps for permanent appointment to the grade of colonel:

Louis P. Abraham	Wade H. Cooper
Dennis N. Anderson	John B. Donovan, Jr.
William R. Ball	Franklin P. Eller, Jr.
Herbert T. Berwald, Jr.	Gerald L. Ellis
Richard J. Blanc	William R. Etter
Ronald E. Blanchard	Arthur P. Finion
Pasquale L. Cacace	Robert C. Finn
John J. Caldas, Jr.	Robert L. Fischer
Richard P. Capatosto	Marcus T. Fountain, Jr.
John D. Carlton	John A. Gagen
Richard W. Carr	Dominick R. Gannon
Edward P. Carroll	John H. Gary, III
Arthur B. Clark	Donald J. Hatch
Edward J. Clarkson	William T. Hewes
Barry S. Colassard	

Thad A. Hoyer
Richard C. Hyatt
James D. Jahn
Gerald D. James
Robert C. Johnson
Carl W. Kachauskas
Billy J. Kahler
Hugh T. Kerr
Robert W. Kirby
Joseph B. Knotts
Peter N. Kress
Neil M. Larimer, II
Robert H. Lockwood
Robert E. Loehe
Jerry W. Marvel
Robert B. Mason
Donald J. McCarthy
James L. McManaway
William J. McManus
Ralph D. Miller
John P. Monahan
Jack P. Monroe, Jr.
Richard J. Morley
Curtis W. Olson
Dorsie D. Page, Jr.
James C. Page
James M. Perryman, Jr.
James A. Poland
William G. Price
Van S. Reed
James K. Reilly
Robert T. Roche
Barry P. Rust
James E. Schulken
James A. Schumacher
Donald R. Seay
Glenn J. Shaver, Jr.
Jerry L. Shelton
Con D. Silard, Jr.
Colben K. Sime, Jr.
Alois A. Slepicka
Norman H. Smith
William R. Smith
Arthur L. Stewart, Jr.
Michael P. Sullivan
Robert C. Tashjian
Frederic L. Tolleson
David C. Townsend
Everett P. Trader, Jr.
John T. Tyler
Francis V. White, Jr.
Charles E. Yates

The following-named officer of the Marine Corps Reserve for permanent appointment to the grade of colonel:

Paul L. Moreau

The following-named woman officer of the Marine Corps for permanent appointment as the grade of colonel:

Vea J. Smith

WITHDRAWAL

Executive nomination withdrawn from the Senate, April 21, 1977:

John McGrath Sullivan, of Pennsylvania, to be an Assistant Secretary of Defense, vice David P. Taylor, resigned, which was sent to the Senate on February 25, 1977.

CONFIRMATION

Executive nomination confirmed by the Senate, April 21, 1977:

DEPARTMENT OF STATE

Michael J. Mansfield, of Montana, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Japan.

The above nomination was approved subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

THE PRESIDENT'S ENERGY PROGRAM

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. RUDD. Mr. Speaker, I see some very, very serious problems and inconsistencies in the President's energy proposals, presented to a joint session of Congress last evening, and his package of proposed environmental legislation which is currently moving through the Congress.

In my position as a member of the House Interior and Insular Affairs Committee, the President's address last night and his proposed legislative program in the Congress fail to strike a reasonable balance between our energy needs and our environmental concerns.

The President said last night that we must boost U.S. coal production more than 65 percent to more than a billion tons of coal a year, so that we can reduce our massive dependence upon oil. I agree with that goal. Yet my Interior Committee has spent the last few weeks working on the administration's proposed strip mining legislation, which for starters will severely reduce U.S. coal production.

The strip mining bill will eliminate any coal mining in many river bottoms and much farmland. This will shackle U.S. coal production, particularly in the West. This is hardly consistent with the President's stated energy proposals last night.

Mr. Speaker, a second major piece of legislation being pushed by the President and the majority in Congress is the Clean Air Act amendments, which would implement a national policy of nondegradation of air quality.

This means severe restrictions on economic activity everywhere—especially generation of needed electricity with coal. The administration's proposed clean air legislation is again completely inconsistent with the President's announced goals of using coal instead of oil.

It is a fact that you cannot use coal without polluting. But the hard environmental line of nondegradation being pushed for inclusion in the Clean Air Act amendments will tolerate no further deterioration of air quality whatsoever. Industry simply does not have the financial means to implement the technology to use coal within the strict environmental standards to be enforced under the administration's proposed legislation already moving through the Congress.

I applaud the President's goal of establishing a national energy policy. But no national energy policy at all is better than a bad energy policy, or an energy policy that will be undermined by unreasonable environmental policy. We must have a reasonable balance. I am disturbed that the President has not struck that reasonable balance we need between energy priorities and environmental concerns.

Mr. Speaker, I am further disturbed that the President views punitive additional taxes on gasoline as a better way to achieve our energy needs than the preferable alternative of just decontrolling gasoline prices and allowing them to reach their proper level in a competitive free market.

A free market might not ration energy better than bureaucrats. But that should not be our goal. Our goal should be more energy, of all types. Our national energy goal should be to encourage a search for new sources of energy, which is what we really need.

This can only be accomplished by a freely competitive system, with a minimum of Government interference, which the President seemed to endorse while at the same time calling for greater bureaucracy.

As the President correctly stated last night, our Nation's energy dilemma is "the greatest challenge our Nation will face in our lifetime." I know there are many in this Congress who share my concerns and doubts about some of the prescriptions offered by the President to meet that challenge.

But because there are problems and serious inconsistencies in the President's program does not mean that we cannot meet the challenge before us. We have a vast array of talent and dedication to the task throughout our great country. And we can work out those difficulties if the reasonable spirit urged by the President becomes a rallying together for commonsense solutions.

I view my job in the Congress as an obligation to give this challenge every effort that I can muster. It is my hope that Congress will see the need to balance environmental considerations with the need to develop more of our own domestic energy resources, and to provide more jobs through expansion of the productive private sector of our economy.

RABBI LIPNICK TO BE HONORED

HON. ROBERT A. YOUNG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. YOUNG of Missouri. Mr. Speaker, St. Louisans plan to honor with a testimonial this weekend a man who has been a civic leader and spokesman for the Jewish community for more than a quarter century. Rabbi Bernard Lipnick, a Baltimore native, first came to Congregation B'nai Amoona in St. Louis in 1951 as educational director and associate rabbi. Today, he is the congregation's beloved senior rabbi. Rabbi Lipnick has published several scholarly articles, and a book—"An Experiment That Works—in Jewish Religious Education."

The book outlines the approach—and philosophy—the rabbi has used in establishing his congregation's religious education program for high school students. His progressive approach has been so successful that the number of young people in the congregation who have continued their religious education has increased from 3 percent to 80 percent in recent years.

In these and many other endeavors, Rabbi Lipnick has demonstrated a unique ability to lead—both in his congregation and in the St. Louis community as a whole. It is fitting that he should be honored for his 25 years of service to all of St. Louis.

REFUGEE ASSISTANCE

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. STARK. Mr. Speaker, today JOEL PRITCHARD and I, along with more than 30 cosponsors are introducing a bill to extend the Indochinese refugee assistance program for 3 years providing for its phaseout over that period. As you know, there are now over 140,000 Indochinese refugees in this country. A majority of those who were admitted shortly after our passage of the Indochina Migration and Refugee Assistance Act of 1975 are nearing the goal of successful assimilation and integration into American life. However, according to HEW, as of March 1 of this year, more than 50,000 or approximately 35 percent were receiving at least part of their support from public cash assistance. At the same time, refugees have continued to arrive in the United States. Between December 1976 and March 1977, 30 States experienced increases in their refuge cash assistance caseload. Unfortunately, within 6 months the Indochinese refugee assistance program is scheduled to end.

There are two compelling reasons that this program should be continued beyond its current expiration date of September 30 of this year. First is the high percentage of refugees requiring cash assistance and the clear need of the refugees for additional English language and vocational training in order to become self-sufficient. Second, the problem is national, not local, and the termination of the program would result in serious hardship to both the refugees and the public and private agencies assisting them. Indeed, the economic impact on State and local governments for fiscal year 1978 is estimated to be approximately $100 million.

The current program provides for 100 percent reimbursement to State and local governments for the cash and medical assistance, as well as the social services provided to the refugees. Related administrative costs are also covered. Our bill provides for a gradual phasedown from this level of Federal funding for cash and medical assistance to 80 percent in fiscal 1979, and 60 percent in fiscal 1980. The bill also provides States with an incentive to place all eligible refugees on the regular programs of AFDC and medicaid by allowing them to use refugee funds to meet their share of these programs. It is important to note that funds for social services, such as language and job training, would not be cut back. Hopefully, this will lead to increased emphasis in this area.

To end this program in less than 6 months would only cut off assistance to many refugees who need additional aid in order to become self-supporting. We cannot allow this to happen. There is a clear need to continue the Indochinese refugee assistance program to give the refugees more time to master the language and job skills they need. It is our responsibility to give them the temporary support required.

CIVIL ENERGY FROM LASER FUSION: A GROWING REALITY

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. PURSELL. Mr. Speaker, today I am inserting my eighth installment on the laser fusion series. I think it is important to realize that laser fusion development is not an isolated project in which relatively few people are interested. The continued development of laser fusion for civilian application is really a part of our entire energy program.

I do not think any of my colleagues would disagree that a national energy policy is a top priority for this Congress. It is vital that such a policy become effective as soon as possible—and that laser fusion be included in this policy.

Today, I would like to share an article which appeared in the Capital Report in March of this year. The article discusses the great need this country has for developing a national energy policy.

[From Capital Report, March 1977]

ENERGY: FACING THE REALITIES

Anybody's views about energy are bound to encounter deeply felt and legitimate disagreements. But we need a dialogue on the issues, so I will sound off, emphasizing that these are my personal views, which shouldn't be attributed to American Security or to the Brookings Institution or even to my wife. The first goal of the dialogue on energy is to face up to the realities—and stamp out the myths.

Reality No. 1: The heating problems of this winter were genuine, not a fake, and were a mere preview of far more severe problems that will develop if we don't act promptly. The widespread conspiracy theories about the problem are largely a flight from reality. For the past three winters, we barely avoided a crisis because of unusually favorable weather; there was every reason and every warning to expect serious trouble in a really bad winter.

Some of the conspiracy "evidence" is outlandish: the fact that a forty-year supply of natural gas is in the ground doesn't suggest that it could be magically taken out of the ground and put into our furnaces tomorrow. The gas remains in the ground because it has been unprofitable to get it out. Naturally, one influence on profitability calculations is the prospect that natural gas can't remain a tremendous bargain relative to other fuels forever. That's no secret or conspiracy—indeed, the gas producers have been insisting publicly that the recent situation created the worst possible incentives. As President Carter said in a recent press conference: . . . "Some instances where natural gas is withheld from the market . . . (are) understandable. If I were running an oil company, I would reserve the right to release or to reserve some supplies of natural gas". Obviously, any natural gas producers who have welshed on commitments should be hauled into court. But, when all is said and done, I'll bet that the amounts involved in such shenanigans wouldn't heat the Kennedy Center.

Conspiracy stories have come into fashion in the post-Watergate era. Just recently, the hunt for the evildoer was centered on coffee—a shortage whose cause was as evident and understandable as that of natural gas. Back in the summer of 1975, the wholesale price of sugar at fifty cents a pound was widely attributed to a producers' conspiracy. Now that price is a dime—can anyone believe that a clandestine monopoly secretly fell apart? Most of the changes in supply and demand that send auction markets up and down are not very mysterious. And when a monopoly takes over a market, it's usually as obvious as it was when OPEC quadrupled the price of oil in 1973–74.

Reality No. 2: The American consumer will have to pay more for energy over time; but the price hikes should be kept gradual to minimize the damage to the whole U.S. economy. To achieve the necessary gradualism, it can make sense to distinguish the pricing of "old" and "new" oil, or "old" and "new" gas. Even though the results may not be neat, the alternatives may be a lot messier. If the U.S. had not controlled petroleum prices after the OPEC price-spurt, we would have had much more inflation in 1974 and a much deeper recession in 1974–75 than we did in fact, given our fiscal-monetary policies. Energy inflation is inflation! Unless it is neutralized far more effectively than in the past, a new spurt in energy prices would again raise costs, push up interest rates and some wages, and squeeze the purchasing power of the average family and the market of the average businessman.

Reality No. 3: Both conservation of energy consumption and expansion of domestic production must play roles in any successful program; the larger role for the long run must go to expanded production. Conservation may stretch out natural gas supplies from forty years to sixty or conceivably to eighty, but that won't secure America's future for the really long run. For the sake of our great-grandchildren, we will have to exploit our vast coal resources and achieve the technological break-throughs to make new sources—shale, fusion or fission, solar, and geothermal energy—feasible, safe, and affordable.

The expansion of production will require resources and efforts from both the public and private sectors. It will require skillful and prudent compromises between energy and environment, producer and consumer, national and regional interests. The worst enemy of production is uncertainty; and we have lived with too much uncertainty for too long about too many things: the shape of a strip-mining bill; the outcomes of hassles in the courts over issues like the Alaskan pipeline; the nature of taxes and regulations for energy producers; the results emerging from an endless roll of red-tape that can delay the opening of a coal mine by six years. We have to settle on reasonable rules of the game and insist on umpires who will make their calls loud and clear.

Reality #4: We should make expansion of U.S. energy production especially profitable and attractive to American business and labor. It is the government's job to ensure that profits are made in a competitive marketplace, so that they contribute to expanded production, not to a prolongation of shortage and stagnation. And it is reasonable to expect (and to help) energy companies to do more than what comes naturally—to focus their managerial capabilities and their capital budgets on investment in energy technology and production at home. This is not the time for a wave of acquisitions of companies in industries outside of energy or for a wave

of further investments in those areas abroad that don't contribute to U.S. independence. But neither is it the time to scrap economic incentives that are reliable and effective, nor the time to threaten oil companies with a carving knife that would cut them up horizontally, vertically or diagonally.

All of this points to Reality #5: The solution to the serious energy problem will be a major test of the ability and willingness of Americans to work together toward a goal—in which our common interests far outweigh our particular and personal conflicting interests.

—ARTHUR M. OKUN.

ANOTHER OUTRAGE

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ABDNOR. Mr. Speaker, this morning I read in the Washington Post an article which cut to the quick. The article was headlined, "Army Sets Ad Campaign On Discharge Upgrade." What are we coming to? I could not find the words to express my disgust when President Carter originally announced the enactment of his discharge upgrade program. It was a slap in the face of all those veterans who served their country's call. Now the Army has decided its program is not moving fast enough. It is moving much too fast for me. So the Army has decided that a media blitz is the answer. They are going to spend the taxpayers money on an advertising campaign to enlighten those who have not read the papers or watched television in the last 2 weeks.

I believe that this is the straw that has broken the camel's back. We hear everyday that the military spends money with reckless abandon. Well, this certainly tops anything that I have ever seen—we are going to spend money to call in the draft dodgers. Where will it all end? I am afraid to ask.

CRS has estimated that the upgrade program itself will cost approximately $80 million. I guess another $5 or $6 million on a slick ad campaign will not be bad. Why do not we just send the Army out and round the people up so we can facilitate the upgrading program? It certainly would not cost too much more. I have introduced a sense of Congress resolution today which expresses the Congress opposition to this plan. The text of the resolution follows:

H. CON. RES. —

Whereas, President Carter has initiated a program to upgrade less than honorable military discharges from the Vietnam era, and

Whereas, the Nation's major veterans' organizations have taken strong position in total opposition to a general upgrade of less than honorable discharges; and,

Whereas, only 15,000 veterans out of the potential 432,500 made inquiries in the first 14 days of the program and the expected surge of inquiries has not developed; and,

Whereas, the Department of the Army has decided to institute an advertising campaign throughout the nation and the world to publicize the program to facilitate application: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring) That it is the sense of Congress that expenditure of Department of the Army funds to promote, through advertising of any nature, this program should not be permitted.

MORE U.S. OIL

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. COLLINS of Texas. Mr. Speaker, President Carter laid it on the line for America in emphasizing the serious impact of our Nation's critical energy supply and demand. The United States is short on supplies of oil and gas and year by year it is getting much worse.

More attention should be given to domestic production. We are now 55 percent dependent on oil imports. Yet we pay $14 a barrel for this imported OPEC oil while only paying $5.25 for American oil under price controls. Let us pay the open market price for all oil and give Americans an equal opportunity with cash funds to compete with the Arabs so Americans can produce more oil within the United States.

The American oil companies are aggressively competitive. They only make a penny on the sale of each gallon of gasoline. Let the U.S. oil companies continue to reinvest their income in new developments by drilling for more oil and gas and by additional capital construction.

The operating results of the 10 largest oil companies for last year show their record of achievement. Let us analyze the 10 largest oil companies as to their net income for 1976 compared to their expenditures for securing more oil through drilling, exploration, and capital plant facilities.

The figures below are in millions of dollars:

Top 10 oil companines in U.S.A.:		*Consolidated net income*	*Capital and exploration expenses*
Exxon		2,754	4,524
Texaco		870	1,500
Mobil		943	1,494
Standard of California		880	1,633
Gulf		816	1,742
Standard of Indiana		893	1,361
Shell (U.S.A.)		706	1,384
Arco		575	1,827
Continental		460	779
Phillips		412	764

Please study these figures carefully. Every company is investing more than they earn. One company spent three times as much as their net income and many committed for exploration and capital nearly twice as much as they earned. Let us put the United States in the open market and restore our energy balance.

ELK WATER USERS AND LOVELL IRRIGATION BILL INTRODUCED

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. RONCALIO. Mr. Speaker, today I am introducing legislation to exempt the Elk Water Users' Association and the Lovell Irrigation District in the State of Wyoming from excess land provisions of the Federal reclamation law.

Legislation is currently pending before the House Interior Committee's Subcommittee on Water and Power Resources to provide for class 1 equivalency on most high plains Bureau of Reclamation Projects, but the Elk Water Users' Association and the Lovell Irrigation District have come under acreage limitations through unique circumstances which justify special consideration and exemption.

Both entities were operating irrigation companies long before their first contractual agreement with the Bureau of Reclamation. In fact, in the case of Elk Water Users' Association, the first lands were brought under irrigation with the constuction of the Rhone Ditch possibly as early as 1901. A permit was granted by the Wyoming State engineer for extension of the Rhone Ditch in January 1903 and the Elk Canal Co. was incorporated in January 1904. The Lovell Irrigation District had similar early development, with permits being issued around 1903, by early pioneers assisting one another without Government financial assistance or intervention in delivery of water onto potentially irrigable lands. It was not until 1909 that the earliest units of the nearby Shoshone project were developed under the Bureau of Reclamation, 8 years after the initiation of the Elk Water Users' Association's water delivery.

Long after these early day developments, the Elk Water Users' Association and the Lovell Irrigation District became involved in attempts by the Bureau of Reclamation projects in the vicinity to adjudicate water rights on the Shoshone River. These neighboring projects sought to establish a water right priority going back to the old 1899 Cody-Salsbury permit.

In negotiations among the several irrigation units to validate and establish water priorities, a contract for supplemental water was offered to Elk Water Users' Association and the Lovell Irrigation District. Elk and Lovell were not only offered some right to storage water but were assured that any further development by the Bureau of Reclamation on projects along the Shoshone River would be under a priority later than their own.

The Elk Water Users' Association and the Lovell Irrigation District accepted

the contract for supplemental water on July 13, 1965, for 4,261 acres for Elk—of which a little less than 3,000 are actually under irrigation—and 10,300 acres for Lovell not to exceed 4.7 acre-feet per acre per year. By entering this contract, Elk and Lovell became subject to reclamation law acreage limitations which up until recently had not been actively enforced.

There are not many farmers in either of the two irrigation districts who have excess acreages. Of the 118 farmers receiving delivery, only 12 to 14 would be directly affected. However, those who are affected must either dispose or agree to dispose of the excess acreages or not receive any of the supplemental water for such acreages. The facilities, diversion units, canals, and structures of the Elk Water Users' Association and the Lovell Irrigation District were not built by taxpayers money or under the Bureau of reclamation. These were rather the product of pioneer families working together independently for their own well-being. The contract with the Bureau for excess water is for a set and determined number of acres. It should not be a concern of the Bureau which individuals own the land or how much. These lands were not developed or brought under irrigation by the Bureau and it is late in their history for the Bureau to be dictating how they should be operated.

I think that granting an exemption under these conditions is highly justified and I would hope that the Subcommittee on Water and Power Resources would take up the legislation and give it favorable consideration. The bill follows:

H.R. 6511

Providing that the excess land provisions of Federal Reclamation laws shall not apply to certain land receiving a supplemental water supply from the Shoshone Project, Wyoming

Be it enacted by the House of Representatives and Senate of the United States of America in Congress assembled, That the excess land provisions of Federal Reclamation laws shall not be applicable to lands situated in the Elk Water Users' Association and the Lovell Irrigation District in the State of Wyoming which have an irrigation water supply from sources other than a Federal Reclamation project and which are receiving a supplemental supply from the Shoshone Project, Wyoming.

AMY'S FIRST TICKET

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. HANSEN. Mr. Speaker, a businessman-citizen who is concerned that Amy Carter's tree house may lead to her citation by an inspector from the Occupational Safety and Health Administration, sent me copy of his letter to her father, the President. In it, Mr. R. A. Cochran, a general contractor from Indianapolis, Ind., cautions the Carter family of what could happen should an inspector slip onto the grounds.

The letter follows:

INDIANAPOLIS, IND., *April 16, 1977.*

President JAMES E. CARTER,
The White House,
Washington, D.C.

DEAR PRESIDENT CARTER: I was alarmed at the picture in the newspaper showing Amy's treehouse. It obviously would not pass inspection by OSHA.

Subpart M No. 1926.500(d)(1) clearly specifies a standard railing, as defined in No. 1926.500(f)(1) for such an installation. Further, in view of the size of normal users of the platform and the possibility of them falling between the intermediate rail of the standard railing, OSHA may very well require that the entire standard railing be covered with chicken wire or solid panels as suggested by Regulation No. 1926.500(f)(3)(ii).

The picture did not show how access to the platform was obtained. However, it might be well to investigate the requirements of Subpart L No. 1926.450 having to do with ladders if this is the means of entry. If one just climbs the tree to get up, then I would think you are on safe ground because I find no Regulation on that subject except that they may require a safety net.

Having had experience with these people, I am very much concerned for you since Big Brother has become so arrogant with us mere peasants that he may even be tempted to show his muscle by assessing a fine on the President of the United States.

Unless you intend to take immediate steps, like tomorrow, to bring Amy's play house into compliance, I would suggest that you demand a search warrant from any OSHA inspector, who might be snooping around the White House, before he gets a look at it. This will, at least, delay the possibility of you being cited.

I trust I have been of assistance in bringing this matter to your attention to protect your exposure to what has become a common enemy and I hope that Amy gets a lot of pleasure out of the facility which you have provided.

Sincerely yours,

R. A. COCHRAN.

WHY I AM LEAVING THE CIA

HON. JAMES P. (JIM) JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. JOHNSON of Colorado. Mr. Speaker, the evidence about CIA perfidy keeps rolling in—and we in the Congress keep ignoring it. We have no effective oversight and the Agency is allowed to continue on its destructive, irresponsible way. On Sunday, April 10, 1977, the Washington Post printed an open letter to the new Director of Central Intelligence, entitled "Why I Am Leaving the CIA." The author is John R. Stockwell, a 12-year veteran of the Agency, who held responsible positions in a variety of assignments. The article should not be read and dismissed. Stockwell is dealing with characteristics of a violent, wasteful organization which needs cleaning, reorganization, and redirection. Note particularly the section of the article pertaining to deceiving congressional investigations.

Mr. Speaker, it is long past time for the Congress and the American people to wake up to this monster we have created in the CIA. The article follows:

WHY I AM LEAVING THE CIA

(By John Stockwell)

(NOTE.—John R. Stockwell was 27, a graduate of the University of Texas and a Marine veteran working as a market analyst for a rubber company in Colorado when he was recruited into the CIA in 1964. A week ago, he resigned from the agency and explained his reasons in the following letter to Adm. Stanfield Turner, the new director of central intelligence. Stockwell plans to move to Texas and become a house builder.)

MARCH 31, 1977.

SIR: We have not met and will not have the opportunity of working together, as you are coming into the Central Intelligence Agency as I am leaving. Although I am disassociating myself from the Agency, I have read with considerable interest about your appointment and listened to some of your comments. You have clearly committed yourself to defending the Agency from its detractors and to improving its image, and this has stirred a wave of hope among many of its career officers. However, others are disappointed that you have given no indication of intention or even awareness of the need for the internal housecleaning that is so conspicuously overdue the Agency.

You invited Agency officers to write you their suggestions or grievances and you promised personally to read all such letters. While I no longer have a career interest, having already submitted my resignation, numerous friends in the DDO [Deputy Directorate for Operations] have encouraged me to write you, hoping that it might lead to measures which would upgrade the clandestine service from its present mediocre standards to the elite organization it was once reputed to be. While I sympathize with their complaints, I have agreed to write this letter more to document the circumstances and conditions which led to my own disillusionment with CIA.

First, let me introduce myself. I was until yesterday a successful GS–14 with 12 years in the Agency, having served seven full tours of duty including chief of base, Lubumbashi; chief of station, Bujumbura; officer in charge of Tay Ninh Province in Vietnam, and chief, Angola Task Force. My file documents what I was told occasionally, that I could realistically aspire to top managerial positions in the Agency. I grew up in Zaire, a few miles from the Kapanga Methodist Mission Station which was recently "liberated" by Katangese invaders, and I speak fluent English and Tshiluba, "High" French and smatterings of Swahili and other dialects.

My disillusionment was progressive throughout four periods of my career. First, during three successive assignments in Africa from 1966 through 1977, I increasingly questioned the value and justification of the reporting and operations we worked so hard to generate. In one post, Abidjan, there was no Eastern bloc or Communist presence, no subversion, limited United States interests and a stable government. The three of us competed with State Department officers to report on President Houphouet-Boigny's health and local politics.

I attempted to rationalize that my responsibility was to contribute, and not to evaluate the importance of my contribution, which should be done by supergrades in Washington. However, this was increasingly difficult as I looked up through a chain of command which included, step-by-step: a) the branch chief, who had never served in Africa and was conspicuously ignorant of black Africa; b) the chief of operations, who was a senior of-

ficer although he had never served an operational overseas tour and was correspondingly naive about field operations; and c) the division chief, who was a political dilettante who had never served an operational tour in Africa. Their leadership continuously reflected their inexperience and ignorance.

Standards of operations were low in the field, with considerable energy devoted to the accumulation of perquisites and living a luxurious life at the taxpayer's expense. When I made "chief of station," a supergrade took me out for drinks and, after welcoming me to the exclusive inner club of "chiefs," proceeded to brief me on how to supplement my income by an additional $3 to 4 thousand per year, tax free by manipulating my representational and operational funds. This was quite within the regulations. For example, the COS Kinshasa last year legally collected over $9,000 from CIA for the operation of his household. Most case officers handled 90 per cent of their operations in their own living rooms, in full view of servants, guards and neighbors. And I expect few individuals would accept CIA recruitments if they knew how blitherly their cases are discussed over the phone: "Hello, John . . . when you meet your friend after the cocktail party tonight . . . you know, the one with the old Mercedes . . . be sure to get that receipt for $300 . . . and pick up the little Sony, so we can fix the signaling device."

In Burundi we won a round in the game of dirty tricks against the Soviets. Shortly after my arrival, we mounted an operation to exploit the Soviets' vulnerabilities of having a disproportionately large embassy staff and a fumbling, obnoxious old ambassador, and discredit them in the eyes of the Burundi. We were apparently successful, as the Burundi requested that the ambassador not return when he went on leave, and ordered the Soviets to reduce their staff by 50 per cent. We were proud of the operation, but a few months later the Soviets assigned a competent career diplomat to the post and he arrived to receive a cordial welcome from the Burundi who were more than a little nervous at their brashness and eager to make amends. For the rest of my tour relations were remarkably better between the two countries than before our operation. The operation, nevertheless, won us some accolades. However, it left me with profound reservations about the real value of the operational games we play in the field.

Later, Africa Division policy shifted its emphasis from reporting on local politics to the attempted recruitments of the so-called "hard targets," i.e., the accessible Eastern European diplomats who live exposed lives in little African posts. I have listened to the enthusiastic claims of success of this program and its justification in terms of broader national interests, and I have been able to follow some of these operations wherein Agency officers have successfully befriended and allegedly recruited drunken Soviet, Czech, Hungarian and Polish diplomats, by servicing their venal and sexual (homo-and hetero-) weaknesses. Unfortunately, I observed and colleagues in the Soviet Division confirmed to me that none of these recruited individuals has had access to truly vital strategic information. Instead, they have reported mostly on their colleagues' private lives in the little posts. Not one has returned to his own country, gained access to strategic information and reported satisfactorily.

Agency operations in Vietnam would have discouraged even the most callous, self-serving of adventurers. It was a veritable Catch-22 of unprofessional conduct. Ninety-eight per cent of the operations were commonly agreed to be fabrications, but were papered over and promoted by aware case officers because of the "numbers game" requirements from Headquarters for voluminous reporting. At the end, in April 1975, several senior CIA field officers were caught by surprise, fled in hasty panic and otherwise abandoned their responsibilities. One senior officer left the country on R & R leave five days before the final evacuation, abdicating all responsibility for the people who had worked for him and for the CIA in his area. Numerous middle and lower grade officers vigorously protested this conduct, but all of these senior officers, including the ones who fled, have subsequently received responsible assignments with the promise of promotions.

After Vietnam, I received the assignment of chief, Angola Task Force. This was despite the fact that I and many other officers in the CIA and State Department thought the intervention irresponsible and ill-conceived, both in terms of the advancement of United States interests and the moral question of contributing substantially to the escalation of an already bloody civil war, when there was no possibility that we would make a full commitment and ensure the victory of our allies. From a chess player's point of view, the intervention was a blunder. In July, 1975 the MPLA was clearly winning, already controlling 12 of the 15 provinces and was thought by several responsible American officials and senators to be the best qualified to run Angola; nor was it hostile to the United States. The CIA committed $31 million to opposing the MPLA victory, but six months later it had, nevertheless, decisively won and 15,000 Cuban regular army troops were entrenched in Angola with the full sympathy of much of the Third World and the support of several influential African chiefs of state who previously had been critical of any extra-continental intervention in African affairs. At the same time, the United States was solidly discredited, having been exposed for covert military intervention in African affairs, having managed to ally itself with South Africa and having lost.

This is not Monday morning quarterbacking. Various people foresaw all this, and also predicted that the covert intervention would ultimately be exposed and curtailed by the United States Senate. I myself warned the Interagency Working Group in October, 1975 that the Zairian invasion of northern Angola would be answered by the introduction of large numbers of Cuban troops, 10–15,000, I said, and would invite an eventual retaliatory invasion of Zaire from Angola. Is anyone surprised that a year later the Angolan government has permitted freshly armed Zairian exiles to invade the Shaba province of Zaire? Is the CIA a good friend? Having encouraged Mobutu to tease the Angolan lion, will it help him repel its retaliatory charge? Can one not argue that our Angolan program provoked the present invasion of Zaire which may well lead to its loss of the Shaba's rich copper mines?

Yes, I know you are attempting to generate token support to help Zaire meet its crisis; that you are seeking out the same French mercenaries the CIA sent into Angola in early 1976. These are the men who took the CIA money but fled the first time they encountered heavy shelling.

Some of us in the Angolan program were continuously frustrated and disappointed with Headquarters' weak leadership of the field, especially its inability to control the Kinshasa station as it purchased ice plants and ships for local friends and on one occasion tried to get the CIA to pay Mobutu $2 million for an airplane which was worth only $600,000. All of this, and much more, is documented in the cable traffic, if it hasn't been destroyed.

I came away from the Angolan program in the spring of 1976 determined to reassess the CIA and my potential for remaining with it. I read several books with a more objective mind, and began to discuss the present state of the American intelligence establishment from a less defensive position. I read [Morton] Halperin's book and [Joseph] Smith's and [David] Philips'. I was seriously troubled to discover the extent to which the CIA has in fact violated its charter and begun surveilling and mounting operations against American citizens. I attempted to count the hundreds, thousands of lives that have been taken in thoughtless little CIA adventures.

A major point was made to me when I recruited in 1964 that the CIA was highminded and scrupulously kept itself clean of truly dirty skulduggery such as killing and coups, etc. At that exact time, the CIA was making preparations for the assassination of Patrice Lumumba, who had grown up a few miles east of my own home in the Kasai. Eventually, he was killed, not by our poisons, but beaten to death, apparently by men who were loyal to men who had Agency cryptonyms and received Agency salaries. In death he became an eternal martyr and by installing in the Zairian presidency we committed ourselves to the 'other side,' the losing side in central and southern Africa. We cast ourselves as the dull-witted Goliath, in a world of eager young Davids. I for one have applauded as Ambassador [Andrew] Young has thrashed about trying to break us loose from this role and I keenly hope President Carter will continue to support him in some new thinking about Africa.

But, one asks, has the CIA learned its lesson and mended its ways since the revelations of Watergate and the subsequent investigations? Is it now, with the help of oversight committees, policed and self-policing?

While I was still serving as the Central Branch Chief in Africa Division last fall, a young officer in my branch was delegated away from my supervision to write a series of memos discussing with the Justice Department the possibilities for prosecution of an American mercenary named David Bufkin. Bufkin had been involved in the Angola conflict, apparently receiving monies from Holden Roberto, quite possibly from funds he received from the CIA. In anticipation of the possibility that during a trial of Bufkin the defense might demand to see his CIA file under the Freedom of Information Act, it was carefully purged. Certain documents containing information about him were placed in other files where they could easily be retrieved but would not be exposed if he demanded and gained access to his own file. I heard of this and remonstrated, but was told by the young officer that in his previous Agency assignment he had served on a staff which was responding to Senate investigations and that such tactics were common, "We did it all the time," as the Agency attempted to protect incriminating information from investigators.

None of this has addressed the conditions which my former colleagues have begged me to expose. They are more frustrated by the constipation that exists at the top and middle levels of the DDO, where an ingrown clique of senior officers has for a quarter of a century controlled and exploited their power and prestige under the security of clandestinity and safe from exposure, so that no matter how drunken, inept or corrupt their management of a station might be, they are protected, promoted and reassigned.

The organization currently belongs to the old, to the burned out. Young officers, and

there are some very good ones, must wait until generations retire before they can move up. Mediocre performances are guaranteed by a promotion system wherein time in grade and being a "good ol' boy" are top criteria, i.e., there are no exceptional promotions for superior performance. The truly exceptional officer gets his promotions at the same time as the "only-good" and even some of the "not-really-so-good" officers, and he must wait behind a line of tired old men for the truly challenging field assignments. These young officers are generally supervised by unpromotable middle-grade officers who for many years have been unable to go overseas and participate personally in operational activity. These conditions are obviously discouraging to dynamic young people, demoralizingly so, and several have told me they are also seeking opportunities outside the Agency.

With each new Director they hope there will be a housecleaning and reform, but each Director comes and goes, seven in my time, preoccupied with broader matters of state, uttering meaningless and inaccurate platitudes about conditions and standards inside the DDO. The only exception was James Schlesinger, who initiated a housecleaning but was transferred to the Department of Defense before it had much effect.

You, sir, have been so bold as to state your intention to abrogate American constitutional rights, those of freedom of speech, in order to defend and protect the American intelligence establishment. This strikes me as presumptuous of you, especially before you have even had a good look inside the CIA to see if it is worth sacrificing constitutional rights for. If you get the criminal penalties you are seeking for the disclosure of classified information, or even the civil penalties which President Carter and Vice President Mondale have said they favor, then Americans who work for the CIA could not, when they find themselves embroiled in criminal and immoral activity which is commonplace in the Agency, expose that activity without risking jail or poverty as punishment for speaking out. Cynical men, such as those who gravitate to the top of the CIA, could then by classifying a document or two protect and cover up illegal actions with relative impunity. I predict that the American people will never surrender to you the right of any individual to stand in public and say whatever is in his heart and mind. That right is our last line of defense against the tyrannies and invasions of privacy which events of recent years have demonstrated are more than paranoic fantasies. I am enthusiastic about the nation's prospects under the new administration and I am certain President Carter will reconsider his position on this issue.

And you, sir, may well decide to address yourself to the more appropriate task of setting the Agency straight from the inside out.

Sincerely,

JOHN STOCKWELL.

CITY WITHHOLDING TAX BILL

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CLAY. Mr. Speaker, I have today introduced a bill to provide for the application of city withholding taxes to Federal employees who are residents of such city.

This legislation is identical to legislation I sponsored in the last Congress which passed the House but was not acted upon by the Senate.

In 1974, I sponsored legislation which became Public Law 93-340, that provided for the mandatory withholding of local income taxes from Federal employees. Since enactment of this law, however, certain problems in its implementation have come to light. The bill I am introducing today seeks to correct these problems.

Currently, the withholding of local taxes from Federal employees who live within a locality but are employed elsewhere within the State is voluntary. Thus, localities are unable to insure that their taxes are withheld from such Federal employees. Often such employees must meet tax obligations in a lump sum causing a financial hardship.

My bill would require the withholding of local earnings taxes from wages of such employees. Localities, which are already hard pressed for funds, are carrying an increased financial burden because some residents do not or cannot meet their tax obligations. Not only are the localities suffering, but individual employees must meet a sudden and substantial yearend tax liability. Sometimes employees may be unable to meet their tax liabilities.

This bill in no way affects the current law concerning the status of nonresidents. Neither current law nor this legislation provides for mandatory withholding for those who reside in one State and work in another.

At committee hearings last year an official from the Treasury Department which is the authority responsible for entering into tax withholding agreements for cities expressed no objections to this legislation. In addition, representatives from several cities expressed support and documented the need for such a measure.

The Subcommittee on Civil Service, which I chair, will hold hearings on this measure in the near future.

ANNOUNCEMENT OF HEARINGS

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. BIAGGI. Mr. Speaker, on Wednesday April 27, 1977, the Select Committee on Aging's Subcommittee on Federal, State and Community Services, which I have the honor to chair, will hold a hearing on the feasibility of expanding meals on wheels programs primarily under the Older Americans Act.

Meals on wheels is a commonly used term for home delivered meals provided to homebound elderly. Statistics indicate that there are between 3 and 4 million homebound elderly in this Nation. They are homebound for any number of reasons, but for many of them providing themselves with a balanced and nutritious diet is next to impossible. They cannot shop or cook or participate in congregate meals provided under title VII of the Older Americans Act.

Our hearings will address the formation of a national meals on wheels program and will discuss the major controversies surrounding the establishment of such a program. What we do know is that the growing number of homebound elderly including many who have been driven into their homes due to the fear of crime, mandates that we greatly expand the existing programs which currently only provide aid to 1 percent of the total homebound elderly population.

The hearings will be held in room 1302, Longworth House Office Building and will begin at 9:30 a.m.

A list of scheduled witnesses follows:

SCHEDULE OF WITNESSES

1. The Honorable George Miller, Member of Congress.
2. The Honorable Tim L. Carter, Member of Congress.
3. The Honorable Arthur Flemming, Commissioner on Aging, Department of H.E.W.
4. Mr. Lewis Straus, Administrator, Food and Nutrition, Dept. of Agriculture.
5. Mr. John B. Martin, Federal Council on Aging.
6. Mrs. Eleanor Cain, Director, State of Delaware, Division of Aging.
7. The Honorable Alice M. Brophy, Commissioner, NYC Dept. for the Aging.
8. Mr. Edward J. Kramer, Administrator, Nutrition Programs, NYS Ofc. for Aging.
9. Mrs. Edna McMurray, President, Mobile Meals, Cedar Rapids, Iowa.
10. Mr. Sam Brown, Director, or Ms. Mary King, Deputy Director, ACTION.
11. Mrs. Ruth Schneider, Meals-on-Wheels Recipient, Bronx, New York.

RECOGNITION NIGHT FOR THE HONORABLE JOSEPH J. CRACIUN, MUNICIPAL COURT JUDGE WARREN, OHIO

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CARNEY. Mr. Speaker, Saturday, April 16, 1977, was "Recognition Night for Judge Joseph J. Craciun, Warren Municipal Judge". More than 600 people attended the dinner-dance at the Romanian Fellowship Hall to express their appreciation to Judge Craciun for his 38 years of dedicated service to the community.

Judge Craciun was recently appointed Warren municipal judge after serving as city solicitor of Warren, special counsel for the Ohio State Attorney General's Office, and probate judge. His community activities include many civic, welfare, religious, political and fraternal organizations in Warren and Trumbull County.

During the recognition night ceremonies, Judge Craciun was presented a proclamation from Mayor Arthur J. Richards naming April 16 as "Judge Joseph Craciun Day" in the city of War-

ren. Attorney Lee Miller presented a letter to Judge Craciun from Ohio Gov. James A. Rhodes extending congratulations for his many years of service to the city and the county. In addition, Judge Craciun received a large, framed color portrait of himself and a plaque from presiding Judge James A. Ravella, which donated by a group of citizens and friends.

Mr. Paul R. Caraway, chairman of the dinner-dance, Attorney Anthony V. Consoldane, secretary, and Trumbull County Commissioner Lyle Williams, toastmaster, were instrumental in making the affair a tremendous success.

Mr. Speaker, I would like to take this opportunity to heartily commend Judge Joseph J. Craciun for his distinguished career as an attorney and judge, and for the outstanding contribution he has made to Trumbull County and the city of Warren. Because of Judge Craciun, our community is a better place in which to live and work. I wish him and his family good health, success and happiness in the future.

I would like to insert a brief biography of Judge Craciun in the RECORD at this time:

BIOGRAPHY OF JOSEPH J. CRACIUN, JUDGE, WARREN MUNICIPAL COURT

Office: Judge, Warren Municipal Court, 141 South Street, S.E., Warren, Ohio

Residence: 247 Garfield Drive, N.E., Warren, Ohio, 44483

Born April 21, 1911, in Cleveland, Ohio

Married to Eugenia Fagadore August 27, 1933; have two sons age 35 and 32 respectively

Colleges: Wittenburg University, 1932–34; John Carroll University, 1935–36; Cleveland-Marshall Law School, 1935–38; and, Doctor of Law, 1939.

Experience: 38 years Legal Experience—General Practice; Assistant City Solicitor and Police Prosecutor for City of Warren, 1945–47; Acting Municipal Judge of Warren, 1949–50; City Solicitor of Warren, 1950–51; Acting Municipal Judge of Warren, 1957–60; Special Counsel for Attorney General of Ohio, 1957–1973; Probate Judge of Trumbull County, 1966–67; and U.S. Bankruptcy Trustee, 1967–1977.

Organizations: National President, 1948–1952, of Union and League of Romanian Societies of America; National Attorney, 1952–58; 1976–78; Real Estate Broker and Insurance General Agent since 1938; Trumbull County Chapter Muscular Dystrophy Association, chairman 1958–64; Life Member Elks; Warren Sportsmans Club; Conservation League; Warren Coin Club President, 1960; Fraternal Order of Police Associates, Secretary, 1960–62, President, 1962–64; Y.M.C.A. since 1938.

Professional organizations: Trumbull County Bar Association Secretary 1940–46, President 1965–66; Member Mahoning Bar Association; Ohio State Bar Association member, Various Committees, 1946–76 District Delegate; Ohio State Bar Association Foundation 1975–1977; American Bar Association; American Judicature Society; American Arbitration Association over 21 years; Delta Theta Phi Law Fraternity; Lambda Chi Alpha Social Fraternity.

Business Organizations: Warren Area Board of Realtors—Secretary, 1963–64; operated Real Estate Co. since 1938.

RALPH DUNGAN

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. THOMPSON. Mr. Speaker, it is always a cause for rejoicing when old friends return to the fold; hence, it gives me great pleasure to place before you and our colleagues an article and an editorial from the Trenton Evening Times making mention of the imminent return to Washington of Mr. Ralph Dungan who will be the U.S. representative on the Inter-American Development Bank. Mr. Dungan will bring to his new assignment extensive knowledge of Inter-American affairs and a reputation of being a man who is very close with a dollar, and I am certain his new colleagues will find that his congenial personality and frugal habits will fit in admirably with the operation of the Bank. I do admit to some degree of apprehension for those who will seek his approval for loans, if that responsibility is a part of his assignment. Other than that, I cannot think of a more splendid and welcome addition to the Washington scene.

The article follows:

DUNGAN SIGNS OFF ON A MODEST NOTE

(By Jim Goodman)

Ralph Anthony Dungan was making what turned out to be his farewell appearance before a New Jersey legislative committee.

"You know," commented Dungan, who is winding up a 10-year career as state chancellor of higher education, "I hate always to be the bad guy in these things."

That sentiment may come as news to the administrators, bureaucrats and politicians who have been dealing with the blunt spoken Dungan over the last decade.

That Dungan has enjoyed his self-appointed role as Peck's bad boy in academic jungle is clearly evident.

The chancellor has been a boat-rocker in the administrations of three governors—Hughes, Cahill and Byrne—making enemies and friends with little concern for the consequences.

Instead of treating him with disdain, those governers have tended to seek out Dungan as behind-the-scenes negotiator on issues and tough controversies far beyond the realm of higher education.

Gov. Richard J. Hughes, now Chief Justice of the State Supreme Court, put Dungan to use as his prime negotiator between community groups and the state after the Newark riots.

Gov. William T. Cahill, a Republican, was close to Dungan despite the chancellor's reputation as a tough Democrat and former JFK–RFK aide.

Gov. Brendan T. Byrne has gone repeatedly to Dungan on sensitive issues even after Dungan advised the governor not to run for re-election for the good of the Democratic party. For a time, Byrne considered moving Dungan out of higher education and making him the No. 2 man in his administration, but nothing came of that.

Dungan describes Byrne as "an amoeba." You have to kick him in the side to energize him.

Of former Gov. William T. Cahill, Dungan says, "He was intelligent and once he made his mind up on an issue, he would stand by it. We had a disagreement once and I told him he could have my resignation anytime he wanted. He never asked for it."

Dungan is less emphatic about Hughes. "I came in on the tail end of an eight-year administration," he explains.

The chancellor's views on partisan politics are equally eclectic.

"I'm a Democrat," he says at one moment. "On the whole I think Democrats tend to think about problems and try to do something about them. Republicans look the other way.

"But I don't think it makes any real difference whether the next governor is a Republican or a Democrat. What matters is what kind of man that governor is.

"Partisan politics doesn't mean that much in state government. The ideological differences between the national parties aren't that important at this level.

"What makes a good governor is the desire to work for the public good and the competence to get that work done.

"I'm a Democrat but I don't think Ray Bateman or Tom Kean is any less interested in the public good than I."

Raymond H. Bateman and Thomas Kean are the two leading Republicans vying for the right to represent the GOP in the November gubernatorial sweepstakes.

Actually, Dungan is rooting for Jersey City Mayor Paul Jordan to win the Democratic nomination.

Dungan's departure—he is about to be named by President Carter to be the U.S. representative on the Inter-American Development Bank—marks the end of an era in state government as well as higher education.

Hughes brought Dungan to New Jersey, along with Carl Marburger to run the education system, and Paul Yivisaker to create the Community Affairs department, as part of an effort to implement Lyndon Johnson's Great Society federal programs on a state level in New Jersey.

Marburger and Yivisaker lasted one term each. They were victims, in part, of the conservative reaction against government intervention into social problems.

Dungan survived in a Republican administration at least part because of his ability to shift gears. When the Great Society programs went out of hand, Dungan became one of the critics of government spending.

"LBJ was a child of the Depression era," Dungan says. "His programs to solve the social problems of the 70s were not much different from FDR's New Deal in the 30s.

"It is easy for (federal) government to say 'yes' to demands for help. But that breeds a feeling of dependency on the federal government to solve everything."

Dungan argues that it would be far better to give the states more responsibility for solving their individual problems rather than to apply federal formulas that are incompatible with local situations.

On a state level, Dungan asserts, the failings of a program are more easily dealt with.

Other improprieties can outrage Dungan.

"Look at the rate of bankruptcies being declared by young doctors, lawyers and businessmen just to avoid paying off their (state-financed) college loans.

"This is happening four or five months after they get out of law or medical school. That's a flagrant violation of personal responsibility.

"The attitude is that 'they' will take care of it (the costs of the loans). The 'they' happens to be the little middle class guy who pays his taxes.

"If that (attitude) makes me a conservative then I'm a conservative."

Dungan's confrontations with Rutgers University president Dr. Edward Bloustein and the state college establishment have kept

the chancellor's name in the newspapers for a decade.

But while Dungan and Bloustein have fought over the extent of state control over Rutgers, and Dungan and the state colleges have battled over academic priorities, the Dungan decade has changed higher education dramatically.

When Dungan arrived to become the state's first higher education chancellor, the state's supervision of its colleges and the university consisted of a low-profile division within the State Department of Education.

The state colleges were little more than factories for producing school teachers. To gain admission, a student had to sign a pledge to teach in the state's public schools for three years after graduation.

All that has changed. The original six state colleges are as much liberal arts schools now as education schools. Two new state colleges offer only token education courses.

A statewide system of two-year county colleges has been established. Rutgers University has held on to a good deal of its independence, but the Higher Education department has a lot to say about what goes on at the state university.

At Rutgers, Bloustein and others have accepted as a fact of life that the universtiy president and the chancellor—no matter who they might be—are going to be adversaries.

State college administrators are conditioned now to demands from Dungan and others that their students and their graduates are going to be held to some general standards.

In the Dungan decade at Higher Education, student enrollment at state and county colleges has increased by 124,000—and that at a time when enrollment in the private colleges in New Jersey has remained at a virtual standstill.

Dungan has enjoyed the battles. He likes to recall his early days when he made impromptu visits at the state colleges for no other reason than to "shoot the bull."

In one such conversation, Dungan suggested that it might be a good idea to require every college graduate to demonstrate an ability to read and write at a college level in order to get a diploma.

"He (the college president) thought that was an unreasonable proposal," Dungan recalled with a grin.

THE ANNIVERSARY OF THE WARSAW GHETTO UPRISING

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Ms. MIKULSKI. Mr. Speaker, April 19 stands as a reminder of a horror of modern history. This date marks the height of the Warsaw ghetto uprising of 1943, when thousands of Polish Jews bravely, but unsuccessfully defied their Nazi captors.

This date symbolizes both the horror and the guilt of the holocaust. Already the systematic destruction of over 6 million Jews had begun. These people died for no reason other than their religion, and died with the tacit acquiescence of countries around the world. Almost all of the occupied countries of Europe participated in some form in the slaughter of countless, Jews, Catholics, Slavs, and gypsies. Denmark alone proved what could be accomplished by unified national resistance.

Certainly the United States tacitly approved of much of the sentiment of the holocaust by denying immigration rights to Jewish refugees in the last desperate days of the 1930's, and by ignoring much of what transpired in the concentration camps and ovens of Europe. "No one of us is innocent," wrote our American diplomat to Poland when visiting the Auschitz Museum. I visited Auschwitz in December, and I too was deeply moved, feeling the same chill and pain synonymous with the most infamous of concentration camps.

The Warsaw ghetto uprising ended 34 years ago; our memory of it recedes over time. Yet, the historical lesson of that date is being learned, and offers hope for the future. The uprising was the first significant resistance given by the Jewish people against the Nazis. This same spirit created Israel, and guided her through three wars. As important, the uprising represents an attempt to preserve the most vital of human rights—life—in the face of hopeless odds. In our concern for human rights today, we should not overlook the beginnings of that concern, nor should we forget the horror that produced it.

FOOD DAY AT THE WHITE HOUSE

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ROSENTHAL. Mr. Speaker, today is Food Day across the country and in the White House. We have come a long way since 1975 when I introduced the first resolution in Congress to declare a day dedicated to good nutrition. We could not even get a hearing then. Today we are getting dinner at the White House.

Credit must go to the Center for Science in the Public Interest and its codirector Dr. Michael Jacobson and his staff for their dedication and hard work. And credit also must go to President Carter for the courage to stand up against strong business pressure to give his support to this important event.

This is a day dedicated to discovering how the food we eat affects our health, to discussing the American diet and to teaching Americans more about good eating habits.

The President is hosting a buffet dinner in the Roosevelt Room as a symbol of his administration's commitment to the importance of eating nutritious foods.

The White House views its support as important in order "To acknowledge a crisis that is happening in this country." That crisis is a result of poor nutrition because "the processed, sugary, high-fat foods we eat help cause heart disease and cancer."

"While tens of millions of people in this country suffer from eating too much, about 500 million people both here and abroad face hunger, malnutrition, or starvation," states a White House memo.

"Giant corporations control more and more of our food supply each year and they do it at our expense—healthwise and dollarwise. Food should be for people, not for profit."

AGENCY FOR CONSUMER ADVOCACY NOT NEEDED

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ASHBROOK. Mr. Speaker, President Carter recently endorsed the creation of a new Federal agency, a so-called Agency for Consumer Advocacy. Formerly known as the Consumer Protection Agency, this item has been high on Ralph Nader's legislative agenda for almost a decade.

Whatever its title, I have consistently opposed such an agency. It would add another new and costly bureaucratic unit onto a Federal structure that has already grown topheavy. We simply do not need more Washington bureaucrats interfering in our free enterprise system and harassing our businessmen at taxpayers' expense.

Following are two excellent pieces opposing the creation of an Agency for Consumer Advocacy. The first is an editorial from the April 8 Washington Star and the second is a column by James J. Kilpatrick:

[From the Washington Star, Apr. 8, 1977]

CLOTHING THE CONSUMER

The Ralph Nader appreciation bill has begun its journey through Congress again, this time propelled by a jet stream of White House rhetoric.

It would establish the Agency for Consumer Advocacy, nee the Consumer Protection Agency, that Mr. Nadar and others among the vocal consumer groups have been pushing for nearly a decade. Its alleged purpose is to protect the consumers who, Mr. Nadar would have us believe, stand naked in the marketplace before greedy, abusive, insensitive merchants.

The ACA (we've never really understood why they changed it from CPA—perhaps it sounded too bookkeeperish) would not, President Carter vowed be a "regulatory agency." Its purpose, he said, "is to improve the way rules, regulations and decisions are made and carried out, rather than issuing new rules itself."

That suggests what critics have been saying all along: It's going to be a "super" agency—a watchdog over the watchdogs—that will insinuate itself into the business of nearly every other agency in town and before long may be telling them all what to do.

Mr. Carter said the agency will not cost more than $15 million a year. Maybe that's all it will cost in the beginning but it's a gross misreading, we suspect, of what it will cost eventually.

Playing to consumer interests is usually good politics. But is a consumer protection agency really all that important to the

American public? An opinion poll a couple of years ago indicated that a large majority of people don't want such an agency.

Is Mr. Carter's advocacy of another layer of bureaucracy likely to be interpreted as contrary to his pledge to reduce government?

Where's the savings in a consumer protection agency? Any saving that the agency produces very likely will be offset, even outweighed, by the cost to the taxpayers of operating the agency and the cost to business of complying with the additional red tape it's bound to create—a cost that will be passed on to consumers.

Mr. Carter would do more for the consumer by holding down inflation.

He would do more by putting the government to work finding cheaper sources of energy.

He would do more by reducing the cost of government, which in turn would reduce the tax burden.

He would do more by seeing that existing agencies do a better job. There are enough agencies that are supposed to look out for the public interest; there's no need for another Naderesque super-watchdog unit.

We had hoped Mr. Carter would not fall victim to that Washington syndrome that makes too many officials hereabouts think that the only way to solve a problem is to create another government agency.

ANOTHER BAD PROMISE KEPT

(By J. Kilpatrick)

President Carter acted last week to fulfill another of his bad campaign promises: He called for creation of a new Agency for Consumer Advocacy.

By nice coincidence, on the same day that Mr. Carter was asking for this new agency, his budget director Bert Lance was commenting on the reorganization act.

"There are too many agencies in government," said Mr. Lance. "We just don't need that many. We need to do something about it."

Perhaps the Congress in its wisdom will do something about the problem by rejecting the proposed ACA—for if ever an agency were unneeded, this is it. An Agency for Consumer Advocacy will add one more layer of bureaucracy to the 10-layer cake that bloats us now. It will create hundreds of jobs for the eager beavers, legal eagles and rabid rabbits who have studied at the feet of Ralph Nader. It will add months to the long delays that already stifle the making of final decisions.

And in the end, the Agency for Consumer Advocacy cannot possibly accomplish its ostensible purpose. That purpose is to represent "the consumer."

Mr. Carter made that purpose clear. His new agency would speak up for "the consumer." It would plead "the consumer's case." It would deal with "the consumer's concerns." Creation of this agency would be only one in a number of steps to better protect "the consumer." These steps, said the President, will enhance "the consumer's" influence within the government.

But who is "the consumer"? And who is to determine "the consumer's interest"? Two recent decisions by Mr. Carter himself will point up the difficulty in defining the terms.

Last month Mr. Carter approved a significant increase in milk price supports. The effect will be to increase the price of milk at the retail level. Was this in "the consumer's interest"? Evidently Mr. Carter thought so. In this case, he felt it more important to preserve a stable and profitable dairy industry than to keep the price down on a basic household commodity.

Two weeks ago Mr. Carter refused to approve the tariff rate quotas recommended by the International Trade Commission on imported shoes. He acknowledged that in the past nine years, the domestic shoe industry has lost 70,000 jobs. These 70,000 displaced workers surely are "consumers." But in this case, he felt it more important to promote world trade than to fix quotas that might benefit the shoemakers' families.

Such conflicts occur constantly. The battle over deregulation of natural gas is yet to be fought. In this area, what is "the consumer's interest"? What position would an Agency for Consumer Advocacy take? Would it intervene to keep the price of gas down? Or would it go the other way?

The new agency's first function would be to intervene in the way "rules, regulations, and decisions are made and carried out." Toward that end, the agency would "intervene or otherwise participate in proceedings before federal agencies." It would have power to enter judicial proceedings. The agency would have its own information-gathering authority, including "access to information held by other government agencies and private concerns."

To be sure, the President denies that his "small, effective" agency would get out of hand, but the President has not been around Washington very long. Mr. Carter has outlined sweeping responsibilities, reaching across the entire spectrum of federal rules and regulations. It is inconceivable that these responsibilities could be met without the creation of a massive bureaucracy. Befor long, we would have scores, then hundreds, of busy, busy, busy bureaucrats, doing nothing that needs to be done.

The government already has one feisty little agency, the Council on Wage and Price Stability, that labors effectively in this field. But the council's powers are limited. It can neither harass nor delay. It can only squawk, and it squawks well. In the name of efficient government—a name Mr. Carter constantly invokes—isn't one such agency enough?

HON. LEO J. RYAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. RYAN. Mr. Speaker, today I want to commend Interior Secretary Andrus for the proposal he sent to Congress yesterday to expand Redwood National Park by 48,000 acres. I completely agree with Secretary Andrus' statement that the Nation cannot afford not to enlarge the existing park. The magnificent coastal redwoods are a national symbol. The tall trees are national jewels which deserve protection.

I am particularly pleased that the Carter administration's position so closely coincides with the findings and recommendations in the first report of the House Committee on Government Operations entitled, "Protecting Redwood National Park." The report was prepared by the Environment, Energy, and Natural Resources Subcommittee, of which I am chairman, and is the result of an extensive investigation and hearings by the subcommittee. It recommends the park be enlarged, that further timber cutting in the Redwood Creek basin be controlled and that cutover lands be rehabilitated.

Secretary Andrus has advocated a comprehensive strategy for protecting the park which is quite similar to the approach outlined in the subcommittee report. This proposal, in addition to recommending expansion of the park's existing boundaries, also includes provisions for rehabilitating the Redwood Creek watershed and for putting together a reemployment plan to alleviate the local, short-term unemployment which will result from removing timberland from production.

I believe the Secretary's proposal represents fair, sensible, rational and responsible public policy and I support his position.

NATIVE CLAIMS AND ALASKAN NATURAL GAS

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MURTHA. Mr. Speaker, in various comments I have shared with my colleagues on development of Alaskan natural gas, one key factor has been the settlement of native claims.

I am very concerned that any decision to build a pipeline through Canada will be delayed by the settlement of these claims. On that point, I would like to share some comments made before the Interior Committee's Subcommittee on Public Lands and Indian Affairs by Dan Johnson representing the Yukon Indians.

"On March 4, 1977, the Council for Yukon Indians presented another brief to the National Energy Board in Whitehorse, Yukon . . . the Council for Yukon Indians has had sufficient time to consult with the 12 Indian communities on the question of pipeline construction. The response we have received has been clear and unequivocal. The Yukon Indian people are opposed to any pipeline in the northern Yukon in perpetuity, and in the southern Yukon we are opposed to pipeline construction until there has been a land claims settlement which has been implemented.

"We will continue to oppose pipeline construction, and in the event one is authorized by the Federal Government before the settlement and implementation of our land claims, we will gather our collective resources and fully utilize these resources in complete opposition to the construction of a pipeline. If this opposition means use of the courts, we will use the courts. We also fear that there will be physical protests by many of our people. But we shall not compromise our present position until our land claims have been implemented."

Mr. Speaker, these comments illustrate why the native claims issue is so important to the development of Alaskan natural gas, and why I hope the Members study this issue carefully before the Congress debates the subject later this year.

DISCRIMINATION AGAINST PREGNANT WORKERS SHOULD BE BANNED

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mrs. SCHROEDER. Mr. Speaker, motherhood is supposed to be one of the few issues that we all support, regardless of party affiliation or ideological strain. However, unless we take action to clarify title VII of the Civil Rights Act of 1964, we will allow employers to discriminate with impunity against pregnant workers.

I recently received a letter that describes the discrimination that will continue unless H.R. 5055, a bill to end discrimination against pregnant workers, becomes law. As the letter illustrates, it is disingenuous to say that because pregnancy is voluntary, we should not require that disabilities resulting from pregnancy be treated as any other disability is treated. As a woman who spent 10 days in intensive care after the delivery of a child, I can assure you that the pregnancy may be voluntary, but the disability is not; it is a shock and a terrible strain, just as any other disability is. For us to permit employers to act as though pregnancy-related disabilities are not disabilities at all is to ignore reality and to allow offensive discrimination against women.

This letter is one version of a story that could be told by thousands of women in this country, and I would like to share it with my colleagues:

DEAR REPRESENTATIVE SCHROEDER: This morning I read an article in the Rocky Mountain News entitled "Pregnancy Disability Controversy Growing." It stated that you are introducing a bill banning discrimination against pregnant women.

I am enclosing an account of my recent pregnancy, the complications involved, and my experience with pregnancy discrimination.

In September, 1975, I became pregnant for the first time, and looked forward to a healthy normal pregnancy. However, that was not to be. I experienced hyperemesis gravidarum and in November and in February was hospitalized for treatment. Both stays lasted three days. However, after my second day, while at home, I experienced a severe reaction to a drug used to counteract the hyperemesis. I stopped breathing. This necessitated emergency measures and a brief stay in an intensive care unit, followed by another hospital stay and a month's recuperation at home.

During the previous four years and during my pregnancy I was a teacher. Because of my difficult pregnancy, I used my available sick days and applied for a reimbursement from the six leave bank. They reimbursed me for days that my obstetrician could prove were illnesses not caused by the pregnancy. However, because the hyperemesis gravidarum was directly related to pregnancy, and because the medication I was taking was to control the hyperemesis, I was not reimbursed for the disability (to work) caused by the hyper-sensitive reactions to the medication.

The Affirmative Action Office of School District 12, Adams County, used my case in hopes of establishing a precedent to be used in pregnancy disabilities cases presented to the sick leave board. Unfortunately the board did not feel that my pregnancy-related absence should be reimbursed. After completing the month of recuperation at home, I was able to return to my teaching duties (with the encouragement and approval of my obstetrician) and complete the school year, without absence for the remaining school year. School closed on June 4, 1976, and my son was born robustly healthy on June 15, 1976.

My husband and I discovered a case of "double discrimination" when we proceeded to prepare our income tax return. We were told that if an employer pays an employee disability pay, that this amount is deductible (this tax law has recently been changed). However, if the employer does not pay or continue the salary during an employee's disability, no deduction (except medical expenses) can be taken! It is ironic that the more help you need, the less you get.

During the course of my pregnancy, I lost more than $1,200 salary for the twenty days work I missed (a teacher's salary is computed at 1/184 of the yearly salary per day). I lost 20/184 of my salary because of my pregnancy related disability.

I realize that the discrimination I experienced is probably quite mild in comparison to the discrimination other pregnant women have experienced, but I thought it may be helpful to relate it to you.

My maternity benefits from the school district's insurance (Blue Cross/Blue Shield) were adequate. However, my disability insurance (with Horace Mann) would not cover my disability to work as it was pregnancy caused.

We were told by Prudential that they covered no pregnancy disabilities, but the illness and complications I experienced during pregnancy would be part of my medical history and would cause an increase with our mortgage insurance rates. They wouldn't recognize it as a disability for my benefit, but they would count it as a medical liability for their monetary benefit.

Sincerely,

DIANE WILSON.

ONE ASPECT OF OUR HOUSING PROBLEMS

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. JACOBS. Mr. Speaker, the following is a letter from my constituent, Mrs. Jane Ann Lemen. It constitutes a detailed description of one aspect of our housing problems:

MANNING ROAD,
Indianapolis, Ind., March 14, 1977.

Congressman ANDREW JACOBS, Jr.,
11th Indiana District, House Office Building, Washington, D.C.

DEAR CONGRESSMAN JACOBS: For a people to have confidence in the government and society in which they live, they must believe that that government provides them with a means of recourse for any wrongs they may have suffered. In return, the people must accept responsibility for their actions. If individuals do not accept such responsibility, a legal recourse should be available for those other citizens affected.

Recently I have begun to doubt that such recourse is always available to all citizens, based on the following experiences.

About five years ago, my husband and I decided to invest our savings in rental property. We are far from rich, but have a modest life-style and felt that real estate would be a good hedge against inflation. We have bought doubles (or duplexes) in the $15,000 to $25,000 range, all located in Washington and Wayne Townships, Marion County. We have avoided so-called "inner city slum" properties. We have improved these properties, and feel we would not rent a property we would not live in. We now own a total of fourteen doubles.

We have had many good experiences as landlords. As Christians, we have tried to help tenants when they have fallen behind, either by their paying a little extra each month until clear or doing painting, cleaning, etc., at other units in lieu of rent. We have developed good relationships with almost all of our tenants, past and present.

Recently, however, the problems have become more numerous, and I fear are indicative of the direction society is taking:

The rental business is now almost a cat-and-mouse game. How long do you help a tenant who is in arrears? For, if you must take legal action, the trick is to do it before he disappears "in the dark of the night." Once he has fled, you have the following problems, all aided by our legal system:

1. in order to file a claim in a Small Claims Court, the landlord, not the Court, has the responsibility of knowing either the new address or the place of employment, if any, of the ex-tenant.

a. obviously, the tenant in these circumstances does not leave a forwarding address. A Change of Address request from the Post Office is often ignored.

b. not all wages can be garnisheed, with Federal employees being the most notorious (which, incidentally, makes you a poor credit risk in my opinion).

2. the ex-tenant may be on welfare.

a. welfare payments cannot be garnished.

b. addresses of welfare clients are "confidential so no claim can be filed. Nor are the caseworkers particularly interested in working with a creditor to help the client pay off back debts.

c. I would imagine a landlord refusing to rent to welfare recipients would be guilty of "discrimination" (and I agree with this). But tax money given to them (of which the landlord pays a part) does not necessarily go to pay the rent.

3. the ex-tenant may be on unemployment. Again the address is considered "confidential."

4. if the case does go to court and a judgment awarded to the landlord, the ex-tenant may declare bankruptcy before the debt is paid.

Let me give you the following five examples, all former tenants of ours and, with the exception of the first, all coming within the past year:

1. D.A.

Debt—$380, back rent (including fraudulent checks) plus $75.

Situation:

1. attempted to secure change of address by sending a registered letter with a change of address request. Result: her mother signed the registered letter and no change of address was given us. Post Office suggested we try again—and pay again.

2. employed at the Finance Center, Fort Benjamin Harrison, which a) initially denied she worked there, and b) after admitting she did indeed work there, offered to garnishee at Two Dollars ($2.00) per month, then withdrew that offer.

3. she then declared bankruptcy.
Collected—$25.00
Loss—$430.00
2. B.A.
Debt—$280.00 back rent.
Situation: on welfare, working part time but not quite enough to be garnisheed.
Collected—$00.00
Loss—$280.00
3. D.B.
Debt—$420 back rent, $400 damages.
Situation—on welfare, no address.
Collected—$00.00
Loss—$820.00
4. R.S.
Debt—$400 back rent, $160 electric bill, plus several damages (including flushing nuts and bolts down the toilet before they left).
Situation:
1. Electric bill—the bill (for a total electric unit) was left in our name although the address was changed from ours to the unit's meaning either they called and gave our name or Indianapolis Power and Light made the mistake. At any rate, Ipalco is holding us responsible for the bill although the tenant admitted living there and owing the bill.
2. Were able to file a claim as he is employed.
3. Out-of-court settlement yielded $120 before they quit showing up.
4. Back to court. We received the judgment to garnishee. However, a lawyer present remarks that he had two claims on them in Perry Township and they were preparing to file bankruptcy.
Collected—$120 so far.
Loss—?
5. C.H.
Debt—$200 back rent plus $50 damages.
Situation:
1. She is on welfare, address confidential.
2. He is on unemployment, address confidential.
Collected—$00.00.
Loss—$250.00.
Total for the five claims:
Debt—$2,365.00.
Received—$145.00.
Loss—$2,220.00.

The key words are responsibility and recourse.

The landlord has a responsibility to provide clean, decent housing at a reasonable rate. If he is negligent in his responsibility, the tenant should have recourse through the courts.

The tenant has a responsibility to pay his rent on time, or if he is unable, to make arrangements for the payment of the rent, and also to maintain the property in the same cleanliness as when he rented it. If he does not, the landlord should have recourse through the courts. I feel we do not at the present time.

I apologize for a rather lengthy letter, but I felt this situation should be brought to your attention. Incidentally, all our properties are for sale; we've had it.

Sincerely yours,

JANE ANN LEMEN,
(Mrs. Gordon Lemen).

CURTAIL IMPORTS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. RANGEL. Mr. Speaker, last week in several cities throughout this Nation, hundreds of garment workers engaged in rallies to protest the growing number of products which this Nation imports from abroad. Here in the Congress many of us have signed letters to the President urging him to develop a new and more realistic trading policy, one that reflects the priorities of our own working people. I think these actions grow out of a concern that many of us have regarding this problem, as we watch as the textile industry continues to decline and the number of imported goods continue to increase.

In the latest issue of the AFL–CIO News, Gus Tyler, a noted political theorist and the assistant president of the International Ladies' Garment Workers' Union cogently delineates the problem. He says that the President's proposal to provide American shoe-producers with support is not enough. I believe Congress must step into the picture in order to correct the imbalance that has developed over the years and to save our already deteriorating textile industries. I think that the problem is important enough for the appropriate committees to take carefully thought out action to remedy it and put American clothing workers back to work.

I would urge my colleagues to carefully consider Mr. Tyler's remarks on this timely issue. The article follows:

JOB LOSSES MOUNT: SPREADING FLOOD OF IMPORTS LAPS AT ADDITIONAL INDUSTRIES

(By Gus Tyler)

The American shoe Industry is an imperiled species. What President Carter proposes to do to save the endangered trade is likely to prove useless—if not worse.

The crisis in footwear is much bigger than it looks, because what happens to boots and shoes today is also happening to apparel, textiles, electronic assembly, plastics, rubber goods, ceramics, bikes, toys, novelties, cameras, and specialty steel, and will soon be happening to the giants of our economy, like basic steel, autos, aircrafts, computers and the like.

But footwear is a timely case study of what's wrong in this industry and what's wrong with Carter's proposed remedies.

The number of shoe factories in the United States has fallen from 600 to 380 in less than 10 years. The result has been a loss of 70,000 jobs.

Where did the jobs go? Overseas. More than half the shoes sold in the United States are imports from countries where the hourly wage is not counted in dollars but in pennies—like two dozen pennies an hour. Taiwan and Korea alone are responsible for more than half the imports.

The rate at which these imports flood our markets threatens to wash away the American industry totally. In 1974, Korea and Taiwan exported 97 million pair of shoes; two years later (1976), they exported 200 million pairs.

To check this flood, the International Trade Commission, a U.S. agency, recommended that we impose substantially higher tariffs for the next five years. President Carter says no. Instead, he proposes that we negotiate quotas with other countries on levels of exports and that we offer a variety of aids to our domestic industry.

The negotiated quota idea is not new—it has been in operation for several years in the apparel and textile industries. And while it is certainly a means to regulate flooding, if it is used in the future as it has been used in the past, it will provide no relief at all.

In the 10 years between 1966 and 1976, the number of employees in the textile and apparel industries (the nation's largest factory employer) shrunk by more than 144,000, while imports in the last year alone rose by more than 34 percent—in spite of quotas.

Carter proposes to assist American shoe producers with technological know-how, with marketing devices, and with financial aid to undertake these improvements.

But of what good is all this if the American shoe producer then proceeds to make his superior technology available to a "contractor" in Korea or Taiwan whose output is committed exclusively to the American shoe company for sale in America—as is already the case? And of what value is superior marketing skills by an American company if it then puts these talents to work to sell the imports here at prices to produce windfall profits?

And why should the American people pay for this process, which is nothing more than an expensive way to commit suicide?

KARL NOBUYUKI

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker, I wish to bring to the attention of this Congress the recent appointment of Mr. Karl Nobuyuki of Gardena, Calif., to the national executive directorship of the Japanese American Citizens League (JACL).

Mr. Nobuyuki has served the city for the past 5 years in a variety of capacities, not the least of which was his instrumental role in creating the city's human services department. Today, this agency serves as the model for all South Bay government services organizations, and stands as testimony to the dedication of both Mr. Nobuyuki and the Gardena City Council.

Mr. Nobuyuki will assume direction of some 40 national JACL committees whose programs concern themselves with specific problem areas facing Americans of Japanese ancestry. Of immediate importance is the committee's support of legislation drafted by Congressman NORMAN MINETA, myself and other Members which seeks to provide Japanese-American postal and civil service employees retirement credit for time in relocation camps.

The JACL committee which stands to grow in importance with Mr. Nobuyuki's appointment is the cultural affairs committee. An honest portrayal of the Japanese-American experience is seldom available to the general public. To meet this need the committee sponsors community exhibits, cultural performances and criticizes stereotypic portrayals of Asian Americans in mass media. The recent establishment of the Gardena Valley Japanese Cultural Institute teamed Mr. Nobuyuki with Director William Hiroto and hundreds of area Asian-Americans in

an effort to provide an anchor for the Japanese cultural and ethnic heritage in Los Angeles County.

This local effort stands to embrace a national forum in the newly created United States-Japan Friendship Commission.

The Commission is charged to undertake activities designated to increase understanding and goodwill between the United States and Japan. It is expected that the JACL will work closely with the Commission in establishing valuable programs supportive of services offered by agencies such as the Gardena Japanese Cultural Institute.

I commend Mr. Nobuyuki on his appointment. For the information of my colleagues, I submit for examination various clippings detailing Mr. Nobuyuki's career, as well as a short history of the Japanese American Citizens League.

[From the Daily Breeze, Mar. 24, 1977]

JAPANESE AMERICAN UNIT PICKS GARDENAN

Gardena's grants administrator has been appointed national executive director of Japanese American Citizens League (JACL).

Karl Nobuyuki's appointment is subject to ratification by the 106 JACL chapters in 32 states.

Nobuyuki is expected to assume the position May 1.

Al Hatate, a member of the personnel board which interviewed applicants, said Wednesday ballots would be sent to JACL chapters.

Hatate said Nobuyuki must be ratified by a majority of the chapters returning ballots.

Nobuyuki, 31, says he is overwhelmed by the appointment and says a major job task will be to pull the organization together.

"I also want to try to get the American public to see that what the JACL does as a human rights organization does not affect only Japanese-Americans, but everyone," he says.

The position would move Nobuyuki and his wife, Hiromi, and their two sons from Gardena to San Francisco, location of JACL national headquarters.

He would succeed David Ushio as national director. Ushio left to join President Jimmy Carter's transition team.

Nobuyuki was born in Gila River, Camp A, a relocation camp in Arizona.

He attended Salesian High School in East Los Angeles, Don Bosco Seminary in New Jersey, East Los Angeles College and graduated from USC where he studied speech communications and political science.

Nobuyuki is a member of the board of the Asian-American Drug Program, Japanese-American Community Services and a commissioner of the Los Angeles County Manpower Advisory Council.

His memberships also include the FOR Junior Sports Association, the Gardena Valley JACL and the Gardena Valley Cultural Institute.

Gardena Councilman Mas Fukai hailed Nobuyuki's appointment.

Nobuyuki came to Gardena in 1971 to head the city's new youth and community services office.

In 1974 he became grants administrator and public information officer for the city.

NOBUYUKI NAMED JACL NATIONAL DIRECTOR

SAN FRANCISCO.—Pending confirmation by the 102 chapters of the organization, the national board of the Japanese American Citizens League Sunday named 31-year-old Sansei, Karl Tatsutoshi Nobuyuki to be the new JACL National Director. Nobuyuki if confirmed, would succeed David Ushio, who resigned from the directorship in Sept.

The JACL national board which is made up of the human rights organization's national officers and district governors, made its choice last weekend following a recommendation from a select national personnel committee consisting of Gary Nakamura, Stephen Nakashima, Ben Takeshita, Al Hatate and Emi Somekawa.

A native of Gila River, Arizona, Nobuyuki attended the Univ. of So. Calif. as a speech-communications major. He also attended Don Bosco Seminary College in New Jersey. Raised in the Boyle Heights area, he is an alumnus of the Maryknoll School and Salesian Maryknoll School.

For the past five years, Nobuyuki has been grant-resource administrator for the city of Gardena. Married to the former Hiromi Yamagata, he is the father of two boys; Craig, 11 and Byran, 7.

As JACL national director Nobuyuki would oversee the activities of the 30,000-member organization which often serves as a spokesgroup for all Asians in the United States.

Nobuyuki's first goal as director would be to pull the organization, which in the past has been beset with regional disputes, together.

"I'd also like to see the Sansei and Yonsei join up and take a more active role in the organization," said Nobuyuki. "Frankly," he said, "it will be a long time before I can be specific about new programs for the JACL but I am going to start by listening to everyono in the organization."

A longrange goal Nobuyuki did commit himself to was "making it clear to the general public that the actions of the JACL as a human rights organization benefit all peoples regardless of race or creed."

The national director-elect said he felt the most valuable skills he would be bringing to the JACL were his administrative experience and background in resource development.

JACL Pacific Southwest Dist. Governor Michael Ishikawa agreed that Nobuyuki's past administrative experience with Gardena and skilled grant proposal writing abilities would be a definite plus for the organization on a national scope.

"Most important from a Pacific Southwest viewpoint," said Ishikawa, "is that Nobuyuki understands the issues and problems faced in an area where there are large numbers of Asians, an understanding which may have been lacking under past leadership. Karl also has the ability to relate to the younger, more progressive members as well as the old guard of the JACL," said Ishikawa.

FAST BREEDER REACTORS

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. DUNCAN of Tennessee. Mr. Speaker, on April 7 President Carter announced his proposals regarding the development of nuclear power. His primary thrust was to deemphasize the use of plutonium for both conventional light water reactors and liquid metal fast breeder reactors now under development. This deemphasis is proposed because of the possible international spread of nuclear weapons through the conversion of nuclear fuel into weapons-usable material by nations which now do not have such weapons.

I share Mr. Carter's concern about proliferation. It is, and will remain, a serious international problem which deserves careful, thoughtful consideration. I am convinced, however, that curtailment of the plutonium breeder reactor will not appreciably affect the possibility of proliferation of nuclear weapons.

In fact, nuclear power reactors are by no means the only path to nuclear weapons. Some 46 nations now operate research reactors; many of these reactors could produce weapons-usable nuclear material at least as easily and economically as by deriving such material from a nuclear power plant. I also note that the five other nations now developing the breeder reactor—France, West Germany, Great Britain, Japan, and the U.S.S.R.—have demonstrated no inclination to follow our proposed curtailment of the plutonium breeder.

If we look closely at the economic benefits of the breeder, perhaps we can better understand why these nations are pressing their plutonium breeder demonstration programs. The plutonium-cycle breeder reactor is, in fact, closer to commercialization and offers a higher probability of economic success than any of the other known advanced energy systems. It can provide our Nation with an almost unlimited supply of clean, safe, and efficient electricity through the next century and even beyond.

Having recorded these objections to the President's proposals, I want to go on to state that, although weapons material can in principle be taken from any substance containing fissionable fuel, and thus no nuclear fuel cycle is completely proliferation proof, nevertheless there are breeder fuel cycles which more closely conform with the President's stringent antiproliferation criterion.

One of the most promising of these proliferation-resistant cycles uses thorium, a naturally occurring heavy element found in granite, sea water, and some uranium ore. It is approximately four times more abundant than uranium. Our Nation has a good supply of thorium, including some of the largest known high-grade deposits in the world.

Although thorium is nonfissionable, it can be converted by a breeder reactor into uranium-233 which can be used to power additional nuclear reactors. While U–233, like plutonium, can be used as a weapons material, it can be denatured by dilution with U–238 to make it less attractive as a material for weapons production.

After U–233 has been denatured with U–238, the U–233 cannot be extracted by simple chemical means for use in nuclear weapons. A complicated isotopic enrichment process, which is both expensive and technically difficult, would be necessary. After the fuel has been used, it is extremely radioactive and would re-

quire shielded chemical reprocessing to obtain weapons-usable material.

We could further guard against the misuse of this nuclear fuel by establishing international secure energy centers in which all of the sensitive operations of the thorium fuel cycle would be performed. Included in a typical energy center would be a breeder reactor, a spent-fuel processing facility and a fuel-fabrication plant, all under strict security measures.

The primary purpose of the center's breeder reactor would be to produce U–233 from thorium which then would be processed and fabricated into a denatured fuel to be sent out of the center to power additional reactors. The denatured fuel would contain less than 20 percent U–233 which would disqualify it for direct use as a weapons material. As earlier noted, the denaturing agent, U–238, would make the reprocessing of this fuel into weapons material costly and time consuming.

If available fuel produced in the secure energy center were used in breeders outside the centers, the entire system could produce a net gain of fissionable material and could be an important component of the Nation's and the world's solution to the energy problem. Although the breeder would convert the relatively small amount of U–238 denaturing agent into plutonium, the fuel at this point in the cycle would be so radioactive as to discourage any attempt to recover the plutonium. The spent fuel would then be returned to the secure energy center to complete the cycle.

A national energy system using the thorium-cycle breeder and the subsequently bred fuel could sustain a 2–3 percent annual growth of energy production from thorium in the United States. In comparison, the plutonium-cycle breeder could sustain a 5–10 percent annual growth rate using uranium. Thus, it is evident that the plutonium-cycle breeder, when compared on the same basis, offers significant advantages over the U–233/thorium cycle by allowing larger growth rates and providing more flexibility in meeting the highly unpredictable needs of our economic future.

In view of these considerations and our general energy situation, the continuation of our most important breeder reactor project—the Clinch River Breeder Reactor Plant Project in Oak Ridge, Tennessee—is crucial. The CRBRP is the Nation's first large-scale demonstration breeder reactor; it is designed to demonstrate the economic and technical feasibility, licensability, and safety of the breeder within a utility environment.

As such, the CRBRP is an important element in the timely commercialization of the breeder reactor. The speedy completion of the project is necessary to assure that we have the option of obtaining clean and safe energy from breeders as our oil and gas supplies diminish.

It is important to note that the CRBRP could be reoriented to test and demonstrate the feasibility of the relatively proliferation-resistant thorium cycle discussed above, as well as the plutonium cycle upon which the current design is based. It can also serve as a test bed for a variety of proliferation-resistant reactor options that may be expected to result from the more active consideration of alternative breeder systems proposed in President Carter's nuclear policy message. Substantial delays or cancellation of the CRBRP should not be considered acceptable because such action could jeopardize the future well-being of this Nation.

WAGE AND PRICE STABILITY

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, President Carter, in his January 31 message to the Congress proposed a 2-year economic recovery program and indicated his desire to strengthen the Council on Wage and Price Stability. In the program he announced last Friday, the President indicated that the council will play a very important role in this administration's anti-inflation program. To this end, in his budget request, the President asked for the addition of 10 senior economists and 3 research assistants to the Council staff, for which the administration requested a supplemental appropriation of $241,000. This is $141,000 above the fiscal year 1977 authorization for the Council. The House voted to appropriate $100,000, which would have kept COWPS' funding at the authorized level. The Senate, however, voted to appropriate the full amount of $241,000. The House conferees are now asking us to accede to that amount.

Mr. Speaker, while I am in accord with the recommendation of the conferees, I must call attention to the unusual procedure by which the President's request came to us. This request for $141,000 more than has been authorized for the Council on Wage and Price Stability for fiscal year 1977 was not submitted to the authorizing committees, the House and Senate Banking Committees.

I realize that the amount of money involved here is not very large. However, I think the administration should be put on notice that we cannot condone appropriations which have not been previously authorized, and that the authorization procedure is a most important part of our legislative responsibility.

I would hope therefore, Mr. Speaker, that we can expect that this is a one-time-only instance of bypassing the authorizing process. This is a new administration, and the President's request for additional staff for the Council on Wage and Price Stability represents an integral part of the anti-inflation program. I urge my colleagues, therefore, to make an exception this one time and support the conferees' motion.

At present, there are 20 senior economists on a full-time staff of 47 personnel. Nine of these economists review and evaluate the economic impact of Federal regulations and rulemaking, and the administration wants to continue that activity. This means, however, that the remaining 11 economists monitor the entire private sector of the economy. It is in this area that the President proposes to increase the Council's analytical capability. The additional personnel would be available to analyze the supply and demand trends in particular industries so that bottlenecks and potential shortages could be identified, thereby allowing the administration to deal with them in a timely manner. This is not an excessive request. I understand it takes a single economist anywhere from 3 to 6 months to do an in-depth industry study.

I should emphasize that in the almost 3 years that the council has been in existence, they have not requested any personnel increases. Now they are requesting an increase of 13 persons, which will bring their total staff from 47 up to 60.

There is one important area that should be dealt with, and that is the spectre of wage and price controls. It has been charged that the very existence of the Council on Wage and Price Stability threatens business and labor with the reimposition of wage and price controls. I reject this argument, and I am sure that business and labor are astute enough to realize that any return to wage and price controls would have to come through the Congress. President Carter has reiterated many times that he does not desire to have authority—including standby authority—to impose wage and price controls. Furthermore, the Senate Appropriations Committee in its report on this supplemental appropriation emphasized that the inclusion of these funds in no way anticipates the adoption of a movement to wage and price controls.

Mr. Speaker, the Subcommittee on Economic Stabilization is currently holding hearings on the Council on Wage and Price Stability Act. Included in the legislation we will consider is a bill I have introduced, which would raise the authorization to $2.2 million so that the council may get on with the very important work the President has asked it to do. I do not believe that figure is unreasonable, and I do not believe the present request is unreasonable.

I urge my colleagues to agree to the full $241,000 as provided for in the supplemental appropriations conference re-

port and promise them that the Subcommittee on Economic Stabilization will give careful scrutiny and review to the duties of the Council on Wage and Price Stability.

SOCIALIST WORKERS PARTY SPIES ON RIVAL MARXIST-LENINISTS: PART I

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. McDONALD. Mr. Speaker, the Socialist Workers Party is presently engaged in a law suit against the U.S. Government complaining that the FBI, the CIA, and other agencies have been investigating them for many years. The SWP is particularly upset that the FBI has had informants planted in their ranks.

It is interesting to note that the SWP has for many years sent infiltrators and informants into rival Marxist-Leninist groups. The SWP reports on their rivals were undoubtedly of great use to the FBI in evaluating the activities of the other subversive groups. Last year, then Attorney General Edward Levi, ordered the FBI to remove its informants from the SWP. As a result the valuable information on international terrorism and domestic subversion that had been available through the SWP is no longer known to the executive branch of the U.S. Government. The SWP is the American section of the Fourth International and provides its members with considerable information on the terrorist activities of other Fourth International sections in Latin America, Europe, and the Middle East.

The Socialist Workers Party recently released an interesting new publication for the confidential use of its members. The introduction to the new publication called Party Organizer was written on March 21, 1977, by Socialist Workers Party National Committee member, Larry Seigle. The introduction read in part:

This is the first issue of the "Party Organizer." The new internal bulletin is the result of a discussion in the Political Committee on the growing need for ways to communicate ideas, experiences, and suggestions on party activities directly to all members of the party. This need has become greater as we have undergone a relatively rapid expansion of the number of branches and the number of cities where we have members.

The "Party Organizer" will be published periodically. It will contain reports from the branches as well as from the national steering committees and national departments. Articles will cover our work in the mass movement as well as party-building activities such as sales, finances, education, forums, bookstores, election campaigns, and recruitment.

Many of the kinds of reports and letters that are now sent out to organizers and the National Committee for communication to all members will instead be published in the "Party Organizer."

The first issue of Party Organizer contains some interesting reports on the activities of the "Maoists" in the United States. These reports which cover the activities of the major pro-Red Chinese organizations and youth groups were based on coverage of meetings and investigations of the "Maoists" made by members of the Socialist Workers Party and its youth group the Young Socialist Alliance. The reports were written by SWP Alternate National Committee members Les Evans and Rick Berman.

It is unfortunate that the Federal Bureau of Investigation does not have access to this publication, as a result of their closing the case on the SWP and removing the informants. Of particular interest, is the SWP report on the activities of Red Chinese agent William Hinton, who they indicate is particularly interested in lobbying businessmen and politicians. According to the SWP, Hinton and his close associate, Martin Nicolaus, see themselves as "ministers without portfolios trying to stir up support for the Chinese Government in ruling-class circles."

The SWP may not know all of Hinton's background. Not only did he live in Red China for many years, but his sister, Joan Hinton Engst, worked on the American atom bomb project and then defected to Red China where she has served for many years helping them develop their nuclear capability.

The Socialist Workers Party has provided valuable information to its members on groups that are a serious threat to American security. They should not be allowed to keep this information secret. I would therefore like to make it available to my colleagues. The SWP reports on the "Maoists" follow:

AMERICAN MAOISTS AFTER THE FALL OF THE "GANG OF FOUR"

(By Les Evans)

[The following reports were given to the Political Committee following the November 20, 1976, "Conference on the International Situation," organized by the Revolutionary Communist Party.]

I assume the comrades have all read the article in the December 10 *Militant* ["Who really represents the Peking line?"] and my written report on that meeting [see page 21.] I just want to add a few comments on what we learned from the November 20 "Conference on the International Situation."

This conference reflected the fact that the Revolutionary Communist Party has become the largest of the Maoist organizations. In the December issue of its newspaper, *Revolution*, it claimed an attendance of 2,300. The *Guardian* claimed 2,000. The Spartacists gave a figure of 1,500. Our estimate was 1,300, which I think was fair, but conservative; it could have been as much as 1,500. The higher estimates seem to me improbable.

The thing was clearly organized by the RCP. The October League, the only other Maoist organization of any size, stayed away, except to send in a few sharpshooters to ask questions.

The RCP succeeded in its principal aim, which was to line up its own membership to accept its claim of what China's foreign policy really is. The key point for them is to interpret the line in such a way that they can pose as opponents of American imperialism. They reject the line that the Soviet Union is the "main danger," that they should ally themselves with the ultraright cold warriors against Moscow, or that their chief activity should be going around exposing the Soviet Union.

Most of the people at the conference were young. Most of them seemed to be relatively new to politics. At the same time, the RCP itself is a hard Stalinist organization of the "third period," ultraleft type. Anyone who stays around it very long will obviously imbibe those politics. The people I talked to seemed to know almost nothing at all about China, about Soviet history, or about Trotskyism. They made little sick-jokes about pickaxes. That is how they are trained from the minute they are recruited.

From what I could see, the RCP has for the moment consolidated a hold on its membership. There was no noticeable debate within the RCP ranks, and their morale seemed high. Nevertheless, I think they are facing some very serious political problems in the near future.

First of all, it's clear from the Chinese press that the RCP line is not China's foreign policy. None of the large, organized Maoist groups dare to go along with China's real line. There are, apart from the strange little sects that will say anything they read in *Peking Review*, three major Maoist tendencies in this country, moving on a gradation away from the Chinese bureaucracy's official position. These are, in order, the October League, the RCP, and the *Guardian*.

The real line is represented by William Hinton, who is now unaffiliated. He has lost his post as chairman of the U.S.-China Peoples Friendship Association, but he still has access to the leaders in Peking. His orientation is to make his major activity the lobbying of businessmen and politicians—particularly right-wing politicians—against the Soviet Union.

Hinton has just made a new convert to this approach from the leadership of the October League, the most ostensibly "orthodox" of the Maoist groups. This reveals a previously hidden difference between the October League and the Chinese government. Hinton's recruit is Martin Nicolaus. You remember Nicolaus. He was the translator of Marx's *Grundrisse* and a big-name "new left" intellectual. He was briefly the *Guardian's* foreign editor. Then he wrote a book to prove that "capitalism" had been restored in the Soviet Union.

He broke with the *Guardian* while his book was still being serialized in the paper and joined the October League. There he was put on its Central Committee and immediately formed a faction. He recruited people to his group, which had the Hinton line. They were just expelled from the OL and denounced as "friends of the bourgeoisie." Now there is evidently a Nicolaus-Hiton tendency which sees itself as ministers without portfolios trying to stir up support for the Chinese government in ruling-class circles.

The October League wants the Peking franchise, and it bends as far as it can possibly go to get it. It took the position that the Soviet Union, not South Africa and the United States, was the main threat to Angolan independence. (The RCP stuck with the previous line of "equal blame on the two superpowers.")

The OL immediately jumped on the bandwagon after the purge of the "gang of four" and endorsed Hua Kuo-feng. Their line on international questions is that the Soviet Union is the "main danger" and that their propaganda should be overwhelmingly directed against the USSR, not the United States. They do not accept the next logical step, which is a public bloc with Washington.

That's the line they don't want to step across. Their membership, like that of the RCP, was recruited largely out of SDS and the student radicalization of the 1960s. The only thing they could agree on when they got together was a general opposition to American imperialism. It's very hard for them to go back on that. Also, the first thing these people learned when they radicalized was to reject anti-Sovietism and anti-Communism. for a while they can play on the hatred of the crimes of the Soviet bureaucracy to justify their pinning of the label "imperialist" on the USSR, but it is difficult to justify

making this their main activity. An alliance with the U.S. government is too much for them to swallow.

The RCP is having a serious problem in reacting to the arrest of Mao's lieutenants. They publish only a monthly newspaper (the October League's Call is weekly), so they evidently thought they could stall. The October Revolution didn't mention the purge. They dropped the November issue entirely. They published a December issue, but there wasn't a word in it on what was going on in China. The same in January.

In the December Revolution they republished in the Spanish section an article from their October issue whose main thrust was to attack Teng Hsiao-p'ing, who seems to be on his way back up in the hierarchy. So they are still trying to hang on to the domestic Chinese line as it was last summer before the death of Mao and the policy turnaround under Hua.

Thus the RCP is waffling on two fundamental questions for a Maoist organization: what Peking's foreign policy line really is and its opinion of the current Peking leadership. This has already lost it the mandate from Peking, which has stopped reprinting articles from the RCP press, although it continues to feature material from the Call.

It cannot be excluded that the RCP will take a turn like Progressive Labor did some years back and break publicly from China. It's surprising if it intends to continue as Maoist that it goes as far as it has in risking its standing with the Chinese government and giving an edge to the OL.

There are some other positions of the RCP and OL that we should be aware of. Both of these groups have lined up with Peking on the Cuban question. They are very vulnerable on that. They both now say that Cuba has restored capitalism and that it has become a Soviet colony. They further agree that Angola is a Soviet colony being run by Cuban "slavemasters." This whole fantastic invention is then cited as proof that the Soviet Union is imperialist.

One last point is that these groups are all vying for control of what they regard as perhaps their major front organization, the U.S.-China Peoples Friendship Association. Each of them has a different line on what this association should be, corresponding to their different lines on foreign policy.

Until recently, Hinton was the chairman of the association, and his line was to make it a top-level, government-to-government agency that would negotiate with businessmen for trade contracts.

The RCP sent its people in to try to take the USCPFA away from Hinton and turn it into a "mass" organization to which they could bring people who are "friends of China" but who don't want to join the RCP. They succeeded in this, but then surprisingly had it taken away from them by somebody else. The OL in a bloc with unaffiliated Maoists took over the USCPFA at a recent conference on the basis of a workerist line.

Whereas the RCP wanted the USCPFA to be a broad membership organization, the new leadership proposes to have it work exclusively in factories and in communities of the oppressed nationalities to recruit pro-Peking sympathizers. The RCP has now been forced out of the leadership and reduced to a minority with its line of a general popular-front organization.

Every one of these organizations, including the *Guardian*, is treading on thin ice at the moment. They can maintain their base only by hoping that their members or readers will not ask too many questions about the implications of China's bloc with imperialism or the purge of the Mao faction. The *Guardian*, the only one of the groups to discuss the internal situation in China, could come up only with the lame position that Hua should be supported *despite* the fact that he is lying to the Chinese people on the issues in dispute with the Chiang Ch'ing group. The *Guardian* dismisses as slander the government's claim that the arrested Maoists were trying to restore capitalism or represented a "right wing" in the Chinese Communist Party.

We should make a point of discussing politics with members of these groups or people influenced by them. We can raise the question of a genuinely internationalist and revolutionary position and the evidence that masses of people in China agree with our position in the fight for socialist democracy. We are the real defenders of the Chinese revolution and of the aspirations of the Chinese workers on these questions, not the apologists for the Stalinist government. I think that now many of these people will listen to us who would not have done so a year ago.

AMERICAN POSTAL WORKERS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CRANE. Mr. Speaker, the day before the recess began, I received in the mail the April newsletter of the American Postal Workers Union, AFL–CIO. On the bottom of the second page of this publication was a column entitled "Unionist's Beliefs." I was a little bit curious, so I began to read. The first paragraph asked the reader to wonder why there was so much antiunion literature being circulated. To counteract that propaganda, and to dispel the myth that "unionists are a bunch of militant hotheads," the author goes on to list 20 declarations which make up the unionist's "beliefs."

As I read these statements, I noticed they looked very familiar: "We believe in Freedom of religion. We believe in Freedom of speech. We believe. . . ." They rang a bell, the Liberty Bell to be exact, and I realized I was reading a summary of the U.S. Constitution.

I scanned the rest of the list and then looked at the end of the article. The author concluded by asking that everyone join in the union's beliefs because those beliefs emanated from the "greatest contract ever written": the Constitution.

Mr. Speaker, I believe in the Constitution, too, and as I glanced back at the enumerated beliefs, I saw that one "right," which is in the Constitution, had been curiously omitted from the column. It was the right described in the first amendment as allowing "the people peaceably to assemble." More commonly called the freedom of association, it is one of our most basic and fundamental rights. I find it very interesting that it was not included in the list, because, just as you can choose to assemble or associate, you can also choose not to assemble or associate. The first amendment is the only part of the Constitution which the unions selectively endorse, and freedom of association just happens to have been left off the list. George Meany himself declared that the AFL–CIO wanted to make every job a union job. To me, that is clearly unconstitutional. There is, and must continue to be, a right for every working person to join a union or not join a union, as they please.

If the unions really believed in the "greatest contract ever written" then there would not be any statements such as Meany's, nor would there have been a common situs picketing bill; we would not have to worry about a Taft-Hartley repealer or about unionizing the whole Government. The author of the "Unionist's Beliefs" says he hopes "that those who throw aspersions at us would join us in these beliefs." Let us hope that in time the author would join us not only in these beliefs, but in our constitutionally guaranteed right of association as well. It is a part of the greatest contract ever written, and everyone joining in a contract should read and understand every line of that contract.

At this point, I would like to have the article "Unionist's Beliefs" inserted into the RECORD:

[From the Illinois Postal Worker, April 1977]

UNIONIST'S BELIEFS

I am unable to understand why we hear so much anti-union talk and see so much anti-union literature. Too often I hear that unionist's are a bunch of militant hotheads. What views do we have that some would want to disagree with? What do unionist's believe in?

1. We believe in the right to immediate representation.
2. We believe in representation before search.
3. We believe there should be no after the fact laws.
4. We believe we should have the right to know when rules go into effect.
5. We believe the rules should be adequately publicized.
6. We believe in freedom of religion.
7. We believe in freedom of speech.
8. We believe in freedom of the press.
9. We believe in a system for settling disagreements and violations of contracts.
10. We believe in the right to due process.
11. We believe there should be no double jeopardy.
12. We believe no one should be required to testify against oneself.
13. We believe everyone should be entitled to a speedy trial.
14. We believe everyone is entitled to know the particulars of the charges made against him.
15. We believe everyone deserves an impartial judge, jury or arbitrator.
16. We believe everyone deserves a trial in the area where the rule infraction is supposed to have taken place.
17. We believe everyone should have the right to be faced by the accuser.
18. We believe there should only be one set of rules.
19. We believe the punishment must fit the crime or rule infraction.
20. We believe everyone has the right to have a compulsory process to produce your own witnesses.

I would hope that those who throw aspersions at us would join in these beliefs because they come from what I consider the greatest contract ever written. It is the contract between the United States Government and its sovereigns, and is called the UNITED STATES CONSTITUTION.

H. W. "Red" Reed
Sec. Ctr. Vice Pres.
Galesburg, IL

OAHE, FISCAL YEAR 1978 APPROPRIATIONS

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ABDNOR. Mr. Speaker, in view of the President's recommendation that no

funds be provided for the Oahe unit in the coming fiscal year, I would like to call to the attention of my colleagues the statement I presented to the Public Works Appropriations Subcommittee when I appeared before them in support of funding for this vital project, as well as the Pollock-Herreid unit:

IN SUPPORT OF FUNDING FOR THE OAHE AND POLLOCK-HERREID IRRIGATION UNITS

(Statement of the Honorable James Abdnor before the Subcommittee on Public Works, April 5, 1977)

Mr. Chairman and members of the Subcommittee, I appreciate the opportunity to appear before you today in support of fiscal year 1978 funding for the Oahe and Pollock-Herreid irrigation units. It is unfortunate that your deliberations have been clouded by the President's hasty and ill-conceived recommendations which will, if upheld by Congress, result in the foreclosure of opportunities for needed water resource development throughout the nation. South Dakotans share the deep sense of betrayal the President's actions have caused among those who recognize the importance of the wise and productive development of our water resources, and I know that includes the members of this committee.

Water resource development is not a partisan issue, nor is it a subject we can afford to put off as we have done with our energy problems. It is not with any partisan intent, therefore, that I come before you in support of the recommendations of President Ford, rather than those of President Carter. The Ford Budget provides $16.96 million for the Oahe Unit. The Carter proposal is for termination of the project, with no funds requested for further study or any other purpose and without so much as an acknowledgement of the commitment of the Federal government to our state.

It is incomprehensible to me that President Carter can recommend billions for temporary public works jobs and at the same time choose to ignore the recurring problems of drought, underemployment, and outmigration that will be addressed through sound water resource development projects. Such projects will not only provide direct construction jobs at a cost comparable to those in the President's public works proposal but they will also continue to provide new job opportunities and abundant new wealth once they are completed. Under the circumstances, the President would have been far more consistent to have recommended that the full capabilities of the Bureau of Reclamation ($21.46 million for the Oahe Unit; $500,000 for the Pollock-Herreid Unit) be funded in the coming fiscal year.

Although our lack of action in dealing with our energy problems might be termed a national disgrace, it will seem pale by comparison to the inevitable result if we do not come to grips with the nation's water development needs. The President's recommendation that 30 major water development projects receive no further funding flies in the face of the urgent needs they were authorized to meet. Taken on merit alone, the President's recommendations must be rejected; but considering the way they have been handled by the Administration, they become insulting.

For example, the Department of the Interior could not tell us two days ahead of time who would be on the "review team" which would come to South Dakota to take public testimony on the Oahe Unit. I detailed other outrageous aspects of the "review" process in my statement to the review panel on March 21st, and I would like to furnish a copy of that statement for the committee's files. Whatever value might be ascribed to the President's recommendation is devastated by the lack of integrity of the process by which they were determined. Clearly, the President and his advisors have failed to appreciate the importance of water development, the historical commitments regarding projects such as the Oahe Unit, and—most importantly—the requisites of the future if the needs of our citizens are to be met.

Having made these general points, let me turn to the specific controversies surrounding the Oahe Unit. It is evident from the difficulty members of Congress have had in obtaining information from the White House that the President had no particular criteria whatsoever upon which he based his judgment to terminate certain projects. Almost as an after thought, however, three broad "screening" criteria were announced as the basis on which all water projects would be weighed for possible termination. These criteria are safety considerations, benefit/cost ratio, and environmental effects.

There are no valid safety questions which might justify termination of the Oahe Unit, but the safety of the James River—both in terms of quality and quantity—will be enhanced as a source of municipal water supply.

The Oahe Unit has been found to be economically feasible in every benefit/cost analysis ever performed using nationally recognized and Congressionally mandated procedures. The overall benefit/cost ratio (which considers spinoff benefits other than those realized directly) for the Oahe Unit has been calculated at 3 to 1. The Oahe Unit is justified in its own right; but even if it were not, to argue that it should be stopped is to fail to recognize the debt owed South Dakota by the federal government. We are deserving of federal assistance in developing our state's water resources and the Oahe and Pollock-Herreid Units are but a portion of the development to which we are entitled.

The third criterion, and the most nebulous of all, used in the "screening" process is "environmental impacts." The Interior Department's March 10th announcement which stated, "a project must have no significant environmental impacts," is indicative of the self-serving, prejudgmental nature of the "review." In my view the whole purpose of water resource development is to significantly alter the environment for the benefit of mankind. The Oahe and Pollock-Herreid Units will certainly do so.

It would make more sense to forgo projects which "pass" the test of no significant beneficial environmental impact than those which "fail" it. If every human endeavor had been subjected to such a "screening criterion," we'd still be living in caves and being served up as lunch for our animal friends. Obviously there are environmental absolutes which must not be infringed upon. No one questions that, but neither can one accept the President's recommendations in view of the arbitrary and haphazard way environmental factors have been applied.

There are a number of other environmental issues of which I am sure the President has no personal knowledge but which are of concern to those who will be affected by the Oahe Unit. Included among these are the irrigability of the soil, the future of the James River, and wildlife habitat losses and mitigation.

As far as irrigability of the soil is concerned, I would point out that the Oahe Unit was the first federally authorized project to have artificial drainage included as part of the original project cost. Detractors cling to early and outmoded soil survey data which indicated that irrigation could be difficult in the project area, but exhaustive more current and more pertinent studies have been undertaken by the Bureau of Reclamation. It is clear from these studies that the project area can support sustained irrigation, and I would like to provide for the hearing file the statement Dr. Larry Fine of the Plant Science Department of South Dakota State University presented to the review panel. Based on his own research experience, Dr. Fine concurs with the Bureau's conclusion that the land is irrigable.

Dr. Fine also discusses the quality of the return flows from his irrigation research plots and goes so far as to say that he and his associates have drunk them in preference to other available water supplies. The Bureau's studies have indicated that at times the quality of the James River will be degraded somewhat over its present condition by construction of the Oahe Unit At other times, however, the quality will be improved. Both the quality and quantity of the water flow in the James will be stabilized.

If arbitrary water quality standards are to be used to justify terminating the project, are we also going to close down the water systems of the 60% of South Dakota communities which fail to meet these standards? Of course we are not, but these communities will never be able to improve their water systems if such improvements must pass the criteria the President proposes to apply to water developments. Furthermore, an expanded economic base—such as the Oahe Unit will provide—is the very thing many of these communities need to make water system improvements feasible.

Under current conditions the problem of water quality is often moot, however, since records show that the stretches of the James in the project area are dry about 40% of the time and flow less than 30 cfs about 75% of the time. The stabilized flow the Oahe Unit can provide will be a benefit more than offsetting any unalterable degradation in water quality. If this were not so, the City of Huron, which takes its water from the James, would not be strongly supporting the project and looking to it as the solution to the City's precarious water supply problem.

Although the flow of the James will be stabilized by irrigation return flows and supplemental water releases, the flooding potential will also be increased somewhat. Obviously, a river which has some water in it when flood scale precipitation occurs will top its banks more quickly and severely than if it were dry. For this reason the authorized plan calls for channelization. There are several alternatives and combinations of alternatives by which to deal with this problem, however, and it is my belief they will result in not only preservation but enhancement of the aesthetic and productive character of the James.

Wildlife specialists have pointed out the costs of channelization as far as fisheries and wildlife are concerned, and these factors will be taken into account as the project proceeds. The U.S. Fish and Wildlife Service also recently released their "Revised Wildlife Plan," which details their suggestions for the wildlife habitat mitigation and enhancement aspects of the project. The public reaction to the revised plan has been overwhelmingly negative due to the large acreage (39,940 acres) which would be removed from private ownership, particular in certain counties such as Day (12,185 acres), Beadle (6,205 acres), Clark (5,183 acres), and Brown (4,550 acres), for example.

There are those who believe that the U.S Fish and Wildlife officials timed the release of this document to coincide with these hearings and to foment opposition to the Oahe Unit. The August 3, 1976, letter I received from then Assistant Secretary of Interior for Fish and Wildlife Parks, Nathaniel Reed leads me to believe, however, that the Fish and Wildlife Service simply hopes to have the Bureau of Reclamation acquire property they intend to gain control of anyway

Specifically, Assistant Secretary Reed wrote that they plan to gain control of about 330,000 acres (110,000 in fee title and 220,000 by easement) in South Dakota in the next 10 to 15 years. I am uncertain whether or not

the nearly 40,000 acres they have suggested be acquired in conjunction with the Oahe Unit is in addition to or a part of the 110,000 acres they intend to acquire anyway, but it is clear that the proposed Oahe mitigation features are the small end of the problem.

Officials of the Bureau of Reclamation should not be made "point men," through the Oahe mitigation features, for the U.S. Fish and Wildlife Service in acquiring wetlands. In view of the expansive plans of the U.S. Fish and Wildlife Service for South Dakota, acquisition of habitat lands for the Oahe Unit should be kept to the bare minimum required to mitigate identified losses. Certainly, all wildlife habitat lands should be acquired from willing sellers, with the concurrence of the county commissioners.

Condemnation should not be used at all in acquiring wildlife acres, and it should be used as sparingly as absolutely possible in acquiring property for necessary project features. It has been argued that an unduly large percentage of the parcels of land thus far acquired have been taken through condemnation proceedings, but it has also been pointed out that these represent a small percentage of the total acreage acquired. It has also been suggested that organized opposition has actively encouraged those who have been asked to settle as a willing seller to resist doing so.

Be that as it may, I am familiar with condemnation proceedings through my own losses to the Interstate Highway; and I am of the opinion that there must be a better and less expensive means of protecting the rights of private property owners and at the same time allowing the acquisition of property needed for projects in the public interest. In this regard I would like to furnish for the hearing file a copy of a report done by the Library of Congress, at my request on "Alternatives to Traditional Court Proceedings for the Valuation of Land in Federal Condemnation." It speaks favorably of the potential of a system of arbitration.

Perhaps the most pertinent of all criticisms of the Oahe Unit has been the notion that "the people don't want it." In my view a very well organized campaign has been waged to convince South Dakotans that they don't want the project. Still, surveys—including two boxholder questionnaires of my own—show support in the range of 70 to 85 percent.

The problem is, of course, determining who should have a voice in deciding the future of the project. The Oahe Conservancy Sub-District Board will appear before you today and undoubtedly express the majority position that fiscal year 1978 funding should be held in abeyance while they review the project. As far as the Board is concerned, however, the majority represents a minority of the people in the Sub-District. I understand they do represent the larger portion of the taxable property which supports the Sub-District, but the American way is one-man/one-vote not one-dollar/one-vote. Also, it should be pointed out that the new majority on the Board did not run on platforms pledged to terminating the Oahe Unit but, rather, pledged to questioning its imperfections. As recently as March 21st the Board requested and received neutral time to appear before the Oahe Review Panel.

The Oahe Sub-District Board is not the most direct representative of the prospective irrigators themselves. The elected officials closest to the irrigators are the Spink and West-Brown Irrigation District Boards, both of which strongly support the project. It has been argued that the farmers don't want the project, but it is evident that those who will be irrigating do. It is beyond belief that once the water becomes available there will not be enough farmers who want to make use of it. It has also been said that it is those in the towns who want the project, but why should farmers who will not be affected have any more to say about the project than towns people who may experience a marked improvement in business once the project is in operation? Anyone who will be adversely affected deserves every consideration, and I will do my utmost to see that he gets it.

On the other hand, extremely strong positions of support have been adopted by numerous associations and organizations throughout the state. I'd like to furnish for the hearing file an editorial from the March 17, 1977, edition of the *Aberdeen American News*, which expresses the broad support of the press throughout the state. Perhaps most impressively of all, the South Dakota Legislature, in an unusual show of bipartisan unity enacted into state law a policy in support of continued funding of the Oahe Unit. In the entire Legislature six votes were cast against the bill. Finally, Governor Kneip, Congressman Pressler, and I appear before you today to continue the tradition of bipartisan unity observed by every major official elected in our state since 1944. Senator McGovern stands with us on the other side of the Hill; but, frankly, the best I can say of our junior Senator, Senator Abourezk, who has announced he will not seek re-election, is that he is not against us.

Senator Abourezk is primarily concerned with supporting the position of the Sub-District Board, apparently without regard to what their position might be. He has said that South Dakota should not be penalized through the loss of federal assistance simply because South Dakotans have the courage to review the merits of the Oahe Unit. I certainly agree with his position in that respect, and I intend to be among the first to support any changes the Sub-District Board may recommend which will improve the project without jeopardizing its completion. I sincerely believe, however, that the Senator has underestimated the threat to funding for the Oahe Unit and the implications of the President's "criteria" for potential additional water resource developments in our state.

It must be noted that the President simply proposes to terminate the Oahe Unit and the 29 other projects on his current "hit list." The period of "review" for these projects ends on April 15, 1977, and he proposes no alternative water developments to replace them. The President intends to save the Treasury the full cost of all of these 30 projects; and, although I do firmly support the goal of fiscal responsibility, I do not believe all South Dakotans fully appreciate the fact that the President contemplates no further federally sponsored water resource development in our state.

For example, many have suggested that funding for the Oahe Unit could be better spent at this time on the various rural and municipal pipelines proposed and so badly needed throughout South Dakota. I will do everything in my power to see these pipelines built; but in my judgment not only will Oahe funding not be diverted to these pipelines but if the President's criteria are applied to them, they will never be built at all. South Dakotans are also entitled to know the implications of the President's criteria as far as the Pollock-Herreid Unit, the Belle Fourche Project re-authorization, the Lower-James proposal, urgent bank stabilization, and additional hydropower facilities are concerned. Indeed, the Oahe Unit's delivery system is the most efficient means of transporting water into eastern South Dakota. If it is not feasible, obviously no other delivery system is either, and eastern South Dakota will be left high and dry.

While the President is explaining these ramifications of terminating the Oahe Unit, perhaps he would also justify why our downstream neighbors are enjoying the benefits of flood control and navigation at the expense of over 1 million acres in North and South Dakota. It would also be instructive to know why Nebraska should get more of our hydropower than we do and why Minnesota gets more than North and South Dakota combined (35.4% for Minnesota FY 1976 versus 11.6% each for North and South Dakota). Perhaps the President can justify, too, the higher rates which will be required for the hydropower if authorized irrigation is foregone in the Missouri River Basin.

But all of that assumes that the President's recommendations will be allowed to stand. I believe Congress will reject the President's proposed budget cuts for the most part, and I am hopeful that the Oahe Unit will be among those projects receiving the full funding requested in the Ford budget. President Carter undoubtedly would have had better success if he had attempted to pick off the projects he chooses to terminate one at a time. South Dakota is a small state by population, and we do not have the political clout to force our will upon the President or the Congress.

We do have the irrevocable moral commitment of the Federal government, however, to provide water resource development assistance to our state in fulfillment of the promise made to us when we agreed to the inundation of one-half million acres of our precious land resources. South Dakota does not yet have a single acre irrigated out of the Missouri River mainstem pursuant to the commitment made to us in the Flood Control Act of 1944. We do have two authorized projects—the Oahe and Pollock-Herreid Units—which only await funding.

I urge that you recommend to the House that $16.96 million be appropriated for the Oahe Unit and $500,000 for the Pollock-Herreid Unit. Please do not betray our trust.

Thank you.

OAHE, LOCAL ASSURANCES AND THE FEDERAL COMMITMENT

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ABDNOR. Mr. Speaker, the President's review of the 30 water projects which he earlier proposed to terminate has been completed and his updated recommendations forwarded to Congress.

He now proposes no funding in fiscal year 1978 for 18 projects. It is my understanding he will seek deauthorization of 15 of them and 3—including the Oahe unit in South Dakota—may receive his blessing for further funding if certain conditions are met.

Specifically, the President's recommendation for funding for the Oahe unit is:

> Delete funding and reinstate only if local assurances are firm and if the project is modified to eliminate the East Plain service area and associated supply works.

I believe this recommendation conforms with Secretary Andrus' suggestion, based on the report of the review panel composed of officials from the Department of the Interior.

Upon first reading there are two particularly disturbing aspects of the Department's report. It is also unclear exactly what South Dakotans must do to provide the "local assurances" the President has requested. I have addressed these issues in a letter to Secretary Andrus. The letter follows:

WASHINGTON, D.C.,
April 21, 1977.

Hon. CECIL D. ANDRUS,
Secretary of the Interior, U.S. Department of the Interior, Washington, D.C.

DEAR MR. SECRETARY: I have noted with interest the President's recommendations for the Oahe Unit, pursuant to the Department's review and report on the project. There are two aspects of your report that I find particularly objectionable.

The first is the implication contained in the "Summary and Conclusions" (p. 25) that the action of the South Dakota Legislature in establishing the Oahe Task Force somehow justifies deferring construction of the project. I have heard no suggestion of any modification which might be offered by the Task Force to alter any portion of the project to be constructed for several years to come The primary focus of the legislation which established the Task Force was to set in law the official policy of the State of South Dakota that funding for the project should be continued—not held in abeyance!

Secondly and more importantly, I strenuously object to the suggestion contained on page 20, under "Political Understanding," that the United States has no commitment to South Dakota to assist with irrigation development. In my view the least—not the "most"—that can be said "is that congressional action in continuing to authorize the Oahe Unit over the years constitutes legal ratification of that political understanding" which lead our state's elected officials to support the Pick-Sloan plan. Besides, if the "legal ratification" can be withdrawn on a Presidential whim, why not also any "legal commitment?"

No, the issue is much deeper than the legal technicalities involved. The issue is whether a President who prides himself on moral leadership is in this instance going to totally denigrate the moral commitment which has been made—and, yes, legally ratified—over several decades.

I pray it will not be so, and I earnestly solicit your assistance in seeing that it does not become so.

Please understand—my responsibility to my constituents clearly requires my strongest efforts to obtain funding for water resource development, regardless of the Administration's position. I would hope, however, that we could work together in the spirit of cooperation of which the President has so eloquently spoken. In that spirit I would appreciate being apprised just exactly what are the potential steps which may be taken to meet the requirement the President has recommended for continued construction of the Oahe Unit, namely that "local assurances are firm."

Your empathetic attention to the foregoing comments and your consideration in informing us how we may restore the Oahe Unit to the good graces of the Administration will be appreciated.

Sincerely,

JAMES ABDNOR,
Member of Congress.

A CURFEW ON AIRCRAFT NOISE POLLUTION

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ROSENTHAL. Mr. Speaker, aircraft noise is a major environmental problem facing our country, particularly the cities and their suburbs, and it demands immediate steps as well as long-range measures.

The ultimate solution to unbearable noise pollution lies in the replacement of noisy aircraft and the orderly development of the airport and surrounding areas. Such measures, even if enacted today, however, would not take full effect for a number of years. In the meantime, a curfew on certain late-night air traffic is a practical short-term answer that will provide immediate relief to many suffering from the adverse effects of noise pollution.

That is the thought behind H.R. 70, which I introduced earlier this year. Because of varying conditions from airport to airport across the country, this bill does not order a single, nationwide aircraft noise curfew. Rather, it calls for the creation of a nine-member commission to investigate the establishment of curfews during normal sleeping hours. The Commission would make legislative recommendations to the Congress within 6 months of creation and then go out of business. I expect its recommendations will show that not all airports need curfews, that those which do may only need them for certain runways and flight corridors, and that curfew hours, in some cases, may vary from airport to airport.

With this information, the Congress will be better prepared to act intelligently and effectively.

Most antinoise proposals concentrate on long-range solutions. But retrofitting, aircraft replacement, noise contour maps, and a noise compatibility program take many years to implement and show discernable results.

To fill the gap between enactment and the time these programs reach fruition, a noise curfew would be a valuable and important step.

Not only would it have the great symbolic value of demonstrating the Congress' sincerity and determination to curb excessive noise, but, more importantly, it would have an immediate and beneficial impact. Mr. Speaker, within 24 hours of the time a noise curfew is imposed, citizens will know and feel the results.

The cost of a curfew is minimal, there is no question of compromising safety, and no new technology is needed. Curfews may mean some inconvenience for the airlines and an extremely small number of users, but this must be weighed against the public's right to domestic tranquility and a decent night's sleep. We cannot ignore the fact that the noise impact of a jetliner is estimated to be 10 times more disturbing during sleeping hours, when it is much more difficult to assimilate sounds.

According to an expert from the division of urban affairs of the International Organization for Economic Cooperation and Development aircraft noise is not only annoying but it also threatens to be harmful to the individual's health as well as his psychological and social balance. Aircraft noise interferes with sleep, speech, listening to the radio or television, communicating, reading, and so on. Repeated disturbances during sleeping hours may decrease the level of efficiency and productivity for many residents, from the elementary school pupil to the factory worker, the following day.

The fear of homeowners that their property values will decline is yet another negative result of jet aircraft noise. Aircraft noise may be creating "environmental ghettos" by depreciating the market value of residential property. A study of the Los Angeles International Airport area has shown that high noise areas are characterized by relatively low incomes, higher unemployment, vacancy rates, and greater residential turnovers.

The FAA has published a series of profiles of scheduled air carrier traffic throughout the Nation. A careful analysis of its findings reveals that an airport curfew from 11 p.m. to 7 a.m. will have a minimal effect on the average number of passengers and flights within this time period. A curfew on airport operations will, however, provide positive results for the millions of persons on the ground plagued by the noise produced by low-flying planes.

Nighttime curfews are already in effect in Tokyo, London, Geneva, and Zurich; Fresno, Los Angeles, and Newport Beach, Calif.; and Boise, Idaho as well as right here at Washington National Airport. National Airport instituted a curfew from 11 p.m. to 7 a.m. in 1966 for air carriers and airlines. This ban on nighttime travel has been working effectively for the past 11 years. Two of our Nation's busiest airports flank my congressional district—LaGuardia and Kennedy. The residents of Queens know just how debilitating aircraft noise pollution can be. The curfew which I have proposed will affect a maximum number of residents and only a minimum number of travelers.

Not all middle-of-the-night flights carry passengers. Many transport only freight. Others are what are called "repositioning flights," which are primarily designed to transport a plane from one city to another to be on hand for the next day's service. To schedule these at less disturbing times would cause the airlines only minor inconvenience.

FAA statistics for a typical day of operations at LaGuardia Airport, May 2, 1975—the latest date for which figures are available—indicate the following effects a curfew will have on passengers:

First. Only 1.1 percent of the total number of passengers flying into and out of LaGuardia Airport on a typical day would be inconvenienced by a curfew between 11 p.m. and 7 a.m., the normal sleeping hours. That amounts to only 432 persons out of a 24-hour total of 38,806 passengers.

Second. Of those 432 persons, 90 could miss the curfew by flying 1 hour earlier; another 333 would have to fly 2 hours earlier and the remaining nine persons would have to move up flight times by 3 hours.

Third. On the average, LaGuardia handles 54 passengers an hour between 11 p.m. and 7 a.m., while that figure rises to 2,400 hourly during normal waking hours.

Fourth. The number of flights affected is as small as the number of passengers. Only 10 of LaGuardia's 614 daily flights would have to be changed because of an antinoise curfew. And on the typical day FAA studied, 2 of those 10 flights were empty anyway.

Fifth. Each sleeping hour flight has about 20 fewer passengers than waking hour flights.

These are some of the conclusions to be drawn from an analysis of the FAA report. I am inserting in the RECORD, Mr. Speaker, detailed charts analyzing these statistics. Similar data also is included for John F. Kennedy International Airport.

It is obvious that the number of people suffering discomfort and potential harm from aircraft noise during sleeping hours is immensely greater than the number of passengers who will have to alter their travel arrangements to prevent such disturbances. Many airports and passengers throughout the country are caught in a similar situation as those utilizing La-Guardia and Kennedy Airports in New York. Some, like Washington National, have taken steps to deal with the problem.

A curfew on late-night flights is not a cure for the noise problem, but it can be effective treatment that, when carefully administered, will alleviate the pain until the long-range solutions can take effect.

PANAMA CANAL LINOWITZ SUIT

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. HANSEN. Mr. Speaker, I enclose the following April 21, 1977, press release for the RECORD to update my colleagues on the progress being made to prevent Panama Canal Treaty negotiations from proceeding while a chief co-negotiator has a conflict of interest cloud hanging over his activities:

COURT REVIEWS PANAMA NEGOTIATOR

WASHINGTON, D.C.—A suit filed by Sen. James McClure and U.S. Rep. George Hansen to bring Panama Canal treaty negotiator Sol Linowitz before the Senate for screening and confirmation proceedings was taken under advisement in U.S. District Court in Washington Wednesday.

The suit also asked for a temporary restraining order to halt further treaty proceedings until Linowitz is confirmed by the Senate under the advise and consent provisions of the Constitution. The Federal Government had asked for a dismissal of the suit. Both requests were taken under advisement.

McClure and Hansen filed the suit recently in roles as private citizens and members of both Houses of Congress opposed to the negotiations of Linowitz because he had not been confirmed by the Senate and because of apparent conflicts of interest.

Hansen, a member of the House Banking Committee has also called for Congressional Hearings and complained to the U.S. State Department and the Marine Midland Bank of New York regarding Linowitz' role as a member of the bank's Board of Directors while serving as a U.S. Government official in direct financial dealings with the Government of Panama which owes $8 million to the large American Bank.

Linowitz resigned his position with the bank shortly after the McClure-Hansen suit was filed. However, he retains his appointment as Chief co-negotiator for President Carter in Panama Canal treaty talks.

Hansen said, "Linowitz also failed to terminate his status as a registered agent for Latin American governments and commercial interests following his ambassadorial appointment until a Georgia Congressman brought the situation to public attention. In fact, during this period as a registered foreign agent Linowitz also served as Chairman of a policy committee for the tax-exempt Center for Inter-American Relations which was founded by Chase-Manhattan banker David Rockefeller and which is a strong advocate of the transfer of the Canal to Panama."

Hansen and McClure said, "We believe that a man with as many apparent and tacitly admitted conflicts of interest should be reviewed and confirmed by the Senatorial process. Whatever a person's thinking is regarding the proposed transfer of the Panama Canal, Mr. Linowitz is a problem. His efforts under the circumstances are designed to effect the transfer which most Americans oppose, and any agreement negotiated under such apparent conflicts of interest would be so tainted as to lose credibility even with those who support a new treaty and thus further frustrate and complicate an already delicate situation."

Hansen noted, "Linowitz also currently serves as a member of the Board of Directors and Executive Board of Pan American Airlines and has held stock in Texaco and ITT, all of which have significant commercial involvement in Panama.

LEGISLATION ESTABLISHING AN OFFICE OF SPECIAL PROSECUTOR

HON. JAMES R. MANN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MANN. Mr. Speaker, since the events known as Watergate the Congress has debated the need of establishing an Office of Special Prosecutor. In both the 93d and 94th Congresses the House Judiciary Committee has considered such legislation. The issue is whether a special prosecutor is needed to investigate and prosecute possible criminal wrongdoing by high Government officials.

The Subcommittee on Criminal Justice will hold a hearing on H.R. 2835, the Special Prosecutor Act of 1977, and related bills on Thursday, May 5.

Persons wishing further information about the bills or wishing to testify at the hearing are invited to contact the subcommittee in room 2137–4 Rayburn House Office Building, Washington, D.C. 20515, telephone (202) 225–0406.

THE COST OF NEWS VERSUS THE COST OF FARMING

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. GRASSLEY. Mr. Speaker, we hear a lot of talk about the high cost of food, with most of that talk focused on blaming the producer, the farmer. As I have stressed so many times during my terms of office, food in America really is not high, especially when prices are compared to those of other products and services. Many times we forget that labor costs in other industries are far higher than those in agriculture. This was articuated well in a recent editorial by Lyle Borg, of the Iowa Farm Bureau Federation. I would like to share his comments with my colleagues today:

THE COST OF NEWS

(By Lyle W. Borg)

A network film crew came to Iowa the other day for a story on the concerns of farmers. After they left, farmers here had another concern . . . things they buy are going to continue to cost more partly because of the way that news team operated.

The difference in productivity was dramatic. Five network employees, who had spent the night in Des Moines, went in two rented cars to a farm in Polk county where one farmer and his hired man alone were handling more than 1,000 acres and raising close to 9,000 hogs for consumers.

The union contract called for all five to be a part of the film crew. One was assigned as the overall director of the filming, one operated the camera, one handled sound for the camera, one conducted the interview and still another was along in case lighting was needed. All this for a film clip that would be televised only once and would not exceed 2 minutes in length from just one of the thousands of news reporting teams.

People tend to focus on food as if only food prices affect consumers' pockets. And when they talk about consumers, these same

people tend to forget that farmers are the biggest consumers in the nation. Increased prices in any segment of our economy affect farm families more than anyone else.

Consumer prices are up for farmers and others partly because the cost of news has risen. That means advertising costs go up and advertisers simply charge more for products farmers and other consumers must have to live and produce.

If farmers farmed like news people surfaced the news, it would take hundreds of people to operate a typical farm. Just imagine the one operation of a tractor with someone assigned as the overall director, another responsible for adding fuel, another to hook up the implements, others for the hydraulic brake, clutch, throttle and power take-off controls and still another who would merely drive the tractor.

No one is attacking the necessity for news or any other occupation. But what is important is for all consumers to realize that what they and others do to make a living has more to do with consumer prices than what the efficient, productive farmer does out on the land.

ENERGY PROBLEMS

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. JACOBS. Mr. Speaker, what follows is a sensible letter concerning energy problems from a constituent of mine:

ELECTRICAL SYSTEMS CO., INC.,
Indianapolis, Ind., March 25, 1977.

Hon. ANDY JACOBS, Jr.,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. JACOBS: The Federal government has thrown up another trial balloon about the energy crisis. Sunday's Indianapolis Star had quite an article on the Carter Administration's proposed plans on how they intend to deal with this crisis. Certainly there is nothing very positive in the approach outlined in the paper, in fact it's mostly quite negative. No true policy of energy conservation is outlined. It has to be kept in mind that the Federal policies over the past several decades have created the urban sprawl which is the American method of living at the moment. These policies have made movement within most metropolitan areas by automobile a necessity. Granted the automobile manufacturers can produce cars which are more energy efficient than the ones which we have been using for the past many years, but the idea of an increase in Federal gas taxes of 4 to 5 cents a gallon per year indefinitely is asinine. This drastic increase will create further inflation and be a severe penalty for those who must use their automobile or trucks in the course of their work.

Another thing mentioned is free home insulation and this has to be a true joke. This is a drastic penalty for those who have spent their money previously to insulate their homes. Now is the government going to make these same people pay for insulation for everyone else? I'd damn sure resent it.

Since World War II the method of moving manufactured or produced goods from the point of production to the consumer has changed from the railroads to trucking. This seems to me to be a fantastic waste of fuel. I believe it behooves the Federal Government to create a policy that will cause the railroads to be rebuilt and cause the movement of goods to be done over the rails rather than done over the highways. Tens of millions of gallons of precious fuel could be saved in this manner. The piggy backing of trucks has become a good method of moving merchandise. With improved rail service it would surpass the amount of material moved over the highways. And while we're on the subject of railroads, certainly if the railroads were in any decent shape at all people would take their trips by rail as opposed to using automobiles or airplanes both of which consume a great deal more energy per passenger mile.

What my plea boils down to is that I hope the Congress takes a very careful look at any proposed penalties to the taxpayer. We have enough of them now without creating further burdens on the wage earner and the small business man.

Sincerely yours,

JOHN W. ROTH.

OAHE, THE PRESIDENT'S PROPOSAL

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ABDNOR. Mr. Speaker, although the President is still recommending no funds be appropriated for the Oahe irrigation project in fiscal year 1978, he has modified his position significantly from simply asking that the project be terminated. According to the official statement from the White House, he will support construction if the 65,000-acre East Lake Plain area is deleted.

This would permit the addition of 25,000 acres of irrigation along the supply canal and would result in a 150,000-acre project instead of the currently authorized 190,000 acres.

Some of the ramifications of this proposal were discussed in the report filed by the Department of the Interior on the results of their review. They are contained in the section of the report entitled, "Deletion of the East Lake Plain Service Area," as follows:

A possible modification in the plan for Oahe Unit would be to restrict the scope of the project in the James River Basin to the area west of the James River by eliminating the East Lake Plain.

Elimination of the East Lake Plain would reduce the irrigable acreage by about 65,000 acres and would eliminate the need for the James Pumping Plant, James Canal, Byron Dam and Reservoir, Byron Pumping Plant, East Main Canal, and the lateral and drainage system for the East Lake Plain.

If the main supply system leading from the Missouri River to the West Lake Plain were constructed to the presently authorized size, it would only be capable of delivering water to about 150,000 acres. This is because the plan for the East Lake Plain contemplates using a combination of James River floodflows and reuse of project return flows supplemented with Missouri River water, all of which are to be stored in Byron Reservoir. Therefore, extensive redesign of these supply works would not be required to provide service to the West Lake Plain area only.

There are about 125,000 acres of land in the West Brown and Spink County Irrigation Districts within the West Lake Plain. Therefore, the system would be capable of supplying Missouri River water to an additional 25,000 acres outside the two existing irrigation districts. The water supply from this additional capability could be delivered at a point or points on the main supply system.

A modification in the plan to this extent would not reduce the capability to furnish municipal water to area towns except for two small communities with a combined 1970 population of 370 people. This modification would:

1. Reduce wildlife impacts by reducing wetland losses by about one-third.
2. Reduce water quality impacts on the James River.
3. Eliminate the necessity to relocate existing summer cabins at Lake Byron.
4. Eliminate flood control benefits associated with diverting a portion of James River floodflows to Byron Reservoir.
5. Increase flooding to a limited extent in the lower James River by adding return flows to the river.
6. Result in a net reduction of 40,000 acres of irrigable lands.
7. Not eliminate the need for handling return flows in the James River through the project area, although the return flows could be reduced in volume. The scope of any water management measures could be reduced.

The cost to complete Oahe Unit after fiscal year 1977 is estimated to be $414,409,000. Elimination of the project features listed above (pumping plants, canals, laterals and drains on the East Lake Plain) would reduce the cost to complete Oahe Unit by about 30 percent.

I had written the President's advisers urging additional canal-side irrigation, and I am certainly pleased at that portion of his proposal. As indicated in my letter, which follows, however, I did not suggest that there be a net reduction in acreage to be irrigated:

APRIL 13, 1977.

Hon. CECIL ANDRUS,
Secretary, U.S. Department of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: As the President's self-imposed deadline for completion of review of federal water projects—including the Oahe Unit in South Dakota—approaches, it is my understanding that various alternatives to completion of each project as currently envisioned are being considered.

I have never maintained that the Oahe Unit is flawless. In fact, I would not object if the full cost of completing it were simply credited to the state of South Dakota so that we could undertake to develop the state's water resources ourselves. I strongly suspect, however, that is not one of the "alternatives" under consideration.

In the light of the longstanding moral (and possibly legal) commitment of the Federal Government to our state, no alternative which would reduce irrigation benefits can be responsibly advanced by the Administration. I believe it would be in the best interest of all concerned, however, to maximize "canalside" irrigation. Such a recommendation by the President would undoubtedly be well received.

Your immediate attention to this urgent issue will be appreciated.

Sincerely,

JAMES ABDNOR,
Member of Congress.

REPUBLIC OF CHINA RESOLUTION

HON. BOB STUMP

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. STUMP. Mr. Speaker, Western States have always taken a keen interest in the affairs and actions of the Federal Government. As a former member of the Council of State Governments' Western Conference, I take pride in sharing with

you a 1976 Western Conference resolution which was passed regarding our friends of long standing—the Republic of China:

URGING THE PRESIDENT AND CONGRESS OF THE UNITED STATES TO MAINTAIN CLOSE RELATIONS WITH THE REPUBLIC OF CHINA

Whereas, the Republic of China has been a continuous and faithful ally of the United States, supplying both moral and economic support to the benefit of both nations; has made every effort to develop a free enterprise-based democratic form of government; has pledged it human and economic resources to the defense of free people everywhere; and the cultural interchange between the Republic of China and the United States has benefited both nations.

Now, therefore, be it resolved that the Western Conference of The Council of State Governments strongly urges:

(1) that the President and Congress of the United States make every effort to develop better social and economic relations with the Republic of China.

(2) that the President and Congress of the United States refrain from impairing our diplomatic relations with the Republic of China.

Though this resolution was addressed to the previous administration when passed, it is the hope of the Western States Conference that the current administration will consider this and other resolutions by many States and similar legislative groups.

QUEEN ISABELLA DAY

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. DENT. Mr. Speaker, I rise today to urge this House to recognize one of history's truly remarkable women: Queen Isabella of Spain.

Isabella was born on April 22, 526 years ago tomorrow. My friend and colleague, Mr. MURTHA of Pennsylvania, has introduced House Joint Resolution 256 to authorize the President to proclaim April 22 of each year as Queen Isabella Day. Mr. Speaker, I know of no better way of remembering the woman who was a unifier of Spain, the patron of Christopher Columbus, and a compassionate friend of the New World she never saw.

We all know the story of how Isabella pawned her jewels to raise the money for Columbus' voyage. This is how schoolchildren remember her. But, Mr. Speaker, Queen Isabella's real life far outshines her legend.

When Isabella of Castile married Ferdinand of Aragon she helped create a united Spain. The nation was finally strong enough to drive out the last Moorish occupiers and bring peace to the peninsula.

More important to us, Mr. Speaker, it was Queen Isabella, alone among the rulers of Europe, who was enlightened enough to support the vision of the Italian navigator Columbus. She arranged to finance Columbus' westward voyage to India—a voyage that ended with the discovery of the New World.

Though Columbus' explorations gave Spain a vast empire, Isabella did not treat the New World with greed or neglect. Many times she expressed concern with the plight of the American natives. When Indians were brought back to Spain as slaves, Isabella ordered them freed.

Columbus' landing on San Salvador in 1492 forever linked the New World to the Old. Because of Queen Isabella, it also formed a bond between our hemisphere and the nation of Spain. Mr. Speaker, let us make that bond even stronger by honoring the woman who made it all possible.

FOREIGNERS RUSH TO ARRANGE STAKES IN AMERICAN FISHERIES TO PROTECT SUPPLY

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. AuCOIN. Mr. Speaker, an article appeared recently in the Wall Street Journal which describes the rash of foreign investment which has been taking place in the U.S. commercial fishing industry since the 200-mile law became imminent.

This story illustrates the very kinds of activities which I have been warning my colleagues about for the past few months. I think the story speaks for itself; therefore, I would like to insert the full text of this article by Jerry Landauer in the RECORD, at this time:

FOREIGNERS RUSH TO ARRANGE LARGE STAKES IN AMERICAN FISHERIES TO PROTECT SUPPLY

(By Jerry Landauer)

WASHINGTON.—Foreign governments that depend on fish to feed their people are vaulting into the new U.SE. "fisheries conservation zone" by quietly placing heavy investments in the American fishing industry.

In a few cases, the foreign effort to keep control of fishing grounds theoretically denied to them by Congress approaches panic buying. And even as the Carter administration's tough stance against illegal Soviet fishing off New England dominates public attention, such countries as Korea and Japan are moving nimbly to tie up the catch that Congress thought it was reserving for Americans.

In enacting the law reserving priority rights to Americans within 200 miles from shore, Congress apparently didn't anticipate that a company wholly owned or controlled by foreign interests could meet easily the legal requirements for hoisting the American flag on vessels it owns and fish at will within the 200-mile zone. The one basic requirement is that the ship must be built in the U.S.; most other requirements can be met by reshuffling the corporate board, and the extent of foreign ownership isn't relevant.

According to government calculations, foreigners own at least 10% of nearly 60 American concerns in the fish business, and the number is growing fast. Last year, for example, just as Congress was preparing to enact the 200-mile law, a Soviet government agency named Sovrybflot organized a joint venture with Cold Storage Co. of Bellingham, Wash., which describes itself as the largest fish storage concern on the West Coast.

FRESH INVESTMENTS SOUGHT

Japanese businessmen, already holding investments ranging from $100,000 to $12 million in 20 or so American concerns, including majority ownership in Whitney-Fidalgo Seafoods Co. in Seattle, are scouting intensively for fresh investment opportunities from Alaska to Alabama. Koreans, having lost nearly all their fishing grounds off Soviet coasts, are busily putting out feelers to shipowners in Alaska and Washington State.

Russell Steiner, a shipbuilder in Bayou la Batre, Ala., recalls one recent Japanese visitor, Naoki Yoshino, president of Nichiro Pacific Ltd. Mr. Yoshino spoke about the possibility of letting contracts to build as many as 50 fishing vessels, Mr. Steiner says, and Mr. Yoshino's associates opened discussions with owners of nearby processing plants. "We have Japanese, Korean and other foreign folks looking around here all the time, Mr. Steiner says.

Much of the foreign activity is clearly intended to stake claims to needed food supplies within the U.S. 200-mile zone, which took effect March 1. It is also stirring fresh protectionist sentiment in Congress. Some 40 representatives have already signed on as sponsors of legislation by Rep. Les AuCoin (D., Ore.) to regulate foreign investment in the fishing industry, and hearings are planned in July.

In theory, all fish found in designated fisheries within the conservation zone are reserved for Americans, up to a "total allowable catch" for each species. Foreign-flag vessels can fish, under quota allocated by the State Department, only if Americans don't plan to bring in the allowable catch.

So, instead of lining up for any leftovers, foreign concerns seek to qualify as Americans enjoying priority rights. "Whoever buys the ships first gets the fish," one government official explains.

A more controversial technique to grab the fish is to sign delivery contracts with American fishermen. Korea Marine Development Corp., for example, recently asked Oral Burch, a shipowner in Alaska, to sign up 30 shrimp boats for catching pollock and delivering the raw fish to a Korean "factory ship" in the 200-mile conservation zone; the 25,000-ton factory ship that the Korean concern intends to deploy is big enough to accommodate 500 women laborers who would clean and process the fish for wages of 30 cents an hour.

AVOIDS U.S. SUPERVISION

According to the Korean plan, the big ship would remain on station in the Gulf of Alaska beyond the three-mile U.S. territorial limit—just far enough from shore to avoid customs inspectors, minimum wage laws or unwelcome visitors from the Labor Department's Occupational Health and Safety Administration.

James Talbot, president of the fish storage company in Bellingham, Wash., has discussed similar plans with his Soviet coventurers. In his case, a Soviet "mother ship" offshore would buy and process hake, a species that American fishermen generally haven't harvested because there isn't much of a market at home, according to Mr. Talbot.

The State Department doesn't find any legal fault with these arrangements. The department's Office of Fisheries Affairs has ruled that fish caught by Americans and sold to the Korean factory ship for processing wouldn't be counted against Korea's 35,000-ton quota for pollock but against the priority American quota.

But New England Fish Co. claims the Korean plan would "circumvent" the 200-mile law, invite the very overfishing that the conservation zone is supposed to prevent, stunt development of the U.S. industry on shore and imperil the company's long-standing plan to expand its processing plant on Kodiak Island in Alaska.

Edward W. Furia, a company consultant,

says the U.S. government seems bent on missing an opportunity to seize control of food resources that could exceed the total American wheat crop. He complains: "the Koreans want to come into the conservation zone, buy fish for five or seven cents a pound, take them home and sell processed seafood back to the U.S. for 50 cents a pound. If Americans caught and processed the fish, as the law intended, we'd end up exporting seafood ourselves and in time we could reverse our $1.3 billion seafood balance-of-payments deficit."

CONGRESSMAN JOHN ANDERSON ANALYZES PUBLIC CAMPAIGN FINANCING

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. DRINAN. Mr. Speaker, Congressman JOHN ANDERSON, the Chairman of the House Republican Conference, is one of the most articulate and effective Members of the House. As a strong supporter of public financing of congressional campaigns, Congressman ANDERSON has helped to increase the likelihood that a system of public financing will be in place for the 1978 elections.

In the April 1977 issue of TRIAL, Congressman ANDERSON discusses the issue of public financing in depth. He stresses the importance of reducing the influence of wealth on the electoral process as a prime justification for public financing of congressional campaigns. Congressman ANDERSON refutes the contention that public financing serves to entrench incumbents, but he does argue for increased campaign spending ceilings in order to give challengers a fair shot at elective office. I concur with Congressman ANDERSON's views on this important subject and commend his incisive analysis to my colleagues.

CAMPAIGN FINANCE LAW BALANCES MONEY'S INFLUENCE

(By U.S. Representative John B. Anderson)

The Federal campaign finance reform act passed its first test last year with remarkable success, allowing candidates to take their cases to the people without having to rely on large campaign contributors. Its success was even more remarkable in light of the alterations and delays caused by the Supreme Court decision in January which, forced a legislative restructuring of the Federal Election Commission (FEC) and eliminated the congressional spending ceiling of the 1974 election law.

But the court upheld the $1,000 contribution ceilings for presidential and congressional races, the public financing provision of presidential primary and general election campaigns, and spending ceilings for those races using federal financing.

When the 95th Congress convenes next year the federal election law is bound to undergo further scrutiny and debate based on our experiences in the 1976 campaign. But my guess is that the real debate will not center on the issue of regulation vs. deregulation of the federal election process. That debate has already been played out before the Supreme Court and the results confirmed by Congress when it subsequently voted to retain the FEC along with the spending and contribution ceiling and public financing for presidential races. An attempt to abolish the FEC was rapidly defeated in the House Administration Committee and no attempt was made to breathe new life into it when the 1976 amendments reached the House and Senate floors.

The new Congress is not likely to waver in its support for an independent campaign watchdog or those provisions barring massive invasions of money into campaigns from wealthy contributors. While the campaign finance reform law should not be viewed as a panacea for preventing future Watergates, it is generally viewed by the public and Congress as a necessary antidote to the inordinate influence of big money on the electoral process and candidates culminating in the 1972 elections.

As a Republican I'm naturally disappointed by the outcome of the 1976 presidential election. But the rise from relative obscurity to the presidency of Jimmy Carter at least shattered the myth that the new election law is somehow an incumbent protection act. The same can be said for Ronald Reagan's near capture of the Republican nomination with the help of federal matching payments in the primaries. The primary subsidies enabled both former governors and other aspirants to take their cases to the people without becoming indebted to large contributors.

And the decision of both presidential nominees to opt for full federal funding in the general election put that race on an even financial keel, thus guaranteeing that neither candidate could buy the election by outspending the other, or be bought in the process by depending on others for substantial monetary support. The federal funding option also freed both candidates from the distracting and demeaning chore of grubbing for survival. At the same time, it enabled them to assist other candidates of their party in their own fund raising efforts.

And while it is popular to say this was a non-issue campaign (which I would dispute) the fact remains that the removal of financial worry from the race allowed more potential time for a discussion of the issues. It might be asked, for example, whether both candidates would have so willingly agreed to the television debates—with all the necessary preparation time—if they hadn't been certain from the outset where the next dollar was coming from.

I don't think the campaign law was in any way responsible for the low turnout at the polls (53.3 percent of eligible voters compared to 55.4 percent in 1972). Voter participation has been steadily declining since 1960 when it was 60.1 percent. And this year's turnout was considerably higher than many predictions of 50 percent or less. It might be argued that full federal funding of the presidential general election campaign, combined with the low spending ceiling, inhibited people from becoming involved in campaigns and stifled much of the usual local campaign hoopla of buttons, bumper stickers, and campaign literature which the candidate could not afford.

There is some validity to this complaint and it should be dealt with in considering amendments to the law, but I don't think these factors should be overrated in their ability to generate increased enthusiasm, interest, and voter turnout. A New York Times/CBS News survey conducted just after the election reveals that "the relatively low turnout in the presidential election appears to reflect demographic factors as well as a sense of powerlessness among the less privileged and the young." Nowhere did it turn up a lack of awareness or interest due to fewer buttons or bumper stickers.

The impact of the federal election law on congressional races is difficult to determine at this time since all the financial data is not yet in. While the fact that 95 percent of House incumbents were reelected might support the argument that the law is somehow an incumbent protection act, the upset of nine Senate incumbents—the most since 1958—would tend to prove the opposite The survival rate for incumbents running for reelection has traditionally been around 90 percent. The figure of 13 House incumbents defeated this year, for instance, is nearly identical to the 12 House incumbents turned out of office in 1972, prior to the present law.

It should be kept in mind that the Supreme Court invalidated the spending ceiling for congressional races under the 1974 law, thus leaving only the contribution ceiling and the spending and contribution disclosure requirements. It is possible that the contribution ceiling made it difficult for challengers to raise sufficient funds to overcome the natural advantage of incumbents, who traditionally raise more money from both individuals and special interest groups.

SPECIAL INTEREST MONEY MOVES IN

It is already apparent that special interest group money is moving in, through multicandidate committees, to fill the vacuum left by the elimination of large individual contributions. Under the present law, individuals may contribute up to $5,000 per election to a multi-candidate or political action committee, and the committees in turn may give up to $5,000 per election to a candidate. The number of interest group committees registered with the FEC as of Sept. 1 was 1,041, more than twice the number in operation during the 1974 elections. As of Oct. 1, interest group contributions in 1976 congressional races totaled nearly $15 million. Of this amount, approximately $7.5 million came from committees as associated with business, professional, or agricultural interests, while labor groups contributed some $5.5 million to congressional candidates. Common Cause estimates that the final figure for interest group contributions to 1976 congressional races will total $20 million, compared with $12.5 million in 1974 congressional campaigns. If projected overall spending on congressional races approaches $100 million this year, up from $88 million in 1974, then interest group giving would account for 20 percent of the total this year compared with 14 percent in 1974.

But the real impact of interest group money is considerably higher than those percentages would indicate because the funds are not equitably distributed among all candidates. Incumbents have traditionally attracted three times more money from interest groups than non-incumbents. And interest groups tends to concentrate their money on the most closely contested races. In 1974, for example, labor group money accounted, on the average, for 43 percent of the total contributions received by the 10 House candidates most favored by labor (contributions of $32,000 to $66,000). And business and professional money accounted for a 25 percent average portion of the total contributions received by their favored candidates (contributions of about $30,000 to $40,000).

This year, all but two of the 20 House candidates receiving the most money from labor groups won, while 15 of the top 20 recipients of business, professional, and agricultural group contributions won. In the Senate, nine of the 15 candidates receiving the most support from labor won, compared with six of the 15 top business recipients.

Despite the $5,000 limitation on multicandidate committee contributions to individual candidates in each race, such contributions seem to be growing larger and more influential. The lower individual contribution limit of $1,000 to candidates may be turning more wealthy contributors to the

multi-candidate committees. And the ban on any private contributions to the federally-funded presidential general election campaigns has enabled such committees to channel all their money into congressional races.

While interest group contributions and efforts may have made the difference in some races and the present election law may have advanced that role, it should also be noted that the new law at least moved in the direction of putting corporate political action committees on a more equal footing with those of unions.

But a far greater factor than interest groups in the reelection of 95 percent of the House incumbents was the mere fact of incumbency itself and all it entails. Shortly after the large class of freshman Democrats came to the House in 1975, the House Administration Committee moved swiftly to increase their allowances for district travel, district offices, and newsletters. The new class put these perquisites and others to maximum use, flooding their districts with mass mailings, visiting their districts every weekend, and servicing their constituents from vans purchased at public expense as "mobile district offices."

According to a *Congressional Quarterly* appraisal, "the 75 freshman Democrats who kept their seats used constituent service to virtual perfection, many obscuring moderate to liberal voting records with a fanatic attention to the problems of the voters back home." CQ goes on to credit them with teaching the Republicans "a lesson in the power of incumbency" by using "the perquisites of office with consummate skill to build political strength and resist close identification with the rest of Congress and the federal bureaucracy."

Columnist David Broder believes, with considerable reason that Republican congressmen are becoming an endangered species. "Given the power of incumbency for the modern representative—with his generous staff budget, travel allowances, and public relations opportunities—these new Democratic majorities are likely to remain intact, barring a major political upheaval," he says.

It is doubtful that the new Congress will reduce or refrain from using its perquisites out of a sense of fairness to potential challengers. Constituent service is, after all, a legitimate function of a congressman, and increasing constituent demands on Congress have necessitated larger allowances to deal with them. Moreover, if, as the Times/CBS survey indicates, a "sense of powerlessness", and feeling that "public officials don't care" are the major factors in nonvoting, then such efforts to maintain closer contact with constituents and assist them in their problems should be encouraged to restore faith in government by demonstrating that it can work for them.

Nevertheless, one step which could be taken to slightly reduce the incumbents' advantage would be to bar congressional mailings within 60 days of an election, as opposed to the present 30-day moratorium.

Consideration also should be given to reducing multi-candidate committee contributions from $5,000 to $2,500 for congressional races while at the same time moving to a system of federal matching payments for congressional candidates in general election campaigns. Under the provisions of bills which I have previously introduced, candidates would have to raise a threshold amount of $5,000 in contributions of $100 or less to become eligible for federal matching funds. After that, the federal government would match the first $100 of all contributions up to a certain level using money from the income tax checkoff fund.

RAISE CEILINGS

While Congress could set an overall spending ceiling as a condition for granting matching payments, there is an unfortunate tendency in Congress to set this figure so low that challengers are disadvantaged. As opposed to the previous spending ceiling of $70,000 for House races (plus expenses), I would favor an overall spending ceiling of $200,000 or no overall spending ceiling, but with a subceiling of $50,000 in federal matching payments for a like sum raised on the first $100 or less on each private contribution. Then no one could charge that the spending ceiling tied to the matching payment system is another form of incumbent protection.

I also think it's important to restore ceilings on the amounts individual candidates may contribute to their own campaigns—to avoid the specter of millionaires buying their way into office. According to the Supreme Court decision, such a limitation could only be imposed as a condition for accepting federal matching payments. I would favor the previous levels of $25,000 for House and $35,000 for Senate races, just as presidential candidates are now limited to contributing $50,000 of their own money in primaries if they accept federal matching funds.

Some changes must also be made in the presidential financing provisions. It's generally agreed that this year's $21.8 million spending ceiling in the general election was too low. Instead of just increasing the federal contribution, I would favor supplementing the current ceiling with a matching formula like the one now in effect for presidential primaries in order to reinvolve the public in the campaign. I also would favor raising from $1,000 to $5,000 the amount which state, county, and local party organizations can contribute on behalf of the national ticket.

While the current campaign law is both sound and successful in its fundamental provisions, there is obviously room for improvement based on this year's experiences under it. But as we move to consider further reforms, we must be careful to keep four basic objectives in mind: limiting the influence of wealthy and special interest contributors, giving challengers a fair shot at elective office, increasing public participation in the election process, and strengthening the role of political parties. Any "reforms" which appear to move in opposite directions should be viewed with great suspicion and apprehension.

BALDUS REINTRODUCES SMALL BUSINESS DEVELOPMENT CENTER BILL

HON. ALVIN BALDUS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. BALDUS. Mr. Speaker, at the request of many of my colleagues, I am reintroducing H.R. 5754, the Small Business Development Center Act, with 27 cosponsors. The response to the bill has been overwhelming since I first introduced it in the House March 30.

The bill provides for Small Business Development Centers at cooperating universities around the country. These would serve small business much as the Agriculture Extension serves agriculture. The practical effect of the centers would be increased managerial assistance for small business, and development of a bank of research nationwide, on their problems.

H.R. 5754 is identical to S. 972, in the Senate, introduced by my colleague in the Senate GAYLORD NELSON, also from Wisconsin. I wish to credit the Senator's early and guiding influence behind the concept of Small Business Development Centers, and would note that Chairman NELSON'S Small Business Committee has already begun hearings on his bill in the Senate. My Energy, Environment, Safety and Research Subcommittee of the Small Business Committee will be holding hearings on the House bill in the near future.

For an extended discussion of the merits of this excellent bill, I refer my colleagues to the March 29 RECORD, H2705.

One sign of the success of this bill in the short time it has been introduced in the House is the cooperation my colleagues have provided to aid in its growth. Suggestions for language expressly guaranteeing provision of the services to women and minorities, and extending the services of the bill to our territorial possessions, have been offered, and will be considered in hearings on the bill.

There is no question small business needs the assistance and research H.R. 5754 would provide, and I urge the continued support of my colleagues.

WILSON STATEMENT ON ENERGY PROGRAM

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker: It was with a great deal of interest that I listened to President Carter's two messages on energy. I represent the one area where there are more automobiles hungry for gasoline than in any other portion of the country—Los Angeles.

Los Angeles is this country's ultimate expression of the automobile. Just to impress upon my colleagues the massive amount of cars that exist, imagine that if the freeways were human arteries and all the autos were cholesterol, Los Angeles would have had a massive heart attack a long time ago. Unlike other major U.S. cities, Los Angeles grew out not up. People spend, on the average, anywhere from 20 minutes to an hour commuting to and from work. When Los Angeles began expanding, the automobile industry did as well and gasoline at that time was a cheap commodity. It is clearly reflected now in the mobile lifestyle of southern California. Just look at the topography—sprawling and massive with public transportation a secondary consideration.

The President, in his address, clearly stated that hardships must be equally borne. Sacrifices would have to be made across the board and our headlong rush to energy doomsday halted.

President Carter, in his unprecedented move to bring about an acute awareness and decisive action on the part of all of us, has done what two previous administrations did not—devise a comprehensive program for energy conservation. In the end, however, no one person can do

the job. While the President has now placed the future of his energy program in the hands of Congress, it is up to the American public, by way of their elected representatives, to resolve this question without delay.

Like most people in this country, the residents of the 31st District are not rich. An increase in the cost of gasoline means their personal budgets will have to be tightened even more than they are right now. Those budgets are contingent upon steady employment and there is nothing more important to a healthy commerce than the energy needed to operate factories and run our transportation systems. What President Carter is ultimately asking is for us to look ahead to a time when there maybe no alternatives and there is no energy.

The President may have overdramatized somewhat by calling the energy crisis "the moral equivalent of war," but the problem is very real and it could result in a major national disaster. After this past winter, I do not think many in this country—including those who live in southern California—would dispute that. However, it is going to be difficult to tell people who work hard for their dollars that energy costs are going to increase—that the oil companies are not withholding natural gas and oil. That is why I was particularly pleased to see the President recommend the creation of an information system of petroleum production.

After the Arab oil embargo and long lines at the gas station, most people believed the oil companies withheld energy resources to allow the price and oil company profits to go up. Establishment of an independent analysis of energy reserves will bring a measure of credibility that the majority of Americans have felt has been lacking. It will provide a much-needed third party perspective.

Surprisingy enough, even though Los Angeles may be the gas station capitol of the world, efforts have been underway to decrease energy consumption. Almost 63 percent of the cars in the area are small cars so, in this regard, Los Angeles residents are well ahead of the President in doing away with gas guzzlers.

What the crucial point of the entire energy question is that government can only provide the framework. The American public must actually reduce energy consumption. The American people must have confidence that the plan is going to work. Without that assurance, we would be indugling in futility that leaves no incentive for people to change their way of living. If people are going to have to pay more for what they now consider to be a necessity—energy—then they must have assurances that the program will be fair as well.

I personally believe we can accomplish energy conservation if the public can be sure that the plan will work and that it is fair. This morning every special interest group in the country is demanding some type of compromise. "The program is essentially good, but—" Which, put simply means it is fine for everyone else to sacrifice, but not for me. I would like to impress upon my colleagues that the most important interest is not that of a particular group, but whether the country—our whole economy can survive this challenge.

We may not have any choice except to pass this legislation, but listening to the complaints of the coal industry, the auto industry, or the utilities will not solve anything. The crucial aspect of reducing energy consumption belongs to everyone. In all honesty, it has become a question of priorities.

OKTOC COMMUNITY CLUB SYMBOL OF RURAL PROGRESS IN MISSISSIPPI

HON. DAVID R. BOWEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. BOWEN. Mr. Speaker, while I was working in the Second Congressional District this past week, the Jackson Clarion Ledger published a fine article concerning the Oktoc Community Club, located in my district in Oktibbeha County.

The spirit and dedication of the members of the Oktoc Club are but an example of the fine people living in our rural communities throughout the State and Nation, and their hard work and desire to maintain their economic and social well-being. Those of us here in the Congress who work for rural development programs are pleased to see communities such as Oktoc successfully utilizing many of these programs.

As their Representative in the U.S. Congress, I want to salute the Oktoc Community Club on their 50th anniversary. Not only is Oktoc the oldest such community club in the State, but they are one of the most successful in development of their resources. The article in the April 10 Clarion Ledger tells the story:

[From the Clarion-Ledger Jackson Daily News, April 10, 1977]

OKTOC COMMUNITY CLUB OLDEST OF KIND IN STATE

About 125 people gathered at the Oktoc Community Clubhouse recently for a big birthday party, to feast, sing songs and relive highlights of years gone by.

This was not a party for an individual, but for a community. Oktoc celebrated 50 years as an organized community club during its regular 601st meeting. In these 50 years, the club has never missed a scheduled meeting.

The Oktoc Community Club, first club organized in Oktibbeha County, is now the oldest active community club in the state. After discussing forming a community club on March 17, 1927, the Oktoc Garden Club called a special meeting of all community members on March 25. The club was organized and the first group of officers elected.

"The key to the success and long life of this club is its membership," said Fred Blocker, a program participant. "Sure, we've had problems and different opinions through the years, but the community club has held us together."

According to Dan Glover, county agent with the Mississippi Cooperative Extension Service, the seeds were sown for organizing a community club by the late County Agent R. M. Lancaster.

"J. M. Deane, an Extension specialist, also played a leading role in getting the club organized," Glover said.

The primary purpose for the community club is family recreation and education, according to Blocker. "In those early days, Extension was new and had much information to disperse to farmers and homemakers," he said. "They found that community clubs offered a means of more effectively serving the people of the county. The club has been a strong supporter of the Extension Service throughout the years."

A typical meeting in the early days consisted of a covered dish group meal, followed by group singing, a news session, separate programs for the men and women, with participation by the young people in reciting poems or performing skits.

"The first few meetings were held in private homes," Blocker continued. "In a few months we started meeting in the one-room schoolhouse and used this facility for eight years. By 1935 the club secured the Presbyterian church and attached the schoolroom to the church for a kitchen; the facilities are still adequate today."

Blocker was fast to point out that the club has had a major influence on the lives of community leaders.

"The Oktoc Community Club has been a training ground for many county and state leaders," he said.

"The club helped get better roads and better telephone service. Members worked hard to get electricity, which came to the community in 1938," he continued. "In fact, according to the minutes, in the early 1930's, every communty family had a car, musical instruments in the home, electricity and mail delivery to the front yard."

Warren Oakley described the club's highlights during the 1940's and early 1950's.

The improved farming practices reported by the club one year included 1,500 acres of pasture clipped, 12½ tons of slag spread and 100 per cent of barnyard manure put back on the land.

"In 1945, a new feature, called Monthly Newscast, was added," Oakley added. "This was a report to keep members up-to-date on local boys in service—where they were stationed, their addresses, etc. All the boys from the community that served during the war returned to us safetly."

Oakley said the Farm Bureau played an important part in the community during those years. This organization helped with farm-to-market roads, telephone service and health programs.

"In those days, the community was served by a private telephone company with old crank telephones. About 15 families would be on one party line," Oakley added.

The birthday celebration was spiced with dramatized calls on two crank telephones still mounted in the clubhouse. In fact, Warren Oakley demonstrated his secret method of communicating with friend, Fred Blocker, to keep other people off the party line.

In the early 1950's, still another facet was added—the Moon Beamers. "We had so many children that we couldn't hear what was going on in the programs, so the Moon Beamers were organized to entertain the children in the kitchen while the adults conducted the program and business session," Oakley explained.

R. P. Hartness Jr. said one of the community's most popular fund-raising projects is the annual country store, sponsored by the Oktoc Garden Club.

"Proceeds from the country store have helped support many worthwhile projects," Hartness continued. 'We have helped with the hospital equipment fund, county library and various departments at Starkville Academy."

From a young person's viewpoint, William Oakley said many changes have occurred in the club and the community over the years.

But," he added, "some things don't change. The kitchen is still full of kids, and the people of Oktoc are still warm, friendly and loving."

Another young farmer, Everett Kennard, said the future of Oktoc is bright. "We are primarily known as an agricultural community, and Oktoc will continue to occupy a top place among such communities. We now have several generations on the same farms, and this community seems to be the place where people want to locate.

"As long as there is an Oktoc Community, there will be an Oktoc Community Club," he added.

MEDICAL FREEDOM OF CHOICE

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. SYMMS. Mr. Speaker, the following article, "Breaking the Drug Barrier," by Dr. Richard Spark, professor of medicine at Harvard Medical School and Beth Israel Hospital in Boston, is yet another clear indication that the United States does indeed suffer from a drug lag and that the American consumer is being denied access to many new lifesaving drugs because of the FDA's regulatory overkill. Dr. Spark states:

". . . the rigorous requirements legislated by the Kefauver-Harris act [the 1962 Amendments to the Food, Drug and Cosmetic Act] are largely responsible for the drug lag.

Dr. Spark continues:

In 1962, a single new drug could be developed for $1.2 million in the United States and around $900,000 overseas (United Kingdom, Holland, Sweden, France and Germany). By 1972, the cost of developing a new drug in the United States increased to $11.5 million while the comparable overseas figure was $7.5 million. Projections are that in 1977 the development of a single new drug in this country will cost $40 million.

Drs. William Franklin and Francis Lowell state in the New England Journal of Medicine that—

The public does not fully appreciate that stringent drug regulation for society as a whole limits therapeutic choice by the individual physician, who is better able to judge the risks and benefits for the patients. . . . The introduction of new drugs has become extremely expensive, preventing development of drugs for less common indications. Because smaller companies cannot afford to spend several million dollars for the cost of an FDA review, large companies gain a monopolistic position and can maintain high prices.

I have introduced the medical freedom of choice bill, H.R. 54 in an effort to reverse this trend. The medical freedom of choice bill repeals the effectiveness provisions of the 1962 Amendments to the Food, Drug and Cosmetic Act. I urge my colleagues to read the article that follows and to support H.R. 54 by joining the 87 Members who have already cosponsored the bill.

The article follows:

[From the New York Times Magazine, Mar. 20, 1977]

BREAKING THE DRUG BARRIER

(By Richard Spark)

Unfortunately, no drug is completely "safe." For example, there is a medication that, when administered in low doses, may cause indigestion and bleeding disorders, and, in higher doses, may result in marked alterations in blood chemistry, stupor, seizures and, on occasion, death. One would hardly expect a medication with such inherent toxicity to be approved for use by laboratory mice, let alone humans.

Yet the use of this drug—aspirin—is sanctioned by the Food and Drug Administration because it lowers fever and relieves pain more consistently than it produces harmful side effects. It remains on the market because its benefits outweigh its risks.

The benefit-vs.-risk formula has been effectively used to evaluate all drugs. In recent years, however, because of pressure from consumer groups and Congress, disproportionately more attention has been given to the risk side of this equation. As a result, the F.D.A. has been both cautious and sluggish in approving new medications for use in this country.

Regrettably, this slowdown has occurred during an era of major advances in pharmacology. Over the past 15 years, many important new drugs have been developed that represent advances in controlling life-threatening cardiac arrhythmias (irregularities of the heart beat), hypertension, asthma, ulcers, edema and seizure disorders. These medications have been widely used throughout the world but have been unavailable to American patients. Eventually, many of these drugs have been or will be sanctioned for use in the United States. But "eventually" usually means a delay of between 2 to 10 years. This bureaucratic embargo on new drugs has been referred to as the "drug lag" and its significance is viewed with variable concern by different members of the health-care community.

One's perspective of the problem depends upon whether one is predisposed to consider new drugs as primarily harmful or beneficial. Members of consumer groups and of Congress, who generally enjoy the luxury of good health, have focused much of their attention on the harmful effects of medications and see in the drug lag the workings of an admirable "better safe than sorry" policy.

On the other hand, patients who must get along with older medications that are either less effective or more toxic than new drugs that are awaiting approval are likely to disagree. Pharmaceutical company officials who in the past have developed antibiotics, antihypertensives, and other "miracle drugs" are also embittered over the F.D.A.'s predilection for procrastination. They note that in the last 15 years the average time from drug development to marketing has quadrupled, and they are fond of arguing that, with the current climate of restrictive regulations, were aspirin a new drug today it is likely that even it would be a long time in being approved by the F.D.A.

Just why does the drug lag exist? It can be traced back to public apprehensions resulting from a number of drug disasters in the late 1950's and early 1960's, peaking with the thalidomide catastrophe in 1962.

Originally marketed in Europe, thalidomide is a fairly effective sleeping pill, which would probably have been routinely approved by the F.D.A. under earlier procedures. But, while approval was pending before the F.D.A., evidence became public that pregnant women who had been taking the pill in Europe were giving birth to deformed babies. It happened that a bill to require extensive and prolonged testing of new drugs was being considered in Congress at the same time. Public reaction to thalidomide helped propel the legislation, the Kefauver-Harris bill, through Congress.

The Kefauver-Harris requirements have resulted in a staggering increase in the paperwork necessary to document a new drug's safety and effectiveness. Today the F.D.A. must each year review an average of 120,000 pages of complex data for each of around 100 new drug applications. For the 70 physicians and 350 ancillary personnel assigned to new drug applications at the F.D.A., this is a herculean task.

One recent example of what is required for new-drug approval is the application by Abbott Laboratories last year for permission to market Abbokinase, an agent that dissolves blood clots and can be used in the treatment of pulmonary embolism. No less than 428 volumes of research results, totaling 664,000 typewritten pages, were part of the company's approval application. The time-consuming barriers of testing that are reflected in such mountains of paperwork stand in stark contrast to both earlier U.S. experience and current practices abroad. In 1948, for instance, the F.D.A. approved a cough medicine, Benylin expectorant, upon submission of only 73 pages of data. And numerous new drugs that face years before clearance in the U.S. have long since been approved and are on the market in Europe or Japan today.

Moreover, there is little motivation in the F.D.A. to speed any application along for approval, for F.D.A. employees know that might get them in trouble with Congress. This caution was described by former F.D.A. Commissioner Alexander Schmidt when he testified before U.S. Senate hearings on health in September 1974. "In all of our [F.D.A.] history," he said, "we are unable to find one instance where a Congressional hearing investigated the failure of the F.D.A. to approve a new drug. The occasions on which hearings have been held to criticize approval of a new drug have been so frequent in the past 10 years that we have not even attempted to count them. At both the staff level and managerial level, the message . . . could not be clearer. Whenever a difficult or controversial issue is resolved by approval, the agency and the individuals involved will be publicly investigated. Whenever it is resloved by disapproval, no inquiry will be made. The Congressional pressure for negative action is, therefore, intense and ever increasing."

This "Congressional pressure for negative action," the brief moment of glory for not approving thalidomide, and the increasing volumes of data to be received were interpreted as a clarion call for inactivity and had a devastating effect on morale and productivity at the F.D.A.

New drug approval, which had peaked at 240 for the year prior to the Kefauver-Harris hearings, fell to an average of 60 in subsequent years; and in one six-year period, 1967–72, not a single new drug was approved in the cardiovascular area.

While the rigorous requirements legislated in the Kefauver-Harris act are largely responsible for the drug lag, a compounding basic problem has been the failure of the pharmaceutical companies and the F.D.A. to work together toward the common goal of safe and effective drugs.

Drug development is a complex process. Ordinarily, a new drug goes through several phases of testing in different species of laboratory animals to determine if it has therapeutic potential and if it has any major toxic actions. Of the several thousand new chemical entities that are developed and tested, only a handful pass this stage.

Once the new drug is considered safe and

effective for laboratory animals, the pharmaceutical company applies to the F.D.A. for permission to test the new drug in humans. This work is usually farmed out to various clinical investigators at medical centers around the country.

While the patient is taking this new medication, the clinical investigator is obligated to see him at frequent intervals to record the effects of the new drug. Does it lower blood pressure? Does it relieve his arthritis? He must also determine whether there are any deleterious side effects. Did the medication make the patient sleepy, hyperactive, impotent, give him diarrhea, or cause his hair to fall out? The investigator must also be alerted to the unexpected. Does the medication that is supposed to relieve high blood pressure also cause blood cells to hemolyze (rupture), cause an elevation in blood sugar, or damage the kidneys?

The information from these studies is forwarded to the pharmaceutical company sponsoring the drug, which collates the data and submits it to the F.D.A. for approval to market the new drug. This is where problems first develop. Frequently, the F.D.A. will review the material and feel that the studies were designed and interpreted by the drug company in such a way as to prejudice the results in its favor. A series of potentially embarrassing questions may be asked:

Was this an adequate and well controlled study? For example, it is known that most hypertensive patients have marked variability in their day-to-day blood pressure. If a hypertensive patient has a blood pressure of 160/100 on a day when he received no drug and a blood pressure of 150/90 when he received the experimental medication, is this due to the drug or his normal day-to-day blood pressure variation? Are the changes produced by the drug objective or subjective? That is, for the patient with arthritis who gets a new drug and says he feels better, can one also demonstrate that there is measurably less swelling in his joints and greater freedom of movement of his affected extremities?

Are the side effects acceptable when measured against the benefits anticipated from the new drug? A sliding set of standards is used to answer this question, standards that depend on the nature of the disease being treated. A 20 percent incidence of nausea and vomiting may be acceptable for a new drug that is designed to treat certain forms of cancer, but is it acceptable for a drug used to treat a kidney infection? The drug company may have demonstrated that its drug does not adversely alter any of the 12 blood tests that were measured in the laboratory safety screening. Do they know with certainty that a 13th, 14th, or 15th test will not be affected? Can the company be sure that this drug will not cause cancer?

Many of the questions that are asked at this time are valid. Some are merely contentious.

However, if any of the questions cannot be answered to the satisfaction of the F.D.A. or one of its advisory committees, the new drug application is likely to be returned to the pharmaceutical company for more studies. Naturally, the more money invested in research and development, the greater the ultimate cost to the patient when the drug is finally marketed.

In 1962, a single new drug could be developed for $1.2 million in the United States and around $900,000 overseas (United Kingdom, Holland, Sweden, France and Germany). By 1972, the cost of developing a new drug in the United States increased to $11.5 million while the comparable overseas figure was $7.5 million. Projections are that in 1977 the development of a single new drug in this country will cost $40 million.

When the test data finally satisfies the F.D.A. and its advisory committees, there is one final hurdle the wording of the package insert which is written by the pharmaceutical company but must be approved by the F.D.A. The package insert contains brief statements about structure, chemistry, mechanism of action, recommended dosage, toxicity, and, most important, a listing of those specific medical conditions for which the F.D.A. has granted approval for the drug to be used. This last point is a source of great medico-legal concern.

It is true that the package insert tends to be largely ignored. Dr. J. Richard Court, director of the Bureau of Drugs at the F.D.A., notes: "We insist that the drug industry spend several million dollars a year putting an insert in every package, knowing full well that at least 99 per cent of these pieces of paper end up in the waste basket."

In any case, the legal status of the package insert is ambiguous. Thus, the law states that a "new drug may not be shipped in interstate commerce intended for uses not contained in the currently approved labeling." But the same law also states that once a "new drug has been shipped in interstate commerce for its approved use . . . a physician [may] lawfully prescribe the drug for an unapproved use."

Why would a physician want to prescribe a drug for an unapproved use? Primarily because there is also an "approval lag."

Frequently, a drug that is initially marketed for one use will, at a later date, be found to have a second unrelated use for which it has not been approved. A notable example is Xylocaine, which was originally approved and marketed as a local anesthetic—it is the "novocaine" we get when we go to the dentist. Years after it was approved for this use, Xylocaine was found to be extremely effective in controlling life-threatening cardiac arrhythmias that may occur after a heart attack. But it was a full 10 years after the original reports of Xylocaine's effectiveness as an antiarrhythmic agent before it was sanctioned by the F.D.A. for this other use.

During this decade Xylocaine was freely shipped across state lines ostensibly "intended" for its approved use as a local anesthetic. However, unless one is willing to presume that epidemics of dental caries struck our hospitals' coronary care units, it is clear that Xylocaine was being heavily prescribed for an unapproved use.

The fact that there is a double standard of legal responsibility for pharmaceutical companies and physicians with respect to the package insert has been interpreted by some pharmaceutical executives as the first crack in the dike at the F.D.A. The current trend is for the drug company to seek approval for a new drug for whichever indication is likely to meet the least amount of resistance at the F.D.A. Once the new drug is approved for use for any indication and is on the market, the drug company confidently assumes that physicians will prescribe it freely for its other, unapproved indications.

Such machinations in marketing, which have left physicians in a precarious position, are the least of the problems that have been spawned by the drug lag. Fearful that any irregularity in animal toxicity studies will jeopardize their new drug applications, pharmaceutical companies have not always made a full disclosure of their data. The most recent case involved the G.D. Searle Company, which withheld data indicating that two of its products, Aldactone (a diuretic and antihypertensive) and Flagyl (a treatment for trichomoniasis), cause cancer in laboratory rodents when given in extremely high doses for a prolonged period of time.

When the consumer-oriented Health Research Group petitioned to have Flagyl removed from the market because of its demonstrated capacity to cause tumors in mice, the F.D.A. refused. While agreeing that Flagyl was, in the doses used, carcinogenic in the mouse, they challenged the Health Research Group's contention that this was prima facie evidence that it was "unsafe for human use." They pointed out that several agents that are known to cause tumors in animals, such as the antitubercular drug isoniazid and the sedative phenobarbital, do not cause cancer in humans. However, in an effort to mollify the Health Research Group and spank Searle, the F.D.A. did recommend that data on animal toxicity be more prominently featured in the package insert.

For medications that are not approved for any use, patients and physicians have found their own creative solutions to the drug lag. For example, Beclomethasone, a cortisone-like compound, marketed in England in 1972, was immediately recognized as a significant advance in the treatment of asthma, for it can be delivered directly to the lungs, thereby eliminating the deleterious side effects of hypertension, obesity, osteoporosis (thinning of the bones), intestinal bleeding and worsening of diabetes mellitus, side effects that occurred when cortisone was swallowed in tablet form and distributed throughout the body. In 1976, four years after Beclomethasone was introduced in England, it was approved in the United States. Four years is a long time to wheeze. But not for the affluent asthmatics who were able to deal with their English Connection, a cooperative London pharmacist who was willing to fill American prescriptions for Beclomethasone for patients who could then smuggle it back into this country.

Has the more demanding ritual required for new drugs in the United States protected American patients? Apparently not, for there are still a number of agents that have wended their way through the process only to be recalled at a later date because of new evidence. The most prominent examples of this are the minipill and sequential oral contraceptives, which, after approval, were found to cause breast cancer in beagles. A more recent example is the drug Triazure, which was approved for the treatment of psoriasis, only to be withdrawn one year later because it was found to cause arterial thrombosis (blood clots). The system is not fool-proof.

On the other hand, while there have been problems with some more rapidly approved drugs in England, there is no evidence to indicate that during those 15 years when drugs have lagged in this country, the British suffered quantitatively more side effects than have been observed here.

What solutions are there to the "drug lag?" The F.D.A. and the pharmaceutical industry are agreed on the need for a more efficient system to make safe and effective new drugs available to American patients. There are several suggestions as to how this may be implemented. The F.D.A. has proposed that the pharmaceutical companies consult with them at the earliest possible stages of drug development so that a mutually acceptable program of clinical testing can be designed. Presumably this would obviate the need for the F.D.A. to request "just a few more studies" after the drug company had already invested millions of dollars and years of time in programs that were exclusively of its own design.

For their part, the drug companies would like to have the F.D.A. spend less of its time and limited manpower justifying its past actions to Congress and consumer groups and devote more resources to processing new drug applications.

The proposed new liaison between the F.D.A. and the drug companies in the early

stages of drug development may prove to be fruitful. However, it is unlikely that elected officials and consumer groups will abrogate their responsibilities and declare a moratorium on questioning the F.D.A.'s actions.

It may be that the only solution to the problem is international. It should be possible for the F.D.A., England's Committee on Medicines and the comparable national agencies of other interested nations to meet and agree on a uniform set of standards for safety and effectiveness that can be applied internationally to evaluate each new drug. A pool of data could thus be gathered and made available to all participating countries and be analyzed on its merits at approximately the same time to determine whether this international documentation of safety and effectiveness justifies approval of that drug. A collaborative effort of this nature would eliminate needless repetition of research and would go a long way toward lowering the cost—in both time and money—of drug development.

There is every reason to believe that the dramatic advances in pharmacology that we have witnessed for the past 15 years will continue. A more efficient system must be devised for testing and evaluating new compounds so that they will be quickly available at a reasonable cost to American patients.

Side effects of new drugs will, it is hoped, be minimized, but they will not disappear. But then neither will disease. Taking any medication will always involve a calculated weighing of benefits and risks. The drug lag has not eliminated the risks. It has merely delayed the availability of the benefits.

EAST BAY SKILLS CENTER JOB FAIR

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. STARK. Mr. Speaker, I would like to call to the attention of my colleagues the celebration of the Eleventh Anniversary of the East Bay Skills Center of Oakland. Calif., The center which provides training for unskilled residents of the San Francisco Bay area, is holding their annual job fair on April 28, 1977, in conjunction with the anniversary celebration. The job fair encourages the participation of employers of the Bay area in the center's training efforts.

The East Bay Skills Center is a vital manpower training program that offers eduction in skills for unemployed residents of the 5 Bay area counties. The educational program encompasses 15 major occupational areas that provide job opportunities in over 40 specific types of jobs. Graduates of this program are now working successfully in businesses and industries throughout the Bay area.

I want to compliment the East Bay Skills Center for its excellence in developing skills and jobs for citizens of the Bay area, and pledge my support and encouragement for the center's job fair and future participation in our community. The East Bay Skills Center's commitment to the betterment of our State and cities is most deserving of recognition and commendation.

STATEMENT OF THE HONORABLE GERRY E. STUDDS ON A SPEECH DELIVERED ON MARCH 23, 1977, BY THE HONORABLE JOHN M. MURPHY

HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. STUDDS. Mr. Speaker, as many Members know, the chairman of the House Merchant Marine and Fisheries Committee, Congressman John M. Murphy, is advocating legislation which would require that up to 30 percent of this Nation's oil in coming years be imported on U.S.-flag merchant marine vessels and that they be manned by American crews. Mr. Murphy presented this position at the annual London Seatrade Conference before 700 of the world's maritime representatives on March 23, 1977.

The speech is an attempt to explain to our allies and others the economic and national security considerations which Mr. Murphy feels necessitate building U.S.-flag ships in the future. The chairman stresses in the speech that this cargo equity device which will be coming to the floor soon is not particularly startling or novel. He points out some of the more than 40 maritime nations who use such cargo devices in many forms and outlines some of the other practices currently in use by these nations which he feels necessitates action by the Congress to revive an aging and dwindling American-flag fleet.

Inasmuch as this legislation is controversial and many of its aspects misunderstood, I commend the speech to my colleagues so that they can become familiar with the basis for the legislation and so that they can gain perspective on some of the motives behind H.R. 1037:

ADDRESS OF HON. JOHN M. MURPHY

Thank you Mr. Chairman, ladies and gentlemen.

It is a great pleasure for me to be here in London to address such a distinguished gathering of experts and representatives from the internationcal community of world shipping. I would thank the editors and publishers of Seatrade magazine for inviting me to participate in this important conference which is of international significance.

I am especially pleased to have this opportunity to discuss such issues as cargo equity and tanker safety, which were several of the topics suggested to me by our host. These are only two of the matters of legislative initiative currently before the Merchant Marine and Fisheries Committee, which I chair, and I know that they are questions which are foremost in the minds at this point in time of international maritime business interests.

In order to give a group such as this a proper perspective from my point I feel it is necessary to briefly restate some of the history of America's merchant marine on the high seas as I see it. It is based on this perception that I plan to move our committee during the months and years ahead.

We in America are a maritime people as was—and is—our mother country, England.

And I am convinced we can be economically strong and independent ashore only as long as we are strong and independent on the oceans of the world.

I might say we took our cue over 200 years ago from the indomitable British, for on the sea—as on the land—Great Britain was indeed awesome having the mightiest Army and Navy on the face of the Earth.

Thus our "Yankee" forefathers turned to the sea—peacefully—for food and foreign trade. We started with the West Indies and then with England. And shortly after our brief encounter with our mother country 200 years ago—who by the way considered our fledging merchant marine a "flea" in its mane—the United States Merchant Marine, the flea, became an eagle.

And we maintained our place on the high seas into the 1900's.

But twice before the 20th century even reached its mid-point, war ravaged the Earth and, twice, America learned the life and death value of a strong merchant marine fleet.

However, we didn't learn our lessons well following the world wars, and with no pressing need for new ships, U.S. shipbuilding declined.

And we lost our competitive edge.

Other nations rebuilt modern fleets that took over more and more of the world's trade—including America's. And so, during the middle of the 20th century we Americans helplessly watched the demise of our own merchant marine.

We finally got ourselves into gear and resolved not to stand by and watch a deepening tragedy. From our point of view we chose not to betray our heritage or surrender our right to independence on the seas.

The U.S. maritime industry—with faltering aid from the government—made an attempt to revive itself. And there were notable achievements by American ship builders:

They regained some of their historic excellence in shipbuilding techniques and technology;

They developed the world's first nuclear powered merchantman;

They developed new techniques to prepare for rising costs and declining supplies of fossil fuel;

They designed an icebreaking tanker to cut a shorter route to Arctic oil;

They revolutionized and streamlined cargo handling and shipping;

They pioneered expeditious and safe containerized shipments; and

They developed ingenious methods to service underdeveloped ports of the world.

But with all of these accomplishments America today finds itself with an almost non-existent merchant marine *fleet*.

We—in the main—depend on foreign flags for imports and exports.

We depend on an illusory concept of "effective U.S. control" or a merchant marine fleet in times of emergency. This was an illusion which President William Torbert of Liberia effectively shattered when he issued an executive order prohibiting any vessels flying the Liberian-flag from participating in the carriage of arms to the middle east, *regardless of ownership*.

And if we remain on our present course, our position will only deteriorate. More and more Americans and U.S. officials are reflecting on the warning of Dwight David Eisenhower when, in our dark days of national peril he cautioned future generations of my country, "never again should we be caught relying on foreign shipping."

Having watched his country build 6,000 merchant marine vessels in the middle of a war, 700 of which plunged to ocean graves, General Eisenhower said, "We were caught flat-footed in both World Wars because we

relied too much on foreign owned shipping. I consider the merchant marine to be our fourth arm of defense and vital to the stability and expansion of our foreign trade."

(That 700 ships by the way compares to our total fleet today of 577 vessels.)

This is some of the historical background and these are some of the developments that the Merchant Marine Committee of the House of Representatives takes into the last third of the 1970's. There is a strong feeling that the time has come when we must begin to restore the American merchant marine flag fleet in future years to the illustrious place it had in our past.

One of the quickest ways to achieve this is to give our fleet the lifeblood of a strong, viable fleet—cargo. And cargo equity has been the first order of business in these beginning weeks of the 95th Congress.

As many of you may know, this is the third time that the United States Congress has addressed itself to a cargo equity principle. Our first legislative efforts was in the 92nd Congress and it ultimately failed in the Senate by a narrow margin. We again considered this matter in the 93rd Congress. That legislation passed both the House and Senate by comfortable margins and the conference report was also approved by both chambers. Unfortunately, the President of the United States pocket-vetoed the bill.

We did not bring up the matter of cargo equity in the 94th Congress because of lack of sufficient support within the administration. The President's pocket veto at the end of the 93rd Congress was based ostensibly on his belief that this measure would create serious inflationary pressures by increasing the cost of oil and that it would stimulate inflation in the ship construction industry. In addition, he felt that it would serve as a bad precedent for other nations, that it would violate our treaties of friendship and convenience, and would invite international retaliation.

I have always felt that President Ford received bad advice in this regard.

Almost the first order of business of the committee after I became chairman this past January was to commence action on a new cargo equity bill. I am very aware of the opposition of the other maritime trading nations of the world to our unilateral cargo equity efforts. I know that the international community has been opposed to our plans in this regard from the very beginning; and that the other maritime trading nations are as adamant in their opposition to our current efforts as they have ever been.

In light of this international opposition, why then has the United States Congress for a third time, embarked upon this legislative course? I believe I can give some explanation for our activity so that you might better understand what motivates us and why we have concluded that some sort of cargo equity device is an absolute necessity for us at this time.

Consider if you will that after World War II, the United States had over 4,800 United States-flag merchant vessels and that today this number has dwindled to 577. Compare that paltry 577, which must serve the needs of the largest trading nation in the world, mind you, to Liberia's 2,600, to Russia's 2,400, and to Japan's 2,000 merchant vessels. Today, the United States commercial fleet is tenth in size, and we are eighth in merchant ship construction.

I must say to you that from our standpoint, this is a tragic and unacceptable state of affairs.

Today, while Soviet-flag ships carry 50 percent of Russia's foreign trade, and Japanese ships carry 39 percent of Japan's foreign trade, U.S.-flag vessels carry less than six percent of our foreign trade, and in dry bulk commodities, it drops to less than two percent.

This decline, of course, has a corresponding impact on the manning of U.S.-flag vessels, and the number of seagoing jobs available to the maritime industry. For example, as of September 1, 1967, there were more than 15,000 licensed officers and some 48,000 unlicensed men—for a total seagoing employment of more than 63,000. In contrast, as of February 1, 1977, there were only 5,994 licensed officers and 14,620 unlicensed men—for a total of 20,614 jobs. By any standards, this is a painful decline from the 1967 figures. It is no great profundity to conclude that something is wrong somewhere in the United States Maritime scheme of things.

Nor do I see any improvement for the U.S.-flag fleet in the immediate future. United States shipbuilding has been tapering off alarmingly in the last several years, *and shipbuilding is the cradle of a potent merchant fleet.* While it is quite true that we still have substantial numbers of vessels under construction in United States shipyards, at the present time very few new contracts are going into the order books of the United States yards so that we are faced with the prospect only two years from now of no building at all in several yards and sharply curtailed building in most of the others. For example, subsidized construction in 1978 is projected for only seven ships, including three liquid natural gas carriers, one barge carrier (LASH), one container ship, and two breakbulk container ships.

I submit that this is meager vessel construction mix for one of the alleged major maritime nations of the world.

I realize that we have all been in the throes of a worldwide maritime recession. *Nevertheless in my view and the view of Congress this Maritime decline must not be allowed to persist.*

To paraphrase the great World War II leader of our host nation, I did not become chairman of the House Merchant Marine and Fisheries Committee to preside over the dissolution of the U.S.-flag merchant fleet.

The facts and figures I have just recited are stark evidence of the tragic decline of U.S.-flag merchant fleet capability. The question for us in the United States Congress is how to arrest this decline and reverse the trend so that we are once again on the upswing with respect to U.S.-flag shipbuilding and United States vessel operation.

In analyzing this difficult situation and examining various alternatives, one always comes back to the one factor I mentioned at the beginning—cargo. This is the element which is the key to the reversal of U.S.-flag merchant fleet fortunes. The United States is one of the major trading nations in the world and we certainly generate sufficient export and import cargo.

200 billion dollars worth to be exact.

Unfortunately, U.S.-flag vessels carry only a small potion of this cargo so that our own participation in the trades is not sufficient to generate United States shipbuilding or maintain an adequate level of United States operation with respect to some segments of our fleet.

After all my years of association with the great port of New York and the Maritime industry, and after 15 years of service on the Merchant Marine Committee, I have become convinced that one of the first steps we must take is to assure that a percentage of petroleum and petroleum products imported into the United States must go on United States-flag bottoms. And I would emphasize to you that we are not talking about liner cargoes or even dry bulk commodities in my legislation. We are mandating only a percentage of petroleum and petroleum products.

I would also emphasize that we are not talking about 100 percent, or 75 percent, or even 50 percent. Our bill would mandate that beginning with 20 percent, then rising to 25 percent, after June 30, 1978, and then escalating to 30 percent after June 30, 1980, of the petroleum and petroleum products imported into the United States should be carried in U.S.-flag vessels. I do not think this is "predatory" on our part to expect this modest percentage to go in U.S.-flag bottoms.

As I mentioned before, we are cognizant of the strong opposition of the international maritime community to United States cargo equity legislative initiatives. I was, and am aware of the great pressures generated against these measures, both domestically and internationally, in the 92nd and 93rd Congresses, and I realize the gathering storm of opposition to our present efforts. The fact that we are apart on this from our maritime partner trading nations does cause me great concern.

There are many matters which necessitate our working in concert in the best interest of international commerce, so I must view anything devisive with concern. However, after the litany of ills I have just recited besetting the U.S.-flag merchant fleet, I think you can understand our position that something must be done. I am convinced that there will be nothing fatal to international trade—or even violative of agreements with our allies—in our requiring that a small percentage of petroleum imported into the United States be carried in our own vessels.

In discussing the outlook for legislation affecting cargo equity in the 95th Congress in this forum, I do not want to argue the pros and cons of each issue affecting the matter, but I did want to point out to you why we view our maritime situation with alarm and why we consider a modest cargo equity device not only justifiable but absolutely necessary.

As Gibbon put it in The Decline and Fall . . ., "The winds and waves are always on the side of the ablest navigators."

Certainly, there is some merit to the arguments raised against cargo equity, and despite the days of hearings held on this subject in two Congresses, such important issues as the legitimacy of the "effective control" fleet and the cost problem are still murky at best. Further, the U.S. State Department has always made a big issue of cargo equity claiming it violates our treaties of friendship and convenience. But after repeated requests, they have failed to ever provide us with a legal basis for their position in this matter.

I do concede that if we are successful, there will be a cost increase to the consumer. How much is a question that has not been determined. Both opponents and proponents have always come in with extravagant claims on each side of the issue. I hope that our present efforts may come up with something more definite with respect to cost to the consumer.

At any rate, I am prepared to accept the reality that there will be a reasonable increase—as was President Carter during his campaign.

This cost to the consumer is justified in my opinion simply by the fact that we will increase the percentage of imports to be carried in U.S.-flag bottoms. At the present time, we are importing 40% of our total petroleum needs and it is estimated that this will rise to 50% this very year.

At the same time, 96% of this import is carried in foreign-flag vessels.

We cannot alleviate this foreign source dependency in the immediate future, but we certainly can and must provide a greater U.S.-flag capability to carry this energy import. I am convinced that we cannot continue to rely on other nations, other flags, other crews to supply 96% of our imported energy requirements. It certainly seems clear to me that economic and national security considerations necessitate providing the availability of U.S.-flag bottoms to trans-

port a greater share of our energy imports. And let me say this—we are not initiating anything that is startlingly novel. The trading nations of the world have long reverted to protectionist devices. In fact, the principle that vessels of our host nation should have cargoes before foreign vessels was first established in 1368 during the reign of Edward III.

I think it would be wonderful if the world in general operated on the basis of "free trade". Unfortunately, the trading world does not conform to the idea of goods competing on an equal basis in an open global market place. In most countries, there is a close linkage between business and government in which tariffs, quotas, subsidies, and other devices are arranged to give advantage to home industries and agriculture.

Communist-bloc countries are state-trading nations.

Government-industry cartels flourish in Western Europe, and Japan, the most aggressive of export nations, is one of the most impenetrable of import nations.

It was not long ago that we all engaged in a monumental international exercise, the UNCTAD code of conduct for liner conferences, which featured a "40–40–20" cargo-sharing arrangement. This international effort is stalled at the present time, but we all know that we are moving in that direction.

Several weeks ago, I set out the various cargo preference devices of varying nations as indicated in our hearing record in the 93rd Congress. One large trading nation took issue with me, in that I had stated that they had a 50 percent cargo preference law.

They claimed that in fact, they did not.

A little examination, however, uncovered the fact that this nation carried between *fifty and sixty percent* of imported petroleum products in its own flag vessels and an additional 25 percent in other flag vessels chartered by its businessmen. I would say to countries such as this, stop your opposition to our unilateral "cargo equity" efforts. Allow us to also carry 50 percent of our oil imports in U.S.-flag vessels, and I will call it anything you want.

I am sure you all wonder—and the operative question is, will our cargo equity efforts succeed this time?

As you know, our previous two efforts ended in failure. I am determined that we shall succeed this time for the reasons I have given here today. We have held hearings on this matter in March, and we have more scheduled in April. The Carter administration witnesses have twice asked for postponement because they were not yet prepared to present a position. I am hopeful that they will be ready the first week in April.

I must say in all candor, the success of our effort depends in very large measure on the position of President Carter's administration. I am hopeful that the administration will see this matter in the same light that the bulk of the U.S. maritime industry and the Congress sees it—*and in the same light they saw it during the election campaign.* However, this is a crucial fact which is as yet undetermined. I do intend to pushing forward in this matter as expeditiously as possible.

I did not really expect to convince you so that you would withdraw your opposition and agree with our efforts, but I do hope that I have been able to explain what we consider to be the reasonableness and logic of our position.

* * * * *

Another matter I have been asked to discuss is the question of tanker safety. In the month of January, we experienced a number of major—and some catastrophic—oil spills and tanker explosions off our coasts. The most publicized episode was, of course, the infamous *Argo Merchant* grounding off Nantucket. In what I would characterize as a typical rush of hysteria in the press and by some of our environmentalists, extravagant claims of damage were made and heavy handed demands for tanker safety resulted.

The United States Senate has combined cargo equity and tanker safety reform into one legislative package. Bills embodying this combination were introduced by Senator Warren Magnuson and Senator Fritz Hollings, and they have been busily engaged in hearings on the Senate side on this bipartite legislation.

We have taken a different approach. We have kept cargo equity as a separate piece of legislation—a separate single principle. We have not introduced any legislation to date relating to tanker safety. It is our intention to examine these recent maritime incidents off our coasts during our Coast Guard authorization hearings next month. At that time, it is our intention to determine exactly what happened in these episodes, the Coast Guard's role, whether the Coast Guard has sufficient personnel and hardware to cope with these situations, and whether there are areas requiring specific hearings and whether additional legislation will be needed. In the event the latter two questions are answered in the affirmative, we will then hold specific hearings in the Coast Guard Subcommittee on these issues requiring attention, and on those matters requiring legislative enactment.

In light of this course of action, I cannot tell at this time exactly what will be required of us with respect to tanker safety. I do know that I do not think this matter should be combined with cargo equity. I think that they should be kept separate and that is how we intend approaching these problems.

Undoubtedly, further action on our part will be required, for example, with respect to safety features such as inert gas systems on all tankers, improved emergency steering standards for all tankers, and backup radar systems with collision avoidance systems on all tankers. In addition, I think it is essential that we examine carefully crew training and crew competence. I feel that the most advanced equipment standards available would not have prevented either the *Torrey Canyon* or the *Argo Merchant* catastrophes since these episodes were clearly the result of human error, human weakness, and human failure. It is incomprehensible why the environmentalists and many of my colleagues continue to beat the wrong drum.

I can agree to a limited imposition of segregated ballast.

I do not subscribe to any mandatory imposition of double bottoms.

When I was the chairman of the Coast Guard Subcommittee, I held extensive hearings on the double bottom question. In addition, my staff and I were members of the U.S. delegation during the October 1973 IMCO international convention for the prevention of pollution from ships held here in London. In fact, my staff was here for the entire conference at which time the conference correctly—and resoundingly—voted down the mandatory imposition of double bottoms.

I am convinced from my studies and investigations that double bottoms will not provide environmental protection as intended and will, in fact, create hazards to safety and navigation inasmuch as they will be a collecting place for dangerous gases and will, in fact, contribute to instability in the event of a grounding. They are, of course, useless in a collision. The evidence indicates that technically, there is no basis of support for the double bottom concept and in fact just the opposite may be true.

I believe that it is an emotional manifestation on the part of those who would protect the environment but do not understand the technical aspects of ship construction and the consequences of this discredited "solution." I cannot agree to impose not only a useless but a harmful standard which will accomplish nothing perhaps but raising the price of ships to an already beleaguered industry while creating the possibility for some really calamitous oil spills the likes of which the world has not yet witnessed.

At any rate, I believe that in the course of hearings in our committee and on the Senate side, these tanker safety issues will receive considerable attention and a thorough airing.

* * * * *

My remarks up to this point have centered on matters which are a subject of some disagreement between the United States and our maritime trading partners. Before closing, I would comment briefly on a subject which is vital to our collective interests and which is of potential danger to our merchant fleets and collective trades. I am referring to the practices of certain Socialist-bloc nations entering the various existing established trades with their newly acquired maritime capability, refusing to join the existing conferences, and undercutting the normal conference rates.

It is obvious if this practice is permitted to continue and the conference system is destroyed, the existing flags will be driven from these trades which will then be dominated by the intruding flags. We find this result completely unacceptable to the United States and I believe it is also unacceptable to the other existing maritime conference members.

In the last Congress, we began to address this problem and dealt exhaustively with legislation which would require these state-controlled carriers to charge rates that are "just and reasonable". In considering whether the rate charged is just and reasonable, the U.S. Federal Maritime Commission, which would have responsibility for administering the law, is to consider whether the rates are fully compensatory, assessed by other carriers in the same trade, required to assure movement of the particular cargo, and other appropriate factors. These so-called control carriers whose rates are challenged sustain the burden of proof, and the FMC is given authority to suspend the rates in question for a period of seven months while a hearing on the lawfulness of the rate is pending. This legislation was strongly supported by the maritime industry, but was opposed by the Great Lakes interests and the shippers.

Shortly after the hearings on this legislation were completed and before the committee could act, the Chairman of the Federal Maritime Commission concluded an agreement with the soviet ministry of merchant marine, now known as the "Leningrad agreement".

In this agreement, the soviet union agreed to charge rates which were not lower than those actually used by the lowest non-soviet carriers in the particular trade, and to begin discussing their membership in the appropriate liner conferences covering United States trades. The Federal Maritime Commission indicates that the Russians to date have shown a willingness to implement the Leningrad agreement. If, however, they should begin to pull back from this implementation, then further consideration and movement of the third flag bill will be essential. *If this should happen, I intend to move forcefully and quickly on this type of legislation.*

Action on our part will be absolutely necessary to protect our already weak U.S.-flag merchant marine *and* our trades.

These are my comments on those subjects which were considered to be of interest by our host. And while I feel all of you might not share the feelings I have on these is-

sues—indeed might oppose them—I ask you to consider the position of my country as we look to the future.

We are not asking for more than many of you already have.

If I were to ask for anything less I would be doing a disservice to the American people whom I represent.

And on reflection, taking a historical look at the position of the United States—past, present and future—I think you *could* agree that what I seek is fair.

I would once again thank seatrade for inviting me to participate in this important conference in this historic mercantile capital of the world and I thank you one and all for your patience and attention.

STATEMENT OF CONGRESSMAN MICHAEL J. HARRINGTON ON PRESIDENT CARTER'S ENERGY MESSAGE

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. HARRINGTON. Mr. Speaker, the battle has finally been joined. The cruel hoax of energy independence perpetrated by past administrations has been laid to rest. In its place the President has issued a call for comprehensive action on the energy front which is both serious and realistic. Serious because it acknowledges that America's joy-ride with the world's energy resources is over. Realistic because it recognizes the limits of technology in solving our energy problems and in being honest about the sacrifices that we as individuals and as a nation must make if we are to enjoy an energy future sufficient to sustain this country's social and economic well-being. And realistic because I firmly believe that the American people and the people of the Sixth District are willing to make their fair share of sacrifices in support of a national energy program which is well conceived and well executed.

I am particularly concerned that the sacrifices which are required—sacrifices in conservation, in higher costs, in altered ways of doing business and altered lifestyles—that all these are shared equitably by all regions. In the past this has not been the case. My part of the country consistently has been forced to pay the highest price for national energy initiatives of little if any value to our region. And, as always, low- and middle-income Americans have had to pay more than their fair share. Such inequities cannot continue. I am confident that the President and Congress will respond positively to any suggestions that may be offered up in ways to moderate the negative regional impacts of our national energy program without compromising its overall objectives.

We in Massachusetts and New England are greatly relieved that the entire Nation has at last been given notice that the energy crisis is continuing and for real—something my constituents, who pay 50 percent more than the national average for their electricity and who have paid for past inaction on the energy issue with a significantly decreased standard of living and, in some instances, their jobs, have known for quite some time. Although the price of oil has quadrupled since the OPEC embargo in November of 1973, Massachusetts and New England still are more than 70-percent dependent upon oil and its byproducts for energy. This dependency means that billions of dollars are flowing out of the State and regional economies—most of it to foreign lands—to support our oil habit. With New England and its 40 million people facing economic disaster because America has refused to take the energy issue seriously, President Carter's message—regardless of its specific deficiencies—comes as a refreshing tonic.

To solicit suggestions on the entire range of energy issues, I am scheduling a series of public hearings in the Sixth District of Massachusetts. The process of arriving at a national energy policy and program must be an open one, and I look forward to learning firsthand from businesses and households in my district their thoughts on the U.S. energy predicament and the way the President's proposal would affect their lives. These district meetings are essential because no single person, and certainly not I as a U.S. Representative, can pretend to have all the answers to the energy issue. But if we pool our individual resources and talents, we cannot fail to come up with those answers.

TRANSPORTATION AND THE CARTER ENERGY PROPOSALS

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. SHUSTER. Mr. Speaker, as the ranking minority member of the House Surface Transportation Subcommittee and Chairman of the National Transportation Policy Study Commission, I am particularly interested in President Carter's energy proposals as they relate to transportation. In an effort to join with the White House in a cooperative venture to enact reasoned and meaningful proposals, I would like to offer the following personal observations:

First. The fundamental objectives of the proposed national energy plan appear to be based on reduced energy demand rather than increased energy production. While conservation, a fair pricing policy, and natural marketplace fluctuations will all have an impact on energy resources, I believe more effort should be directed toward increasing energy productivity.

Second. The President's fuel pricing proposals are aimed at achieving parity with the true replacement cost of energy. This is to be at least partially achieved through taxation, which in turn will adjust market conditions allowing the price of energy to reach a natural level. I believe this objective could be accomplished more easily and more fairly by simply decontrolling the price of energy so that the price will accurately reflect natural market conditions rather than artificially induced conditions.

Third. The proposed graduated tax on big gas-guzzler cars and tax credits for the purchase of fuel-efficient cars is one worthy of serious consideration. I first introduced this concept several years ago in testimony before the Ways and Means Committee during consideration of Federal-aid highway legislation, and still believe it has merit.

Fourth. The proposed standby gas tax may prove to be necessary over time, but the inequities in this proposal make it wholly unacceptable except as an emergency measure. For example, any gas tax increase as a penalty for not meeting national energy objectives, without redistributing the money back into transportation programs and facilities, is discriminatory against rural Americans and others who do not have access to mass transit systems. Rural Americans do not have the option to choose an alternative to auto travel, and any penalty imposed on autos or gasoline would place then in a position of disadvantage compared with urban dwellers.

Fifth. I am very concerned about the proposed expanded use of the Highway Trust Fund to compensate States for a loss in gas tax revenue due to reduced auto travel. This concept was first introduced by the Ford administration 2 years ago and was decisively rejected by the Congress. While highway repair and maintenance is critical to the safety of auto travel, and have traditionally been the responsibility of the States, it is not true that State gas tax revenues are devoted exclusively for this purpose. Many States use gas tax funds for State police activities and other programs totally unrelated to transportation.

Using Federal gas tax receipts for repair and maintenance activities would, in my opinion, set a dangerous precedent that could ultimately involve the Federal Government in direct maintenance and repair programs.

If reduced auto travel places some States in a financially depressed condition, I believe that problem should be dealt with on its own merits without additional Federal intervention and intrusion into State highway programs.

Sixth. I agree with the President's proposed repeal of the 10-percent excise tax on intercity buses as an incentive to increase this form of travel. But unless this reduction filters down to the consumer, making intercity bus travel more attractive to more people, it will have no beneficial effect on our national energy program.

Seventh. I was very surprised to learn that the President is recommending the establishment of a commission on national energy transportation systems for two reasons: First, this is inconsistent with the White House initiative to reduce the number of Federal advisory groups as a means of streamlining the Federal bureaucracy. And second, the congressionally created National Transportation Policy Study Commission, of which I am Chairman, has a statutory mandate to include energy resources and needs in its overall evaluation of national transpor-

tation policy. The creation of a separate commission at this time is duplicatory, and I would urge that the White House work with the National Transportation Policy Study Commission to develop national energy transportation recommendations.

Eighth. In summary, I am impressed by the scope and comprehensiveness of the President's energy proposals despite what I believe to be inherent pitfalls and inequities for certain segments of our population. In my capacity as ranking minority member of the House Surface Transportation Subcommittee, and Chairman of the National Transportation Policy Study Commission, I intend to work toward the realization of the President's national energy objectives through the legislative process, and I trust that this first step will illustrate the deep concerns we share about energy independence.

HUMAN RIGHTS VIOLATIONS: CUBA—I

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ASHBROOK. Mr. Speaker, Senator GEORGE MCGOVERN has returned from a trip to Cuba urging closer relations with that country and a partial lifting of the trade embargo. The Carter administration has been reported as trying to expand current fishing negotiations with Cuba into wider ranging ones. From all this it is obvious that there is a move on to eventually reestablish full diplomatic relations with Castro's regime.

President Carter has also enunciated a policy of strong support for human rights throughout the world. The desire to have closer relations with Cuba and the policy of supporting human rights is in some conflict. In addition, there is the issue of Cuban troops in foreign countries, particularly Angola, and its continuing involvement in the internal affairs of other countries.

Let us then take a look at the historical record of Castro's violation of human rights.

After Castro came to power there were the circus-type public "trials." No efforts at due process were considered. The accused were brought before mobs, sentenced and executed summarily. Movies documented the slit-trench scene with the condemned getting their last cigarette and then being machinegunned into their open graves.

In May 1963, the Inter-American Commission on Human Rights of the Organization of American States reported on the situation of political prisoners and their relatives in Cuba. The Commission found that arbitrary arrests were made; they were made without ascertaining if the right person was being arrested; arrests were made in the middle of the night or at dawn; people seeking information on individuals arrested often were arrested themselves; arrests were made without any explanation or warning.

The political prisoners according to the Commission were held in conditions worse than barbaric. Underground dungeons used during the period of Spanish rule were reopened to house political prisoners. Such prisons lack ventilation, light, space, and sanitary facilities. Torture chambers have been opened. Concentration camps have been set up with little shelter, corporal punishment, and forced labor.

Political prisoners—again according to the Commission—have been tortured, threatened with additional punishment, and beaten. Many of these prisoners die because of a lack of medical care; others are driven insane. The families of political prisoners also have been mistreated. This runs from being arrested themselves to having to wait for hours or days at a prison to see a relative when such visits are even allowed.

Some may say that all this is ancient history—that all this happened in the early 1960's and things have changed. The evidence points in the other direction. Thousands of Cubans are still political prisoners and mistreated. Arrests continue.

In July 1975, the International Rescue Committee stated there are still thousands of political prisoners in Cuba. In the words of the International Rescue Committee there is "an unconscionable length of incarceration."

Recently, Of Human Rights carried an article from the Miami Herald of May 1976. According to the article, there exists "the same 'idiosyncratic and extreme totalitarianism of the Cuban penal system' observed by Amnesty International in 1973." Also, according to the article:

> Corroborated reports of incidents within the past four years indicate prisoners have been beaten to the point of concussions, fractured skulls and broken bones for refusing to submit to a nude search prior to the admission of visitors, leading hunger strikes, passively resisting transfer to another jail or cell . . .

Little investigation was given to the Boniato massacre. It has been reported that in 1975 in the Boniato prison one political prisoner contracted tetanus after removing two teeth with the handle of his spoon. The prison holds about 100 or more political prisoners locked inside windowless steelpacked cells. The prisoner was refused medical attention. Inmates banged their protest with their tin cups. According to reports, guards opened the cells and beat the prisoners with rifles and machetes. Guards then opened fire. Two prisoners were killed and 60 to 70 wounded.

The conclusion is inescapable: Castro's regime pays no attention to human rights in Cuba while alleging human rights violations in other countries. To support by words human rights while engaging in activities, to have closer relations with Castro's Cuba where human rights are not respected are two contradictory policies. Castro's regime is no protector of human rights.

SALT AND THE TRANSFER AMENDMENT

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MITCHELL of Maryland. Mr. Speaker, the first concurrent budget resolution for fiscal year 1978 is scheduled for consideration on the floor of the House next week. I have intentions of offering a transfer amendment, in the form of a substitute, to reorder the priorities of the budget resolution as reported out of the Budget Committee, on which I serve. I have received correspondence suggesting that the transfer amendment is in conflict with the SALT negotiations. I hope this short analysis will clarify any misapprehensions experienced by my colleagues on the implications of the transfer amendment on the SALT negotiations.

SALT AND THE MILITARY BUDGET

Cutting the military budget during the SALT negotiations is both responsible and necessary. It is the most important step for Congress to take at this time to achieve the goal of meaningful arms control and reduction.

Arguments have been raised against the Mitchell transfer amendment because of the timing of the SALT negotiations. It has been suggested that Congress refrain from reducing military expenditures while SALT talks proceed.

It would be both counterproductive and unwise to accept these arguments:

First. The SALT negotiations have broken down.

This is untrue. The negotiations are continuing. The Soviet Ambassador has met with Secretary Vance and President Carter to discuss the proposals. Both sides will resume formal negotiations in May in Geneva. Following the initial exchanges after the Moscow meeting, both President Carter and Secretary-General Brezhnev have been unusually cordial and flexible in their public statements. The only reasonable conclusion to draw is that both sides remain deeply committed to achieving an arms control agreement through the SALT framework. The question for Congress to consider is how it can help these negotiations to succeed.

Second. A "real growth" military budget will signal the Soviet Union that it must either accept U.S. proposals or face an enlarged U.S. military threat.

If the premise behind this statement were true—that a threat produces compromises in negotiations—then logically the current alleged "Soviet military threat" that we hear so much about every day should be forcing the United States to make concession after concession in SALT. Clearly this has not happened. The scare campaign about the Soviet military has had the opposite effect in the United States. The same would be true of Soviet reaction to a U.S. threat.

No big power will be coerced or

stampeded into making agreements which compromise its vital security interests. Both sides must be committed to seeking arms agreements as an alternative method of protecting security. If Congress turns the military budget into a club against Soviet negotiators, the Soviet stance would stiffen and the negotiations would be adversely affected.

Third. Adding new weapons systems gives the United States more "bargaining chips" to trade in the SALT talks.

The "bargaining chips" theory is a major reason for the failure of seven years of SALT talks to restrain or reduce nuclear arms. Any weapon lethal enough to be a credible bargaining chip also becomes attractive to the military. These weapons soon generate their own military, economic and political constituency which resists any effort to negotiate them away.

Two of the most dangerous weapons systems now subject of the SALT II negotiations originated as "bargaining chips". The MIRV system was proposed originally as a bargaining chip against the ABM system. ABM's were negotiated away—but the MIRV remained, and the result has been a vast increase in the number of nuclear warheads which threatens, rather than protects our national defense. The cruise missile was funded originally as a bargaining chip following the SALT I agreement. It now threatens to become the roadblock to SALT II.

Previous experience indicates that the "bargaining chip" policy hinders rather than expedites SALT negotiations and the goal of arms reductions.

Fourth. The SALT experts rather than the Congress should decide which weapons systems should be controlled.

This argument is unconstitutional in its implication and irresponsible in its impact. It suggests that Congress should give up its constitutional obligations concerning the military and the power of the purse and hand these powers over to a group of unelected experts who in their greater wisdom will make the best decisions. The expertise and wisdom of our negotiators are high, but nonetheless they are not mentioned in the Constitution. Congress alone is accountable to the American people for budget decisions. It cannot delegate its responsibility.

Fifth. The military budget should be expanded as a hedge against a SALT breakdown.

The fallacy of this argument, regardless of who makes it, is that our national safety will somehow be strengthened if we turn American military forces into a mirror image of the Soviet Union's We do not need to match Soviet spending ruble for ruble or warhead for warhead. We need a defense budget sufficient to meet our defense needs.

It is dangerous, unnecessary and expensive to use the military budget as a signal to Soviet leaders that the United States intends to defend itself even if the SALT talks break down. This is especially true given the U.S. nuclear superiority, which President Carter has discussed. Using this questionable method to communicate a political message may well force us to impose a new authoritarianism at home in order to shift still more resources into the military sector.

If automatic escalation is the price to pay for entering negotiations which subsequently fail, then it must be seriously questioned whether any negotiations should ever be entered.

REDUCING THE MILITARY BUDGET

Cutting the military budget and transferring the savings into social programs is perhaps the most important action for Congress to take both to contribute to successful negotiations and to begin the process of arms reductions. The reasons include:

First. Military restraint improves the negotiating climate.

Congressional action to restrain arms development and to reduce execessive military expenditures will be a tangible demonstration to the world of our intention to accomplish "drastic reductions" of weapons. Such action would demonstrate U.S. goodwill and help create a political climate favorable to securing national security through means other than huge arsenals. The United States holds a commanding technological lead in many weapons systems. Suspending the deployment of the MK 12a warhead—which would give the United States a 5-year lead in hard target kill capability—or suspending the development of the cruise missile—in which the United States holds a 5-year technology lead—would surely improve prospects for successful negotiations without jeopardizing U.S. security.

Second. Agreements to limit arms are more achievable before weapons systems are funded than after they are funded.

Once weapons reach the stage of advanced development or deployment, it is almost impossible to negotiate their elimination. First, technology often outraces negotiation. Weapons are often ready to be used before negotiators have found ways to control them. Second, verification is more difficult once weapons have been fully tested. Who knows whether they have been deployed. Once deployed, who can say if they have been removed? Third, the further a weapon system moves toward production, the bigger the domestic constituency becomes in support of it and thus the more difficult it becomes for political leaders to convince the military establishment to give it up.

The cruise missile is an excellent example of all three problems. During the SALT I and early SALT II negotiations, cruise missile guidance technology had not reached a sophisticated level so the weapon was not included in the totals. But now the cruise missile testing program roars ahead while the negotiators fumble for ways to control it. The verification problems are massive: Once the United States has tested the cruise missile at strategic ranges, how are the Soviets to know that we will not deploy it for strategic uses? Finally, the cruise missile now has firm proponents in the Army, Navy, and Air Force—each has its own variant. It has a big political backing as well.

A more realistic approach to arms reductions is to restrain arms in their early budgetary stages and then to negotiate a permanent prohibition in the SALT talks. Our national defense would have been more secure had Congress taken this step during the MIRV development. The same is true today with the cruise missile, maneuverable warheads and other weapons.

Using the military budget to give the negotiators the opportunity to actually reduce arms would be a major step forward. Cutting the military budget is entirely consistent with the goal of arms reduction through mutual negotiation.

Third. Reducing weaponry below SALT levels is consistent with the purpose of SALT.

One of the President Carter's chief criticisms of the previous SALT proposals was that they set guidelines which expanded levels of weaponry on both sides. In the United States a major cause of this problem has been our policy of regarding every SALT ceiling as a new floor for strategic weapons programs. In essence, we responded to the SALT ceilings as if they were magnets.

The Carter administration will have to change this policy to accomplish its goal of "drastic reductions" in nuclear arms. The SALT ceilings indicate only the upper limit of what is permitted, not the lower limit of what is necessary. For example, the Carter "comprehensive" SALT proposal allows the United States—and the Soviet Union—to expand its warhead arsenal by at least 50 percent. But there is no evidence that automatically expanding warhead deployment makes us more secure or stems the arms race.

There may be honest differences in Congress over how much defense is sufficient for the United States, but in no case should the assumption be made that the SALT ceilings necessarily define sufficiency. A limit may be negotiated higher than sufficiency in order to gain the military establishment's approval of a proposal. In this and other cases, independent reductions by Congress would be a constructive solution to a major problem which has heretofore prevented SALT from reducing arsenals.

Fourth. Certain arms control or reductions are desirable even when they cannot be negotiated.

SALT is not the only way to work for arms reductions. Everything should be done to make SALT successful, but the goal of arms reductions should be approached through other avenues as well.

A major difficulty with SALT is that the negotiating process itself creates new barriers to arms control. Asymmetrical force structures—such as the cruise missile—are hard to balance off against each other. Independent initiatives might control such weapons better than bilateral negotiations. The "internal negotiations" between the political and military leaderships within each country can lead to artificially high ceilings in the "external negotiations" between the two countries. One must ask whether the military is supporting Carter's "comprehensive" proposal because it does not require the United States to give up the B–1, the Trident submarine, the Trident missile, the

maneuverable warhead, the nuclear bomb production, et cetera. In this case, putting together a successful negotiation proposal from the domestic political perspective may have prevented successful negotiations from the arms reduction perspective.

The experience of President Ford shows how the very fact of the negotiations themselves creates a domestic political struggle—in his case the Pentagon won—which jeopardizes arms reductions.

Thus, Congress needs to use its power to forward the goal of arms control and reduction to complement the SALT process and take initiatives when SALT is not the most productive approach. Reducing military expenditures is a good example: SALT may produce savings in strategic weaponry, but the military establishment may demand that these savings be reinvested in conventional forces as its price of endorsing Senate ratification of a SALT II treaty. Lowered military sector expenditures is thus better addressed by congressional action apart from, rather than to rely on, the SALT process.

Fifth. Congress must examine critically the conventional force structure which is not subject to SALT negotiations.

SALT negotiations concern strategic weapons. But strategic forces comprise only 9 percent of President Carter's military budget request—$10.619 billion of $120.373 billion total obligational authority. What about the other 91 percent, which comes to almost $110 billion? Clearly Congress has a responsibility to eliminate waste, trim unnecessary expenditures and reduce unwarranted weaponry from the conventional category. This is where the greatest personnel and procurement costs are located—and where the greatest excess is found as well. Thus, the SALT negotiations should not inhibit Congress in any way from considering and reducing conventional force structure expeditures.

Sixth. The role of Congress to reduce the fiscal year 1978 military budget is especially critical due to the Carter administration's inability to submit its own budget.

The Government's military budget request is a bastard child of two administrations operating under different assumptions about the "Soviet threat," U.S. foreign policy commitments and other crucial budget inputs. As President Carter stated in his fiscal year 1978 budget revisions:

> Because the budget revisions had to be prepared in a short time, radical changes in defense programs are not now proposed.

He did, however, initiate a "major review of U.S. defense policy and military programs" which will be reflected in the fiscal year 1979 budget. Under these circumstances, it is necessary for Congress to look closely at programs which the Carter administration did not have sufficient time to explore. Congress should not regard reducing the military budget in fiscal year 1978 as a posture of opposing the White House. The House Budget Committee has already approved approximately $4 billion in savings below Carter's submission. This process should continue and be addressed in the transfer amendment.

Seventh. National priorities must be reordered and funding transferred from military to social programs as a basic commitment to meeting the needs of the American people for social justice.

Our need for social justice must be given a higher priority in decisionmaking for national security. A fortress America bristling with nuclear overkill but decaying internally is an insane model of national security. We simply cannot afford to exempt the Pentagon from critical appraisal and reductions at budget time while domestic programs are forced to eat inflation or while important national initiatives, such as welfare reform or national health insurance, are postponed.

Under President Carter's "comprehensive" arms proposal offered in Moscow, the United States would be permitted to spend $8 billion in fiscal year 1978 strategic programs. Only $140 million would be actually halted. It would be nothing less than a scandal to negotiate under the banner of arms reduction and then to turn around and spend billions of dollars to expand or modernize our arsenal. We cannot let the SALT dividend evaporate as happened with the Vietnam peace dividend. Even if the SALT talks are successful, we cannot fail to transfer precious tax dollars into the programs responsible for the social and economic well-being of the American people.

PUBLIC STILL WAITING FOR EXPLANATION OF HUSSEIN PAYOFFS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. DRINAN. Mr. Speaker, when Jimmy Carter was campaigning for the Presidency last year, those of us who have fought for increased openness and accountability of the CIA were encouraged by his statements on that issue. He promised to diminish the shroud of secrecy in Government and to reveal the details of CIA mistakes to the American people.

It is therefore disappointing that, as President, Jimmy Carter has followed the lead of his predecessors in closing the lid on disclosures of CIA payoffs to King Hussein of Jordan. Rather than explaining or attempting to justify these suspicious payoffs, the President reacted by criticizing the disclosures and asking the public to accept on faith alone that the payments were justified.

I sincerely hope that President Carter's response in this instance is not a harbinger of things to come. It is vital that the CIA be made accountable to the Congress and the American people for its actions. Such accountability cannot be established without the support of the President.

In the following article which appeared in the May 1977, issue of the Progressive, Prof. Arthur S. Miller of George Washington University School of Law analyzes the constitutional implications of the President's response to the Hussein payoff disclosures. I commend this fine essay to the attention of my colleagues:

CARTER AND THE CIA

If there was any doubt that the CIA is, in fact, a "rogue elephant" out of control, as Senator Frank Church once observed, it vanished when the bribery of King Hussein of Jordan was reported in February. The CIA has been paying off Hussein (among others) for many years, and the action has been condoned by several Presidents.

When the story broke in The Washington Post, President Carter reportedly cancelled the payments. He later charged The Post had acted irresponsibly in publishing the article, especially since it appeared on the very day when Secretary of State Cyrus Vance arrived in Jordan to confer with Hussein. The President then announced he was reducing the number of people privy to CIA covert activities, such as the Hussein payments, from twenty to five.

The President's reaction indicates he has already become a prisoner of "the system"—a captive of the weird reasoning that passes for logic where matters of "national security" are concerned. That conclusion is buttressed by other recent Presidential statements, including Carter's assertion that the Hussein payments were neither improper nor illegal. It is not known whether the payments have been resumed.

The episode, as it unfolded, exposed a direct conflict with Carter's rhetoric during last year's Presidential campaign. It also left a number of questions unasked (by the press) and unanswered.

What, for example, are the criteria by which Carter determined that the payments were not improper? They are hardly self-evident, and the American people—in whom the President professed such great trust during the campaign—are surely entitled to know the means by which he reached that conclusion.

And how did Carter conclude that the payments were not illegal? Under what system of law? International law? Constitutional law? Were the payments authorized by statute—that is, by act of Congress. The answer, of course, is that they were not. Since we are given hardly any details about the CIA's operation, and none about its budget, no one outside the inner circles of the Executive Branch can determine whether considerations of legality ever entered into the decisions that led to such payments.

Furthermore, the secret deal with Hussein is analogous to the secret bombing of Cambodia during the Nixon Administration. In both instances, the only ones kept in the dark were the American taxpayers who must pay for such foreign adventures. U.S. officials knew about them, the recipients knew about them, and surely the Kremlin knew about them, too.

That means Presidents have flouted the Constitution in the past, and announced Carter policy of even greater secrecy will increase the likelihood of abuse in the future. The Constitution provides, in Article I, Section 9, that there be a public accounting of all money drawn from the U.S. Treasury. Were that to be given its plain meaning—"all" surely means all—we would be furnished, in the words of the Constitution, with "a regular statement and account of the receipts and expenditures of all public money. . . ."

Supreme Court saved the day for Government secrecy when it ruled in 1974 (in United States v. Richardson) that a taxpayer did not have "standing" to demand a public accounting. Nixon's legacy—the present Supreme

Court, dominated by the four Nixon appointees—now includes preventing a taxpayer from finding out how tax dollars are spent. As Justice William O. Douglas said in dissent, "secrecy of the government acquires new sanctity" when Richardson's wish merely to know how much of his personal taxes went to the CIA was denied.

Just why Hussein was bribed is not fully clear. What was the quid pro quo? He cannot have furnished much in the way of intelligence, for that is readily and more cheaply obtained by other means. His friendship might have been purchased, though it is difficult to say why he would not want to be a friend of the United States—with or without a cash inducement.

If we turn the question around and ask about the legality or propriety of payments to members of Congress from the Korean CIA, a different perspective emerges. Whether or not indictments are eventually brought against the legislators involved, there is obviously something unsavory about American officials on the take from even a "friendly" intelligence service. Would President Carter consider it improper or illegal for, say, Secretary of State Vance or strategic arms negotiator Paul Warnke to receive payments from the USSR, because the Soviets might be anxious to enter into an arms agreement?

During his campaign, Carter promised less secrecy in government. He now asks the American people to trust him because only he has the facts—precisely what "the best and the brightest" asked of us during the Vietnam war. Congress, furthermore, is of no help. Senator Daniel Inouye's Committee on Intelligence is firmly adhering to the dreary pattern of averting the Congressional eye when the CIA steps out of line. The press, after its initial outburst, is strangely silent.

It would be naive to regard the Hussein bribe as an aberration. Other such payments have been and are being made. Indeed, analogous secret foreign adventures have been a hallmark of Presidential policy since the days of George Washington. But long-standing practice is no justification. As Senator Sam Ervin often observed when faced with similar arguments, "We have had homicide and theft throughout human history, but that does not make murder meritorious nor larceny legal."

The Central Intelligence Agency is "a state within a state"—out of control and protected by a President who promised to reveal the "mistakes" the CIA made. One is reminded of a statement attributed to an anonymous aide of President Kennedy: "Everyone believes in democracy until he gets to the White House and then you begin to believe in dictatorship, because it's so hard to get things done." And secrecy is an essential component of dictatorship.

OFFICE AND PROFESSIONAL EMPLOYEES INTERNATIONAL UNION

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ANDERSON of California. Mr. Speaker, on June 6, 1977, Los Angeles will host for the first time the annual International Convention of the Office and Professional Employees International Union. Those of us familiar with the labor movement in Southern California are quite pleased at the prospect of hosting this auspicious gathering, and we sincerely hope that the members attending the convention enjoy their visit to our city.

The history of the Office and Professional Employees International Union can be traced back to February 24, 1904, when the American Federation of Labor issued a charter to "Stenographers, Typewriter Operators, Bookkeepers and Assistants Union, Number 11597," in Indianapolis, Ind. Today, this same organization is known as Local No. 1 of the Office and Professional Employees International Union.

In October, 1904 a charter was issued to Local 11773—now Local 2—in Washington, D.C. The first charter local on the West Coast—and the third established—was founded on April 3, 1911 in San Francisco, Calif. An international office was established for the first time in Vancouver, British Columbia, on March 26, 1931.

In that time, the idea of a union for office workers was quite innovative, since earlier craft unions had specificallly excluded them from their own ranks. Soon, a local had opened in almost every major city in the United States.

Most of the membership of these early locals consisted of office workers employed in trade union offices. Despite the strong growth of the movement, the locals were completely independent of each other, united only through their charters in the American Federation of Labor.

Passage of the Wagner Act in 1935 and the advent of World War II, combined with the growing inflation and low pay, stimulated the desire of office workers to participate in collective bargaining. This trend was encouraged by the growth of the defense industry. As membership increased, more and more local chapters found themselves dealing with the same employers.

Thus, in 1941 the American Federation of Labor adopted a resolution instructing its officers to establish an International Council of Office Employees Unions. It was formed in 1942 in Chicago, and J. Howard Hicks was elected president. On January 8, 1945, at a constitutional convention in Cincinnati, Ohio; American Federation of Labor President William Green personally presented the charter. The Office Employees International Union had been officially established.

Today, the Office and Professional Employees International Union represents over 100,000 men and women. The scope of its operation has grown tremendously, and its membership ranges from Wall Street, and the Tennessee Valley Authority, and the public utilities, to the entertainment and broadcasting industry in Hollywood.

The current president of the OPEIU, Howard Coughlin, was present during the formative years of the union. He succeeded Paul R. Hutchings in 1953. William A. Lowe now serves as Secretary-Treasurer for the organization.

Los Angeles is a fitting place for a convention of labor leaders in the white collar field to be held. Local 30 of the OPEIU was established here in 1945, and existed earlier as a Federal chartered union. I am positive that the 700 to 1,000 individuals attending the convention in June will be pleased with the accommodations that have been made in their behalf.

Therefore, Mr. Speaker, I would like to take this opportunity to extend my warmest welcome to the members of the Office and Professional Employees International Union as they arrive in Los Angeles for their convention. I am positive that the time they spend in our area will be as enjoyable as it will productive.

RESULTS OF THE QUESTIONNAIRE SURVEY OF THE 2D MINNESOTA CONGRESSIONAL DISTRICT

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. HAGEDORN. Mr. Speaker, on February 21, 1977, I sent a questionnaire to 175,000 residences in Minnesota's Second Congressional District. The purpose behind the 12-question survey was to get the opinions of my constituents on some of the issues that are expected to come before Congress.

Approximately 30,000 citizens in my district completed the questionnaire and returned it to me. The results of the survey have now been tabulated and they are interesting and important. I am inserting the results in the RECORD for the information and consideration of the U.S. Congress and the President of the United States. The results of the questionnaire follow:

QUESTIONNAIRE RESULTS

[Answers in percent]

1. Do you approve of President Carter's pardon of Vietnam War draft evaders?

Yes	27
No	66

2. Do you agree that the Boundary Waters Canoe Area should be maintained as a true wilderness area rather than divide it into a wilderness and recreation area?

Yes	64
No	29

3. Do you favor the gradual decontrol of the price of natural gas?

Yes	39
No	51

4. Do you believe that the Federal government ought to spend substantially larger sums for public works jobs in an effort to reduce unemployment?

Yes	26
No	66

5. Do you favor the retention of Section 14 (b) of the Taft-Hartley Act which enables states to prohibit agreements requiring employees to join unions in order to hold their jobs?

Yes	72
No	21

6. Do you think there is need for a constitutional amendment which would establish a longer term of Congressmen and limit service to a specific number of terms?

Yes	47
No	45

7. Do you think there is a need for some major changes in the way the trucking industry is regulated?

Yes ---------- 63
No ---------- 22

8. When a vacancy occurs in the U.S. Senate, would you favor an immediate election to fill the seat rather than allow the Governor to appoint a successor until the next general election?

Yes ---------- 72
No ---------- 21

9. Do you favor the creation of a Federal Consumer Protection Agency?

Yes ---------- 40
No ---------- 50

10. Do you favor the establishment of government held grain reserves to protect against future commodity shortages?

Yes ---------- 46
No ---------- 44

11. Would you favor Federal tax credits for those who insulate their homes or otherwise invest in substantial energy conservation efforts?

Yes ---------- 53
No ---------- 40

12. Do you support or favor the concept of regionalism or regional government?

Yes ---------- 31
No ---------- 56

FALN TERRORISM: A SUMMARY OF THE EVIDENCE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. McDONALD. Mr. Speaker, the FALN—Armed Forces of National Liberation—have exploded over 49 bombs since the terrorist group began its career in 1974. FALN has admitted responsibility for the murder of at least four people and for the wounding of scores. On March 1 of this year I provided a survey of support activities for the FALN, and organized resistance to Federal grand juries in Chicago and New York City investigating the FALN's terrorist violence.

I have often been critical of the mass media for failing to report, or minimizing the danger posed by terrorists and their support networks. On this occasion I wish to congratulate New York Times Reporter Mary Breasted for having written a lengthy and detailed account of the FALN and the evidence indicating that a radical clique was able to obtain administrative positions within the Episcopal Church and divert money to support their secret terrorist activities.

Episcopal Presiding Bishop John Allin should be commended and supported for his responsible cooperation with the law enforcement agencies investigating the terrorist group. And the editors of the New York Times should be praised for publishing Reporter Breasted's story, and should be encouraged to assign more staff time to this area of vital public interest in the future.

The article follows:

THREE-YEAR INQUIRY THREADS TOGETHER EVIDENCE ON FALN TERRORISM

(By Mary Breasted)

The dynamite comes from the Southwest. The bombs go off in Manhattan, the Chicago Loop, the Newark Police Headquarters, the nation's capital. The bombers' notes call for Puerto Rican independence, but Mexican-Americans are among the suspects and subpoenaed witnesses.

Episcopal Church officials have received subpoenas for documents and, having complied, now wonder how serious this breached the constitutional barrier between church and state. At the same time, church staff members and voluntary workers wonder who among them might be or once have been political terrorists or known of one.

These are some of the major elements in a tangled three-year investigation of Hispanic-American terrorism, one of the Federal Government's most difficult and extensive investigations, reaching into New York, Chicago, Denver, New Mexico, Southern California and Puerto Rico. Details of the case are only now beginning to emerge.

It is a search for those who set 58 bombs or incendiary devices in the last three years, people who officials believe are members of the F.A.L.N., or Fuerzas Armadas de Liberación Nacional Puertorriqueña—the Armed Forces of National Liberation for Puerto Rico.

As the investigation proceeds, it focuses more intently on persons who served on the Episcopal Church's National Commission on Hispanic Affairs from 1971 through 1976.

The only known member of the F.A.L.N. was a member of that church commission, a quiet young man who served on its theological task force, helping to write a hymnal and book of religious texts in Spanish while, unknown to some of those who worked with him, he rented a Chicago apartment and—according to law enforcement sources—carried into it the materials for making F.A.L.N. bombs. So far the only person who has been charged is that young man, Carlos Alberto Torres. He is wanted on a Federal fugitive warrant and Federal charges of illegal possession of explosives.

Three other persons sought for questioning by the authorities have disappeared, and a fourth, also once on the Episcopal Church's Hispanic commission is a suspect in a dynamite theft and has been subpoenaed to appear before two grand juries working on the case, one in New York and the other in Chicago.

A detail that emerged about two weeks ago was the reaction of a dog trained to detect explosives when it was taken in the New York apartment of Maria Cueto, the former head staff member with the church Hispanic commission.

The dog, whose sense is regarded as highly reliable by police bomb squads but is of uncertain value in court, indicated that it smelled traces of dynamite in Miss Cueto's apartment. The dog's reaction is now being checked through laboratory tests of materials taken from Miss Cueto's apartment, law enforcement sources said.

Miss Cueto went to jail last month after Federal District Judge Marvin E. Frankel rejected her claims of a First Amendment religious privilege to refuse to testify before the grand jury here, and the United States Court of Appeals recently upheld his ruling. Before she turned herself over to Federal marshals, she told reporters that she knew nothing about the F.A.L.N.

FOUR KILLED IN ONE BLAST

The most serious of the bombings for which the F.A.L.N. has taken responsibility—it has not done so for all 58 under investigation—was the blast at Fraunces Tavern in New York on Jan. 24, 1975. Four people were killed in that blast, and 55 others were injured.

Another blast that the group has said it set, a trap in an abandoned East Harlem tenement, blinded a young police officer in one eye and partially crippled one of his arms.

Most of the other F.A.L.N. bombings have damaged only property, exploding late at night inside or near government buildings, large banks or major corporation headquarters. The targets have been as various as the State Department Building in Washington, the Newark City Hall and Police Headquarters, the Standard Oil Building in Chicago and—last weekend here in New York—Macy's, Gimbels and Bloomingdale's.

The demands, stated in typewritten notes left near the bomb sites, have consistently included Puerto Rican independence from the United States. Recent notes have also made dire threats if the cancer-stricken Puerto Rican terrorist, Andres Figueroa Cordero, is not released from Federal prison before his death. He was sentenced to 81 years for his role in the 1954 incident in which five members of Congress were wounded when Mr. Figueroa Cordero and three other Puerto Ricans fired into the House chamber from a visitors' gallery.

Recent F.A.L.N. notes have also asked an end to the grand jury investigations.

CHANCE DISCOVERY IN CHICAGO

Law enforcement officials knew the identity of no one in the F.A.L.N. until the chance discovery last November by the Chicago police of what has come to be known as a "bomb factory" in the apartment rented by Mr. Torres.

Since then, the grand juries have been empaneled and investigators say they are encountering various degrees of cooperation. Six witnesses in Chicago are challenging their subpoenas, and the challenges are in litigation.

Miss Cueto's secretary, Raisa Nemikin, is with her in the Manhattan correctional facility, also jailed for having refused to answer the grand jury's questions. Both women had been granted immunity from prosecution.

Despite the unwillingness of these witnesses, various police and Federal sources have told the New York Times that they have pieced together the following evidence:

The dynamite found in the Chicago apartment of Mr. Torres last fall was stolen last June from a Deer Creek, Colo., construction site.

Other dynamite used in several bombs that failed to explode in Chicago and New York is believed to have been stolen from the Heron Dam site near Tierra Amarilla, N.M., in the late 1960's.

A University of Colorado van used by a Mexican-American student organization was photographed at more than one New York F.A.L.N. bomb site in October 1974 and was reportedly driven in New York about the time of those bombings by Ricardo Romero, a Denver Chicano activist who had served on the church's Hispanic commission The van smelled of explosives, the Denver police said, when it was returned to Colorado and inspected by a specially trained dog shortly after the bombings.

A second batch of dynamite stolen from the Deer Creek construction site late last summer was recovered by the Denver police in the fall. The explosives were found hidden in a crypt in an old cemetery where Crusade for Justice members were working. (The Crusade for Justice, a Denver Chicano political and civil rights organization that has received church commission funds, formerly employed Richardo Romero.)

Nelson W. Canals, who served on the church commission's staff under Miss Cueto in 1974 and 1975, visited the four Puerto Ricans convicted of the shooting in Congress in 1954 and reportedly told his friends

that he was concerned about them, especially about Mr. Figueroa Cordero. Travel records show that Mr. Canals made several trips between New York and San Juan shortly before and after the Fraunces Tavern bombing.

FIRST MAJOR CLUE

The discovery of the Chicago "bomb factory" was the first real lead in the case.

It happened, according to law enforcement sources, after a narcotics addict living in the same building saw Mr. Torres and a companion—identified as Oscar Lopez, who preceded Mr. Torres on the church's Hispanic commission—carrying giftwrapped packages into the apartment.

The addict waited until the apartment was untended, kicked in the door and found 211 sticks of dynamite in a foot locker and a nylon duffelbag, walkie talkies, scores of propane tanks, blasting caps, detonator cord, watches already wired to serve as timing devices and various other incendiary materials.

The addict started to sell the dynamite, and the Chicago police learned of the venture and made an undercover buy, law enforcement sources said. They arrested the addict, who led them to Mr. Torres' apartment.

They walked in on Nov. 3 without a search warrant. The next day, the F.B.I. obtained a search warrant and made its own assessment of the evidence.

The most interesting piece of material was not the dynamite, investigators have said, but an F.A.L.N. communiqué. Written on paper with the group's symbol—a five-pointed star with the letters imposed over it—the communiqué was the first hard evidence about the identities of people in the group.

A Frontier Airlines schedule for Chicago-to-Denver flights also found in the apartment bore the fingerprints of Oscar Lopez, law enforcement sources said, and fingerprints of Mr. Lopez's girlfriend, Lucy Rodriguez, were found on the giftwrap paper.

THE FOUR ARE MISSING

Mr. Torres; his wife, Haydee Beltran-Torres; Mr. Lopez, and Miss Rodriguez all disappeared after the Chicago discovery and Federal investigators have been unable to trace them.

As the government presses its search for Mr. Torres and for the links between the Southwestern dynamite thefts and the F.A.L.N. bombs, it is proceeding on the theory that Mr. Torres and his friends in the F.A.L.N. used the church commission to cover their activities.

One former commission member, Pedro Archuleta of Tierra Amarilla, N.M., was named in a confidential law enforcement document last November as the prime suspect in the theft of the Heron Dam dynamite, which authorities believe turned up later in the F.A.L.N. bombs that failed to go off.

Mr. Archuleta, who has been subpoenaed to appear before both the Chicago and New York grand juries, declined in an interview to answer any questions about the F.A.L.N. or the church's Hispanic commission.

He said he thought his subpoenas stemmed from the bitter local politics of his area, in which he has taken the side of the leftist La Raza Unida Party against the local Democratic organization.

The local leader of the La Raza Unida Party, Moises Morales, who last fall ran unsuccessfully for sheriff against the Democratic candidate, has also been subpoenaed.

Both he and Mr. Archuleta have been asked to supply the Chicago grand jury with handprints, fingerprints, handwriting samples and voice exemplars. Why would their voice samples be wanted? "Well, some of the bombings were reported in telephone calls to the police here, and those calls were recorded automatically," a Chicago law enforcement official said.

EXTENSIVE TRAVEL

Travel records obtained by the F.B.I. from the agency that arranged trips for commission members, Travel Arrangements Inc., show that commission members traveled extensively in the United States and to Puerto Rico between 1971 and 1976. Several present and former commission members interviewed by The New York Times said that their travels had been legitimate journeys to and from the quarterly commission meetings.

Church officials and commission members said that until this year, when the Hispanic commission was reorganized, the group had an annual budget of $300,000 to $400,000, used for projects helping poor Hispanics in various parts of the country as well as for commission members' travel expenses.

An Episcopal church spokesman said that records of the commission's grants had been locked up to prevent any tampering with what might become government evidence.

One of the questions that Raisa Nemikin, Miss Cueto's secretary, refused to answer before the New York grand jury was whether she knew of any commission funds that went to the F.A.L.N.

Partial records made available by the church showed that the commission had funded several projects that its own members were affiliated with. Among these were the Crusade for Justice in Denver, the Puerto Rican High School in Chicago and the Cooperativa Agricola del Pueblo in Tierra Amarilla, for which Mr. Archuleta works.

Not only participants in these projects and commission members who approved the funding, but also law enforcement officials who have examined the projects in the course of their investigations have portrayed the efforts as beneficient, sometimes vital services.

The Tierra Amarilla cooperative spawned the founding of a clinic that provides low-cost medical care to poor Mexican-Americans in remote valleys near the Sangre de Christo Mountains.

The Puerto Rican High School in Chicago has a reputation as a serious institution that, while espousing a radical leftist philosophy, keeps unmotivated students in school and sends most of its graduates to college.

Now, members of the church commission say they fear that their good works will be tainted by a connection in the public's mind between their programs and the F.A.L.N.

One of the accused was acquitted last week, and all charges against the second man were then dropped.

Violence has been common in the Chicano movement in the last decade, but what the bombing and shootouts in Chicano politics might have to do with the Puerto Rican independence movement is something that law enforcement authorities are still trying to determine. Police in Denver point out that an F.A.L.N. communique was printed in the October-November 1975 issue of El Gallo, a newspaper produced by Denver Chicano activities. The Denver police say they believe radicals there are supplying dynamite to groups elsewhere.

When Maria Cueto and her secretary went to jail, they accused the grand jury and the F.B.I. of trying to thwart the Puerto Rican independence movement.

But the questions that the grand jury reportedly put to them were not about Puerto Rican Independence, but about their last contacts with Mr. Torres, the Fraunces Tavern bombing and the possible flow of money from the church commission to the F.A.L.N.

Whatever the Federal investigators' suspicions are, it was clear from interviews with commission members that Maria Cueto was in a position, as chief staff member, to know more than anyone else about how other members were chosen for the commission

How, for example, was Oscar Lopez appointed as representative from the Chicago region? No one interviewed could recall.

In retrospect, some wondered aloud whether a clique of radicals had moved among them, doing the church's work in public while in private setting bombs.

CONSUMERS HAVE A RIGHT TO KNOW

HON. HAROLD E. FORD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. FORD of Tennessee. Mr. Speaker, I rise today to reintroduce with additional sponsors H.R. 902, a bill to amend the Fair Packaging and Labeling Act to require that packaged consumer commodities be labeled to show their selling price.

I am proud to inform the distinguised Members of this House that nearly 70 of our colleagues have joined me in cosponsoring this important legislation. Moreover, it has the enthusiastic support of the Retail Clerk's International Association, the Food and Beverage Department of the AFL–CIO, several regional supermarket chains in my congressional district, every major consumer organization in the country including the Consumer Federation of America and, last but most important, the American people.

I have received a number of letters from citizens across the Nation who endorse the concept embodied in H.R. 902, and I would like to take a moment today to share some excerpts from these letters with my colleagues here today:

MEMPHIS STATE YOUNG DEMOCRATS,
Memphis, Tenn.

MR. HAROLD FORD: Thank you for your letter of February 15, 1977, concerning the bill requiring supermarkets to label their goods showing the selling price. I am in favor of your bill and appreciate your endeavors to keep your constituents informed. I myself am employed by the Kroger Company and do not feel supermarkets can justify *not* posting prices; this practice is unfair to the consumer. Please keep the supermarkets from imposing computer-assisted checkout stands.

Thank you again for your concern and dedication.

A loyal Democrat,

MS. LINDA C. WARREN.

MEMPHIS, TENN.
March 18, 1977.

Congressman HAROLD FORD,
Longworth House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FORD: I appreciate the News Release you recently sent to the 8th District. I am sure some of your decisions are not popular with your fellow Congressmen.

I sincerely hope H.R. 902, the mandatory price-marking bill will be made into law in the 95th Congress. That is of importance to every person. It is absolutely a necessity that items for sale have the price marked on them.

Thank you for a job well done and caring for your people in the 8th District.

Sincerely,

MARGARET ODOM,
Treasurer, Tennessee Auxiliary to American Postal Workers Union.

STARKVILLE, MISS.,

DEAR MR. FORD: I totally agree with your bill. I also am for progress but not to the extent of cutting out jobs with our already unstable economy. I have been in the grocery business for about ten years now, and I know how to please the consumer.

Our customers in this area like service, and expect it. . . .

Thank you,

JIMMY CRUMBY.

Mr. Speaker, my esteemed colleague from the Volunteer State, Ms. LLOYD, was kind enough to forward to me a letter she received from one of her constituents about H.R. 902 which I would like to insert in the RECORD at this point:

FULL PACKAGE AND LABELING ACT

SIGNAL MOUNTAIN, TENN.,
March 25, 1977.

Hon. MARILYN LLOYD,
U.S. House of Representatives,
Washington, D.C.

DEAR MRS. LLOYD: It is my understanding that Rep. Ford of Tennessee has introduced, or will introduce, legislation to amend the above Act to require that packaged consumer commodities be labeled to show their selling price.

Recent TV advertisements by IBM have brought home to me the big "selling" act to consumers to support the universal produce code, which will eliminate the requirement that each item have an item price on each item, a grave injustice to the consumer in the low and middle income class.

I, for one, will never buy any item that does not have a unit price thereon. I am all for progress, provided the computer does not take away what I consider my right to have a unit price on the unit itself, rather than a price on the shelf which I cannot take home with me. If the larger chain stores do get this legislation, to eliminate the unit price on each unit, enacted I am sure there will still be Mom and Pop small stores who do not have UPC and the prices on the shelf rather than on the unit. When I get home I want to be able to check my purchases against the tape—can of beans, for example. I want to know three or four weeks later if the price on this particular can of beans, same label, has increased, decreased, or remained the same. When I leave a store I will, under UPC, have only the cashier's receipt which does not show the price of each specific item. As I grow older it is harder to read the numbers now on the shelves in certain chain stores getting ready for the UPC elimination of the unit price. I will not and cannot shop in a "prices-off" grocery store!

Best wishes.

Sincerely,

Mrs. F. PATTON FENTRESS.

The observation made by Mrs. Fentress about the impact of price-removal on elderly Americans was also made by the National Senior Citizens' Law Center last year when they stated, the Universal Product Code "may also pose special problems for those elderly consumers who may have difficulty bending low enough to see the shelf prices or who have poor eyesight."

Mr. Speaker, H.R. 902 is a cautious yet meaningful step intended to safeguard the basic rights of every consumer—the right to know what goods cost. This measure merely requires supermarkets to continue marking prices in items it displays for sale—it does not require them to do anything new.

Presently, H.R. 902 has a broad-based, bipartisan coalition of 69 cosponsors. I am hopeful that additional Members of this body will join me, not only in sponsoring this measure, but in urging the chairman of the Subcommittee on Consumer Protection and Finance of the Committee on Interstate and Foreign Commerce, the Honorable BOB ECKHARDT, to schedule hearings on it soon. Only by swift enactment of this legislation can we prevent any interruption of item-pricing in our Nation's supermarkets.

RICE PROGRAM

HON. DAWSON MATHIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MATHIS. Mr. Speaker, the Subcommittee on Oilseeds and Rice, of which I am chairman, recently recommended to the full House Agriculture Committee that the present rice program be continued basically in its present form for another 4 years through the 1981 crop.

The Rice Production Act of 1975, which created the present program for the 1976 and 1977 crops of rice, set target and loan rates at $8 and $6 per hundredweight, respectively, adjusted yearly thereafter to reflect changes in the index of prices paid by farmers. In response to both foreign and domestic concerns over the availability of this important food commodity, the Rice Act provided that rice allotments would not serve as a restriction on the production of rice but only as a base for computing the quantity of rice placed under loan and to compute disaster and deficiency payments when necessary. The subcommittees recommendation of a 4-year extension of this program is based on the majority's view that the Rice Act is in the best interests of both producers and consumers.

For the 1976 crop, deficiency payments to farmers caused by severely depressed rice prices will probably total about $140 million, down considerably from costs in excess of $166 million for the 1975 crop in the last year of the old program. The Department of Agriculture projects that under the Rice Act these costs will drop in half to around $100 million for the 1977 crop. By all accounts, had the Rice Act not been adopted and the old program had continued, the Government would be acquiring most of our production at huge losses and our export markets would have been lost. Because of unusually favorable growing conditions around the world, rice prices are now at their lowest point in 5 years. If conditions return to normal and prices improve, as many experts predict, the cost to the Government will become virtually nil.

Under present conditions, any dramatic shift downward in the loan and target levels for rice, as some are now advocating, could be catastrophic for producers. At the present target rate of $8.25, the average producer, according to USDA cost of production figures, is barely breaking even. Many other rice producers who have lower yields or above average production costs are experiencing benefit of deficiency payments, which may be as high as $55,000 for a grower with a large allotment and big outlays, rice producers are at best recovering their cost of production.

In my opinion, the Rice Act, while imperfect, has been a substantial factor in preventing the wholesale bankruptcy of the rice growing industry, a situation that would be intolerable for the producing regions, the consuming public, and millions of individuals overseas who depend on America as the world's only major exporter of rice. Few Americans are aware that the number of farmers in the United States is declining at an alarming rate, and that the farm population has dropped by 15 percent in just the last 6 years. Unless this number is stabilized soon, our food production may fall under the control of a few oligopolistic corporations, and the days of relatively low food prices will have gone the way of cheap energy.

Although the Commodity Credit Corporation has received under loan a considerable amount of rice this year, world market prices are still above the CCC's cost of acquisition. Therefore, the CCC reserves do not represent losses to the Government. Curiously, critics of farm programs often refer to the costs of these programs as "losses," although we do not hear of the annual expenditures of an agency like HEW as $170 billion in "losses," or that the Government "lost" $5 billion on food stamps in 1976.

Deficiency payments to producers of rice have not been an unfair amount. Total payments in 1 year for rice stabilization are equal to the average outlays of about 6 hours by HEW or a half day by DOD. In conclusion, the present program has proved to be one of the more effective programs of the Federal Government, and I hope the subcommittee's recommendation for a 4-year extension will be enacted.

PETITION TO THE SECRETARY OF AGRICULTURE ON THE QUALITY OF FOOD IN FEDERALLY ASSISTED FEEDING PROGRAMS

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MILLER of California. Mr. Speaker, today a number of nutrition, consumer and children's groups nationwide are joining to sponsor "Food Day" meetings and activities on behalf of improved nutrition programs in our schools and in support of increased attention to nutrition education.

As part of the "Food Day" activities, the following petition was presented to Secretary of Agriculture Bob Bergland calling for improvements in the quality of food served in federally assisted feeding programs:

PETITION TO THE SECRETARY OF AGRICULTURE ON THE QUALITY OF FOOD IN FEDERALLY ASSISTED FEEDING PROGRAMS

We, the undersigned Members of Congress, are greatly concerned about the quality of food being offered to children who participate in the federally-assisted feeding programs in schools, day care centers and child care institutions. The kind of food served shapes children's eating habits for the rest of their lives and has a direct effect on children's health.

The United States Department of Agriculture (USDA) is responsible for insuring that these programs provide meals meeting minimum standards based on nutritional analyses. Unfortunately, USDA has allowed, and even encouraged, the use of non-nutritious and imitation foods. Furthermore, it has dropped its ban on the sale of junk foods in schools participating in lunch and breakfast programs. USDA has also ignored the growing body of nutritional research which indicates that too much fat, sugar, salt, and cholesterol and too little fiber in our children's diets contribute to tooth decay, obesity, heart disease, and other health problems. In addition, the use of fresh, locally grown and prepared food, which serves farmers' interests and reduces energy costs, is becoming the exception rather than the rule in our federal child feeding programs.

Therefore, we the undersigned Members of Congress, demand that USDA take the following steps to insure the quality of the food reaching our nation's children in the federally subsidized food programs:

1. Study the nutrient content of school breakfasts and lunches cooked on-site, prepared in central kitchens, and shipped cooked and frozen from other cities (pre-plated). The nutrient content should reflect food "as eaten."

2. Adopt nutritional standards that would reflect the need for (1) the amounts of all vitamins and minerals currently recognized to be part of a nutritionally adequate diet, (2) a diet low in sugar, salt, fat, and cholesterol and adequate in fiber content, and (3) nutrients to come as much as possible from natural foods.

3. Evaluate the nutritional, social, psychological, environmental, economic and cultural impact and possible consequences of preplated meals and machine-vended foods.

4. Encourage school food programs to be used as learning laboratories for effective nutrition education.

5. Ban the use of fabricated foods until nutritional research shows that such foods both meet high nutritional standards and promote sound eating habits in children.

6. Strictly control or ban from school foods any additives, such as artificial colorings and preservatives, that might represent a health risk to children.

7. Issue instructions which, to the maximum extent possible, encourage on-site preparation of food, the hiring of local people to work in the food programs, the buying of fresh foods from local farmers and merchants.

8. Issue regulations to insure that food service workers have adequate training to prepare appealing, nutritious, inexpensive food.

9. Reissue its ban on the sale of non-nutritious foods that compete with the sale of the authorized school lunch and recommend to school boards that nutritious foods (nuts, yoghurt, fresh fruit, etc.) be substituted for non-nutritious foods (soda pop, candy, potato chips, etc.) in all school vending machines and snack bars.

10. Adopt regulations that would insure the involvement of students, parents and school board officials in menu planning, preparation, and service of food.

11. Issue regulations which establish a pleasant cafeteria environment by requiring a lunch period of at least thirty minutes and encouraging schools to have teachers, the elderly and other adults with students.

12. Establish an office of Deputy Director for Nutrition, Child Nutrition Division, to promote good nutrition in every possible way in their programs.

UNDOING OF THE SERVICE STATION

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. HANSEN. Mr. Speaker, service station operators have had problems of pressing concern for a number of years, problems which seem to be getting progressively more acute.

The following article by Nicholas von Hoffman depicts the operators' serious problems in classic Von Hoffman style.

I do not subscribe to proposals to break up the major oil companies, but I do agree the little guy is overmatched and the consumer continues to get less service for more money.

I insert the following article:

UNSERVICE STATIONS

(By Nicholas von Hoffman)

It's a bit late in the day, but the major oil companies are admitting that they have been hosing their gas station operators just as the dealers have charged for years and years.

"The big companies didn't give a damn about gasoline marketing; it was just a necessary evil," Maurice Holderaf, the former top marketing official for Shell Oil, told The Wall Street Journal's Peter B. Roche, who writes (March 28): "The purpose of the service station was to keep pumping as much gasoline as possible—whether at a profit or not—so the companies could make their big profits at the wellhead."

The Journal asserts that the oil companies have looked on their gas stations as "loss leaders," a management philosophy which explains why the dealers have been screaming for decades that they're little better than impecunious, indentured servants to Exxon, Mobil, Texaco and the rest of the major oil companies.

From this unlooked-for source also comes the validation of the oil company critics who have charged that these gigantic corporations manipulate their books so as to hide their true profit-and-loss picture to escape taxation. By running their gas stations as a bookkeeping loss and pretending their profits come from drilling and pumping they can exploit particularly generous tax gimmicks like the famous oil depletion allowance. (The oil depletion allowance has now been cut back but there are other clauses in the tax which are as good if not better.)

These admissions strengthen the case of those pushing for oil company divestments, that is telling the so-called integrated companies that they can discover crude and pump it, but they can't be in the refinery business also, or the pipeline business, or the gas station business.

In the last five years 37,000 gas stations have been closed, most of them by major oil companies who intend to do with the owner-operator gas station what the giant supermarket chains did to the small owner-operator grocery store a generation ago. Goodbye to those TV commercials with the nice guy in overalls helping the cute little girl put air in her tricycle tires while the music-over chorus sings, "I can be very friendly, yes I can."

In the gas station of the future, if Exxon has its way, will be an indifferent attendant seated in a bullet-proof-glass box into which you will slip your money through a slot before you pump the gasoline into your car yourself. If your windshield is covered with mud and crud, bring along a bottle of Windex, good buddy, or use your shirttail. The new, modern gasoline station like new, modern super markets will feature no conveniences and no services whatsoever. You get no mechanic, you get no air for your tires, you get no credit card, and, most of all, you get no help.

In return for paying through the slit in the glass, you will pay more per gallon. There's no way around it because the conversion is going to cost tens, if not hundreds of millions of dollars. And this at the very time when you can't pick up a business publication without reading of some oil company executive lamenting "the capital shortfall" which is depriving the industry of the money it needs to discover and drill. Talk about profligate waste and madness, the industry proposes to junk 189,000 already-built, already-paid for, perfectly functional gas stations when it says it's short of cash.

Presumably the oil companies want to convert their retail operations because they believe high-volume chain outlets with few employees is the economical way to go. That's what they thought in the food business when such enormous financial muscle was put on the mom-and-pop stores to drive them out of business. But the calculations were wrong. Experience has taught that small chains with but six or seven stores have the lowest costs, and that, far from being uncompetitive, mom-and-pop-type convenience operations like 7–11 do far better than hold their own against the grocery giants.

If the gas stations of our country are closed, it won't be because they are intrinsically unprofitable but because the oil companies own them and the oil companies want to close them. Another source of small-scale entrepreneurial strength will be weakened, and what has been a labor intensive activity will be made overly technological and capital intensive for no very good reason.

Divestiture has been opposed for decades because people say the oil company isn't a monopoly in the ordinary sense. Its sin is

bigness wherein a large corporation controls everything from the extraction of the raw product to its retail sale, but bigness by itself, as this case shows, can be intolerable.

A SOUND PENSION FUND—WHAT IS IT?

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. PICKLE. Mr. Speaker, occasionally we note an alarming statement that pension fund investments are not doing well. Or we might hear an assertion that such-and-such a pension fund has to be sound because it has "never lost a dime." Or we see a statement that such-and-such a pension fund must be doing well because it has a rate of return better than some other investments.

These statements are often off the mark.

As stipulated in the Pension Reform Act passed in 1974—ERISA—the purpose of a pension fund is to preserve the fund for the use of the beneficiaries. It is not to "make money."

The investment policies of ERISA are important because they go not only to the history or record of a pension fund's investments, but to the very structure of those investments. The fiduciary guidelines in this law go to the potential of loss. Funds must be invested so that the potential of large losses is minimized.

An article in the Sunday, March 27, New York Times offers further insight into the meaning of ERISA and into why the law's fiduciary regulations are so important. I would like to reprint that article at this time:

SOME ANSWERS FOR PENSION FUNDS

(By A. J. C. Smith)

The results of pension fund investment in North America during the last decade have been disappointing. A survey of 78 bank commingled equity funds showed that only 21 matched or bettered the Standard & Poor's 500-stock index during the first half of the 1970's.

Today more than $220 billion is invested in private pension plans covering about half of all workers in commerce and industry. With government plans, the total invested comes to more than $400 billion. Pension fund investment performance is obviously important.

A variety of explanations has been offered for the poor performance: a business recession, continuing inflation, the unpredictable behavior of the stock market or, less kindly, incompetent investment management. But the real explanation seems more likely to be found in a more fundamental shortcoming: a failure to define the problem.

When the wrong people, members of the investment community, are asked the wrong question—"How can we get the largest return on investment on these funds?"—getting the wrong answer is almost inevitable. If the basic approach is wrong, then conscientiously developing skills and improving techniques will achieve little.

The purpose of a pension fund is to finance a pension plan. It is impossible to understand the nature and purpose of pension funds without an understanding of pension plans.

It is true that pensions were once regarded as gratuities for long service, with their payment and financing completely under the control of the employer. Then it was reasonable for the employer to see the pension fund as an extension of his business, subject to the same balance of risk and reward that was part of the strategy adopted for the company as a whole. But today pensions are almost universally regarded as deferred compensation.

The pension plan is the device used to pool the employee's deferred earnings with those of other employees of his own and other generations so that he can arrange to spread his earnings during his working life systematically over his natural life and support himself and his dependents after retirement.

This view of the pension plan required a change in the philosophy of investment. And it's true there has been a change in attitude toward pension fund investment. It is difficult to say whether this has resulted from a new understanding of the purpose of the pension fund, or the generally moribund performance of the stock market or, perhaps, the emphasis in the Employee Retirement Income Security Act on fiduciary responsibility.

The legislation has had a significant and beneficial effect. Storing value, preserving capital and accepting responsibility for taking what is, in effect, the beneficiary's money are ideas that are at last getting the emphasis they deserve.

So far so good. It is certainly true that we needed to rethink carefully our approach to the pools of money that represent the efforts of employees to defer their compensation by storing some current earnings. It is important that such funds be invested with the awareness that they are accumulated savings for pensioners and sometimes for widows and orphans. They should not be treated as counters for scorekeeping in a trading game devised by the investment community.

There are some signs that the change in attitude to pension fund investment is in fact providing a new approach to the problem. Recognition is being given, at least in form, to the need to have a specific investment policy, which common sense has always demanded and the Employee Retirement Income Security Act clearly mandates. The objectives, strategies and techniques should be chosen thoughtfully with regard to the final purpose—the payment of pensions—rather than glibly in terms of the jargon of asset mixes, portfolio volatility, beta coefficients and so on.

It is encouraging to note that portfolio selections are more often being based on old-fashioned fundamentals like the determination to preserve capital and the expectation of continuity and growth of income. Of course, capital has to be preserved in terms of purchasing power, which in today's economic environment means it must be made to grow in dollar value to offset the effect of inflation.

But on the other hand, there is also a tendency to adopt defensive attitudes which are in the last resort irresponsible because satisfactory results are sacrificed to maintain a record of actions beyond any possibility of criticism. This is one of the inevitable but discouraging reactions to the recent legislation—a predictable reaction of which Congress should surely have been cognizant when passing massive legislation to correct minor abuses.

The pension fund investor should obviously take the long view because pensions are accumulated over employees' working lifetimes. There is usually little risk attached to this approach because the demands of a pension fund do not generally exceed current income, so that liquidity is not required. In spite of this, investment managers and plan sponsors have too often chosen fixed-interest investments and investments with market values that are not expected to fluctuate to avoid showing investment results that appear unsatisfactory in the short run.

The actuarial profession, in setting the assumptions about the future to be used as the basis for calculating contributions, has sometimes defensively insisted on an unduly conservative forecast with respect to the return on investments. Current contribution requirements are consequently increased beyond the necessary level, and the plan sponsor is restrained from making benefit improvements that would further increase his costs.

What can be done to protect our pension funds from the impact of the latest fashions in institutional investment, to preserve the savings of millions of employees and, in the long run, to insure the continued availability of this pool of capital in the private sector of our economy?

First, responsibility cannot be left in the hands of Wall Street. An introspective institution concerned with the technicalities of trading financial instruments is not best suited to taking care of the futures of our citizens, without some direction.

Plan sponsors must accept the obligation to arrange for the investment of pension funds with the understanding that these are accumulations of the employees' savings in the expectation that, when they have to be used after retirement to purchase goods and services, they will have retained their value. (Of course, if government allows inflation to reduce radically the value of the dollar, it is unlikely that any practicable pension fund investment can protect employees' savings.)

The primary objective of the pension fund is to provide income to retired employees by maintaining the real value of current earnings, deferred to provide pensions. It is only a secondary objective to reduce the amount of current wages or salaries that need be deferred and to eliminate subsequent need for supplementary contributions by earning a satisfactory return on vested funds.

One of the consequences of the Employee Retirement Income Security Act is the shifting of the ultimate legal obligation for pension benefits from the pension fund to the plan sponsor. This does not diminish the responsibility of the others involved in funding a pension plan—the investment manager and the actuary—but there obviously are decisions that the plan sponsor alone is equipped to make.

Contemplation of the purpose of the pension fund provides another insight that should be influential in determining the way in which it is invested. A pension plan is a very long-term financial arrangement—and in the large majority of cases its growth is systematic. The payments to be made into and out of a pension fund can usually be predicted with some accuracy. Even when some unforeseen event occurs that changes the trend, it is usually possible to deal with any adverse effects on the pension fund gradually over an extended period.

There do appear to be signs of a shift toward sounder pension fund investment, with emphasis on fundamental long-term objectives. This will continue if plan sponsors accept their responsibilities and investment managers direct their strategy to preservation of value over the long term.

A MEMORIAL HONORING LT. FRANK WASKOWICZ OF CHICAGO

HON. JOHN G. FARY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. FARY. Mr. Speaker, April 18, 1977, marked the 35th anniversary of the first American air raid on Tokyo. As the war progressed the courage of our American pilots did more and more to help swing the pendulum of World War II in our favor. I had the pleasure of knowing

one such pilot who was particularly brave and patriotic—Lt. Frank "Fritz" Waskowicz of Chicago.

We were close as young men in Chicago. Fritz answered the call of our great country and became a pilot. All who knew him were proud of his military accomplishments and admired his courage and determination.

Mr. Speaker, it was in September of 1942, while involved in a military operation against the enemy, that Lieutenant Waskowicz paid the supreme sacrifice for his country—life itself. He was reported missing in action over the Solomon Islands never to be heard from again.

His passing grieves me even today, but Lieutenant Waskowicz has not been forgotten by the people he fought so gallantly to protect. Recently a committee of community leaders from Lieutenant Waskowicz's neighborhood in Chicago held a memorial in his honor. It warmed the hearts and brought back many pleasant memories to those who attended this memorial.

Lieutenant Waskowicz's brother, Dr. A. T. Waskowicz, along with other members of Fritz's family, Bernice Gorell, Helen Dominion, John Troike, and August Troike, accepted a plaque on behalf of the entire Waskowicz family. Two plaques were assembled in honor of Lieutenant Waskowicz. One plaque had a picture of Fritz as a football player, and the other showed him as a pilot.

These plaques were sponsored and purchased by the Veterans of Foreign Wars Post, American Legion Posts, and Kiwanis Organizations. Each half-year a commander from the VFW Post addresses an assembly of the most valuable players and presents awards to the outstanding athletes. It is hoped that the deeds and heroics of Lieutenant Waskowicz which instilled Americanism and patriotism in the younger players will long be remembered.

Like many of these young players, Lt. Frank Waskowicz was born and raised in the Back of the Yards community of Chicago. He participated, with a characteristic vigor, in football, wrestling, and boxing, starring at Cornell and Davis Square Parks Elementary School, en route to greater fame and tougher competition at Lindblom High School, and then at Washington University where he achieved All-American honors, starring in the Rose Bowl Game—Washington versus Pittsburgh—and climaxing his career by being named the most valuable player.

Answering the call of his country, he enlisted in the Army Air Corp and was commissioned as a lieutenant. At Pearl Harbor he was wounded, and later was reported missing in action over the Solomon Islands.

One of the eloquent speakers who addressed the memorial was Joseph Meegan, secretary of the Back of the Yards Council. He spoke of the tremendous boxing programs that took place in the 1930's and 1940's at Cornell and Davis Square Park and commented that Lieutenant Waskowicz "was a very active athlete who participated in all sports."

The neighborhood council's summer boxing program for youngsters of Chicago was started by the late Mayor Richard J. Daley and will continue under the sponsorship of the present mayor, Michael A. Bilandic. An explanation of the program was highlighted by the introduction of the former middleweight champion of the world, Tony Zale. Mr. Zale presented trophies to a group of outstanding boxers from the Cornell and Davis Park area. There were also boxing exhibitions featuring the outstanding novice boxers from the two areas.

During the memorial I had the opportunity to meet with many of the community's leaders, including members of the committee which organized the memorial; Comdr. John Szalflarski, Town of Lake; Comdr. John Lavrik, Ted Stempien Post; Comdr. John Novak, J. J. Zientek Post; Comdr. Al Hubbel, McKinley Post; Comdr. Chester Stachyra, Darius Garenas Post; Dr. Poronsky, Kiwanis Stock Yards District; Stanley Brode, J. J. Zientek Post; Joseph P. Wagner, Jr., Town of Lake; Comdr. Ted Markowicz, Our Boys Post, and representatives from the Veterans Posts Women Auxiliaries.

I was also afforded the pleasure of meeting with many of the political leaders present which included Mayor Michael Bilandic, Senator Richard M. Daley, Senator Frank Savickas, Representative Michael Midigan, Alderman George Kwak of the 12th, Representative Edmund Kornowicz of the 23d, Judge Art Cieslak, and Circuit Court Judge Joseph Power, all of whom lent their wholehearted support and leadership to this affair.

In attendance were religious leaders such as Msg. John Koziol, pastor of St. Joseph Elementary School who talked with me about Lieutenant Waskowicz's school days at St. Joseph's.

Former Lt. Gov. Neil F. Hartigan presented the family with a personally inscribed plaque and gave an excellent speech ending his remarks by exhorting the audience of "hereditary patriots" to fight for their country with "every ounce of strength" they possess.

Mr. Speaker, at this memorial I was proud; proud not only for Lieutenant Wakowicz and his many tributes, but for this fine area of Chicago with its people so conscientious that they recognize and praise—even long after his death—a man like Lieutenant Waskowicz. It is easy to see where many of Fritz's virtues were first planted.

FIREMEN HONORED

HON. ROBERT E. BADHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. BADHAM. Mr. Speaker, I would like to call the attention of my colleagues to the outstanding and dedicated services rendered to their cities by three firemen, who were honored today, April 21, by the Newport Harbor-Costa Mesa Board of Realtors at the annual "Fireman of the Year" awards ceremonies.

The three men chosen for their distinguished service to the public are Capt. Gerald Poarch of the Costa Mesa Fire Department, Glenn Sekins, a paramedic of the Orange County Fire Protection Agency serving the city of Irvine and Capt. Richard Ellerman, who served the city of Newport Beach until he was retired because of industrial injuries last year.

It is indeed an honor for me to rise today to call public attention to the activities of these three superb citizens, who have demonstrated their interests in the public welfare for years by their selfless efforts above and beyond the call of their normal firefighting and public safety responsibilities.

Capt. Gerald Poarch, who has served Costa Mesa for the past 15 years, has devoted countless hours to improving the emergency services rendered by the department in his city. He spent his own time obtaining credentials to certify instructors in first aid and has been the fire department's representative to the council of emergency services.

Additionally, Capt. Poarch has been a member of the Costa Mesa Hospital Auxiliary, active in the fourth grade junior fireman program and chairman of the recycling committee, part of the city's beautification committee.

Glenn Sekins has dedicated himself to service to the youth of Irvine, as an advisor for the Search and Rescue Post No. 891 and by working with the Irvine Unified School District, where he was instrumental in setting up an interaction video television program, to explain the duties of the paramedics to the students and to further acquaint students with all fire department programs.

Furthermore, he has been involved in the new firearms counselor program in Irvine, where the youths of Irvine come to the station to talk to firemen about their problems and gain an outside view on how to cope with them.

Capt. Richard Ellerman, who joined the Newport Beach Fire Department after 11 years of military and U.S. Post Office service, was the epitome of a thoroughly professional fire-fighter during the 19 years he served honorably in the city's department.

Ellerman was known as "Mr. Reliable" by his fellow firemen for the efficient, brisk and expedient manner with which he always carried out his duties and service to the city.

It is with pleasure that I describe to the members of this honorable body the dedication shown by Gerald Poarch, Glenn Sekins and Richard Ellerman in serving their communities, all of whom are in the 40th Congressional District of California. I am proud to know that public service, no matter how backbreaking, how thankless, or how monotonous, can attract men of the calibre of these three men who were honored today in Newport Beach, Calif.

H.R. 6407—AN ACT TO AMEND THE CONSOLIDATED FARM AND RURAL DEVELOPMENT ACT

HON. EDWARD R. MADIGAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. MADIGAN. Mr. Speaker, yesterday I introduced a bill—H.R. 6407—which

will make several changes in the U.S. Department of Agriculture, Farmers Home Administration, farm ownership and operating loan programs.

This bill is similar to a bill considered in the House Agriculture Committee in the 94th Congress, but which was not reported out of the Committee primarily because there was not sufficient time to take action upon it. It is also similar to a bill—S. 312—introduced by Senator BELLMON of Oklahoma.

There is a need to increase the loan limits for Farmers Home Administration loans, both for ownership and operating loans. The present limits were established in 1970, and I need not remind farmers or lenders that inflation has lifted land values and machinery prices tremendously in the ensuing years.

The credit needs of farmers have risen drastically, and neither the private sector nor the Farmers Home Administration is meeting those needs. This bill by lifting certain limits placed on loans in the Consolidated Farm and Rural Development Act should prove of great help to young farmers starting out in the business of farming. Moreover, it should permit the Farmers Home Administration to work more closely with private lenders, improve quality and expand credit services to all rural borrowers, and insure fiscal restraint and responsibility in the administration of these essential credit programs. I emphasize the latter, because I assume the Farmers Home Administration will continue to manage these programs with some fiscal discipline so that they will not engender larger defaults or be viewed as driving up land prices for farmers.

There are few sectors of our economy that have been as adversely affected by the high costs of oil imports in recent years as the farm sector. Yet, it is the farm sector that is feeling the credit pinch most and is contributing most in offsetting our Nation's balance of payments deficits from burgeoning oil imports.

In the bill I have introduced, I have increased the maximum interest on loans for water and waste disposal systems and essential community facilities made or insured, other than guaranteed, to 5½ percent. Loans made or insured, other than guaranteed, under sections 304(b) or 310B will also be increased in that they will bear interest at a rate determined by the Secretary based on the cost of money to the Treasury.

I have taken this step with the hope that by so doing, the amount of money made available for these purposes will be increased. For instance, I am hopeful that with a 5–12 percent interest rate on community facilities loans we will see some support by the Carter administration and that USDA will urge the Appropriations Committee to increase the amount of funds available for those purposes based on the increased rate of interest to the borrowers and the decrease in subsidy by the Government. It seems to me that if the borrowers can have some confidence that a greater amount of funds are going to be available to them if they are willing to receive less subsidy, that the support may be there to gain acceptance of an increase in this rate of interest on such loans. However, if experience proves that even though the rate of interest has increased on such loans as community facilities or water and waste disposal systems and the amount of money made available for such loans remains the same, then it seems obvious to me that the borrowers will tend to resist any further increase in the rate of interest. So our experience under this bill if it were to become law, it seems to me, will determine the future of how these loans will be handled in the future and whether increased rates of interest resulting in concurrent increased availability of money can be sold as a credible policy in the rural areas.

It well may be that in the course of hearings on a bill such as this, the issue can be "flushed out" fully and commitments either can be made by the administration and the Congress that if interest rates are increased on some of these loans, that the amount of funds made available will also be increased.

If any savings may be effected from the enactment of a bill such as this, I suggest that those funds be utilized for emergency, disaster or crop insurance programs which Congress may enact.

A summary of H.R. 6407, which appears below, explains in greater detail the provisions that are included therein:

SUMMARY OF PROPOSED LEGISLATION

Section 1 makes corporations and partnerships eligible for farm ownership loans as long as the entity does not become the operator of a larger than family-size farm. The credit elsewhere test would apply to both the entity and the principal stockholders or partners. However, the credit elsewhere test would be eliminated for guaranteed loans.

Section 2 authorizes farm ownership type loans up to $200,000, instead of the present $100,000, and up to $300,000 for guaranteed loans. It eliminates the $225,000 total indebtedness restriction that may exist against a farm. It also eliminates the requirement that the county committee certify as to the maximum amount of such a loan.

Section 3 simplifies the definition of "rural", gives a preference to municipalities having a population of not more than 5,500 for subtitle A loans other than business and industry ones, eliminates the confusing "urbanized and urbanizing" test for business and industry loans, and authorizes the Secretary to determine population levels on a when-needed basis.

Section 4 provides that for any loan made under subtitle A on a guaranteed basis, the interest rate will be negotiated between the borrower and the lender. It increases the maximum interest to 5½% on loans for water and waste disposal systems and essential community facilities. Loans made or insured (other than guaranteed) under sections 304(b) or 310B will bear interest at a rate determined by the Secretary of Agriculture after considering the cost of money to the Treasury. It also permits an add-on for the latter loans of not to exceed 1%. Business and industry loans made on an insured basis would continue to be made at their present formula interest rate which permits a slightly higher rate of interest than the proposed cost of money formula for other subtitle A loans. The last amendment in this section would delete the requirement that the Secretary hold any required escrow funds in a segregated account.

Section 5 eliminates the maximum dollar limitation on the amount of new loans that may be held in the Ag. Credit Ins. Fund, as other funds administered by FmHA. It also adds language that would permit the Agricultural Credit Insurance Fund and the Rural Development Insurance Fund to be used to pay holders of any paper sold from the Funds the amounts represented by deferred interest. This will permit the Secretary more discretion in structuring the repayment terms of loans, particularly to young farmers.

Section 6 adds a new section which would authorize the Secretary to purchase the guaranteed portion of any outstanding guaranteed loan from the holder and to use the assets of the Ag. Credit Ins. Fund and the Rural Development Ins. Fund for such purposes.

Section 7 eliminates the transfer of employment and overproduction determinations required by section 310B of the Consolidated Farm and Rural Development Act, as well as deleting the Dept. of Labor certification, where the FmHA financial assistance does not exceed $500,000 or where employment will not be increased by more than 20 employees. The time period the Secretary of Labor has in which to certify as to compliance with restrictions (1) and (2) of section 310B of the Consolidated Farm and Rural Development Act would be shortened from 60 to 30 days.

Section 8 does for operating loans the same thing that section 1 does for farm ownership type loans, including the elimination of the credit elsewhere test for guaranteed loans.

Section 9 increases the operating loan limit from $50,000 to $100,000, and provides for guaranteed operating loans a ceiling of $200,000. It also deletes the requirement that the county committee certify as to the maximum amount of operating loans.

Section 10 provides that the interest rate for guaranteed operating loans will be one negotiated between the borrower and lender, and provides that the Secretary shall set the interest rate after considering the costs of money to the Treasury.

Section 11 deletes Puerto Rico and the Virgin Islands from the eligible areas for emergency loans since these areas are covered by a new proposed definition in section 15. Similar changes are being made in other sections of the Consolidated Farm and Rural Development Act. This section also specifies that an eligible partnership for an emergency loan must be a U.S. partnership. A similar requirement is already imposed on corporations.

Section 12 authorizes loan and grant activity to continue as to existing projects financed in a rural area after the area ceased to be rural.

Section 13 empowers the Secretary to establish an appeal procedure from determinations made by the county committees.

Section 14 exempts guaranteed loans from the credit graduation requirements. It also makes a technical amendment consistent with the amendments made by sections 1 and 8 exempting guaranteed farm ownership and operating loans from the credit elsewhere test.

Section 15 inserts a new definition in the Consolidated Farm and Rural Development Act which increases the jurisdictional area which FmHA may serve to include all commonwealth territories, and possessions of the U.S.

Section 16 specifically authorizes Congress to establish FmHA program levels. Where such a level is established, it must contain both an insured and a guaranteed amount.

Section 17 empowers other Fed. Agencies to become jointly involved with the financing of any program FmHA can finance.

STATEMENT CONCERNING H.R. 6474; A BILL TO MAKE CLARIFYING AND TECHNICAL AMENDMENTS TO TITLE I OF THE OMNIBUS CRIME CONTROL AND SAFE STREETS ACT OF 1968

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CONYERS. Mr. Speaker, as the title of this bill explains, its purpose is only to clarify a small section of Public Law 94–503 which reauthorized the Law Enforcement Assistance Administration September 30, 1976. The section in question is that one creating an Office of Community Anti-Crime Programs, section 101(c). The Law Enforcement Assistance Administration was concerned that the language in the legislation was vague and they may not be able to carry out the congressional mandate without clarifying congressional intent. The Subcommittee on Crime, which I chair, authored the section and reported a bill with this section in it to the full Judiciary Committee on May 7, 1976. The committee reported H.R. 13636 to the House on May 15, 1976 with section 101 (c) included in toto. The House agreed to the bill on September 2, 1976 without changing the section in question. Several times in the aforementioned legislative process statements were made by myself and my chairman, Congressman RODINO, as to the extreme importance of this section and the program emphasis it represents. The House and Senate met on September 27, 1976 to confer on their respective bills to amend the Omnibus Crime Control and Safe Streets Act. What emerged was Public Law 94–503, signed October 15, 1976, which contained the referenced section just as it appeared in my subcommittee print.

The concept of the program was to encourage community crime prevention programs by creating anti-crime programs to provide direct grants to groups in which members of the community or neighborhood participate. It was felt by the House of Representatives that the new wave of crime reduction activities had to emerge from the grass roots of the country. The Public Law authorized $15 million to be set aside from LEAA's $753 million budget for these purposes The House and Senate Appropriations Committee then appropriated the $15 million for these specified purposes. This was in October. It is now April and not one penny of that money has gone to a deserving group or any group for that matter. I, on November 23, 1976, wrote a letter to LEAA detailing what was Congress' intent in creating the new program. LEAA, on November 24, 1976, requested from the Controller General of the General Accounting Office an interpretation of the legislation. We received on March 3, 1977 a legal opinion from GAO which states there is no need for LEAA to expend any of the funds authorized or appropriated for the purposes set out in the legislation, that is, community anti-crime prevention. This opinion is totally contrary to the whole legislative process and an affront to the Congress. This bill is an attempt to redress the wrong committed upon Congress. Copies of these communications are included for the record.

The technical amendments in H.R. 6474 should adequately clear up any questions as to the intent of the legislation. They answer questions put to GAO by LEAA; namely, does the new Office of Community Anti-Crime have grant making authority?

The answer is yes. It was stated repeatedly in the subcommittee markup and in the committee that the new office would make grants to or contracts with groups, agencies, institutions and organizations which are private and nonprofit to perform effective community crime fighting activities. This office was separated from the normal administrative structure of LEAA for a reason. It would be directly under the Deputy Administrator for policy development. This means it would exist outside of the present Office of Regional Operations. We wanted the office separate so it would get the high visibility it deserves and also so its administration would not be confused with the discretionary fund operations. This is a program whose administration should differ slightly from that of the discretionary fund. We wanted projects to be funded directly from the LEAA Office of Community Anti-Crime programs to eligible grantee groups outside of the normal block and discretionary grant process. These projects would be funded with SPA knowledge however. In fact, another portion of the law requires that the SPA assure the participation of community group members on their advisory boards. It was hoped that these members would lobby successfully with the SPA's for adoption of their projects by the State. The clarifying language in my bill should make it evident that the newly created office is authorized to make and administer grants and contracts.

Who should receive these grants and contracts?

It is stated explicitly that private nonprofit organizations, institutions, agencies and community groups are eligible grantees. There is no necessity for groups to be incorporated to receive these grants as the bill states.

Is there a necessity for the grantee to supply match money?

There is no requirement for match. The funding is up to 100 percent. It was always believed by Congress that the projects involved would, for the most part, comprise very small money awards. Even so, a neighborhood group may not be able to raise a sum to match these grants. Therefore, there is no match requirement.

What would be the purpose of the grants?

The awards would go for the purposes described as examples in the House report of May 15, 1976—H.R. 94–1155—and repeated in this bill. Many of these projects may be described as "victim prevention." In some cases, they would cost no money at all except to send a trained community organizer to a neighborhood to explain good crime prevention activities. LEAA already has 3–5 years worth of reports on successful projects which could easily be replicated. The other type of crime prevention project which requires some use of research into the root causes of crime could be more costly, such as job programs for neighborhood juveniles. There was never in Congress any intent that very large amounts of money would be spent to have an outside group administer this program. It is expected that LEAA would handle grant administration internally. To reiterate that intent, I have placed a percentage limit on the money that can be used for technical assistance grants.

Can the Office of Community Anti-Crime use any part of the $15 million for technical assistance as required in section 101(c)(1)?

LEAA may use part of the $15 million to perform the technical assistance provided for in the legislation. They are cautioned, however, not to award a large grant to an outside contractor to perform the services they are capable of doing in-house since the act allows them this money to be used internally. We have found ever since 1973, when Mr. Santarelli was Administrator, an in-house capability existed to disseminate information to applicants on types of projects and to train citizens to run effective community anticrime programs. We realize the office may need assistance in affirmatively identifying those community groups which could be effective grantees.

What role do the SPA's play?

SPA's may take over the auditing and administering functions of these grants in accordance with their existent letters of credit.

Are grants limited to section 301(D)(6) of part C of the act?

No.

Are these part C grants pursuant to section 306(a)(2)?

No.

Let me assure you, Mr. Speaker, I have worked with the Department of Justice, LEAA General Counsel, the ranking minority members on our Committee Mr. MCCLORY, and the Senate Judiciary Committee to gain their approval of this technical amendment.

ROBERT ABEL, M.D., EAST ROCKAWAY KIWANIS CITIZEN OF THE YEAR

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. LENT. Mr. Speaker, on May 6, the Kiwanis Club of East Rockaway, N.Y., my hometown, will honor as its Citizen of the Year, Dr. Robert Abel, a 30-year resident of East Rockaway. I am delighted to join with my fellow citizens

in paying tribute to this outstanding servant of the public.

This year's Kiwanis theme is "Pride in Our Community." Dr. Abel, through his sefless service to his community, truly exemplifies that theme.

Dr. Abel serves currently as department surgeon of the East Rockaway Fire Department and the East Rockaway auxiliary police; as president of Hose Company No. 1 of the East Rockaway Fire Department; secretary of the E.R.F.D. rescue squad; medical adviser for emergency medical services training for the Nassau County Department of Health; and in a number of other capacities. He also teaches three separate courses for emergency medical training at South Nassau Communities Hospital.

Long before becoming an M.D., Dr. Abel was a member of the East Rockaway Fire Department rescue team. He still responds to fire alarms and rescue calls, and he has been responsible for saving many lives through his dedication.

There is a bumper sticker which says "Firefighters Still Make House Calls." Dr. Robert Abel is a physician who still makes house calls, and he is deserving of the gratitude of the community. His is a record of public service which is uncommonly fine.

H.R. 6464, TO STOP AG-LAND

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ABDNOR. Mr. Speaker, today I have introduced H.R. 6464, to amend the Internal Revenue Code of 1954 to deny tax exemption to any otherwise tax-exempt organization which invests in farm real property.

This bill is a reintroduction of H.R. 4789, which I introduced on March 9, and 11 of my colleagues have now joined me in cosponsorship. They are Mr. MOFFETT, Mr. MOORHEAD of California, Mr. NOLAN, Mr. PATTERSON, Mr. RICHMOND, Mr. SEBELIUS, Mr. SIMON, Mrs. SMITH, Mr. STANGELAND, Mr. STEERS, and Mr. TAYLOR.

Chairman ULLMAN of the Ways and Means Committee, to which H.R. 4789 has been referred, has indicated this legislation may be considered later this year and early next year when the committee takes up the administration's tax reform proposals. Accordingly, a number of my colleagues and myself addressed a letter to Dr. Laurence N. Woodworth, Assistant Secretary for Tax Policy, U.S. Department of the Treasury, urging the administration's attention to this issue and a definitive policy statement from the President.

Although the outcry which developed over the particular proposal which received public attention has apparently resulted in its withdrawal, tax exempt organizations do not require approval from IRS to purchase farmland. In fact IRS would be prohibited from divulging information about such purchases, and it is possible they have already occurred and could continue without public awareness.

Those who wish further information on this vital issue may see my remarks on pages E1363–E1365 of the March 9 CONGRESSIONAL RECORD, which also contains the text of H.R. 4789. The Subcommittee on Family Farms, Rural Development, and Special Studies has held hearings on the Ag-Land I proposal, and a review of the hearing record will reveal the concern it has generated.

In my view it is of extreme importance and some urgency that we act to remove this threat to the future of the family farm system.

MOVING THE MAILS: THE TORTOISE EXPRESS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. CRANE. Mr. Speaker, for most of us, as each day goes by, it becomes clearer and clearer why persons and firms are trying every possible means of circumventing the U.S. Postal Service when conveying messages from one location to another. It can also be deducted, without a special commission and a 3,000 page, 6-month study, that the Postal Service's future looks bleak. Since the study is before us now and the results do not reveal much information that we were not already aware of, I would like to include in the RECORD an article from the Alternative—March 1977—that highlights one incident where the Postal Service "lost," but nevertheless, "won."

[From the Alternative: Mar. 1977]

MOVING THE MAILS: THE TORTOISE EXPRESS

(By Herbert W. Stupp)

"Do you know the way to San Jose?" was Dionne Warwick's dulcet question back in the summer of 1968. But if her question were directed in 1977 to the United States Postal Service—even its San Jose office—the answer would have to be no.

Such, in sum, is the plight of California clothing retailer Mel Solomon. Mr. Solomon's shop, Sportique, depends on a mailing list that is regularly serviced to attract about 85% of its business. In handling third-class flyers announcing an annual summer sale, the Postal Service delivered between 8,000 and 10,000 of Mel's mailers too late or not at all. Plotting out prior performances of Sportique's summer sales, Mr. Solomon determined that the bungled postal delivery had lost him well over $20,000 in profits.

Mr. Solomon's first impulse was to sue the Postal Service for damages, but he was barred from so doing by the provisions for sovereign immunity of the government in the Federal Code. So Mr. Solomon decided on another course of action—bringing suit against the individuals he ascertained as responsible for his loss. His attorney, Roger Marzulla, posits that there is no legal impediment to prosecuting individual postal workers for damages arising from their action or inaction. Indeed, there are at least fifteen precedents in American and British law whereby postmasters were held liable for heedless supervision. Most of these cases were brought in the 19th century.

U.S. District Judge Robert Schnocke, upon hearing Marzulla's argument in court, ruled that individuals employed by the federal government did not have unlimited immunity from suit while executing "non-discretionary" duties of their employment. The case was then transferred to a Judge Harris for trial.

The trial itself was Hollywood stuff. If Messrs. Solomon and Marzulla had staged auditions for the consummate federal bureaucrat to cast as defendant (read: "heavy") for maximum benefit in their crusade, they would have been hard pressed to improve on William Lawrence, the San Jose postmaster and one of nine original defendants in the suit. Mr. Lawrence's arrogance quotient is high, even considering his chosen field. When asked by the Judge why no "delayed mail report" was filed, or why he didn't attempt to isolate the employees responsible for the negligence, Mr. Lawrence replied: "Because, well, employees, your Honor, when it gets down to 'did you,' are not about to admit that they knew that 2,000 pieces were buried under something. So when you ask them, they will deny they were there." The Judge laughed. And asked what his normal procedure would be, were Mr. Solomon to call and complain about tardy delivery of his mailing, Mr. Lawrence countered with: "If Mr. Solomon called me and complained about such a thing, I would tell him, 'I do not believe you.' Then, I will look into it."

Clever cross-examination by Roger Marzulla enabled the plaintiff to focus his legal attack, after trial evidence pointed toward the negligence being insulated within the San Jose Main Post Office. In his final argument, Marzulla exculpated seven of the defendants of any negligence, leaving the San Jose postmaster and assistant postmaster, William Lawrence and Wilmer Bennett, as the sole respondents to the suit.

After four days, the trial concluded. The Court concurred with virtually all of Solomon's legal contentions—that he had lost $20,000 to $30,000, that the San Jose post office had failed to deliver promptly some 8,000 pieces (and failed altogether to deliver 2,000)—but nevertheless ruled that postal employees were immune from legal liability. The Judge ruled that individuals who are employed by the Postal Service are part of its organic whole, and are hence not liable to litigation incurred by their work habits, unless negligence can be linked directly to them. When I asked William Lawrence for comment on the decision, he told me smugly, "The Federal judge's ruling is rather complete."

But Solomon and Marzulla remain undaunted. They have filed an appeal in the Ninth District of the Federal Circuit Court of Appeals, and they intend to carry their legal action as far as their resources and jurisprudence will allow them. An organization based in Washington, the Citizens Legal Defense Fund, has begun to aid the appeal, and has provided $2,000 thus far. Solomon has spent $7,000 of his own funds on the suit. A spokesman for the CLDF, Len Theberge, stressed that the Solomon case had "very significant implications" which could ". . . hold public employees to the same degree of liability as private employees."

It appears that the Solomon case could indeed set a precedent extending liability for federal employees in executing or neglecting their duties. Even the potential of such a weighty legal occurrence ought to qualify Mr. Solomon's case for occasional attention from the networks and the great national newspapers. But after scattered reports around the country, the case has been neglected.

The tribulations of the long-suffering Mel Solomon are exceptional, but not entirely unique. My own mail consciousness has been raised by two particular attempts to communicate with me via the Postal Service. One letter took a year to reach me in New York, having been mailed in Washington. Another, along with a check, took six months from Ithaca, New York. This sort of experience has won countless converts to the Eleventh Commandment of doing business

in New York, "The check is in the mail," without which the town might collapse.

The sheer cost of postage has stampeded people into circumventing the federal mails. The Narragansett Electric Company of Providence, Rhode Island, for example, initiated hand delivery of bills to about a quarter of its 250,000 subscribers. The messengers are Narragansett employees who would have been laid off, but for this ingenuity.

Since 1971, when the independent Postal Service was duly constituted, first-class rates have escalated from 6 cents to 13 cents per ounce. Currently, the organization wolfs down a lump sum appropriation of $1.6 billion, and President Carter is expected to make good on a campaign pledge to make the Postmaster General's post a political appointment once again.

And yet there are developments to cheer the hearts of those who long to see the federal monopoly over the mails felled. J. Edward Day, who was U.S. Postmaster General in the early 1960s, has filed a suit on behalf of the Association of Third Class Mail Users challenging the constitutionality of the Postal Service's monopoly of third-class mail. "We want to have available to us the alternative of using private carriers," he unashamedly told an interview in October. Which goes to prove that given time, even a former Postmaster General can become as wise as Solomon.

NEW YORK STATE CELEBRATES ITS BICENTENNIAL

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. KEMP. Mr. Speaker, the history of my State of New York is the story of the growth of democracy in a wild, untamed land, of the struggle for political and social freedom, and of the establishment of a respect for the fruits of a person's labor and for the property rights that this respect engendered. It is the story of strength in the face of hardship, of the thirst for freedom of a few Yankee "rebels," and the coming of age of one of the Thirteen Original Colonies of these great United States. It is the story of America.

From the original settlement of what was to become the great State of New York, this area attracted settlers of all faiths and nationalities, because of its widespread reputation for tolerance to divergent interests and groups. It was here that the famous John Peter Zenger trial was held in 1733 that was to prove a landmark in the Colonies' fight for freedom of the press.

The first settlers brought with them a sense of order and stability, and a desire to establish a democratic and responsive government. Although the first Dutch and English proprietary Governors in New York were practically autonomous in their rule, gradually an advisory council was established, and later an assembly—which, although subject to veto by the Governor or the Duke of York, was to gather considerable authority in the eyes of the people, and play a substantial part in the Revolution.

It was during the fight for independence that New York proved to be the cornerstone of American resistance to the British troops. Because of New York's strategic location, separating New England from the rest of the colonies, the chief avenue of attack to British Canada on its northern border—also the British military headquarters for the entire New World—it was generally considered that whoever controlled New York controlled the American colonies. As England increased its demands on the colonists in the way of tightened trade and navigation laws and higher taxes, New York played a leading part in American resistance movements. In 1765, the Stamp Act Congress met here to register opposition to the British stamp tax. Later, "Sons of Liberty" erected "Liberty Poles" throughout New York State to dramatize their defiance of English authority. Emotions ran deep on both sides of the independence question, and both sides gathered in size and force.

After the bloody battles of Lexington and Concord, New York was drawn irrevocably into the fierce conflict. The British stockaded their garrison in New York City as the Revolutionary forces captured the important New York forts of Ticonderoga and Crown Point. On July 9, 1776, the New York provincial congress signed the Declaration of Independence, and firmly committed the State to the war for independence. Whigs and Tories fought bitterly, often relative against relative, and the British gained ground in the crucial Hudson River-Champlain Valley.

That summer, Philip Livingston, (one of New York's signers of the Declaration of Independence), joined with two other prominent New Yorkers, John Jay and Gouverneur Morris, to form a committee to draft New York State's first State Constitution. The Convention of 1776–1777 was to acquire the nickname, "government on the run," because the British troops forced it to migrate first to Harlem, then to Kingsbridge, Philipse Manor, Fishkill, Poughkeepsie, and finally, Kingston. There, at Kingston, the constitutional committee was to present its masterpiece—the New York State Constitution—a document that was to outlast the Continental Articles of Confederation by over 30 years. It was a shining example of democracy in action, establishing a bicameral legislature with an Assembly and a Senate, a judicial branch with lifetime appointments for judges, and the first elected governor in the entire fledgling United States. The new Constitution was adopted on April 20, 1977, and proclaimed on April 22 from a platform mounted on a hogshouse. The government of New York was officially established.

In the fall of that same year, New York troops turned the tide of the Revolution at the Battle of Saratoga, and after many more grueling years, joined in the joyous celebration of a free land, the United States of America.

As we join with the citizens of New York State and the New York Legislature as they gather in Kingston this week to commemorate the dedication and the foresight of the framers of our State constitution, let all of us take just a few moments to reflect on the price of peace and freedom, and of those precious liberties that we now enjoy as a result of the efforts of those courageous patriots who fought for their country in every state and region, 200 years ago.

THEY BAKE TO PERFECTION

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. HANSEN. Mr. Speaker, there is, as the following article says, something very satisfying and comforting about a perfectly baked potato.

Read on and learn how you can savor this Idaho delight plain—or with the usual seasonings, and not fear any dietary consequences.

THEY BAKE TO PERFECTION

(By James A. Beard)

In my youth I used to travel back and forth on the train between Oregon and New York. I had the choice of the Great Northern or Northern Pacific, the Milwaukee or the Union Pacific and being a great eater, I almost always took the Northern Pacific because it had a reputation for extraordinarily good food and was known as "the line of the great big baked potato."

The potatoes, specially grown for the Northern Pacific, were huge, weighing over a pound each, and they were always perfectly baked, a great feat in the galley of a dining car, you must admit. They came from the kitchen split and dripping with butter and one ate them with fresh steak, or chops, or fried chicken, sometimes with fresh trout put aboard at one of the station stops. They had a quality one seldom finds and they baked to perfection. I have never forgotten how good they were.

There is something very satisfying and comforting about a perfectly baked potato. The beautiful floury lightness and delicious crisp, chewy skin with an earthy flavor intensified by the baking process need no dressing up. I prefer to savor that earthy flavor with just freshly ground pepper and a little salt (if I am allowed it)—no butter, no sour cream, no chives. Maybe a little bit of butter with the skin, but more often only more pepper and salt.

It's good to know that eating a plain baked potato, with butter or trimmings, is a very low-calorie experience. A potato has only about 90 calories, and a good deal of riboflavin, iron, thiamin, niacin and vitamin C. The Department of Agriculture research division tells us that a diet of whole milk and potatoes would supply almost all the food elements necessary for the maintenance of the human body.

So many people who are dieting say they love potatoes but wouldn't dare to eat them because they are fattening. That's hogwash. Ounce for ounce, a potato has about the same number of calories as an apple, pear or banana, and it is certainly more filling and satisfies the craving for something different in taste and texture from the usual diet foods.

Of course, if calories don't count with you, there are many ways to eat a baked potato—with good sweet butter, salt and pepper, with yogurt, sour cream or creme fraiche, maybe some chopped chives or crumbled bacon or finely cut green onions.

Or you can bake your potatoes, take them out of the oven, cut off about a quarter inch across the top, scoop out the pulp, mix it with butter, bacon bits, chopped onion and parsley and shredded Gruyere cheese, return it all to the shell, dot with butter, sprinkle with Parmesan cheese and pop in a 350-de-

gree oven for 15 minutes to reheat and blend the flavors.

Then there's that extraordinarily good first course or luncheon dish of baked potato with caviar that was first served, if I remember rightly, on the Hamburg-American Line, and then taken up by other steamship lines.

For this you bake the potatoes in a 400-degree oven until fluffy and tender, break them open, add a large spoonful of caviar and a spoonful of sour cream and serve at once. You can sprinkle the sour cream with chopped chives or onion, if you like, but it is not really necessary. Just the combination of the hot fluffy potato and the delicious caviar, with the benison of sour cream, makes this a never-to-be-forgotten treat.

Another way to bake potatoes is to slice them in thirds straight across, arrange them on a lightly buttered baking sheet and bake them for about half an hour at 450 degrees until they are crisp, brown and puffed on the surface and moist inside. I also happen to like overbaked potatoes—potatoes baked at 400 degrees for 2 hours instead of one, which gives you a thicker, crispier skin with less of the white starchiness. Somehow, when baked this way, the potatoes take on an entirely different flavor.

I often bake the skins, after removing the baked potato pulp for another dish. When all the pulp is removed, cut the skins into strips about an inch wide, with scissors, put on a baking sheet, brush them generously with melted butter, season with salt, pepper and a dash or two of Tabasco and either put in a 475-degree oven or under the boiler until they brown and become quite crisp (if you use the broiler, make sure they don't burn). Served with drinks, as an hors d'oeuvre, they are better than any potato chip.

ISRAEL EXPO '77 TO BE HELD IN WORCESTER, MASS.

HON. JOSEPH D. EARLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. EARLY. Mr. Speaker, the Jewish Community of Worcester, Mass., is planning an 8-day "Israel Expo '77" to take place from May 8 to May 15, 1977. The Jewish Community Center and its grounds will be transformed into a miniature Israel, portraying the country in all its aspects: religion, business, science, agriculture, life styles, food, and entertainment.

It is with great pleasure and pride that I recognize the cultural and educational importance which this week-long "happening" will have on the entire community. Hundreds of volunteers and professional technicians have been donating their time and contributing their efforts to insure that the project achieves the tremendous success it richly deserves. In addition to involving the total Jewish community—10,000-member—Israel Expo has sought the active cooperation of Worcester's other religious groups and the business and academic communities as well.

Mr. Speaker, this project is the first of its kind to be undertaken in New England. It has been pioneered by several other communities across the country and received tremendous public reception. More than 30,000 visitors from all over New England are expected to attend and enjoy the many unique and exciting features of Expo.

The event is being cosponsored by the Worcester Jewish Community Center and the Worcester Jewish Federation, with the cooperation of the synagogues and affiliated Jewish organizations. The purpose of Expo is to deepen understanding and knowledge of Israel's 5,000-year history and achievements as a modern state among both Jews and non-Jews.

From 10 a.m. to 10 p.m., May 8 through May 15, the Community Center on Salisbury Street will become a living, walk-through panorama of Israel, featuring large-scale replicas of the Western Wall and the Jaffa Gate. Visitors of all faiths and ages will be invited to "come walk this land." They will have the chance to experience the sights, sounds, and smells of life in Israel—walk through the Jaffa Gate to Old Jerusalem, bow their heads at the Western Wall, feast on "falafel," "kebags," "shashlik," and other delicacies, visit a working kibbutz, hunt for bargains in an old city bazaar, and much more.

Mr. Speaker, I offer my highest words of commendation and praise to the many persons who have actively been participating in the planning of this great event. I am, indeed, proud of my constituents for their efforts in this undertaking, I wish them tremendous success, and I eagerly look forward with much enthusiasm to visiting Israel Expo.

At this point, Mr. Speaker, I would like to include a list of some of the attractions planned for this event, for the information of my colleagues:

ATTRACTIONS PLANNED

A reproduction of the Western Wall, part of the wall Herod built in the 1st century B.C. around the Temple in Jerusalem.

A replica of the Jaffa Gate, one of the 8 gates through which one enters the old walled city of Jerusalem.

A display of the only copy of the Dead Sea Scrolls in the Western Hemisphere. The exhibit will include an exposé of the Scrolls' "Worcester Connection."

A working Kibbutz, constructed and lived in by teenagers; including lookout tower, gardens, livestock and chickens.

Models of Jerusalem and Massada, the fortress on which hundreds of Jews committed suicide in face of imminent capture by Romans after a three year siege two thousand years ago.

A walk-in archeological model of a Tel, with collections of artifacts dating from different periods of Israel's history.

A typical Old City Bazaar, selling Israeli fashions, jewelry, rugs, wall hangings, etc. in a wide range of prices.

An Art Exhibit of Israeli painting and sculpture made available by Boston and New York galleries, on sale in a wide range of prices.

A Cabaret presenting Fashion Shows and Night Club entertainment by professional Israeli performers.

A Restaurant and Snack Bars featuring Israeli food, emphasizing Middle Eastern specialties and Central European kosher food.

An exhibit of current and ancient Coins and Stamps.

A Biblical Garden featuring ancient and modern plants referred to in the scriptures.

A Ham Radio Station transmitting messages to and from Israel.

A "walk" through the history of the Holocaust, with special sound and light effects, starting in Hitler's Germany and ending with embarkment to Israel.

Displays demonstrating Israeli Scientific, Industrial and Irrigation techniques and the development of medicine and health care in the modern State.

Mini-lectures, Films, and Slide Shows on various aspects of life in Israel.

AMERICAN TRAUMA SOCIETY

HON. BARBARA JORDAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Miss JORDAN. Mr. Speaker, I would like to bring to the attention of my colleagues the existence of the American Trauma Society, an organization incorporated in 1968 to combat our national epidemic of trauma. The American Trauma Society is a national, not-for-profit, voluntary health organization which brings together health professionals and interested lay persons. Currently, the society is a network of 34 incorporated State divisions—and an additional number of city or community units—with headquarters in Chicago, Ill.

From April 28, 1977, to May 1, 1977, the American Trauma Society will hold its fifth annual meeting at the Shamrock Hilton Hotel in Houston, Tex. On this fifth anniversary of the actual organization of the society, it is holding its annual meeting in Houston to honor its Texas division, which was the first officially chartered ATS division.

This annual meeting itself brings the society to a new level of organizational consciousness. On Saturday, April 30, 1977, the society will present officers or executives from more than 20 trauma-related organizations and agencies in a special 1-day forum entitled "Trauma Is Everybody's Business."

Presentations will fall under six major areas of concern: Prevention, first response, qualified assistance, hospital facilities and personnel, and rehabilitation. Organizations now making special efforts in each area will have an opportunity to explain just what it is they are doing, what successes they have had so far in their work, and how other allied organizations can help increase the effectiveness of that organization's efforts.

Organizations and agencies participating in "Trauma Is Everybody's Business" are: The Division of Emergency Medical Services of the Department of Health, Education, and Welfare; National Safety Council; American Telephone & Telegraph; National Association for Search and Rescue; American Heart Association; American National Red Cross; National Association of EMTs; International Association of Fire Chiefs; Department of Transportation; Military Assistance in Safety and Traffic; American College of Surgeons; American Hospital Association; American College of Emergency Physicians; Emergency Department Nurses Association; American Dental Association; American Medical Association; American Burn Association, National Paraplegia Foundation; Shriners Burn Program; and, the Veterans' Administration.

The successful presentation of this forum will represent a major American Trauma Society effort to begin fulfilling

one of its basic goals; To organize and coordinate all persons—lay and professional—involved in trauma awareness, response, and care for the acceptance, promotion, and support of optimal trauma response and care within the community.

Other goals of the Society are:

Increasing public knowledge and understanding of trauma, motivating each person so the toll of trauma is reduced through personal action at the community and national level;

Promoting and supporting the initial and continuing education of physicians, nurses, and allied health personnel involved in trauma response and care; and,

Supporting research and the systematic gathering of data to determine the effects of trauma and to improve the care of the trauma patient.

Trauma means injury, any kind of injury. Often, we think of an injury as occurring from "just an accident," but 105,000 Americans did not call their injuries "just an accident" in 1974. They died from trauma.

Trauma is the leading cause of death among all persons aged 1 to 38. It is the fourth leading cause of death among persons of all ages; 11 million Americans suffered disabling injuries in 1974, and 380,000 of these suffered permanent impairments from their injuries.

In total, an estimated $43 billion is spent each year in the United States to pay trauma's toll. One out of every eight hospital beds is occupied by a trauma victim. These are more beds than are required for all births and for all cardiac patients, and four times the number needed for all cancer patients.

Much can be done to prevent or lessen the impact of trauma. In industries where safety practices have been applied conscientiously, the toll of death and disability has been reduced by more than 50 percent. Even the low 20 percent use of automobile safety belts is credited with saving 3,000 lives each year. According to the National Academy of Sciences, 15 to 20 percent of the deaths due to trauma could be prevented each year by improving emergency medical services throughout the Nation. This could result in 20,000 lives saved every year.

One key to reducing the toll of trauma is an aroused, enlightened, and involved public. The American Trauma Society is hard at work creating just such a public. The other key to reducing the toll of trauma is an aroused, enlightened, and involved health profession. The American Trauma Society is also hard at work encouraging and assisting just such a profession.

A EUROPEAN COMMUNITY DECLARATION ON HUMAN RIGHTS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. FRASER. Mr. Speaker, the European Community's protection of human rights has recently been reinforced by a joint declaration by leaders of its institutions. The very successful European Convention on Human Rights, ratified in 1950, has now been formally backed by the European Parliament, the European Council of Ministers, the European Commission, and the European Court of Justice. This establishes a pattern for the sort of human rights protection many of us seek for the world-at-large.

This April 5, signing of a declaration on fundamental human rights by Community leaders in Luxembourg again emphasized the importance of human rights to the nine nations that comprise the Community. It was, in effect, a reaffirmation of the human rights values common to these nations as these rights are expressed in their own constitutions and in their common institutions.

I would like to place in the RECORD a "Background Note" describing the signing. Published by the European Community Information Service, the note testifies to a very successful human rights effort:

A EUROPEAN COMMUNITY DECLARATION ON HUMAN RIGHTS

A declaration on fundamental human rights was signed in Luxembourg today by the President of the European Commission, the President of the European Parliament, and the President of the European Council of Ministers. The signing underlines the importance that the institutions of the European Community place upon human rights as they are defined in the constitutions of the Member States, and in the European Convention on Human Rights.

Fundamental rights are, in the first place, an essential part of the Community legal order. There are provisions in the Treaty of Rome, whose aim, or at least, effect, is to guarantee and improve the position of the individual in the Community. On the basis of some of these articles, the European Court of Justice has been able to give important judgments on the protection of fundamental rights.

It is a central belief of the Community that the individual citizen should be protected against the arbitrary use of official power, and although it is manifested in different ways, this basic aspect of democracy is present in the constitutions of all the member states. The Commission has consistently stated that there can be no democracy without the recognition and protection of human rights, and guaranteed freedom of the citizen, and it is because of this insistence on human rights within democracy, coupled with economic strength, that the European Community is proving able to influence the reestablishment of fundamental rights outside its own borders.

Because of its nature, and the ideals of its founding treaty, the Community has consistently refused membership by nondemocratic states. When the "Colonels" came to power in Greece in 1967, the Community "froze" its association agreement with Greece as an act of censure. One of the first acts of the democratic government of Greece when it returned to power was to seek full membership of the Community. It is no accident also that the government of Portugal, as part of its efforts to protect, and stabilize a fledgling democracy, recently established after 48 years of dictatorship, should, as one of its first acts of foreign policy, formally apply for Community membership.

In both these cases, the attraction of the Community was twofold. Both the economic opportunity and well being that come from access to Community markets, and the politically stabilizing effect of belonging to a union of nations committed to democracy, drew Greece and Portugal toward the Community. Within the Community structure, the basic rights of the citizens of these countries will not only be better protected, but have also, a European dimension.

Spain, too, as she moves toward the establishment of a political democracy is being encouraged to do so by the knowledge that when this is achieved, she will be eligible for membership of the Community.

All three of these nations are important to the Atlantic alliance. Their stability and the freedom of their citizens is crucial to the stability of the world.

Thus, in the pursuit of its founding ideals, and its emphasis on human rights, the European Community shares with the United States part of the task of encouraging and protecting democracy and individual freedom around the world.

FAIR HOUSING MONTH

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. DODD. Mr. Speaker, today I am introducing a resolution designating the month of April as Fair Housing Month. Nine years ago this month, the Fair Housing Act of 1968 which guarantees all Americans the right to live where they wish to live, when they wish to live there, for as long as they can afford to do so became law.

Although this act has done much toward insuring that every American has decent housing, the last 9 years have also revealed weaknesses in the law which need to be corrected in order to provide for its effective enforcement. So, on this 9th anniversary of the enactment of the fair housing law, let us dedicate ourselves to making the necessary changes in the law which will make good the promise of protection against discrimination that the Federal Government made to all Americans in 1968.

The resolution I am offering today calls on the Congress to rededicate "itself to the promulgation and practice of the letter and spirit of the fair housing law so that fair housing will become a right that can be realized by every American."

With the passage of this law, the Federal Government extended to housing its formal acceptance of the principle that black Americans so valiantly fought for all through the 1960's—no American should be denied his constitutional right to equal protection of the laws, because of his race, religion, or national origin.

While many still hailed the passage of this landmark piece of legislation, it became more and more clear that the law's failure to grant the Federal Government strong enforcement powers made it almost impossible for HUD to process housing discrimination complaints in a timely manner and, therefore, greatly reduced the number of cases that HUD could successfully resolve.

In testimony last September before the Subcommittee on Civil and Constitutional Rights of the House Judiciary Committee, on which I had the honor of

serving in the last Congress, former HUD Secretary Carla Hills said:

Respondents know all too well that HUD has no meaningful enforcement power . . . and many have virtually ignored (HUD's) conciliation efforts because they have no inducement to cooperate.

Similarly, the U.S. Civil Rights Commission has also found that the law needs to be significantly strengthened.

Mr. Speaker, justice delayed is justice denied—and a right that is thwarted is a right denied. No longer can we in the Congress deny all Americans their rights by not giving HUD and the Justice Department the kind of strong enforcement authorities they need to make fair housing a reality in practice and not just meaningless words, once stated and now forgotten.

A lot can be done by the administration acting under its own authority, by assigning more people to enforce the law, but unless the Congress gives HUD the statutory authority it needs, these additional personnel would not have the tools they need to make this law work.

I am happy to say that legislation has already been introduced in this Congress which will significantly strengthen the law. A bill, H.R. 3504, introduced by Representative DON EDWARDS, chairman of the Subcommittee on Civil and Constitutional Rights, would grant the administration important new enforcement powers such as the authority to issue cease-and-desist orders and the authority to initiate a suit without having to establish a pattern or practice of discrimination as is now required.

Mr. Speaker, with these authorities HUD and the Justice Department can make this law work, but they need our help. I ask all my colleagues to support both this resolution and the strengthening of the Fair Housing Act of 1968.

The resolution follows:

RESOLUTION

Resolved,

Whereas it is the policy of the United States to guarantee to every citizen the right to fair housing; and

Whereas this right and the responsibilities attendant on it are set forth in the National Fair Housing Law, Title VIII of the 1968 Civil Rights Act; and

Whereas, since 1968, the Month of April has been set aside each year for commemoration of the Fair Housing Law; now, therefore, be it

Resolved, That the House of Representatives (the Senate concurring) recognizes the month of April as Fair Housing Month and that the Congress of the United States hereby rededicates itself to the promulgation and practice of the letter and spirit of the Fair Housing Law so that fair housing will become a right that can be realized by every American.

WILL THE HUMAN RIGHTS ADVOCATES CONDEMN SLAVERY

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. McDONALD. Mr. Speaker, a number of the leading "human rights" advocates have demonstrated a peculiar sense of priorities. They single out for particular condemnation countries fighting terrorists and restricting the ability of Marxist-Leninists to organize revolutionary armed struggle and those with "minority governments" such as South Africa and Rhodesia.

Existence of a "minority government" is stated by some of these "human rights" advocates as ipso facto "repressive." Few mention the record of oppression and injustice compiled by the majority of the so-called majority rule African countries, where military dictators and their cliques inflict torment on people of their own, as well as other races.

The London-based Anti-Slavery Society for the Protection of Human Rights has documented the existence of slavery instituted by the Government of Equatorial Guinea, along with other abuses in other countries. An article based on the British organization's work in the Review of the News—April 20, 1977—points out that the United Nations has a double standard on human rights issues. In the words of Anti-Slavery Society Secretary Col. Patrick Montgomery, "There is of course a tacit understanding at the U.N. about which countries may be openly reviled for their disregard of human rights."

The current U.S. Ambassador to the United Nations should be asked to demonstrate the depth of his commitment to human rights by speaking out against slavery before that international body. The article follows:

ANDREW YOUNG IGNORES SLAVERY IN BLACK AFRICA TODAY

(By John Brennan)

Three hundred years after Roots author Alex Haley's reputed ancestor Kunta Kinte was stolen from the gardens of Gambia and transported to the New World aboard the *Lord Ligonier*, black leaders of newly "liberated" African countries have reinstated human slavery.

The London-based Anti-Slavery Society For The Protection Of Human Rights has furnished your correspondent with documented details and confirmed in a trans-Atlantic interview, for instance, that President Francisco Macias Nguema of Equatorial Guinea is now the dictator of a state in which slavery is official policy. And the Society charges that the United Nations knows all about the slavery in Equatorial Guinea but has done nothing about it. The Russians and their sympathizers are dictating that the eyes of the world be turned instead toward Rhodesia and South Africa, the two great African prizes being sought by the Soviets.

Perhaps not one American in ten thousand can point out Equatorial Guinea on a map, although its location is well known to Communist strategists. It is a sweltering country located both on and in the Atlantic just north of the Equator and below the great westward bulge of Africa. There is the large island of Macias Nguema Biyogo (785 square miles), and such lesser islands as Corsico, Great and Small Elobey, and Pigalu. They would have important strategic value in any military conflict between global powers.

Macias Nguema Biyogo was known by the more romantic name of Fernando Po until 1973 when President Macias modestly named it after himself. We will refer to it as Fernando Po in this article to avoid confusion. This is the dread "Nanny Poo" of the slaving days before European colonists put a stop to the peculiar institution, and it lies much closer to the coasts of Nigeria and Cameroon than it does the land sections of Equatorial Guinea. Fernando Po was discovered by the Portuguese in 1472 and ceded to Spain in 1778 in a sort of swap which gave Portugal large tracts in South America. Britain, in agreement with Spain, used Fernando Po as an advance naval base in its actions against slavers. The British outlawed slavery in 1807 and the Spanish in 1817.

In the mid-1800s, cocoa beans were brought from the West Indies and planted on Fernando Po where they thrived to such an extent that Equatorial Guinea's chief money crop today is cocoa, reputedly the finest in the world. But the Spanish faced a problem in expanding cocoa production there. The island natives, the Bubi, were too few in number to work the plantations. The colonists thus turned toward the continent itself as a source of labor, particularly an area known as Rio Muni, the territory that is the mainland section of Equatorial Guinea today.

Rio Muni is bounded by Cameroon to the north and by Gabon to the east and south. The hot humid climate seemed ideal for developing great cocoa and coffee plantations, and the large population seemed to guarantee a large labor pool. But Rio Muni was populated not by a few docile Bubi who quickly adjusted to working with the Spanish, but by the Fang—a tough, cohesive, nationalistic tribe more than 150,000 strong. The Fang were not interested in the arduous working conditions on Fernando Po. They preferred to raise their own coffee and cocoa on small family plots, and the few who did take employment on Fernando Po quickly won reputations as difficult and disagreeable workers. The Spanish thus turned to nearby Nigeria for workers.

When the first winds of independence began to blow in Equatorial Guinea their effects were first felt among the Fang of the mainland. Spanish rule ended in October, 1968, and it was a Fang named Francisco Macias Nguema who was elected President. By 1972 he had rewritten the Constitution and proclaimed himself "President-For-Life." Political murders, jailings, torture, and exiling became commonplace as Macias took his country into the Communist orbit.

The *Eurova* yearbook says: "In 1974 there were reports of several attempted coups-d'etat, the leaders of which have been executed. It is reported that over 100 political detainees have committed suicide, that all Catholic priests and nuns have been arrested and that one quarter of the population has fled the country due to Government oppression. President Macias has control of the radio and press and all citizens are forbidden to leave the country. Equatorial Guinea is a member of the Organization of African Unity and the United Nations."

But it remained for the Anti-Slavery Society to point out to a world unwilling to listen that President Macias, imitating the savages, had formally imposed slavery on his people.

The Society reported in November 1976 that working conditions on the island of Fernando Po had deteriorated seriously. Macias's henchmen were not the type to listen to complaints. When Nigerian laborers rallied to demand payment of wages, 95 were slain. Suzanne Cronje, in a research report for the Anti-Slavery Society, revealed that "In 1975, after fresh allegations of brutality, including the ill treatment of embassy staff, the Nigerian government repatriated its nationals. Ten thousand were flown home in December and many more came by sea. By the end of January, 1976, 25,000 of the 45,000 Nigerian laborers had been repatriated."

The loss of the Nigerian labor force left President Cacias's cocoa-based economy on the edge of disaster He ordered his guards

to capture between 2,000 and 2,500 people in each of the ten mainland districts of the Rio Muni. These people were then shipped like Kunta Kinte to Fernando Po where they were pressed into slavery to replace the Nigerians. All this took place without a word of protest from a United Nations Development Program which was not only operating on the island but was fully aware of what was happening to the inhabitants. The fact that 20,000 people were impressed into slavery was simply ignored!

The magazine Anti-Slavery Reporter for November 1976 states that "The inhabitants of Fernando Po and its labourers imported from the mainland are now forbidden access to its beaches while for others—including United Nations Development Programme personnel—government authorization on payment of a fee is required for each visit to the shore. The inhabitants say these measures are intended to discourage escape" of the pathetic slaves.

President Francisco Macias followed this action with a decree in March 1976 making it compulsory for all citizens over the age of 15 to serve a term at manual labor as slaves in government plantations and mines.

Yet the role of the United Nations on Fernando Po and in Rio Muni has been one of collaboration with President Macia's slave program. Suzanne Cronje concludes her study of Equatorial Guinea by charging that "an essential part of the success of this regime has been the silent complicity of foreign governments, business firms and the United Nations agencies."

The Anti-Slavery Society points to the presence of the Soviets in the Equatorial Guinea area. The Macias Government has maintained the friendliest relations with Moscow, although some of the envoys Macias sent to the Soviet Union have since fallen from grace and been murdered. Macias granted Moscow a deep-sea fishing base in Malabo, and the U.S.S.R. is supposedly carrying out a pilot "fishing" project.

Questioning the role of the Soviets in the area, the Anti-Slavery Society observes: "Since Angola became the subject of bitter international dispute Fernando Po is more valuable than ever because of its strategic potential and it seems likely that this consideration explains the Soviet presence as well as *America's unwillingness to embarrass Equatorial Guinea by asking awkward questions.*" *

United Nations Ambassador Andrew Young, who recently made a tour of certain African countries and embraced black dictators while he castigated Rhodesia and South Africa, is unlikely to be the first American Ambassador to ask the awkward questions. Young has that sort of tunnel vision which allows him to see only the problems in Rhodesia and South Africa while ignoring the monstrous violations of human rights—including outright slavery—in countries ruled by black governments.

Equatorial Guinea's neighbor, Cameroon, also retains slavery despite being a member of the United Nations with a vote equal to that of Ireland or Switzerland. Missionaries have done their best to free the slaves, but Leftist Cameroon still has harems into which girls are kidnapped and kept in slave captivity. As Colonel Patrick Montgomery, Secretary of the Anti-Slavery Society, wrote in *Contemporary Review* for August 1973: "One, Atajumba, was kidnapped as a gift on her way to her wedding. It took her nine years to escape over the 20 ft. wall surrounding the harem of the Lamido of Ngaoundere in Cameroon. She said she would rather die than go back. The Lamido of Rei Bouba, who until 1969 was allowed to regard himself as the owner of his 50,000 subjects, still possesses a harem believed to be three hundred strong."

The Anti-Slavery Society has also received reports in recent years that a number of Cameroon Africans were sold as slaves in Saudi Arabia to pay for the return flight of a noble pilgrim from Cameroon. This would be an exception, where until 15 years ago such sales were the rule. Oil wealth has eliminated the need for slavery in Saudi Arabia. King Faisal decreed slavery illegal in 1962 and sent a royal commission about the country to pay indemnities to anyone wishing to accept the state's offer for freeing his slaves.

Reports of chattel slavery in Africa come also from the Central African Empire, until recently more modestly named the Central African Republic. Following the pattern set by so many black nations after "liberation," Marxist Jean-Bedel Bokassa, the elected "President" of the country, proclaimed himself emperor in a manner he thinks worthy of Napoleon or . . . Charles de Gaulle. Bokassa served 23 years in the French Army and is an admirer of both French leaders.

Emperor Bokassa, whose nation has full representation at the United Nations and a vote equal to that of Canada or the United States, has inflicted a savage rule on his country. He not only believes in slavery but is reputed to have celebrated a recent Mother's Day by having all men who had committed offenses against their mothers taken from the jails of the Central African Empire and publicly executed.

But the story of much of Africa's slide into a giddy and oftentimes cruel primitivism is not being told in the West. Only Idi Amin of Uganda receives severe criticism, and one notes that he became a target only after he refused to join in a federation with his Marxist neighbors. Otherwise our mass media would no doubt shrug off his reported crimes against his people as mere excesses not to be taken too seriously. Most Americans have heard of the mysterious death of an Anglican Archbishop in Uganda, but how many know that Marxist Sékou Touré of Guinea put a Catholic archbishop behind bars for life seven years ago, or that President Mobutu of Zaire forced Cardinal Mulala to flee for his life? And who remembers the events in Stanleyville in November 1964, during the "liberation" of the Congo, when the saintly Dr. Paul Carlson and other missionaries were murdered by the Simbas?

The one group that seems to have struggled in the face of apathy and antipathy to bring the story of the violation of human rights in much of Africa to the attention of the conscience of the West has been the Anti-Slavery Society For The Protection Of Human Rights.

The Society was founded in 1937 as *The Aborigines Protection Society*, and merged with another anti-slavery society in 1909 to form the present organization. Its leaders say it has no political or religious bias, and it is supported entirely by private subscription. The Society claims to be the sole source of published material on contemporary slavery throughout the world, and has consultative status with the United Nations Economic and Social Council. But it has few illusions about the hypocrisy and duplicity of the United Nations.

The Secretary of the Anti-Slavery Society, Colonel Patrick Montgomery, M.C., wrote in 1973 that "there is of course a tacit understanding at the U.N. about which countries may be openly reviled for their disregard of human rights." Colonel Montgomery says there is a double standard there on slavery and that the Afro-Asians and the Communist delegations consistently vote together "to block or delay every attempt to make progress on human rights."

The Colonel cites as an example of this duplicity the "U.N. Convention on the Abolition of Slavery, The Slave Trade and Practices Similar to Slavery," to which 81 member states put their signatures in 1956 at the Anti-Slavery Society's urging. But to this day, Colonel Montgomery points out, "no machinery exists to implement it. No single U.N. employee has a duty to inform himself about slavery, let alone do anything about it."

"Furthermore," the Colonel continues, "no government has yet allowed its delegations to call for such machinery. Were it not for the importunity of non-government organizations, the [anti-slavery] Convention itself would not exist—at least in the form it does—binding its signatories to eradicate not only chattel slavery in which persons are owned but also debt bondage, serfdom, [and] the exploitation of children."

"One or more of these institutions survives at least vestigially in forty countries," the Colonel says. And this does not count the Marxist-Leninist nations where slaves "have been taken out of private ownership by the Communists, who in the Soviet Union hold an estimated one million in forced labour camps." The Reds nationalize everything—including slaves.

We asked Colonel Montgomery if the Marxist states of Africa interfered with the work of the Society, and he replied that they certainly do not love it. Montgomery urged those interested in learning about slavery in the Soviet Union, today, to read Solzhenitsyn's The Gulag Archipelago, Part II, Chapter 5. The Communists are the world's biggest slaveholders.

Colonel Montgomery cites the difficulty of working with slave owners at the U.N. while trying to put a stop to slavery. He recalled when the United Nations' "Working Group of Experts on Slavery" submitted its report to the U.N. Sub-Commission on Prevention of Discrimination and Protection of Minorities. There were five international lawyers in the group, and its formation was the result of 18 years of continuous pressure by the Anti-Slavery Society. But when the report was submitted to the Sub-Commission the Russian member, a Mr. Smirnov, immediately criticized it, noting that the report contained 200 pages but was supposed to have been "brief." He further alleged that it contained nothing new. Then he said that when he reached a reference to a "discredited" author, Aleksandr Solzhenitsyn, he stopped reading at once. The reference was on Page 5.

But while the Soviets, their satellites, and the Afro-Asian bloc can be accused of blocking serious attempts to protect human rights, so may the United States. Ambassador Andrew Young, the former Atlanta Congressman who is a close friend of President Carter, has made it perfectly clear that the Carter Administration, speaking through his mouth as our Ambassador to the United Nations, is just as unwilling to criticize the outrages of black African nations.

Carter crony Young went so far as to blame whites for the alleged murders and persecutions occurring in Uganda under Idi Amin. He was quoted in the *New York Times* as saying "there are a lot of other people responsible for the death and bloodshed that we now have in Uganda." Asked if he meant

---

* Suzanne Cronje, in *Equatorial Guinea, The Forgotten Dictatorship* (The Anti-Slavery Society, London, 1976), asks: "What action, for example was taken by the foreign friends of Saturino Ibongo, a young diplomat who had graduated at the prestigious University of Navarre in Spain and then gone on to study international relations in America. At independence Macias had urged him to abandon his studies 'in the interest of our great nation' and become Equatorial Guinea's first ambassador to the United Nations. He complied but in less than four months he was recalled for 'urgent consultations.' On arrival at the airport in Malabo he was accused of being an accomplice of Atanasio Ndongo: protesting his innocence, he was taken behind a nearby bush and summarily executed within minutes."

the British, Ambassador Young reportedly replied that he would rather not say but had certainly "heard that charge."

Young, who embarrassed the United States almost as badly when he praised Cuban soldiers for "stabilizing" the situation in war-torn Angola, declared that Britain is "chicken" on racial matters at home and abroad, and charged America's longtime friend with having "institutionalized" racism more than anyone else "in the history of the earth."

Ambassador Young, who should have been summarily discharged from his post, did make one bit of sense in his anti-British tirade on BBC. "I would think," he is quoted by the *New York Times* as declaring, "that at some point we are going to have to realize that we are not going to be able to do business with black Africa on one set of principles and then deny that set of principles totally in doing business with white Africa."

Of course, Ambassador Young. And we will know you mean what you say when we hear you protest slavery in the black-ruled countries of Equatorial Guinea, Cameroon, the Central African Empire, and other vicious Marxist states that whirl in the Soviet orbit. Surely, Mr. Ambassador, you are against slavery!

NEW MINIMUM WAGE BILL OPPOSED BY NEW YORK TIMES

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ASHBROOK. Mr. Speaker, the Subcommittee on Labor Standards of the House Education and Labor Committee has been holding hearings on H.R. 3744, a new Federal minimum wage bill. Enactment of this legislation would have severe repercussions on our economy.

An excellent analysis of the minimum wage appeared in the March 21, 1977, edition of the New York Times. It was in the form of the lead editorial, "The Minimally Useful Minimum Wage." With analytical precision—and rare economic insight—the Times editorial exposes the fallacies of the minimum wage and sets forth the economic dangers that would result.

The editorial points out that passage of H.R. 3744 would result in large numbers being laid off or forced into the fringe of the labor market not covered by the minimum wage laws. The Times makes a rough calculation that those who would be degraded economically would be between 200,000 and 1 million. Another little-recognized threat of the minimum wage is also discussed in this editorial. It is the forced geographical shift of poor and unemployed between major labor areas in this country.

In addition, the Times looks at the proposal of tieing future minimum wage increases to an economic index. And indexing does not come out well.

Judging the issue of minimum wages, with or without indexing, the Times says "Whatever the merits of minimum wages in the past, they make little economic sense today, whether determined by indexing or in the old fashioned way." The concluding paragraph sums up the issue of minimum wages pointedly: "A higher minimum wage is no answer to poverty, and the indexing gimmick can not work any better to improve the lot of the neediest citizens."

While I disagree with the editorial's conclusions that a lower minimum for youth would not be helpful, I concur with the Times that even with a compromise in this area a higher minimum wage makes little economic sense today.

I believe that after reading this editorial, many Members of this House will believe as I do: that this timely editorial from the New York Times makes an important contribution to exposing the fallacies of the minimum wage.

Mr. Speaker, for the information of my colleagues I include the following editorial from the New York Times:

[From the New York Times, Mar. 21, 1977]

THE MINIMALLY USEFUL MINIMUM WAGE

Congress will debate a new minimum wage this spring, but this time there's a twist. Organized labor, drained by the battle to raise the wage floor every few years, is pushing for a permanent solution: indexing. This approach, proposed by John Dent, chairman of the House Labor Standards Subcommittee, would replace the current $2.30 minimum with an index keyed to the average manufacturing wage Chairman Dent wants the minimum set at 55 percent of that average wage—about $2.85 an hour this year—and 60 percent in 1978, about $3.30. With such an index, the minimum wage would automatically be tied to the fortunes of industrial workers, eliminating the need for periodic Congressional amendments.

Since the Depression, liberals have favored higher minimum wages while conservatives have resisted. But this debate has become sterile. Whatever the merits of minimum wages in the past, they make little economic sense today, whether determined by indexing or in the old-fashioned way.

Organized labor favors a high minimum wage because that reduces management's resistance to union recruiting. Where cheap alternative sources of labor are eliminated, high-priced union labor no longer looks so bad to company managers. Support for a wage floor also comes from people with generous hearts. Is it fair, they ask, to require anyone to work for $70 or $80 a week, the take-home pay of employees earning the $2.30 minimum?

It may not be fair, but a higher minimum offers no remedy. Some businesses that pay low wages respond to an increased wage floor with or without an index—by cutting back operations or switching to labor-saving techniques. According to the Department of Labor, eight million workers would be directly affected by the $2.85 minimum. A majority would probably benefit from higher paychecks. But some workers would be laid off or forced into the fringe of the labor market not covered by the minimum wage laws. Just how many jobs would disappear is not known; rough calculations put the figure between 200,000 and one million.

Snowbelt representatives, eager to stanch the flow of industry to the South, offer an additional rationale for minimum wages. They argue that urban living costs and union pressure force companies in older cities to pay high wages, even without a minimum wage. Thus a substantial boost in the minimum would fall most heavily on the low-wage states, and make them less of a lure to corporations in the North.

A higher floor would indeed make Northern cities more competitive with small towns in Mississippi. But a hitch remains: Some poor people would benefit at the expense of other poor people. And if a higher minimum wage did shift more unskilled jobs to the Snowbelt, would anyone up North really want the result—more unemployed people in Mississippi with no choice but to head for those jobs in Detroit?

Some proponents of higher minimum wages suggest a compromise: to raise the minimum for adults, but to exempt teenagers, the group that is most vulnerable to layoffs. The idea has a certain appeal. Young workers need the extra money less than the typical adult, who must support a family. Exempting teen-agers, however, would induce employers to substitute cheaper young labor for more expensive adult labor, a substitution of dubious social benefit. The idea looks particularly bad after the discovery by Edward Gramlich, a Michigan economist, that many teen-age workers are members of middle-class families, not the intended beneficiaries of a lower youth minimum.

A higher minimum wage is no answer to poverty, and the indexing gimmick can't work any better to improve the lot of the neediest citizens.

ILLEGAL ALIENS

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ABDNOR. Mr. Speaker, there is not a single State in our Nation untouched by the problem of illegal aliens. Some are more affected than others because of their proximity to international borders and the resultant caseload imposed on officials of the Immigration and Naturalization Service in these areas.

The problem also touches States like South Dakota which might be considered remote for those illegally entering the country, yet official estimates show that we have up to 2,000 such cases. The nationwide influx of illegal aliens has had enormous impact on our unemployment situation and it is for this reason that I was pleased to join my colleague, Hon. TRENT LOTT, in sponsoring H.R. 4449, the Immigration and Jobs Displacement Reform Act.

Last Sunday, in a thoughtful editorial, the Sioux Falls, S.D., Argus-Leader addressed the overall problem of illegal aliens. I would like to share their comments with my colleagues:

CONGRESS SHOULD ACT ON ILLEGAL ALIEN PROBLEM

The federal government has taken its first major step in its campaign to combat the problem of illegal aliens: distribution of new identity cards to the four million aliens who are legally entitled to live and work in the United States.

The new card is said to be counterfeit-proof. It cost $15 million to develop and it will take five years for the government to replace the current green card which the U.S. Immigration and Naturalization Service (INS) says is too easily forged. The five-year period seems entirely too long for the bureaucracy to take.

The new card has a photo, a fingerprint and a signature. The photo cannot be peeled off and replaced. Characteristics of the signature and fingerprint are encoded in a 50-digit identifying number that can be read by INS computers.

The new card, or something like it, may be required of every American worker, not just aliens, before long under programs that are under study in both Congress and the Carter administration. Action is necessary because of the increasingly serious problem of illegal aliens in this country. The esti-

mates on their number range from 4 million to 12 million. The increase each year is a half a million to a million.

MOST ILLEGAL ALIENS FROM MEXICO

About 80 per cent of the illegal aliens in this country are from Mexico, which has population pressures from one of the western world's highest birth rates and economic pressures in meeting its people's rising expectations. The fence along part of the friendly border between Mexico and the United States is no deterrent. Wetbacks who are caught are sent home by plane; they can try again another day to lose themselves in this country.

Leonard Chapman Jr., commissioner of INS, has estimated that illegal aliens cost the taxpayers about $13 billion a year "by taking away jobs from legal residents and forcing them into unemployment, by illegally acquiring welfare benefits and public services, by avoiding taxes."

One way that the government could effectively cope with the problem of illegal aliens is to enact legislation that would prohibit their hiring and penalize employers who do. U.S. Rep. Joshua Eilberg, D-Pa., who heads the House subcommittee on immigration, is sponsoring a bill aimed at penalizing employers who knowingly hire illegal aliens.

Attorney General Griffin Bell says the Carter administration will support legislation making it illegal for employers to hire illegal aliens. The United States is one of the few countries in the world that has no such law. Such a law could do a lot to reduce the unemployment rate.

AMNESTY WOULD BE A MISTAKE

There has been a lot of loose talk in this country about granting amnesty to the illegal aliens who are already here. This would be a serious mistake. It would penalize aliens who have sought to comply with the law, and have waited patiently under the quota system to live and work in this country. It would also invite virtually everyone in the world to come to the U.S.A. by any means possible in the hope that illegal entry would be forgiven again in the future.

The United States' "good life" is the spur that beckons Mexicans north of the border. A Mexican who is lucky enough to have a job and who earns the equivalent of $4 a day in his own country can make $16 to $20 in the United States if he can cross the border and avoid law enforcement officers.

If the present trend of illegal immigration continues, the millions of additional Mexicans and other Hispanic people could change the characteristics of the population, and increase the requirements for all kinds of services and the pressures on the environment.

There are some things this country can do to ease Mexico's plight: by reviving the bracero program to supply farm labor on a legal basis when it is needed and by increasing trade south of the Rio Grande. Most Mexicans in this country, whether here legally or illegally, have made a worthwhile contribution to their chosen second home. Some of them do hard work spurned by American citizens; others compete in all areas of employment.

A TOUGH, INHERITED PROBLEM

The Carter administration has a real tough problem on its hands. It's an inherited problem—and doing something about it has been put off for too long. There is a movement now for a solution—and Congress should provide the necessary legislation.

It may come to the point that the land of the free and the home of the brave will require national identity cards for all its citizens to preserve a way of life that the whole world envies.

THE NATIONAL COUNCIL OF CHURCHES AND AFRICA: ACCOMMODATING TERRORISTS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. McDONALD. Mr. Speaker, in March the National Council of Churches conducted a week of meetings in New York City and upstate New York called a consultation on Southern Africa. The conference was designed to pressure prominent black African religious leaders into nonopposition or even alliance with the Soviet-sponsored terrorist movements thereby neutralizing religious leaders around which moderate, multiracial coalition governments might be built. The second purpose of the meetings was to develop concrete support from the U.S. religious community for the new Communist regimes in Angola and Mozambique, as well as for the Soviet-supported terrorists.

Whether or not the National Council of Churches and it allies were successful in this is debatable. Clearly a number of the moderate African church leaders were aware of what was going on, but their indignation was guarded since the NCC had been presented to them not as supporting the Marxist terrorist factions but as a "responsible" organization.

Preparations for the NCC consultation on Southern Africa moved into full swing early in February 1977, when the conference's principal organizer, Rev. Robert C. S. Powell, staff director of the Africa Committee of the Division of Overseas Ministries of the NCC, contacted a State Department political affairs official, Frank G. Wisner. Following the discussion with Powell, Wisner approved the sending of an unclassified State Department telegram to the American Embassies in South Africa, Zambia, Mozambique, Botswana, Lesotho, and Swaziland which read in part:

Subject: National Council of Churches of Christ Conference on the Church and Southern Africa.

1. The National Council of Churches (NCC) is sponsoring a conference on the Church and Southern Africa at Utica, New York, March 7–11. About 50 persons have been invited to participate. Foreign participants will have travel expenses and accommodation paid for.

2. NCC has asked us to alert posts to possibility of visa applications from personnel whose names listed below. Conference attendees will, of course, have to meet requirements for visa issuance. Should post have any question about individual applicant please advise department.

3. List of invitees is as follows:

NAMIBIA

Mr. Daniel Tjongarero.
Pastor Zephania Kameeta.
Reverend Cleopas Dumeni.

SOUTH AFRICA

Reverend John Thorne.
Mr. Oliver Tambo (currently working in Lusaka, Zambia).
Dr. Manas Buthelezi.
Bishop Desmond Tutu (Bishop of Lesotho, residing in Maseru).
Reverend Alan Boesack.
Mr. Revelation Ntoula.
Mrs. Mablietsa.
Reverend E. T. S. Buti, Sr.
Mrs. Sally Motlana.

ZIMBABWE

Mr. C. D. Watyoka.
Mr. Max Chigwida.
Dr. John Kurewa.
Bishop Abel Muzorewa.
Mr. Nathan Shamuyarira.
Mr. Oaanan Banana.

MOZAMBIQUE

Rt. Reverend Dinis S. Sengulane.
Mr. Rogerio Daniel Juane (Ndawana).
Reverend Isaac David Mahlalela (aka Machlalela).
Most Reverend Alexandre Dos Santos.

ANGOLA

Bishop Emilio DeCarvalho.
Madame Josepha Luis Antonio Neto.
Pastor Mbala Manual Lucumbona.

OBSERVERS

Zambia—Most Rev. Emmanuel Milingo, Archbishop of Lusaka.
Swaziland—Rt. Rev. Mandla Zwane, R.C. Bishop of Swaziland.

Oliver Tambo is president of the African National Congress—ANC—of South Africa, a revolutionary group with offices in London and Lusaka but whose literature is printed by the East Germans. ANC is controlled by the Soviet-directed South African Communist Party. ANC conducted a terrorist campaign through its "armed struggle" cadre called Spear of the Nation in the 1960's; it claims a major share of responsibility for the violent rioting which disrupted South Africa during 1976 and is active among the labor movement.

Tambo is a member of the presidential committee of the World Peace Council, a Soviet-directed front which campaigns for Western disarmament while providing logistical support for Soviet-approved Marxist terrorist groups. Tambo did not attend the NCC "consultation." Instead he participated in the official founding conference of the Communist Party which rules Mozambique, FRELIMO. FRELIMO Chairman Samora Machel, the president of Mozambique, told his followers that there must be "iron organization and discipline" in the new "vanguard Marxist-Leninist party" in order to "combat internal reaction" and "direct, organize, guide, and educate the masses towards building socialism."

Tambo and the leaders of the principal terrorist movements of Southwest Africa—Namibia—and Rhodesia—Zimbabwe—received assurance of support from Machel whose country has provided other terrorist groups with training bases. Stated the Mozambican Communists:

The Mozambican revolution is an integral part of the world proletarian revolution. Internationalism is a constant, major and fundamental feature of our revolution.

Late in March, Tambo and Joshua Nkomo of the Zimbabwe African People's Union met with Fidel Castro in Angola, to coordinate what sort of military and political support might be made available to the southern African terrorist forces.

Another terrorist leader who did not appear in person at the "consultation" was Abel Muzorewa, a Methodist bishop,

who from Zambia now heads a splinter group called the United African National Council. During the 1960's and early 1970's, Muzorewa was a leader of the African National Council—ANC—of Rhodesia which served as the umbrella coordinating group for the main Marxist terrorist organizations. These were—and are—the Maoist Zimbabwe African National Union—ZANU—and the pro-Soviet Zimbabwe African People's Union—ZAPU. Muzorewa was a leader of one of the ZANU factions.

Three years ago the ANC split on ethnic and political lines, not over using terrorism to intimidate innocent civilians. When ZANU Gen. Robert Mugabe, commander of the largest terrorist forces, formed an alliance of convenience with the staunchly pro-Soviet Joshua Nkomo of ZAPU, Muzorewa was left out. Now that the Soviet bloc, the Organization of African Unity and the five "frontline" states have recognized the Nkomo/Mugabe-led Zimbabwe Patriotic Front—ZPF—as the "only authentic and legitimate representative of the people of Zimbabwe," and are supplying funds and guns only to the ZPF, Muzorewa is without a power base.

During the past several months the former terrorist bishop has somewhat cooled his violent racist rhetoric and has reportedly made overtures that he would like to be considered a leader of Rhodesian moderates. The ZPF would no doubt like to neutralize that potential and cut Muzorewa off from his U.S. supporters. During the 1960's Bishop Muzorewa received support from the National Council of Churches and had spoken at NCC meetings in the United States.

Although the terrorist superstars did not attend the NCC's meetings, several second-rank terrorist leaders and Communist officials who should not have qualified for U.S. visas did attend. They will be discussed at length later in this report.

The conference was throughout organized and conducted by the National Council of Churches. Although the U.S. Catholic Conference was listed as a cosponsor, its involvement was small. The NCC organized the meetings, selected the invitees, and paid the travel and hotel expenses of participants; the USCC's contribution was making available the Bergamo East Conference Center in Marcy, N.Y., a suburb of Utica.

Activities opened on March 5 with a "Teach-in on Southern Africa" sponsored by the NCC's Africa Committee and held at Riverside Church. Sunday, March 6 featured a "Service of Prayer and Witness with the People of Southern Africa" with drumming and dancing in which Rev. Isac David Mahlalela, general secretary of the Christian Council of Mozambique, read a three-sentence poem in praise of the Marxist-Leninist Frelimo party:

> Today our Revolution is a great flower to which each day new petals are added.

The "church militants" concluded the service with an unsubtle choice for a recessional, "Rise Up O Men of God."

From March 7–11, the consultation meetings were held in Marcy, N.Y., near Utica.

The conference was opened on March 7 with an address by Rt. Rev. Desmond Tutu, Bishop of Lesotho—Anglican. Bishop Tutu said that in his opinion a race war was inevitable. He concluded:

> What is surprising is that blacks generally still want to speak to whites and still long for a peaceful but just solution. But this can't go on forever. We have no other option but to resort to violence.

Bishop Tutu expressed no concern with the illegitimacy of terrorism as a tactic for attaining and maintaining power. He likened the so-called liberation movements to the "underground resistance movements during the last World War" and to those Germans who sought to assassinate Adolph Hitler, a tyrant.

Terrorism is violence directed against the civilian noncombatant segment of the population in order to intimidate them and thereby attain a political or military goal.

Terrorism is not unconventional or guerrilla warfare against military targets. When the Nazi army took civilian hostages that was terrorism. Those resistance groups which attacked Nazi military targets were not terrorists. The ANC's attacks were directed against civilians. The Southwest Africa People's Organization—SWAPO—has had its snipers carry out assassinations of anti-SWAPO leaders. The victims of ZANU and ZAPU in Rhodesia have been overwhelmingly civilians living in rural villages and on farms; and the revolutionary groups have obtained recruits by mass kidnapings of schoolchildren. In each instance the goal has been to destroy the civilian leadership and terrorize the population into submitting to the terrorists. If an organization conquers civilian resistance by terrorism and then begins to attack military targets, the organization cannot be considered nonterrorist. It will use terrorism whenever it feels that would serve its purposes.

Bishop Tutu was followed by three other speakers active in terrorist support work in this country, George Houser of the American Committee on Africa—ACOA—Timothy Smith of the NCC's Interfaith Center for Corporate Responsibility—ICCR—and Rev. Powell.

George M. Houser, executive director of the American Committee on Africa since 1955, has long been an apologist and publicist for Marxist African revolutionaries. The ACOA was established early in 1952 as Americans for South African Resistance in anticipation of "acts of resistance" to be conducted by the Communist dominated African National Congress. At that time Houser was working with the militant socialist/pacifist Fellowship of Reconciliation and was serving as executive secretary of the Congress of Racial Equality. Houser made initial contact with the ANC via Bill Sutherland, an American with the American Friends Service Committee who has worked with African Marxists since the early 1950's.

Since then the ACOA has distributed propaganda, directly contributed funds to the "liberation movements," paid the travel expenses to this country for innumberable revolutionary leaders such as the late Amilcar Cabral, and arranged for their speaking and fundraising tours.

In his address, Houser noted that a number of the revolutionary movements were being supported by the Soviet Union. He warned that unless America immediately abandons its economic, strategic and political interests in South Africa, an "international conflict involving the "great powers" could erupt. Houser said he believed this country would not abandon South Africa "without a fight" but that U.S. participation in a worldwide effort to isolate South Africa economically, politically, and culturally would substantially aid the "liberation forces."

Tim Smith then took up ACOA's theme of economic blockade to cripple the South African economy, his specialized area of expertise. A Canadian educated at the University of Toronto—B.A. 1966—Smith's interest in African matters began in 1966 when he was sent to Kenya by Operation Crossroads Africa of whose board of directors he was a member in 1970.

While attending Union Theological Seminary, Smith served on the Southern Africa Committee of the University Christian Movement, the "Christian new left" counterpart to Students for a Democratic Society. Smith remains a member of the now independent Southern Africa Committee which continues to be a militant advocate for the African Marxist guerrilla movements through its monthly magazine, Southern Africa. The committee has stated it is under investigation by the Department of Justice for possible violations of the Foreign Agents Registration Act, and is being represented by Peter Weiss, National Lawyers Guild law partner of William Kunstler, who both tried to join the defense team for the Baader-Meinhof gang in West Germany in 1975. Weiss has been a leader of ACOA since 1961, and currently serves as ACOA counsel.

Tim Smith is a member of the ACOA board. He has held executive positions with the Committee for a Free Mozambique, a support group for the Marxist-Leninist FRELIMO; the Interfaith Committee on Social Responsibility in Investments; the Church Project on U.S. Investment in South Africa; and the Council for Christian Social Action of the United Church of Christ.

Smith described how the projects he had been associated with worked to persuade American corporations to divest themselves of their investments in southern Africa from the days of the Polaroid boycott to the antichrome ore import agitation and the proxy fights and disruptions of stockholder annual meetings. Smith attacked U.S. companies who pay fair wages to their African employees of all races as "aiding racism," presumably because this does not contribute to a revolutionary situation.

Reverend Powell then stated that the purpose of the "Consultation on Southern Africa" was to find ways that the U.S. churches can work with the southern African churches "for justice and reconciliation."

The remaining days of the "consultation" were devoted to drafting statements on the five targeted southern African regions: Angola, Mozambique,

South Africa—Azania—Rhodesia—Zimbabwe—and Southwest Africa—Namibia.

Control over the results was maintained by the choice of leaders and recorders for the meetings. The Angola task force was led by Fr. Rollins Lambert of the U.S. Catholic Conference and by Bishop Emilio de Carvalho, a supporter of the Marxist-Leninist MPLA regime installed by Cuban mercenaries equipped by the Soviet Union. The report drafted stated that the Angolan churches have a role "working with the government in the process of national reconstruction," and in supporting the rulers of the new Soviet satellite "in playing a critical role in the struggle against white minority rule and exploitation in South Africa, Namibia, and Zimbabwe." This refers to the terrorist training camps and bases in Angola maintained by the MPLA regime in support of SWAPO, ANC, and others.

The Angolan report recommended that—

The U.S. churches support a broad educational effort among their people which will lead to understanding and appreciation of Angola—of the * * * aims of the Angolan government in constructing a new society—of the threat from within and without which Angola faces as it builds anew * * *.

In plain English this calls for promoting the Soviet-dominated regime, its goals to build a Marxist-Leninist society, and condemning those pockets of resistance against the MPLA/Cuban forces.

Other recommendations included a church campaign for U.S. diplomatic recognition of the Angolan regime—as a preliminary to economic assistance—which would seriously hamper the remaining anti-MPLA resistance; and that the U.S. churches provide direct "material and financial assistance for the reconstruction of Angola" which "should come in response to specific requests" and be channeled in ways acceptable to the churches and to the Angolan Government."

The leading participants in the task force on Mozambique included Rogerio Daniel Juane Ndawana, who admits to being a functionary of the FRELIMO Marxist-Leninist vanguard party; Ruth Minter, an activist with the Southern Africa Committee; and Archbishop of Maputo, Most Rev. Alexandre Dos Santos. The Mozambican report asserted that "The church is grateful to FRELIMO for its liberation" which included the confiscation by the state of all church-run schools, hospitals and clinics. It suggests U.S. churches send aid to the "Christian Council on Mozambique, and direct to the government" and that any new, FRELIMO-approved "missionaries" will have to be "part-time church workers who also work in government institutions."

The task force on Zimbabwe demanded "an immediate transfer of power to the majority," claiming "gradual reform only prolongs the suffering." The report condemns institution of any internationally funded plan to subsidize the evacuation of Rhodesian whites. Last summer at a Capitol Hill Fund for New Priorities conference, the Rhodesian terrorist representatives from the various factions united in opposition to the evacuation plan, stating they preferred a "quick kill" policy to collect the "blood debt." Again, church aid and logistical support for the terrorist "liberation forces" was requested.

The South African task force contained similar provisions, with a call for economic pressure. It read in part:

The churches of North America have extensive contacts with South African churches, or others, and are often called upon to support the work of the churches, or others, involved in the liberation struggle. Such support should be provided—spiritual, moral and material—in so far as possible in order both to give evidence of solidarity in the struggle and to help those most involved in risk and danger in the struggle.

I would note in conclusion that a number of functionaries of Marxist terrorist organizations participated in the NCC "consultation." And although the NCC has denied any terrorists participated in the meetings, the evidence was provided by the NCC in the biographical sketches of foreign participants which it distributed to other attendees:

Josefa Luis Antonio Neto was jailed briefly by Portuguese authorities as a member of the MPLA.

Max Tongai Chigwida—"member of the Branch and District Executives of the United African National Council" and its "Publicity and Information Secretary (all honorary) since the end of the Muzorewa faction.

J. W. Zvomunondita Kurewa—"Administrative Assistant to Bishop Muzorewa of the United Methodist Church since November 1975."

Rogerio D. Juane Ndawana, a functionary of FRELIMO and employee of the Marxist-Leninist government of Mozambique.

I would also note in passing the number of representatives present from the World Council of Churches—(WCC)—whose Special Fund to Combat Racism has made substantial grants to the Marxist terrorist movements of Southern Africa and to their support groups in the United States. As I detailed in my report of January 19, 1977, the WCC provided substantial funding for ACOA's Washington Office on Africa, a registered lobbying group; to Africa News, a revolutionary news service disseminating communiques from and informat about the terrorists which is headed by William and Ruth Minter of the Southern Africa Committee; to the terrorist American Indian Movement—(AIM)—and to another U.S. terrorist support group, the Puerto Rican Solidarity Committee.

Attendance at the "consultation" included the following persons:

USCC/NCC CONSULTATION ON SOUTHERN AFRICA

Angola

Bishop Emilio de Carvalho, Methodist Bishop of Angola.

Madame Josefa L. A. Neto, General Chairwoman of the Angola Methodist Women's Society, MPLA.

Mozambique

Most Rev. Alexandre Dos Santos, Roman Catholic Archbishop of Maputo.

Rev. Isaac D. Mahlalela, General Secretary, Christian Council of Mozambique.

Mr. Rogerio D. Juane Ndawana, Mayor of Matola City, Methodist Circuit Steward, Frelimo.

Rt. Rev. Dinis S. Sengulane, Anglican Bishop of Libombos.

Namibia

Dr. Lukas de Vries, President, Evangelical Lutheran Church in South West Africa.

Rev. Kleopas Dumeni, Evangelical Lutheran Ovambokavango Church.

South Africa

Dr. Allan Boesack, Dutch Reformed Church of South Africa, Chaplain at the Cape University.

Dr. Manas Buthelezi, Bishop of Central Diocese, Evangelical Lutheran Church in Southern Africa.

Rev. E. T. S. Buti, Sr., Moderator, Nederduitse Gereformeerde Kerk of South Africa.

Rev. Boganjalo Goba, United Congregational Church of Southern Africa.

Mrs. Deborah Mabiletsa, Director of Women's Work, South Africa Council of Churches.

Mrs. Sally Motlana, Officer of the South African Council of Churches, Vice Chairlady, General Committee, All Africa Conference of Churches.

Mr. Revelation Ntoula, Communications Officer, South Africa Council of Churches.

Rev. John Thorne, President and General Secretary-Elect of the South Africa Council of Churches.

Rt. Rev. Desmond Tutu, Anglican Bishop of Lesotho.

Zimbabwe

Rev. Max Chigwida, Professor of Theology, Epworth Theological Seminary, Salisbury, Presbyterian Church of Southern Africa, V-ANC.

Dr. J. W. Zvonumondita Kurewa, Administrative Assistant, Rhodesia Annual Conference, United Methodist Church; V-ANC.

Mr. D. C. Watyoka, General Secretary, Christian Council of Rhodesia.

OBSERVERS

Africa

Most Rev. Emmanuel Milingo, Roman Catholic Archbishop of Lusaka (Zambia).

Father Joseph Ossei, General Secretary (Roman Catholic) Symposium of Episcopal Conferences of Africa and Madagascar (Ghana).

Most Rev. Mandlenkhosi Zwane, Roman Catholic Bishop of Manzini (Swaziland).

Mr. Thomas Leeuw, Student (South Africa).

Europe

Rev. Georges Andrie, Staff member of the Department Missionnaire de Eglises Protestantes de Suisse Roman.

Trevor B. Jepson, Society of Friends, Chairman of CCSA.

Mr. Ninan Koshy, Staff, Commission of the Churches on International Affairs, World Council of Churches.

Mr. Baldwin Sjollema, Commission on the Programme to Combat Racism, World Council of Churches.

Rev. James L. Wilkie, Executive Secretary (Africa), British Council of Churches.

North America

Dr. Bernard Brunsting, Reformed Church in America.

Bro. Joseph Davis, S.M., National Office of Black Catholics.

Ms. Adissa Douglas, IFCO.

Mr. Charles Brewster, New World Outlook, United Methodist.

Mr. Timothy Smith, Interfaith Center for Corporate Responsibility, ACOA Executive Board.

Ms. Therese Drummond, Agricultural Missions, NCC.

Dr. Norman Thomas, Faculty, Yale Divinity School.

Prof. Peter Walshe, Dept. of Government and International Studies, Notre Dame U.

Catholic Relief Services Representative.

Ms. Kathleen Wills, IMPACT, NOBC.

STAFF

Mrs. Barbara Brown.
Ms. Ginni Davis-Cook.
Mr. Willis Logan.
Fr. Robert C. S. Powell.
Mr. John Schultz.

SOCIALIST WORKERS PARTY SPIES ON RIVAL MARXIST-LENINISTS: PART II

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. McDONALD. Mr. Speaker, here is the second part of the reports on Maoist Communist groups which appeared in the new confidential publication of the Trotskyite Socialist Workers Party, Party Organizer, of March 21, 1977:

REPORT ON THE RCP'S 'CONFERENCE ON THE INTERNATIONAL SITUATION' HELD IN NEW YORK CITY, NOVEMBER 20, 1976

(By Les Evans)

This gathering, subtitled the "Conference on the International Situation, War, Revolution, and the Internationalist Tasks of the American People," was organized by the Maoist Revolutionary Communist Party and its youth affiliate, the Revolutionary Student Brigade. It was the largest Maoist meeting yet held in New York, drawing between 1,100 and 1,500 people as compared with about 900 for the "united front" meetings of two years ago to discuss Maoist regroupment between the RCP, the October League, and the *Guardian*. Unlike the previous meetings, this one was strictly an RCP affair, boycotted by both OL and the *Guardian*. Its aim was to establish the RCP's hegemony in the Maoist movement, especially in New York, and to settle a debate in the RCP's ranks and with other Maoist organizations over what China's foreign policy really is.

The size of the conference can be explained by two factors. First, it was advertised widely as a broad, nonsectarian discussion of world affairs. A number of big-name sponsors were secured including Nobel Prize winners and prominent China scholars. Second, it was built through a full-scale national mobilization of the RCP's membership with large delegations from the Midwest and the West Coast. (Many of the listed sponsors did not attend the conference, and three of them publicly withdrew their sponsorship the day before the meeting on the grounds that "it began to have the feeling of a left-sectarian event" [Prof. Richard A. Falk].)

Invited speakers who did attend included Dave Dellinger, Eqbal Ahmad, Dave McReynolds, Prof. Mark Selden, and organizations such as the Iranian Student Association, Indian Peoples Association in North America, and Vietnam Veterans Against the War. The steering committee passed a motion that no Trotskyists would be permitted to speak, but Ralph Schoenman was invited to be on the panel debating China's foreign policy. Evidently the organizers were unaware that his views on this question are similar to those of the SWP.

It was clear that for the RCP the real debate was between themselves and Willian Hinton. Hinton defended the position—which is China's actual policy—that the Soviet Union is the "main danger" and that Maoists should now seek an alliance with American imperialism against the USSR. The RCP position is equal blame to the "two superpowers" and a rejection of support to Washington. The "third" tendency permitted by the organizers was comprised of generally unaffiliated radicals who would uphold the view that the United States is the main danger, although with the exception of Schoenman most of these were half-Maoists who held that the Soviet Union was "probably" capitalist. No one openly defending the Moscow line participated.

The format was a three-way, equal-time debate, repeated throughout the day on different aspects of the attitude toward the United States and USSR. The RCP, whose members were a clear majority of the participants, at the beginning tried to keep its members polite and permit an exchange of views within the narrow framework of positions represented. As the day wore on, it became clear that its members weren't used to this and they became more and more hostile to the non-RCP speakers.

In the morning there was a three-way opening debate between Hinton; Nick Unger of the RCP; and Eqbal Ahmad, who held that the Soviet Union was capitalist but that the Soviet navy was not a threat to the Third World.

This was followed by two sets of workshops, run consecutively. The largest were on Angola in the morning and on China's foreign policy in the afternoon. I went to both, which were attended by about 400 people each. The audience was almost equally divided in the Angola workshop, with a slight majority for the RCP. The RCP defended the proposition that no support should have been given to any of the three nationalist groups in the civil war, but that the Cubans were "capitalist mercenaries" fronting for the Soviet Union in an attempt to turn Angola into a Soviet colony. They openly stated that Cuba had restored capitalism. Their opponents, mostly "Third Worldists" and *Guardian* types, supported the MPLA as "socialist" and backed the Cuban-Soviet intervention. The Spartacist League participated actively, criticizing the characterization of the Soviet Union and Cuba as capitalist. They were loudly abused by the Maoists but usually managed to finish their speeches in the question period.

The China foreign policy panel consisted of Ralph Schoenman, William Hinton again, and Clark Kissinger, former SDS and antiwar activist, who is now a hard-line RCP supporter although he may not be a member. Schoenman presented a revolutionary Marxist criticism of Chinese foreign policy, peaceful coexistence, and the lack of socialist democracy in China. About halfway through his speech, the audience got the drift of where he was going and the Maoists began to shout abuse and to boo him. He was defended by a significant minority of the audience. At the end he was jeered by about three-quarters of those present, but the other 25 percent applauded him loudly. This was clearly more than just the Spartacists and included many independents present and perhaps some RCPers who believed in democratic procedures.

Kissinger began by attacking the "Trots" and justifying the imprisonment of the Chinese Trotskyists. ("Once when speaking on China a fervent young man demanded to know why China had released a large number of Kuomintang war criminals but still kept Trotskyites in jail in China. I replied that I did not know precisely but that the penal policy in China is to work for idealogical reformation of the person and I could only conclude that Kuomintang generals were more liable to this process than Trotskyites.") This was applauded by the Maoists.

Kissinger's basic line was that China's policy of friendship for imperialism and for dictatorships in the colonial world was only a government-to-government policy, but that on a party-to-party level it still promoted revolution.

Hinton disputed Kissinger, but while he presented the actual policy, he was a poor debater and failed to cite any documentary proof. The whole debate turned on the "or-

thodoxy" of what Peking's line was supposed to be and not very much on the merits of the conflicting interpretations, and Hinton failed to make a serious case, out of incompetence.

The evening session was another three-way debate, between Hinton, Dave Dellinger, and Bob Avakian. Here the mask was taken off and the session was turned into an RCP victory rally. A standing ovation was organized for Avakian when he appeared on the platform. He shouted insults at the Guardian and the OL and proclaimed the RCP correct against Hinton and that it was the revolutionary party in the United States. He succeeded in whipping up his members and convincing the great majority of them that Hinton did not represent the real line: that it was possible to remain a Maoist and still be anti-imperialist and keep the Peking franchise.

The OL boycotted the conference on the grounds that "revisionists" were permitted to speak. They sent in a few people to participate from the floor in the question periods. One of them demanded to know what position Avakian had on the "gang of four." Avakian replied that the RCP was still considering this and had not made up its mind. It appears that despite his demagogy, the RCP has already lost the Peking mandate: Hsinhua has already printed lengthy excerpts from the October League's Call supporting the purge.

(Also in the question period, Avakian defended Stalin's reign of terror in the 1930s as a "great achievement of socialism" and promised that the RCP would know how to deal with "external and internal enemies" in the future.)

This conference reflects the fact that the RCP has become clearly the largest Maoist organization in the country. Judging from the applause in the evening "rally," some 700 or 800 of those present considered themselves Avakian supporters. Significantly, the conference projected no action of any kind and discussed no specific anti-imperialist struggles taking place in the United States today. Its purpose was to convince the membership of the RCP that they could at the same time retain the position of being a general anti-imperialist organization and still claim the authority of the Chinese state. The generally high spirits of the final meeting indicate that Avakian succeeded in this purpose for the time being.

Nevertheless, such a "victory" is plainly an ephemeral one. It rests on a deliberate "misunderstanding" of Peking's line that is certain to be revealed to even the least conscious RCPer in the period ahead. The fact that the RCP felt the need to permit the kind of debate that did take place at the conference shows that this is an issue of crisis proportions for them and that the crisis will be renewed and deepened not far down the road.

Most of the participants were young. Talking to a few of them I got the impression that many of them are in the RCP for largely accidental reasons. The leadership and the basic cadres are hard Stalinists of the most unregenerate type who are completely cynical about workers democracy and are openly against it. Even their commitment to "anti-imperialism" seems tactical, based on the realization that it is impossible to build anything in this country on the Hinton-Peking line. (Hinton advocated a campaign to pressure the Pentagon to send more arms to Japan and NATO and a campaign to oppose trade with the Soviet Union.) Many of the young RCPers and members of the RSB genuinely believe that there is socialist democracy in China and that is why they are Maoists. They are ignorant of Soviet history and accept what they are told about Stalin and Trotskyism, but they are genuinely repelled by the Soviet Union. (They accept without question that the Soviet Union is "capitalist," an assumption that underlies the whole current line of all the Maoist groups.)

(Even the OL is afraid to go the whole route with Peking and Hinton. Their official position is that the Soviet Union is the "main danger" and that they should wage a propaganda offensive against the USSR and the CP as "capitalists," but they stop short of an open bloc with Washington.)

If we can participate in the debate that is taking place and point out to some of the young RSBers the difference between what their leadership tells them Peking stands for and what it really stands for, we may have an effect in preventing the RCP from consolidating its hold on a number of young radicals who have joined it for reasons quite different from the policies it really represents.

MAOIST YOUTH ORGANIZATION IN THE U.S.

(By Rick Berman)

This report is based on information from the Young Socialist Alliance organizational tours and from phone calls to about fifteen cities.

The Revolutionary Student Brigade, the RCP's youth group, is probably about the same size as the YSA. Until about a year and a half ago, the RSB was a somewhat heterogeneous youth group. The Revolutionary Union was the most influential tendency in it and determined its national policy, but other Maoists also participated. In some chapters there were battles for leadership between RU and non-RU forces.

About the time RU decided it was the new communist party and changed its name to the Revolutionary Communist Party, it also decided that the RSB should affiliate to the RCP as its youth organization. The RSB held a special conference in the fall of 1975 to declare its support to the RCP.

The RCP openly sets the line of the RSB. For example, at the RSB conference in the fall of 1975, RCP leaders announced who would be the RSB national office staff. RSB members had no control over this.

The RSB publishes a regular monthly newspaper called Fight Back. Fight Back is more professional, and probably has a wider circulation on campus, than any of our other opponents' youth press.

The RSB's main activity is basic propaganda work. They have regular literature tables up on campus, they hawk Fight Back and Revolution, hold campus forums on different political issues, and are pretty thorough about paste-ups. On most campuses they are probably at least as visible as the YSA.

Like the RCP, the RSB is extremely sectarian and does not often participate in action coalitions around particular issues. When they participate in a struggle, they generally set up their own ultraleft "coalition" apart from any broader coalitions that exist. Often their "coalitions" include only RSB members and sympathizers.

I haven't been able to discover any important issue in the Black struggle that the RSB is involved in. From what we know, they have a smaller Black membership than the YSA. But they probably do have an edge over the YSA in Chicano and Asian-American members. Their isolation from the Black struggle is a result of their racist opposition to busing and affirmative action.

Comrades in California report that the RSB has lost some influence in recent months, particularly among Chicano students. The RSB abstained on the two most important issues Chicano students are involved in on campus: the campaign to pass Proposition 14 and the strugle to overturn the Bakke decision.

One struggle that the RSB has been involved in is the International Hotel struggle in San Francisco. This is a struggle against the eviction of mainly elderly Asian-American tenants. The RSB and the RCP have their own "coalition" on this issue, but since the RSB is the only organization working on this issue on campus, it has become identified with it on many campuses in the Bay Area.

The RSB works closely with a large number of Iranian students. One wing of the Iranian Student Association is in general political agreement with the RCP and RSB.

Vietnam Veterans Against the War is an RSB front group, which it captured several years ago. VVAW has a national newspaper and exists on some campuses in different parts of the country.

Until this fall, campus cutbacks and tuition hikes were the most prominent issues in the RSB press and it has been quick to initiate actions around these issues. On campuses where the YSA has participated in cutbacks fights, the RSB usually pulls out of coalitions and tries to set up its own coalitions, but in some areas such as New Jersey, it has been influential in broader coalitions.

This fall the RSB's major campaign was a campaign for a boycott of the presidential elections. Their main slogan was "Politicians Fight for $ Interests." At the University of California Berkeley campus, for example, they asked people to wear black armbands on election day to demonstrate their refusal to vote.

On other campuses the RSB challenged the Democrats to debate. They also challenged the YSA to debate them on the question of the elections in New York, at Kent State University, and in Boston. Our debates with them weren't too fruitful. Few independents attended, and the RSBers refused to discuss the main political issues raised in the election campaign, focusing their remarks on why bourgeois elections are a fraud.

These debates were a departure from previous RSB policy. They have a long record of trying to prevent Trotskyists from speaking at events they participate in. They have also threatened and at times physically attacked members of th SWP and YSA. In addition, they usually refuse to speak on the same platform with bourgeois politicians. I think this departure from their usual policy reflects the problems they had convincing their members, sympathizers, and contacts of a boycott position on the elections when both the SWP and the CP ran well-published campaigns. Fight Back carried a full-page article on why the Camejo-Reid campaign was a "phony left" campaign.

When I was in Madison, Wisconsin, this fall, about the time we found out about these challenges to debate, I asked an RSB member if they would challenge us to a debate in Madison. He explained to me that their policy was to debate us in cities where the YSA is bigger than the RSB, particularly in the big Eastern cities. So apparently these decisions to debate us were part of a national policy known to their membership, not isolated decisions by local leaderships.

Also, individual members of the RSB have approached YSA members privately to discuss China. These kinds of conversations between RSB and YSA members over coffee or a beer to talk about politics rarely happened in the past.

This fall the YSA has recruited a few former RSB members, mainly through the Camejo-Reid campaign.

The RSB generally abstains from struggles in the women's liberation movement. They oppose the Equal Rights Amendment and believe that defending abortion rights is un-

important. On campuses all over the country they held anti-ERA forums on International Women's Day last spring.

Right after Mao died, the RSB held memorial meetings on campuses all over the country. We don't have reports on how successful these were. *Revolution* reported that these meetings occurred on more than sixty campuses across the country. If this is accurate, it is another indication that the RSB is roughly the YSA's size.

In some cities during the past year or so, we've found that the RSB leaves different campuses as the YSA moves onto campus. They don't try to challenge us. That's been the case in Newark, Baltimore, Oakland, and Cleveland, for example. But in other cities that hasn't happened. For example, in San Jose, comrades reported that the RSB brought new people onto campus for reinforcement as the YSA began to grow.

In some areas the RSB is growing and getting some people who should be in the YSA. Although we don't have accurate figures, my impression is that they are stronger in more campus towns, regional areas, than the YSA.

One other thing I wanted to add is that comrades may have noticed an article in the issue of *Revolution* published right after the RCP's July 4 demonstration in Philadelphia. It pointed to some thinking in the RCP about setting up another youth group in addition to the student-based RSB. The article made a big point that a number of unemployed youth from street gangs attended their demonstration, and that there was potential to build a youth organization to attract people like that, separate from a student organization. The RCP hasn't said anything more specific about this, but it's worth noting.

I'd also like to report some information on the Communist Youth Organization, which is the October League's youth group. We know very little about it. The CYO is quite a bit smaller than the RSB. It is only about a year old. They claim they had 200 people at their founding conference; it could have been even smaller.

The OL does most of its campus work in its own name. Even on campuses where it has students and regular activity, only rarely is its activity carried out in the name of the CYO. My own opinion is that OL hasn't decided if it wants to build a separate youth organization.

CYO publishes on an irregular schedule a newspaper in a newsletter format, only 4 to 6 pages. It doesn't take up particular issues being discussed on campus.

ARE THERE DOVES IN THE KREMLIN?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1977

Mr. ASHBROOK. Mr. Speaker, from time to time we are regaled by Kremlinologists with stories of how there are doves and hawks in the Kremlin. To encourage the doves, the argument goes, we must be reasonable and responsible in our dealings with the Soviets. Such reasonableness and responsibleness often translates into caving into Soviet demands.

Recently, Daniel Graham, former head of the Defense Intelligence Agency, put the whole notion of doves and hawks to rest. His article was published in the Washington Post. It deserves attention not only in the Congress but in the State Department and the White House. The text follows:

KREMLIN DOVES AND HAWKS: A "FALLACIOUS NOTION"

(By Daniel O. Graham)

The recent series of columns in The Post by Victor Zorza about hawks and doves within the Soviet leadership is palpable nonsense. When a Post editorial picked up the fallacious notion of a counterpart to the U.S. hawk-dove political alignment in the Kremlin, it became too much for anyone remotely familiar with the facts to bear in silence.

Brezhnev came to power in the U.S.S.R. via a coup against Nikita Khrushchev, which was fully supported by the Soviet military. One of the main complaints the military had against Khrushchev was that he had entertained to some degree the heretical Western doctrine of mutual deterrence. He had stated publicly that both societies—capitalist and Communist—would be destroyed in a general nuclear war. He cancelled naval construction programs, deactivated some ground divisions and reduced Soviet forces to a mere 3.6 million. These were among the "hare-brained schemes" that the military could not abide.

Brezhnev took exactly the hawkish measures required of him. He poured resources into the Soviet military machine at an unprecedented rate. The Strategic Rocket Forces got six completely new ICBM systems and numerous modifications as well. The bomber force got a new strategic bomber. The Soviet navy got several models of missile launching submarines and a high rate of attack submarine and surface ship construction. The Soviet army got 30 more divisions, new tanks and armored personnel carriers, new tactical missiles and an entire new fleet of tactical aircraft for support. Brezhnev and company committed 26 divisions to crush the deviations of Dubcek's Czechoslovakia from the Soviet model. This is Brezhnev the dove?

Under the tutelage of Chairman Brezhnev, the heretical notion of Khrushchev that military forces might better be designed to deter rather than fight and win wars has been discarded. Although he occasionally argues that nuclear war menaces mankind, he has never repeated the Khrushchev heresy that the Soviet state would perish in a nuclear war. Further, he has boasted that "precisely" Soviet military might has "forced" detente upon the United States. There is not a shred of evidence that Brezhnev and his Zorza-alleged dovish majority has stopped or even slowed any Soviet military program in the SALT-detente era.

How can one conclude that an effective dovish faction exists *at all*, let alone dominates the Kremlin's present policies?

Brezhnev's insistence on fast progress toward new SALT agreements, in Zorza's theory, means that hawks are discontent with the results to date and threatening his position. Why should Brezhnev *not* press for quick new SALT agreements? From his point of view, both SALT and detente in general have argured well for the relative power of the Soviet Union as well as his own personal power. Why should the Soviet military balk at SALT, which to date has restrained their opponents' military programs and left their own unfettered?

Zorza noted that two marshals had changed jobs. Kulikov moved from his job as chief of the general staff to take direct command of the entire Warshaw Pact. He was replaced by Ogarkov. Since Ogarkov had been the military representative on the Soviet SALT delegation, Zorza assumes that he is a dove relative to Kulikov. He paints Kulikov's reassignment as punishment of a sort for being a hawk.

This is pure speculation. The Kulikov transfer is by no means a demotion. Command of the Warsaw Pact has in the past been the stepping stone to greater things. Grechko went from that position to Minister of Defense. There is no reason to believe that Ogarkov's views differ from those of Kulikov. His former position on the Soviet SALT delegation means only that he was well trusted by the military.

As for Lt. Colonel Rybkin's article, also cited by Zorza, Zorza reports it as an example of conversion from a hawkish to a dovish view. But Rybkin has always followed the party line faithfully and today is not dovish at all. He states that there will always be a real threat of war until the entire world is in the Communist camp. If his article is read in full, it is apparent that in his remark that more nuclear weapons are not helpful, he was talking to the *United States*, not the Soviet Union.

The motion that some mirror-image of the U.S. situation, including its civilian-versus-military contest for resources, can be entertained only by those ignorant of the nature of the Soviet state. In the U.S.S.R., as in the Russia of the tsars, the military establishment has been the backbone of society, *not* a social overhead as in the democratic countries of the West. With relative power shifting to the favor of the Soviet Union, we cannot afford more blunders based on this brand of bad analysis. In the end they could prove fatal.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Friday, April 22, 1977, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

APRIL 25

8:00 a.m.

Agriculture, Nutrition, and Forestry

To continue markup of S. 275, to amend and extend through 1982, the Agriculture and Consumer Protection Act of 1973.

322 Russell Building

9:00 a.m.

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee

To hold hearings on proposed legislation authorizing funds for fiscal year 1978 for the Legal Services Corporation.

Until 1 p.m. 4232 Dirksen Building

9:30 a.m.

Appropriations

Interior Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Forest Service.

1114 Dirksen Building

Veterans' Affairs

To hold hearings on S. 247, to provide recognition to the Women's Air Forces Service Pilots.

Until noon 318 Russell Building

10:00 a.m.
Armed Services
General Legislation Subcommittee
To meet in closed session to consider proposed fiscal year 1978 authorizations for the Defense Civil Preparedness Agency.
224 Russell Building
Banking, Housing, and Urban Affairs
To hold hearings on the nominations of John H. Dalton, of Texas, to be President of GNMA; William J. White, of Massachusetts, to be a member of the Board of Directors of the New Community Development Corporation; and Ruth Prokop, of the District of Columbia, to be General Counsel of HUD.
5302 Dirksen Building
Commerce, Science, and Transportation
Merchant Marine and Tourism Subcommittee
To hold hearings on S. 1250, proposed fiscal year 1978 authorizations for the Coast Guard.
5110 Dirksen Building
Energy and Natural Resources
To resume hearings on S. 9, to establish a policy for the management of oil and natural gas in the Outer Continental Shelf.
3110 Dirksen Building
Environment and Public Works
Subcommitttee on Water Resources
To hold hearings on proposed fiscal year 1978 authorizations for river basin projects.
4200 Dirksen Building
Governmental Affairs
Energy, Nuclear Proliferation, and Federal Services Subcommittee
To resume hearings on S. 897, to strengthen U.S. policies on nuclear nonproliferation, and to reorganize certain nuclear export functions.
6202 Dirksen Building
Judiciary
Antitrust and Monopoly Subcommittee
To resume hearings on S. 825, to foster competition and consumer protection policies in the development of product standards.
2228 Dirksen Building
Select Ethics
To hold an open business meeting to discuss committee organization, to be followed by a vote to close the meeting to discuss certain classified business.
1417 Dirksen Building

APRIL 26

8:00 a.m.
Agriculture, Nutrition, and Forestry
To continue markup of S. 275, to amend and extend through 1982, the Agriculture and Consumer Protection Act of 1973.
322 Russell Building
9:00 a.m.
Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To continue hearings on proposed fiscal year 1978 authorizations for the Legal Services Corporation.
Until 11.30 a.m. 424 Russell Building
9.30 a.m.
Appropriations
State, Justice, Commerce, Judiciary Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of Justice.
S-146, Capitol
Human Resources
Subcommittee on Labor
To hold hearings on S. 995, to prohibit discrimination based on pregnancy or related medical conditions.
Until noon 4232 Dirksen Building
Select Small Business
To hold hearings on problems of small business as they relate to product liability insurance.
1202 Dirksen Building
10:00 a.m.
Appropriations
Transportation Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Urban Mass Transportation Administration.
1224 Dirksen Building
Commerce, Science, and Transportation
Merchant Marine and Tourism Subcommittee
To hold hearings to receive testimony in connection with delays and congestion occurring at U.S. airports-of-entry.
5110 Dirksen Building
Environment and Public Works
Subcommittee on Water Resources
To hold hearings on projects which may be included in proposed Water Resources Development Act amendments.
4200 Dirksen Building
Governmental Affairs
To consider pending nominations; S. 826, to establish a Department of Energy; S. 904, to establish a center within OMB to provide current information on Federal domestic assistance programs; and to discuss committee funding resolution.
3302 Dirksen Building
10:30 a.m.
Commerce, Science, and Transportation
To hold a business meeting.
235 Russell Building
11:00 a.m.
Select Small Business

154 Russell Building

HOUSE OF REPRESENTATIVES—*Friday, April 22, 1977*

The House met at 11 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Thine, O Lord, is the greatness, and the power, and the glory, and the victory, and the majesty; for all that is in the Heaven and in the Earth is Thine; Thine is the kingdom, O Lord, and Thou art exalted as head above all.—I Chronicles 29: 11.

"For the beauty of the Earth,
For the glory of the skies,
For the love which from our birth
Over and around us lies;
Lord of all, to Thee we raise
This our prayer of grateful praise."

We thank Thee for this land of liberty in which we live and pray that we may ever be a people mindful of Thy favor and glad to do Thy will. Bless our country with honorable industry, sound learning, and pure religion. Save us from violence, discord, and confusion, from pride and prejudice, and from every evil way. Fashion us into one people eager to walk in the ways of righteousness, justice, and good will for our own good and the good of all mankind. In periods of prosperity keep our hearts filled with gratitude and in times of trouble let not our trust in Thee fail; for Thine is the kingdom, the power, and the glory forever. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. SYMMS. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

Mr. ROSTENKOWSKI. Mr. Speaker, I move that the Journal be approved.

The SPEAKER. The question is on the motion offered by the gentleman from Illinois (Mr. ROSTENKOWSKI).

The question was taken and the Speaker announced that the ayes appeared to have it.

Mr. SYMMS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 326, nays 8, answered "present" 1, not voting 98, as follows:

Mr. GOLDWATER changed his vote from "present" to "yea."

So the motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR SUBCOMMITTEE ON ECONOMIC OPPORTUNITY OF COMMITTEE ON EDUCATION AND LABOR TO SIT TODAY DURING 5-MINUTE RULE TO RECEIVE TESTIMONY ON H.R. 6111 AND H.R. 1137

Mr. ANDREWS of North Carolina. Mr. Speaker, I ask unanimous consent that the Subcommittee on Economic Opportunity of the Committee on Education and Labor may be permitted to sit during debate today under the 5-minute rule to receive testimony on H.R. 6111 and H.R. 1137, bills to amend the Juvenile Justice Act of 1974.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, can the gentleman from North Carolina assure us that there will be no markup?

Mr. ANDREWS of North Carolina. There will be no markup.

Mr. ROUSSELOT. I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

FIRST AMENDMENT WRONGS

(Mr. ANDERSON of Illinois asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON of Illinois. Mr. Speaker, the recent outcry against a former President's comments on the present administration has prompted me to speculate on just how this "American political tradition" of mute ex-Presidents might best be institutionalized. The following is one possibility:

H. RES. —

A resolution to amend the Constitution of the United States of America in keeping with the American political tradition.

(Introduced by Mr. J. C. Mononeill of Demoland.)

Resolved, That the first amendment of the Constitution is amended to read as follows:

"Congress shall make no law abridging the freedom of speech, but, the President, Vice President, or any congressional leaders of their choosing or persuasion, may, in keeping with American political tradition, abridge the freedom of speech of any former President, provided that such former President is of an opposing political party beginning with the letter "R" and further provided that such speech is, in the determination of the Administration in power, critical of such Administration."

ANOTHER BROKEN POLITICAL PROMISE

(Mr. HARSHA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HARSHA. Mr. Speaker, like the rest of the Nation, the people of Ohio have been deluged with self-serving rhetoric from Jimmy Carter about personal integrity and keeping faith with the people. Phony rhetoric is all that it is, and if Ohioans did not know it before, they know it now.

During the Presidential campaign, at the urging of Ohio Democrats, candidate Carter went around proclaiming his strong support of the planned $4.4 billion expansion of ERDA's gaseous diffusion plant near Portsmouth, Ohio.

Well, the people of Ohio have been had, and by some of the most sordid political shenanigans imaginable. After promising to support the plant's expansion and to request sufficient funds to start construction—before and after he entered the White House—President Carter has broken that promise and pulled the economic rug out from under Ohioans by scrapping the project he used to get elected in Ohio.

It is an outrageous breach of faith with the people and shows a callous contempt for those who supported him. The Democratic Party needed Ohio badly, and its candidate was willing to stoop to any level to carry the State, and indeed he did.

I am shocked at his action and stunned that he holds Ohioans in such low esteem. I am certainly not alone in that regard. The phones in my office have been ringing off the hook with calls from irate citizens who know the importance of the atomic plant to their area and remember well Jimmy Carter's promise to support the plant's expansion.

That such shabby treatment should be meted out from one who sanctimoniously boasted that he would never lie to the American people is absolutely unbelievable.

After all of the work that has gone into this project and after all of the public assurances by President Carter to the people of Ohio that it would proceed as planned, I find both his attitude and his action unconscionable. Obviously, campaign commitments are meaningless to this administration.

APPOINTMENT AS ADDITIONAL MEMBERS OF AD HOC COMMITTEE ON ENERGY

The SPEAKER. Pursuant to the provisions of House Resolution 508 and House Resolution 509, the Chair appoints as additional members of the ad hoc Committee on Energy the following Members of the House: The gentleman from Alabama (Mr. FLOWERS) to rank after the gentleman from Texas (Mr. ECKHARDT), the gentleman from Pennsylvania (Mr. MURPHY), and the gentleman from California (Mr. GOLDWATER), to rank after the gentleman from Texas (Mr. COLLINS).

DEPARTMENT OF DEFENSE AUTHORIZATION FOR FISCAL YEAR 1978

Mr. BENNETT. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 5970) to authorize appropriations during the fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense, and to authorize the military training student loads, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Florida.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 5970, with Mr. ROSTENKOWSKI in the chair.

The CHAIRMAN. When the Committee rose on yesterday, Thursday, April 21, 1977, title I had been considered as having been read and open to amendment at any point.

Are there any amendments to title I?

Mr. BENNETT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I will not take the 5 minutes but I want to say I know that many of the Members want to complete debate as expeditiously as possible. If they can stay on the floor and cooperate on this and have speeches promptly on each amendment, maybe we can get through this bill on time. It is not my purpose to rush anybody but if we can cooperate we can get through and it is just a matter of cooperating to get through as soon as possible.

AMENDMENTS OFFERED BY MR. BENNETT

Mr. BENNETT. Mr. Chairman, I offer some technical amendments, and I ask unanimous consent that they be considered en bloc.

The Clerk read as follows:

Amendments offered by Mr. BENNETT: Page 7, line 6, strike out "(A)" and insert in lieu thereof "(1)".

Page 7, line 12, strike out "(B)" and insert in lieu thereof "(2)".

Page 7, line 17, strike out "(C)" and insert in lieu thereof "(3)".

Page 7, line 19, strike out "(i)" and insert in lieu thereof "(A)".

Page 7, line 21, strike out "(ii)" and insert in lieu thereof "(B)".

Page 7, line 24, strike out "subparagraph (B)" and insert in lieu thereof "paragraph (2)".

Page 7, line 25, strike out "(D)" and insert in lieu thereof "(4)".

Page 8, line 4, strike out "(E)" and insert in lieu thereof "(5)".

Page 8, line 10, strike out "(F)" and insert in lieu thereof "(6)".

Page 24, line 23, strike out the semicolon and insert in lieu thereof a colon.

Page 25, line 14, strike out "84" and insert in lieu thereof "85".

Page 25, line 25, and page 26, line 13, strike out "Committee" and insert in lieu thereof "Committees".

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Florida (Mr. BENNETT).

The amendments were agreed to.

AMENDMENT OFFERED BY MRS. SCHROEDER

Mrs. SCHROEDER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mrs. SCHROEDER: Page 2, line 10 strike out the period and insert "of which $207,200,000 authorized for procurement of 3 E-3A airborne warning and control system (AWACS) aircraft and $41,300,000 for advanced procurement shall not be expended until a favorable decision is made by the North Atlantic Treaty Organization allies for procurement of the system."

Mrs. SCHROEDER. Mr. Chairman, I think this position is very easy for people to vote for. You voted for it last time, if you voted for the armed services procurement last year. The reason I had the amendment read was to show that it does not strike—repeat does not strike—the money for the AWACS aircraft. Instead the amendment puts the AWACS money in escrow until our NATO allies determine they are going to purchase it.

What is the AWACS? It is really a Boeing 707 with a lookdown radar system. The reason AWACS is so important is it is able to do two things that ground radar cannot do. It is able to see over the horizon and it is able to monitor low-flying aircraft. That is important. I will be the first to grant that.

Now, what is the problem? Why am I here? First of all, the original procurement was supposed to be for 34 of these and a majority, at least 20, were to go to NATO. What happened in the interim has gone on and on. We now have built 19. We have been told originally that we needed 10 for the United States Air Defense; so if we need 10 and we now have 19 and there are currently 3 more in the budget, what this amendment would do is we hold up the procurement of those 3 more until NATO agrees to buy them. If we proceed, we will then have 22 of AWACS. Again, remember, we were originally told we only needed 10. There is some question among many people whether we even need 10 in the United States, because AWACS basically only guards the United States against low-flying bombers. I question how much of a threat there is to the United States from low-flying bombers. One of the biggest problems is that we cannot defend the United States from strategic ballistic missiles, be they land-based or be they sea-based. Since we cannot protect the United States from them, there is some question whether we should attempt to protect them from low-flying bombers; for by the time any bombers reached here there would be nothing but cinders. Nevertheless, assuming we do want to protect against low-flying bombers, we have nine more than we need already.

Now, what has happened with NATO, every year we have been urged not to stop AWACS procurement because the sale to NATO was imminent.

We have constantly been told we must continue procuring these because NATO is going to purchase them. Last year we were told they said they were in contract negotiations.

Mr. Chairman, in the last couple weeks we now know that the West Germans have said they are not going to do this. The British pulled out of the whole deal and said they will not put up their amount of money to purchase AWACS. Instead, they are going to procure and build their NIMROD, which in essence is the same thing as the AWACS. It is now fairly clear that NATO will probably purchase the NIMROD not the AWACS.

We have statements of Secretary Brown saying that the United States will not purchase these planes for NATO. We will not give them the planes.

I think if this Congress wants to give to the Defense Department the strongest case for going forward in tough negotiations with NATO, we should adopt this amendment, because what it will say to NATO is, "Either you order the AWACS or we are not going to give them to you on a silver platter cost free."

Continuing to procure AWACS makes it appear that we are going to give NATO these planes free so why should they engage in serious contract negotiations.

Let me discuss several other AWACS issues.

The current cost of these planes is $138 million per copy. If we build 34 of them, the cost will be $109 million per copy. Either price makes the B–1 bomber look very cheap indeed.

Another point often made is we should go ahead and keep the production lines moving. Well, we have enough in procurement to keep the lines open until the middle of 1979. At that time, were the Defense Department to come up with a new mission for the AWACS, and it has had many new missions since its inception, the production line would still be available. Passing this amendment does not shut down the production line tomorrow.

The CHAIRMAN. The time of the gentlewoman from Colorado has expired.

(By unanimous consent Mrs. SCHROEDER was allowed to proceed for 1 additional minute.)

Mrs. SCHROEDER. So, I ask all the Members to remember several different items. No. 1, this amendment does not strike the amount from the bill, but only holds it in escrow until NATO makes a positive decision. We have been told that perhaps Iran or someone else will buy them, and so forth and so on. The only problem is that if we build up our inventory to that level, and if we have no use for the inventory we are going to have to give them away, so I think from a bargaining position with NATO it is best to adopt the amendment and send them a message Congress is serious.

Mr. ROBERT W. DANIEL, JR. Mr. Chairman, I rise to oppose the amendment.

Mr. Chairman, I think it would be well to consider what the effect of this amendment would be. If we had it within our power, I would certainly urge and, indeed, come close to requiring NATO to acquire this weapons system. This is not the issue. We would be hamstringing our own capabilities through this amendment.

AWACS is a magnificent technological achievement in the field of radar surveillance. It has taken many hard knocks since its initial contract in 1970, but through it all knowledgeable authorities have been unwavering in their support of the program for reasons that I think we should examine here today.

I have talked not only with Air Force planners here in Washington, but also with the future users of AWACS, the Tactical Air Command. I have ridden in this aircraft and have seen its most impressive capabilities.

Let me make two points. First of all, the military capability of AWACS would be of tremendous value. It has added new dimensions to aerial combat through its surveillance and tactical control systems and will give our fighter pilots what they need most, a jump on enemy action.

Second, turning away from the military aspect of AWACS, we as a nation will have, if we continue to support this program, the first system that we can use during day-to-day routine missions to perform many necessary and hitherto overcostly support missions for civil and environmental control agencies. For instance, the Treasury Department is most interested in utilizing AWACS on the southern and northern borders to help eradicate the drug traffic. The Coast Guard is interested in the control of supertankers in restricted waters and possible surveillance of our new 200-mile fishing limit. The Federal Aviation Agency sees many ways in which it could be used on standby emergency traffic control system, and the list goes on and on.

All of the above could be accomplished while the Tactical Air Command is conducting routine exercises and bringing their crews up to combat readiness. This means that there is no additional cost to the taxpayers of the United States. We can say that this is a two for one system that provides both a peacetime and wartime benefit for our civilian and military establishments.

Contrary to what my friend from Colorado has just said, the requirement is not 19 or 20. The U.S. Air Force is requesting 34 of these systems for the Tactical Air Command, which is minimal based on our worldwide commitments, the requirements of NATO aside.

It behooves us to provide all the support necessary to insure that these systems are authorized.

Mr. DOWNEY. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I think that if everyone is listening to the argument, both pro and con, they should be struck by a curious fact. What the gentlewoman from Colorado is attempting to do is not to prevent NATO from having the AWACS aircraft. There is nothing in her amendment to stop them if they came forward and said, "Yes, we would like to buy this $160 million aircraft," from having the aircraft.

What the gentlewoman is doing is putting in escrow the money that would be authorized to buy three additional AWACS.

We already have authorized and appropriated 19 AWACS. The evidence and the testimony that our committee received indicates that we need 10 AWACS for the continental air defense, which wolud leave us 9 for other missions.

What the gentlewoman is attemping to do is put NATO's feet to the fire, and say, "If you want the airplane, we will be happy to provide it for you, but at least show the good faith of coming forward and saying you want that aircraft."

NATO has not done that.

I respectifully ask the gentleman from Virginia if in his presentation the gentleman covered the fact that the British, for instance, who were interested at one time in buying the AWACS, have now decided not to buy it and are purchasing the NIMROD, their own aircraft, and that the West Germans, originally interested in purchasing AWACS, are now reluctant to purchase it because they believe that if they wait long enough the United States will begin to deploy AWACS at German air force bases, without them having to spend the money. The Germans are also annoyed because we have not been able to come forward and purchase the Leopard tank or agree to some NATO standardization on the tank.

What the gentlewoman is attempting to do is put our allies' feet to the fire and saying, "If you want the aircraft, we will give it to you, but at least come forward and ask for it."

They have not done it. They have not done it for the last 3 years. I think it is time to have them act in good faith on this very costly weapon.

Mr. ROBERT W. DANIEL, JR. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentlewoman from Virginia.

Mr. ROBERT W. DANIEL, JR. I thank the gentleman for yielding.

Mr. Chairman, I would say that, while we might be attempting to put the feet of NATO to the fire, we are at the same time eroding our own national defense capabilities, in view of the fact that we require 34. To acquire 19 or 20 will be very much short of what the United States needs, disregarding NATO.

Mr. DOWNEY. The gentleman is a conscientious member of the committee. No doubt the gentleman was there last year when we went over some of these requirements for the AWACS, and it was specifically asked of Mr. Jones—how many AWACS did we need for ourselves, "Do we need 10? Do we need 19? Do we need 34? Do we need 140?"

And at that time, when we were debating whether or not to go from 9 to 12, there was some question as to whether or not they would get their 12, and all of a sudden the requirement was for 10, where they could satisfy the continental air defense requirement with 10. We have 19. Nineteen of them. If NATO wants three more God bless them, let them have them. But at least let us have them ask for it.

Mr. ROBERT W. DANIEL, JR. If the gentleman will yield further, the U.S. Air Force requirement for worldwide operation is 34.

Mr. DOWNEY. But if we are going to have a worldwide requirement, at least our allies should share in the expense of that requirement. That is all the gentlewoman from Colorado is asking.

Mrs. HOLT. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I think we are losing sight of the fact that we have a big investment in NATO. The leadership, our people there, are very concerned about the need that we have for the E-3A, and it has certainly been tested. The capabilities of this airborne surveillance system has caused our military planners to come up with a new set of rules regarding aerial combat, rules which now must reflect one F-15 under control of an E-3A can do the work of three.

Multiple jamming attempts against the E-3A can now be considered little more than a nuisance factor. It has been tested; it is needed; there are negotiations going on to buy it.

One of the problems we have not mentioned here is that if we cut back the production that we are contemplating, with the attending dollar and material changes, if we go through with this reduction, there are over 2,500 skilled and semiskilled workers who are going to be laid off within a short time. But the impact does not end there. The delay and the stretchout of the production program into later years are going to increase the cost. Cost increases ranging between 25 and 30 percent on avionics equipment will occur.

Mr. Chairman, I believe we ought to think very seriously about this. We know that it is wanted, and we must consider that negotiations are going forward to purchase the AWACS.

Mr. EDWARDS of Oklahoma. Mr. Chairman, will the gentlewoman yield?

Mrs. HOLT. I yield to the gentleman from Oklahoma.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I thank the gentlewoman for yielding.

Mr. Chairman, the arguments presented in favor of this amendment fly in the face of all logic. Since the AWACS program's predevelopment phase was begun in 1970, we have hoped to see the development of an aircraft system that would offer a command and control capability that the world has never seen. Last month the first operational unit was delivered to the Air Force. The development, test, and evaluation programs which have been run on the aircraft since 1970 have proven that the AWACS has exceeded all initial hopes.

In April of 1975 the AWACS was sent to Europe to be evaluated in a number of areas. These were: First, detection of small vessels and low-flying aircraft; second, control of fighter aircraft in air-defense and antiship roles; third, deep-look capability into Warsaw Pact countries; fourth, friendly SAM support; fifth, integration of air-ground information; and sixth, interoperability with ground-based command and control systems. Each objective was met and exceeded.

We now have an aircraft that is unique. No such capability exists in the Soviet Union or the Warsaw Pact countries. We are asked today to support an amendment that can only diminish the military advantages this aircraft gives us.

We are asked to forfeit time and money. The time that is lost by postponing production will hurt us in two ways. We will be without the aircraft we need at a time when the Soviet Union is increasing the strength of their conventional forces, the very targets that this aircraft can most effectively identify. We will also be forfeiting time to the Soviet Union so they can develop their own electronic countermeasures against a radar system that would, under this amendment, be coming on line over a longer period of time. Above all, we will be denying ourselves a defensive advantage where our conventional defenses are most vulnerable: Europe.

We will lose money, not save money, by the passage of this amendment. The Boeing Co. has testified that production costs of the AWACS are based upon continuity of production. My colleagues on the Armed Services Committee can testify to the many occasions where procurement programs were postponed in the name of economy only to be begun later at a higher per unit cost. When the cost increases of inflation are added to the basic cost increases that would be the result of delaying production of the AWACS, the cost justification for this amendment disappears.

The more basic question to be answered in this debate is, Why unilaterally forsake the production of an aircraft system that is proven to increase our defensive capabilities? Can you justify to your constituents a vote that increases the potential deadlines of a surprise attack on our troops in Europe? Granted, all the contractual details have not been worked out with our NATO allies. But we do not live in the age of the bow and arrow. We must cope with lead times, production schedules, and above all, inflation. We literally cannot afford to reduce our procurement of the AWACS.

Mr. BADHAM. Mr. Chairman, will the gentlewoman yield?

Mrs. HOLT. I yield to the gentleman from California.

Mr. BADHAM. Mr. Chairman, I thank the gentlewoman for yielding.

I also rise in opposition to this amendment. Several of us who are members of the committee recently visited NATO and the American forces commanders in Europe, and the single most important request they have made to us is for fulfilling our pledge and our requirement to provide AWACS, which is absolutely essential to the defense not only of NATO and Central Europe and the Southeast but to the defense of our American forces presently in the European Theater.

Even if our friends in Germany and our allies in Great Britain were not to purchase AWACS, that would not relieve this Congress from the responsibility of providing that absolutely essential surveillance and airborne control system to our people who are defending our way of life, even though they are defending that way of life on another continent.

The respected gentleman from New York (Mr. DOWNEY), who is a member of the committee, has said that we only need 9 or 12. He is assuming, unfortunately, that these aircraft will never need service, that they will never need to have their crews rested, that they will always be in the same place, and that they only need one to fly in orbit. That is unfortunately not true.

Mr. Chairman, we must have these aircraft. We must have them for the protection of our own personnel. We must have them in Europe. Every commander of the armed services in Europe thinks this is absolutely essential. It is our duty constitutionally and as a Congress to provide these aircraft.

Mr. WHITE. Mr. Chairman, will the gentlewoman yield?

Mrs. HOLT. I yield to the Chairman of my subcommittee, the gentleman from Texas.

Mr. WHITE. Mr. Chairman, let me ask the gentlewoman this question:

Is it not true that some of our ground surveillance, as we have found it, has been diminished by reason of some of the Mideastern and Asian area altercations, as, for instance, that on Cyprus, and, therefore, that the commanders have told us that AWACS is a very much needed instrument by which we can maintain this surveillance?

Mrs. HOLT. Absolutely. This is the single most requested item to protect that southern flank of NATO. They want to get the AWACS coming along as quickly as possible. They feel that this would protect them and give us the opportunity to defend our troops and our allies there.

Mr. WHITE. And is it not also true that the Soviets have developed a very large tactical air force which is unlike their previous air force, and that, therefore, AWACS, which has been surveyed and studied for over several hundred miles, can see these tactical aircraft coming and can give adequate warning to prevent the possibility of attack?

Mrs. HOLT. That is absolutely true. This is the latest radar technology available, ably to fly at 30,000 feet, providing data on air and maritime activity in the immediate combat zone, but also 200 miles awav

Mr. STRATTON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I think we ought not to lose sight of what is happening with regard to our NATO position; and we ought not to be playing games.

The gentlewoman from Colorado (Ms. SCHROEDER) is suggesting that we hold off on buying these aircraft until our NATO allies say that they are going to buy some or actually do purchase some. However, let us not kid ourselves. If anybody has been reading the papers lately, he will know that the German Bundestag has announced publicly that they are not going to buy any AWACS until the United States puts a German 120mm gun on our own XM–1 tank.

This bill in another title contains a provision that says that we are not going to put any 120mm gun on our XM–1 tank until we are satisfied that it has been properly tested and is the best thing we can get to protect our troops.

Mr. Chairman, are we going to vote here today to base our needs in the NATO theater on what the German Parliament is going to do, or are we going to base it on what our own U.S. Air Force needs?

Let us not kid ourselves again. If there is to be a war in Europe or if we are to have a confrontation in NATO, who is going to supply the air protection? It is going to be primarily and fundamentally the U.S. Air Force. Let us not kid ourselves on that.

Mr. Chairman, what we need the AWACS for is to provide the control, the overhead command and control, of American planes in NATO. So let us keep in the money that the Air Force needs. We are going to be protecting American flyers, American aircraft, and American troops on the ground in the event that anything—God forbid—should happen involving NATO. Let us not base our action on what may be the current political sentiment in the German Bundestag.

Mr. Chairman, let me also remind the committee that President Ford asked for six of these planes. President Carter took a look at the budget and reduced it to three; and that is all we have the money in there for, just for three planes. In line with the recommendations of the President, the Committee on Armed Services voted 28 to 8 to support President Carter's position.

Mr. CHARLES H. WILSON of California. Mr. Chairman, I find myself on the other side of my good friend, the gentleman from New York (Mr. STRATTON), on this subject.

It seems to me that NATO is supposed to be an operation where all of the member countries cooperate as a unit. It is not going to be the United States against the common enemy. It is going to be all of these countries.

Why should they not pay their share and participate financially just as we do?

Mr. STRATTON. My information is that they are paying their share. But this is a plane needed to command and control air warfare, and, essentially, if we come to it, we are the ones who are going to be conducting that air warfare, not Belgium or Holland.

Mr. CHARLES H. WILSON of California. If the gentleman will yield further, Britain is going to build their own, too, now; and I think we could discontinue the AWACS.

Mr. STRATTON. The gentleman has his view. He was one of the eight who were outvoted.

Mr. SIKES. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Florida.

Mr. SIKES. Mr. Chairman, the gentleman from New York (Mr. STRATTON) has made an eloquent defense of the AWACS. I support his position.

Is it not also worthy of consideration that we are outnumbered in almost every category of weapons right down the line and that we need the most modern and effective weapons that we can obtain for the limited money that is available in this budget?

Mr. STRATTON. There is absolutely no doubt about that, and we should have had those charts here again today. We are effectively outnumbered when it comes to planes.

Mr. MARKS. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Pennsylvania.

Mr. MARKS. Mr. Chairman, there seems to be a basic concern and difference. That is, the gentlewoman from Colorado (Ms. SCHROEDER) and the gentleman from New York have suggested that we do not need 34. The gentleman from Virginia, the gentleman in the well, and others have suggested that we do.

Can we at least get some insight with respect to that question?

Mr. STRATTON. As our distinguished colleague, the gentleman from Virginia,

(Mr. Robert DANIELS) indicated, the Air Force says that they need 34. We are only up to about 20 at the present time.

President Ford said we needed six. President Carter cut it to three. That is all we are giving them, and that is still well below the need of the Air Force.

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Florida.

Mr. YOUNG of Florida. Mr. Chairman, the gentleman from California (Mr. CHARLES H. WILSON) made the point that as regards NATO, we ought to hold this off until we decide that NATO wants to use it.

The gentleman from California should be advised that we should have a separate, distinct defense responsibility and capability, separate from NATO's.

Mr. BYRON. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I urge you to defeat the amendment offset by Representative SCHROEDER. The Armed Services Committee, after careful investigation and deliberation, did not choose to tie the future of the U.S. E–3A program to a favorable NATO decision on E–3A procurement. We should support their reasoned judgment.

Let us consider the probable outcome of this amendment. If NATO does not make a favorable decision by October 1—and chances of that are unlikely due to the complexity of ongoing negotiations among the several sovereign nations, each with their own national parliamentary procedures, time schedules and fiscal concerns—then the proposed amendment cuts off funds for the U.S. program. At the least, this would result in a production halt, which would not only unnecessarily increase the program cost, but would also delay delivery of this capable aircraft to operational units. At the worst, it could make the continuation of the program cost prohibitive, leaving the Air Force with insufficient numbers of a system that is urgently needed.

The Air Force Chief of Staff, General Jones, has testified that the E–3A is the Air Force's first priority system for our general purpose forces. Should we allow procurement of this first priority system to depend on the decision of other parliamentarians in other countries? I think not. If we are to terminate a vital program, let us debate the question directly.

By passing the proposed amendment, we are not encouraging continuation of the real progress NATO has made toward a positive decision—rather, we are placing the entire E–3A program in jeopardy. We probably would be terminating the program. Therefore, I urge you to join me in defeating the amendment under consideration.

Mr. TONRY. Mr. Chairman, I move to strike the requisite number of words, and rise in support of the amendment.

Mr. Chairman, I think the question before this House is whether or not we will finance NATO. I might say that I seldom rise in support of amendments offered to the defense bill from the Committee on Armed Services, on which I serve, but I think in this instance that the main question and the logical question before us is the question of whether we are going to ask the taxpayers of the United States to finance NATO. If we are going to fashion this logic, then it is not just a question of financing AWACS but also of financing the tanks, the guns, and the other airplanes used by NATO.

We have right now, according to the testimony that we have heard, enough AWACS to support the defense of the United States; that number is 10. The additional 11 AWACS will be used for NATO.

We are then faced with the essential question: Are we going to finance NATO and provide it with the planes needed for their defense, or require them to pay for them? Are we going to put the burden on the taxpayers of the United States? That is the essential question.

The amendment offered by the gentlewoman from Colorado (Ms. SCHROEDER) does not go to the quality or the merits of the plane itself, but would simply say that until NATO decides that they are going to buy these planes at this cost, let us not go into the business of financing NATO any more than we are already in it.

Mr. KAZEN. Mr. Chairman, will the gentleman yield?

Mr. TONRY. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, I cannot seem to follow the reasoning of the gentleman from Louisiana, in that NATO is some strange alien force. The gentleman from Louisiana knows that we are part of NATO and that NATO is part of our defense. This is one of the essential weapons that we need not only for the defense of NATO but for the defense of this country.

Mr. TONRY. I think this is a matter of logic. I agree we are in support of NATO but we are not all of NATO. I think there should be contributions from the NATO countries themselves, because the essential defense tactics that these planes are going to do is for the NATO countries, not for the borders of the United States but for the NATO countries themselves. Admittedly they are intertwined with our own defense but, most importantly, the primary objective is their defense. If this plane is necessary for their defense, then let them bear the cost of it.

Ms. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. TONRY. I yield to the gentlewoman from Colorado.

Ms. SCHROEDER. Mr. Chairman, I think one of the issues missed here is that NATO will almost assuredly buy Nimrod rather than AWACS. We cannot impose our will on NATO and dictate on what they do.

Further, there has been some talk about waste if we shut the line down, but it will be very wasteful to procure nonneeded planes. Also as I stated before the line will not be down before May 1979.

As far as the 34 planes are concerned, they have been saying all along they intend to sell 20 to NATO but it now appears that if we will not give them to NATO and that NATO will not purchase them, for they will purchase the British plane. What do we do with them?

We have nine extra AWACS now. To continue development of AWACS and to build surplus planes at $138 million a copy means that we will get ourselves into the position where we will have to give them away if they are to be put to use. I think that is an improper way to proceed.

Mr. DOWNEY. Mr. Chairman, will the gentleman yield?

Mr. TONRY. I yield to the gentleman from New York.

Mr. DOWNEY. Mr. Chairman, I think the issue has been joined. The fact of the matter is that, in response to questions about the actual number of planes needed for the defense of the United States the witnesses for the Department of Defense could not give a specific number needed for the defense of the United States and for the defense of NATO.

It never has been indicated clearly by anyone that the need is any more than 10.

So, we have to ask outselves the question that the gentlewoman from Colorado (Ms. SCHROEDER) is posing: Whether or not we want to purchase, ourselves, all of the AWACS planes for NATO without their participation.

Mr. BENNETT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I just want to try to see if we can conclude this. I do not want to conclude it on a negative note; we usually try to conclude these matters on a positive note to see if we can sustain the committee. Therefore, I want to review briefly what this is all about. This is not the purchase of any planes for NATO. This is the purchase of planes for woldwide commitment of the United States to protect our country, to see that our country is safe. It is true that only 10 are actually needed for U.S. defense but the number programed—and that is not definite, but certainly at least 24 are required, and this bill only brings us to 21. The Air Force says it needs 31. This will be the most economical way of proceeding. It is certainly a very cost-conscious proposition, because it was reduced from six to three. President Carter reduced the number and the committee agreed with him. I just want to emphasize that the committee studied this in depth and overwhelmingly was of the opinion that we need these for U.S. forces.

Mr. DORNAN. Will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from California.

Mr. DORNAN. I thank the gentleman for yielding.

Mr. Chairman, today is a very significant date in history. It is the birthday of Vladimir Ilyich Ulyanov Lenin. We have Russian Tupolev 95 bombers flying off the coast coming closer to our aircraft carriers than they ever have before and this inside of our coastal defense zones. This started years ago before we

ever started working with AWACS, but the Soviet planes have never flown with such provocation.

Let me emphasize that we are playing word games with people's lives. AWACS aircraft flying in the Southeastern Asian Theater of Operations literally saved hundreds of lives of U.S. fighter pilots. Ninety percent of all POW survivors were Air Force, Navy, and Marine fighter pilots. Many pilots went down and never knew what hit them because Mig's were vectored on their tails by enemy radar. Without the advance warning of these AWACS aircraft throughout the world today, fighter pilots could not accomplish anything in individual combat. He must have the advance warning. These NATO fighter pilots feel they are also flying in defense of the United States as well as their own country. God forbid, under the dictates of Lenin that the Soviets decide they can take us because of their overwhelming superiority in weapons and then move to take all of Europe—which I believe will happen before they would move in the Middle East—it will be the United States and NATO fighter pilots who will be the first line of defense.

We are issuing here a death sentence if we cancel AWACS not just on American fighter pilots rotating to the NATO Theater, but on British and other pilots in NATO who will be relying on this equipment, whether or not their governments play games as to whether or not it is going to be replaced by Nimrod instead of our superior Air Force aircraft. We need a ratio of three of these very complex electronic aircraft on the ground to every one we use in the air.

One of the most famous of Sir Winston Churchill's statements was the following:

> Never in the course of human conflict have so many owed so much to so few.

We are the many in that case, and the few were the handful of British Hurricane and Spitfire pilots in the Battle of Britain who really saved all of Western civilization by holding back the scourage of Hitler. Fighter pilots then could with their eyeballs protect us from the Messerschmitts and Fouke Wolfs and do battle with them.

But today we need this complex AWACS system, for sophisticated warning and we had better buy it, no matter what games European governments are playing with their young pilots' lives.

Mr. BENNETT. I appreciate the comments of the gentleman from California.

Mr. Chairman, I ask for defeat of this amendment.

Mr. RISENHOOVER. Mr. Chairman, I rise in opposition to the amendment although I am aware of the conflicts surrounding the continued procurement of the Air Force's AWACS system by both our own country and our own sister nations of NATO.

The controversy has vacillated over the capabilities of the system and the cost of the system requires no additional comment on my part. I choose to discuss the prime need for this advanced command control function.

As a nation, our country has prided itself on being the arsenal of peace and defense of the free world. Now, suddenly, we have awakened to an age of rapidly advancing technology especially in those areas of the world controlled by our potential enemies.

During the past year, startling and revealing statistics regarding the military strength of the Soviet Union have suggested that our military position has now been relegated to second place. But, still, there are those of us who would deny the seriousness of this challenge and continue a "business as usual" attitude toward our defense posture.

If ever there was a need for systems which can alert us to a threat—that time is now. That we have such a system, and continually argue over the politics of it, rather than the need of it, is almost unbelievable.

If I were to tell you for instance that I possessed an iron clad method for increasing the capability of our tactical fighter command by as much as 30 percent and could show you actual photographs and documented evidence of such fact, who then would deny the right of our military to utilize this system. In essence, we are doing this to our military when we disregard the tremendous inherent and potential capability of the E–3A AWACS and when we substitute petty bickering for commonsense.

The need for better command, control, and effectivity of our military forces is a daily subject of discussion, debated at great length during our hearings of the defense budget. But, we must remember, that these peacetime needs are magnified a hundredfold during the actual combat and failure to provide them could spell the difference between a military success or catastrophic failure. Commanders of all three services have witnessed the E–3A AWACS during actual flight operations, and their opinions, as to its needs in the national and international defense structure, have been unanimous. It is, they say, a necessary and vital addition to our military forces.

Our NATO allies foresee almost an unlimited usage of the system, not only in its tactical role but additionally as an airborne deterrent to those pact nations who would realize that by the AWACS presence alone, any prehostile activity on their part would be immediately exposed.

Let me conclude by emphasizing that continued procurement of the E–3A equates from the need for such a system in light of today's somewhat delicate balance of power coupled with the enormous strides being made in offensive weaponry. That we should disregard this need or fail to take the proper steps toward procurement of a system to fulfill this need is unthinkable.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from Colorado (Mrs. SCHROEDER).

The question was taken; and on a division (demanded by Mr. DOWNEY) there were—ayes 22, noes 67.

RECORDED VOTE

Mr. DOWNEY. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 135, noes 222, not voting 76, as follows:

[Roll No. 146]

The Clerk announced the following pairs:

On this vote:

Mr. Addabbo for, with Mr. Waggonner against.

Mr. Thompson for, with Mr. Teague against.

Mr. Koch for, with Mr. Milford against.

Mr. Flippo for, with Mr. Ford of Tennessee against.

Mr. Hawkins for, with Mr. Shipley against.

Mr. Stark for, with Mr. Price against.

Mr. Rosenthal for, with Mr. Carney against.

Mr. Ford of Michigan for, with Mr. Staggers against.

Ms. Mikulski for, with Mr. Whitten against.

Mr. Mikva for, with Mr. Long of Louisiana against.

Ms. KEYS changed her vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. EMERY

Mr. EMERY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. EMERY: On page 2, lines 21 and 22, strike "$1,319,000,000"; and insert, in lieu thereof, "$1,611,000,000;"

On page 2, lines 22 and 23, strike "for the AO fleet oiler program, $322,700,000; for the fleet tug program, $52,700,000;"

On page 2, line 18 strike "$700,800,000" and insert, in lieu thereof, "$764,900,000;"

Mr. EMERY. Mr. Chairman and ladies and gentlemen of the committee, this amendment accomplishes several things. First of all, it strikes a total of $375.4 million from the bill, the cost of two fleet oilers and three tugs. It adds $292 million for two FFG–7 guided missile patrol frigates, and $64.1 million for long lead procurement for one additional SSN–688 class nuclear attack submarine. It cuts a total of $19.3 million from the bill. But at the same time, it provides funding for three additional combatant ships that the Navy very badly needs. If there has been any single thread which has tied our Seapower Subcommittee testimony together, it has been the great concern of the committee and of the Navy that we have not built a strong enough Navy, that we need more combative vessels with greater fire power to project our Naval influence throughout the various oceans of the world.

Another aspect which is equally as important is that the oilers and fleet tugs can easily be built by the merchant marine or supplied from vessels currently afloat. I for one believe that the U.S. merchant marine, which has sunk to No. 11 in the world in recent years, needs to accept more of the responsibility for supporting our Navy.

Mr. Chairman, this amendment is an important amendment. It adds more firepower to our fleet, it calls on the merchant marine to meet its obligations to our national security, and it cuts $19.3 million dollars from this defense bill.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield?

Mr. EMERY. I yield to the gentleman from California.

Mr. McCLOSKEY. Mr. Chairman, I thank the gentleman for yielding.

I think I can speak, Mr. Chairman, for the great majority of the members of the Committee on Merchant Marine and Fisheries in asking the committee to agree to this amendment as one element in increasing the seapower of the United States.

As the Members know, under the Merchant Marine Act of 1936, the merchant marine of this Nation is intended to be suitable to serve as an auxiliary to the Navy in time of war.

Essentially the bill that the committee came out with asks for the building of two tankers at a cost of $161 million each. That is $322 million for tankers. As the Members know, there are presently 30 million deadweight tons of tanker capacity laid up around the world. There are numbers of good, fast, modern tankers on the market today that can be purchased at a price of less than $20 million.

The committee has had estimates before that tankers that are now laid up in the fjords of Norway, off Japan, and elsewhere around the world can be bought for prices of between $8 million and $17 million.

What does this mean to the Navy? The Navy ran tests back in 1972 on the use of civilian tankers to fuel Navy ships at sea. Let me quote to the Members from the 1972 Maritime Administration/Navy joint findings, as follows:

. . . potential savings from using merchant ships for wartime Underway Replenishment are large enough to justify further, more detailed analysis and fleet testing. In addition to the $610 million savings to the Government from using simpler merchant designs in peacetime, an additional savings of $130 million would arise if ships to support two attack carrier groups deploying one month after D–Day were chartered only when war occurs. In peacetime, these ships would earn revenues which defray much of their cost to the government.

If we can require in the Federal construction subsidy for merchant marine ships that merchant marine tankers be capable of servicing the Navy in time of war, there is absolutely no need, and it seems almost insane, to build two tankers at $161 million each when we can buy similar tankers for $20 million each in the world market today and refurbish them to properly service the Navy, with adequate pumps, adequate self-defense mechanisms, and adequate communications gear.

In my judgment, Mr. Chairman, this amendment ought to be enacted. It transfers money for fleet oilers and tugs to combatant ships, which is the very direction the Armed Services Committee itself has stated is necessary in the opening paragraph of its report.

Mr. BENNETT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, there is no comparison between the fleet oilers and tugs designed to go in harm's way—that is, in danger—and ordinary civilian oilers and tugs.

The fleet oilers must have special characteristics peculiar to fleet oilers. They must be able to sustain 20 knots on ocean transit; they must be able to maintain 15 knots replenishment speeds; they must be capable of operating with Navy task forces; they must have a self-defense capability; they must have a combat information center, special command and control, and communications equipment; they must have redundancy in critical engineering and steering systems; they must have extensive damage control configurations and fire control systems.

In addition, they must have modern firefighting equipment; they must have especially trained repair parties; they must have sufficient compartmentation to maintain a margin of survivability; they must have multiship refueling capability, since oilers usually refuel ships on both the port and starboard sides simultaneously; and they must have a high fuel transfer rate. These ships have the capability of transferring 900,000 gallons of propulsion fuel and 540,000 gallons of aircraft fuel per hour.

The same thing cannot be said about commercial oilers. This is a bulk oil carrier which cannot do what the military oilers have to do. They do not satisfy any of the above requirements.

The fleet tugs are discussed in the following manner: They are actually semi-combatants. The fleet tugs have been requested and designed primarily for open-sea towing of battle-damaged fleet units. Their primary peacetime role includes providing fleet target towing services, drone and torpedo recovery, coastal and open-ocean towing of non-operational units and other specialized support operations. To accomplish these missions, fleet tugs are deployed world-

wide as members of the mobile logistic force.

The fleet tugs will be capable of embarking transient salvage, diving and open-sea oil pollution control teams, and they will have space and weight reservations for portable salvage and diving equipment, as well as having emergency firefighting equipment and rescue capability.

Commercial tugs cannot meet these obligations. The tugs and oilers have to be combatant or semicombatant. There is no in-between.

Mr. Chairman, it is an expensive procedure to build these kinds of tugs and oilers.

I would rather have combatant ships of long range, expensive ones like the carrier or something like that. They would be better for our Nation at this time. But we have to have some sort of mix.

The ships, the oilers, and tugs we now have are so old that they are actually decades old and they must be retired.

The ones we need have capabilities the like of which no commercial tugs and oilers can match.

Therefore, Mr. Chairman, I ask that the amendment be defeated.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from California.

Mr. McCLOSKEY. Mr. Chairman, the gentleman will concede, I am sure, that we would all like the merchant marine to be capable of serving as a naval auxiliary in time of war.

Is the gentleman not familiar with the tests of the *Irma Elizabeth*, a civilian tanker, with respect to which it was estimated it would cost only $30,000 to do the necessary refurbishing work to make the *Irma Elizabeth* capable of serving as an adequate fleet oil tanker? Is that not correct?

Mr. BENNETT. I do not believe it is.

Mr. McCLOSKEY. May I ask the chairman this question: Instead of building a new tanker at a cost of $161 million today, if we bought a 38,000 gross deadweight ton tanker on the market today for $20 million, could we not change that tanker and modify it to do all of the things the gentleman has said a Navy tanker would do at a cost of far less than $161 million?

Mr. BENNETT. There is no way of doing it through the merchant marine and getting the same ship in that way.

These oilers and these tankers are not standby. They are not stuck in some port. They are worldwide ships. They are used currently. They are not ships that can be brought in at some other time. They are needed now.

Mr. McCLOSKEY. If the gentleman will yield further, I do not think that I am getting my point across.

We have a particular situation in the world market today because of the tremendous surplusage of oil tankers.

The CHAIRMAN. The time of the gentleman from Florida (Mr. BENNETT) has expired.

Mr. ASPIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like further discussion with the gentleman from California (Mr. McCLOSKEY) because I think that basically what the gentleman from California would like to do sounds like a good idea.

I know that Admiral Zumwalt in the past has indicated a great deal of interest and that he tried to put across the idea of getting more use out of the merchant marine fleet for the benefit of the Navy.

My question is about whether this amendment is the way to do it, and how do we get to the place to which we want to go from where we are today.

Mr. McCLOSKEY. If the gentleman will yield, perhaps I could make this point: Because of the overbuilding of tankers prior to the 1973 Arab oil embargo, there are many good fast medium-size tankers laid up around the world of the type the Navy seeks.

Because of this peculiar situation we can build a civilian tanker today at a cost of $120 million in a Japanese shipyard or at perhaps twice that cost in a U.S. shipyard. However, with all of this tanker surplus that is laid up, we can buy the same tanker for $17 million, one-tenth of its price to build.

Mr. ASPIN. Mr. Chairman, I understand the gentleman's economic argument and I know about the numbers he uses for comparison.

I think his point is that we are talking about spending $10 million to $17 million for a civilian tanker, as opposed to about $161 million for a Navy tanker. I understand that the Navy ships are indeed a little bit more capable in certain areas and can do things which the civilian ship cannot. Maybe the civilian ship can be modified, but let me ask a couple of questions in particular about where we are in the bill.

Before this bill reached the floor the administration had more oilers and tankers in the bill than are in it as it is on the floor now.

I was concerned, when the bill was before the committee, that we had cut out too many oilers and tankers already and now I am concerned that we are cutting out the remaining oilers and tankers in the bill and putting in some combat frigates, which raises two questions in my mind.

No. 1: What assurances have we that the oilers and tankers will in fact be in the budget of the Committee on Merchant Marine and Fisheries? And, No. 2: What assurances do we have that these frigates we are putting in are going to survive over in the Senate?

Mr. McCLOSKEY. Both of those questions rest on future events. Certainly, it would appear to me, that no Member in this House could ever promise or even estimate what the Senate might do. But it would seem to me that since we have the maritime authorization bill coming before us next month and we have to report it out by May 15, the sole basis upon which we can ask this country to fund the construction of ships for the merchant marine is if they are helpful to us in time of war.

Mr. ASPIN. If the gentleman from California would respond to this question: Why is it not, in view of the fact that we have already cut out some oilers and tugs from this budget already, justification enough for us to put in some money in the budget of the merchant marine for the purpose of building tankers?

Mr. McCLOSKEY. The significant fact is that the only thing the subcommittee cut from this budget were tankers and oilers. The Navy asked for four tankers, claiming that they felt they had to have them. The Armed Services Committee cut it to two. The Navy asked for four tugs and the committee cut that to two, because the committee felt they were not necessary.

Mr. ASPIN. I do not think it is true the subcommittee felt they were not necessary. I think the subcommittee felt that it would be difficult or impossible to raise the defense budget and felt that fighting ships were more important than these oilers and tankers. The problem is, since we have already cut the oilers and the tankers in the budget before us, I do not know why the gentleman cannot go before the Committee on Merchant Marine and Fisheries and say that the House Committee on Armed Services has already cut the request of the administration from four to two, and that we ought to increase the number in the merchant marine budget to make up for these. We do not have to cut the last two.

Mr. McCLOSKEY. I believe our remedy for that problem is to insist that before we spend one more dollar on merchant marine subsidies that we require that any ships we fund be suitable as auxiliaries for the Navy, just as the 1936 law requires.

I think I can speak for the Merchant Marine Committee chairman, the gentleman from New York (Mr. MURPHY) on that point, although I have not discussed it with the gentleman.

Mr. ICHORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, because of the noise that has prevailed in the House, I must say that I know very little about this amendment. I could hear the gentleman from Wisconsin (Mr. ASPIN), as I am sitting closer to him and I do concur with the gentleman. But I must say that we cannot write a defense bill on the floor of the House.

If this is such a good idea, why was it not submitted in the committee? Why did the author of the amendment not submit it in the committee?

As the Members I am sure know, the members of the Committee on Armed Services have the duty of determining priorities. We are working within a limited budget.

In fact, Mr. Chairman, I would state to the Members of the House that if we do not do something next week when the Committee on the Budget presents its proposal, there is no chance to have any stronger defense in this country. That is because the Ford administration proposed $122 billion, the Carter administration proposes $120 billion, and now the Committee on the Budget is only recommending $116 billion.

As I say, Mr. Chairman, we are dealing with priorities. We know very little about the effect of this amendment on the capability of the U.S. Navy.

I would ask the gentleman from Maine (Mr. EMERY) why the gentleman did not offer the amendment in the Committee

on Armed Services if it is such a good idea?

Mr. EMERY. Mr. Chairman, if the gentleman will yield. I would remind the gentleman that the last time I offered an amendment in the Committee on Armed Services, the same gentleman from Missouri objected that I offered it in the committee and not on the floor.

Mr. ICHORD. I opposed it because the gentleman had a bad amendment.

But, why did the gentleman not offer this amendment in the committee and give the committee a chance to consider it?

Mr. EMERY. Will the gentleman yield?

Mr. ICHORD. I will not yield at this time. The gentleman from Maine well knows that the chairman of the full committee, the gentleman from Illinois (Mr. PRICE) is very considerate of the rights of all members of the committee.

The gentleman could have authored it in the committee. Why did he not do it at that time?

Mr. EMERY. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Maine.

Mr. EMERY. I thank the gentleman for yielding.

In the committee we discussed a great many alternatives for increasing the shipbuilding program, and it was the desire of the subcommittee to maintain at least a semblance of the original budget request. Consequently, when the Seapower Subcommittee program was considered by the full committee, we found that our request was practically the only one of all the other subcommittees that maintained the original budget request, and we were some $40 million below, if I remember correctly.

I want to point out to the gentleman that this amendment reduces the entire budget by $19.3 million. It does not merely add more money.

Furthermore, as the gentleman from Missouri well knows, the patrol frigate program, oiler program, tug program, and the attack submarine program have all been discussed in subcommittee—and I am a member of that Seapower Subcommittee. And certainly, I have the right to offer any amendments, such as this one, as the adopted rule permits. The gentleman's objections would, I think, carry more weight if they reflected facts, figures, and philosophy rather than his distaste for the fact that my amendment was offered.

Mr. ICHORD. I would state to the gentleman that he could have brought it up in time to hold hearings on it. I am not a member of the Seapower Subcommittee, and, in fact, most of the members of the House Committee on Armed Services are not members of the Seapower Subcommittee.

Mr. LOTT. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Mississippi.

Mr. LOTT. I appreciate the gentleman's yielding.

I am not on the Committee on Armed Services, and I do not have any vested interest in the frigates or in the amendment, but I should like to point out that the original defense authorization bill introduced this year did have these two additional frigates in it. So it was considered by the subcommittee.

I want to say to the gentleman from Missouri that his point is well taken. We should not be writing this sort of legislation on the floor of the House; but it is because of the inadequacy of this bill, especially in shipbuilding, that we are having to resort to this attempt to increase the Navy's authorization. Why did not the committee come forward with a better bill as far as naval firepower is concerned?

Mr. ICHORD. Can we make that determination in 15 minutes here on the floor of the House? Why did not the gentleman bring it up in committee? That is my question.

Mr. ASPIN. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Wisconsin.

Mr. ASPIN. I thank the gentleman for yielding.

I think that basically what the gentleman from California (Mr. MCCLOSKEY) is trying to do is in fact a very interesting and sensible approach. We have had suggestions similar to this from Admiral Zumwalt, when he was the Chief of Naval Operations, to get the merchant marine to support the Navy more. We are going to have to do that if we are going to have a strong Navy, because the Navy is going to have to do the fighting, and the merchant marine will have to support it and provide the replenishment of food and supplies in war.

But the problem is trying to build that policy with these specifics at this time. If we take out these support ships and put in two frigates, we are gambling on two things: one, the support ships will be built later for the merchant marine; and, two, the Senate will agree to the position of keeping two frigates in.

The CHAIRMAN. The time of the gentleman has expired.

Mr. TRIBLE. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, as a member of the House Armed Services Committee and as a member of the House Merchant Marine and Fisheries Committee, I rise in support of the proposed amendment. America needs desperately to build combatant ships for our Navy and increase the size and capability of our merchant marine to serve as a naval auxiliary in the time of peace, war, or national emergency. This amendment points us in this direction.

First. We need to marshal our limited fiscal resources and build combatant ships. The size and threat of the Soviet Navy increases each day. We must increase the size and capability of our own naval forces. This amendment will add two needed modern, effective patrol frigates requested by the Navy; long lead funds for one nuclear attack submarine; and will save the hard-pressed taxpayers $19.3 million.

Second. Necessary support vessels and services are readily available in the private sector and can be acquired at significantly lower public expense.

There are a number of good reasons for striking the fleet oilers. There are over 30 million deadweight tons of tankers idle on the world market. We should not be building new tankers of any kind in the face of this surplus. The two Navy oil tankers proposed will cost $161 million each. Good new civilian tankers can be purchased for $10 to $17 million today.

A 1972 Navy/Maritime Administration study of the use of civilian tankers concluded that substantial savings could be gained by using merchant ships. Tests of the *Erna Elizabeth*, a civilian tanker, showed that civilian vessels were adequate to meet Navy needs.

The case for tug reduction is equally strong. In November 1975, GAO studied Navy harbor tugs—not the ocean tugs which are in the fiscal year 1978 DOD authorization bill. It concluded that,

> Greater requirements on the commercial sector for tug boat services with a concurrent day activation of Navy tug boats could bring about significant savings to the DOD.

GAO is now working on an analysis of ocean tugs. Tentative conclusions suggest there is little reason to build more Navy tugs at this time. For the period analyzed by GAO, 39 percent of the Navy's ocean tug requirements were point to point towing—the kind which requires no special military features. Yet only 3 percent of the Navy's ocean tugs services were performed by commercial tugs. Since there is no question but that commercial tugs could perform the point to point towing, this fact demonstrates that commercial tugs could be more extensively utilized.

Moreover, the costs of using commercial tugs are substantially less. In 1976 Navy tugs operating costs exceeded $10,000 per day. MSC tugs—military operation but manned with civil service crews—operated at $5,000 per day. Comparable civilian tugs were chartered at $2,884 per day.

Construction costs of commercial tugs are also substantially less than Navy tugs. The three proposed Navy tugs will cost $17.5 million each. Comparable civilian tugs cost $3 to $5 million. There are over 1,000 U.S. civilian tugs which can do the same jobs the Navy ships will do.

Third, this Nation needs to do all it can to encourage the development of our merchant marine fleet in order that we can conduct international trade and provide for our national defense. This is not going to be possible if the Navy continues to build its own support vessels.

For the foregoing reasons, I urge my colleagues to support this amendment. Such action will properly direct our efforts toward the construction of necessary combatant ships for the Navy and to the task of building a merchant marine capability necessary to meet our national commitments.

Mr. CHARLES H. WILSON of California. Mr. Chairman, will the gentleman yield?

Mr. TRIBLE. I yield to the gentleman from California.

Mr. CHARLES H. WILSON of California. Mr. Chairman, I think there would be a great deal of support to add two frigates, but the facts are we need

these support ships in spite of what the gentleman says about the merchant marine. We have eight fleet oilers that are Navy-manned, and they have 27-plus years of service, and eight oilers manned by the Sealift Command, and they have 31-plus years. Those are the only ones we have.

We need these combatant ships. I would support an amendment to add two frigates, but we should not take away these tugs. They are too important to the program.

Mr. TRIBLE. I agree we need more ships but operating under the constraints we are today I feel we should put our money in combat ships.

Mr. STRATTON. Mr. Chairman, I move to strike the requisite number of words.

There is one point that has been lost sight of in this discussion, which is that Navy tankers or oilers are combat ships. There is a whole world of difference between a Navy fleet oiler and the Texaco tankers, super-tankers or otherwise. This is not a case of building ships for the merchant marine and then when the balloon goes up suddenly taking them over the way we take over the reserve fleet and say: "From now on you go with the Navy."

A Navy fleet oiler has got to be able to keep up with the cruisers and aircraft carriers to which it is assigned and it has to be built with that in mind and not on the basis of whether they can maximize profits in transporting oil from the Alaskan Slopes to some other place. We cannot have a fleet oiler operating simply on a standby basis. It is part of the fleet.

This House, I think very mistakenly, but they did it a few months ago or weeks ago, voted to knock out a nuclear carrier the Navy wanted and substituted two oil-fired carriers of somewhat smaller dimensions. I do not know where we are going to get the oil because the President tells us there is not going to be any oil; but that is the way we voted.

But if we are going to build two more oil-fired carriers we are going to have to supply the oil for them, and so we will need the tankers to keep up with them. These are the oilers we have in this bill, oilers that will have to keep up with a carrier that will go 28 or 29 or 30 knots. This is an entirely different proposition from building a tanker that can be turned over to the Navy after an emergency has been declared.

I am in favor of building merchant ships that can be turned over to the Navy for use in time of war. But the ships we have got in this bill are fleet combat oilers and so long as we are going to rely on oil the ships that will have to carry that oil into combat are absolutely necessary, and as combat ships capable of speeds of the combat vessels.

Mr. McCLOSKEY. Mr. Chairman, if the gentleman will yield, all of those things being said, why did the gentleman vote to cut out two oil tankers from the budget which the gentleman already characterized as too low?

Mr. CHARLES H. WILSON of California. Because the Committee on Seapower recognizes they cannot have everything. We are trying to live within the budget and as the gentleman from Missouri indicated the Budget Committee has reduced the figure even lower.

Mr. STRATTON. The point is that I sympathize with the gentleman's objective, but we simply cannot meet the needs of the Navy with Texaco tankers.

Mr. McCLOSKEY. The *Erna Elizabeth*, it was testified in 1972, steamed 120,000 miles with an attack convoy and performed very adequately, to the extent the Navy said further tests should be done. Since 1972, nothing has been done although 5 years have passed.

Frankly, the Merchant Marine Committee has been wholly unable to get information from the Navy as to why.

Mr. STRATTON. Well, I cannot yield further, but the gentleman is suggesting that we buy prowl cars for the police department and then turn them over to the fire department and police department will only call on them when they need them.

If we are going to build these ships, they have got to be available now and at all times for the Navy. We cannot have it both ways.

Mr. McCLOSKEY. Mr. Chairman, if the gentleman will yield further, let me suggest that in the gentleman's own report that triggered this, the report states that the prime way the committee addressed the weaknesses of the administration's shipbuilding program is "through the allocation of a greater proportion of funds to combatant vessels and a smaller proportion to support vessels."

So the Navy did not have an adequate fleet building program, is that not correct?

Mr. STRATTON. Mr. Chairman, I yield to the chairman of the Committee on Seapower.

Mr. BENNETT. Mr. Chairman, I believe I attended all of those hearings, but I think I can answer the question. The truth of the matter is that the request by the Navy, because of the imposition of the budget, was for a lot of cheap ships. We thought that the Navy is supposed to fight, so we gave them some fighting ships, in addition to oilers and tankers. They need to protect themselves.

Just because someone has one steak for dinner does not mean he has to have five steaks for dinner.

Mr. LOTT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to indicate my support for the Emery amendment. In support of our argument that the shipbuilding portion of this bill is just insufficient, I urge the Members to look at page 45 of the measure. There is just an inadequate number of ships totally, but there is especially an insufficient number of ships with firepower. I would like to see us start adding ships across the board, the oil tankers, the tugs, and those with firepower, the combatants.

I have talked with almost every Member of the committee and there is no amendment going to be offered to add ships, so we have to offer one.

I strongly suggest to the Members again that they just look down the list. It is pitiful in terms of quantity and firepower.

The amendment gives us three or four advantages. No. 1, we are replacing auxiliary ships with ships with firepower. By substituting the two additional frigates and the SSN-688 class attack submarine under discussion, we save $98 million. I am surprised that the gentleman from Wisconsin, who is usually for saving money in a military authorization bill, is against this particular amendment.

Mr. Chairman, I think we have to have more firepower for combatant ships. This amendment would give us that additional capability.

Mr. McCLOSKEY. Mr. Chairman, I move to strike the requisite number of words. I rise in favor of the amendment.

Mr. Chairman, I will not take the full 5 minutes, but I wanted to read from the Armed Services Committee report to which I referred.

In its report on the authorization bill, the Armed Services Committee recognizes that "the—shipbuilding—program indicates no sense of purpose to achieve a balanced fleet of the appropriate numbers and kinds of ships required by the Navy of the future."

I think the committee stands by that language, and I think it is correct.

I think it stems from the committee's dismay and certainly the dismay of those of us on the House Merchant Marine Committee that in the 5 years since tankers were used to fuel ships at sea and there were studies to show they could be used, no further work has gone forward.

Yesterday, before the Merchant Marine Committee, we had testimony from a retired admiral of the Navy Reserve who said that this was because of Navy politics. He felt it was a Navy desire to preserve the Military Sealift Command fleet, and for that reason the Navy was not willing to consult with the Merchant Marine in developing a civilian Merchant Marine capable of servicing the Navy. What is the case for oilers, two oilers at $161 million each, when we could buy and refurbish them for a fraction of that sum?

But the case of the tugs is almost incredible. These tugs, incidentally, which are built in Senator PROXMIRE's State of Wisconsin—we have not heard from the Senator of the Golden Fleece on this subject—will cost $17 million each. Let me quote from a GAO study:

> The Navy used commercial tugs for only 3 percent of its ocean point-to-point towing last year, but conceded that 39 percent of the ocean point-to-point towing by the Navy could have been done by civilian tugs.

There were over a thousand ocean-going tugs in this country capable of performing this service for the Navy. Granted, a Navy tug has additional features, but look at the comparative costs in 1976 under the GAO study: The Navy tugs, manned by Navy crews, cost in excess of $10,000 per day to operate. The Navy tugs manned by civilian crews cost $6,200 per day to operate; and for the 3 percent of the ocean tug services which were chartered from the civilian fleet, those tugs cost $2,884 per day to charter.

So that, had the Navy chosen to use civilian tugs for that 36 percent of oceangoing tug work for which they used

Navy tugs, millions of dollars could have been saved. I think it is a fair lesson to the Navy at this point to vote against the request to build tugs; that civilian tugs can do the work as well and far more cheaply.

We transfer by this amendment funds for five support ships to two frigates the Navy wanted originally, and one attack submarine, plus the fact that passage of this amendment would finally demonstrate that the Congress does want the Merchant Marine Act of 1936 adhered to, that we have a civilian fleet capable of supporting the Navy.

The thing I want to pledge to the chairman is that if our two committees can work together we can say, "Let us force the Navy and the Merchant Marine to develop a Merchant Marine capability to help the Navy."

Mr. BENNETT. Mr. Chairman, will the gentleman yield?

Mr. McCLOSKEY. I yield to the gentleman from Florida.

Mr. BENNETT. I will be very glad to consider joint hearings in the two committees and hope to find a course to pursue, but I think the amendment at this time would defeat the purposes of national defense for our country. I think we would wind up getting neither combatant ships or the oilers.

Mr. McCLOSKEY. Recognizing the vigor with which the chairman defends his position, and the respect in which he is held, he pursues the only course he can. I am hopeful we can go through the process the chairman steered his subcommittee through when he deleted two tugs and two oil tankers from the Navy's budget.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maine (Mr. EMERY).

The question was taken; and on a division (demanded by Mr. EMERY) there were—ayes 23; noes 45.

So the amendment was rejected.

(By unanimous consent, Mr. MONTGOMERY was allowed to speak out of order.)

PRESIDENT CARTER ANNOUNCES THAT VIETNAM WILL PROVIDE ADDITIONAL INFORMATION ON AMERICANS MISSING IN ACTION

Mr. MONTGOMERY. Mr. Chairman, President Carter today, at noon, announced that the Vietnamese have informed this Government that additional information on Americans missing in action and some remains of Americans will be given to the United States right away. The names of these deceased Americans will be given to the families after positive identification has been made at the identification laboratory in Honolulu. This is encouraging because of the quick reply of a communication from our country sent 2 weeks ago, and that the Vietnamese have asked for additional information on several Americans listed as missing.

I must caution the families of the missing, though, that a complete accounting of those lost is impossible. We cannot get a complete accounting because of the time, climate, jungles and those lost at sea.

I would hope that the Laotian Government would follow suit and give this Government the remains of the Americans that they might have in Laos.

There seems to be some type of light at the end of the tunnel for our sad involvement in Vietnam.

Mr. DICKINSON. Mr. Chairman, will the gentleman yield?

Mr. MONTGOMERY. I yield to the gentleman from Alabama (Mr. DICKINSON).

Mr. DICKINSON. I thank the gentleman for yielding.

Mr. Chairman, I would like to commend the gentleman for his continued interest and for his efforts on behalf of the MIA's and the effort to continue to get some comfort for the families of those who have not been informed as to what has happened to their loved ones.

But I was wondering if, in connection with this, there is a price tag on this that we are going to pledge to spend so much money in Vietnam or appropriate so much money.

Mr. MONTGOMERY. So far as I know, there is no price tag whatsoever. There will be talks started in Paris on May 3. There will be talks pertaining to information on the missing and other matters that affect both countries. But as to my involvement on the Commission appointed by the President and the select committee of the House, there is no price tag mentioned or committed, so far as I know.

Mr. DICKINSON. I thank the gentleman for his comments.

Mr. GILMAN. Mr. Chairman, will the gentleman yield?

Mr. MONTGOMERY. I yield to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. I thank the gentleman for yielding.

Mr. Chairman, I want to join in commending the gentleman for his continuing interest and concern on this very vital issue. I, too, would like to encourage the gentleman and the Presidential Commission, the Woodcock Commission, that they urge upon the President in any further discussions of reparations or aid to Vietnam, recognition of Vietnam, or admission of Vietnam in the United Nations, that there be a definite linkage between an exhaustive accounting in those considerations.

Mr. MONTGOMERY. I agree with the gentleman.

Let me say that because of the action of the House of Representatives we have been able to get new information. The setting up of the House Select Committee, which the gentleman has served on, has brought about improved communications with the Vietnamese. So I think the House of Representatives should take some credit that we have begun a dialog and have been instrumental in bringing it about between our two countries.

Mr. GILMAN. Mr. Chairman, I thank the gentleman.

Mr. DOWNEY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, this will be the end of the procurement title, and I think it is important for the membership to know that in this title there is an authorization for three B–1 bombers. In the interest of time I am not going to offer an amendment to delete the bomber request. But I do think we should once again, very briefly, refresh ourselves with respect to the problems that the B–1 bomber creates.

First of all, the plane is very expensive. Everyone understands that. If there is a national security need for the B–1, then expense should not be a consideration. But there is a further problem with the B–1 bomber, and that problem is a military one. By the late 1980's and early 1990's the Soviet Union will probably have the same thing for the Soviet air defense that we have for the American air defense, the AWACS, we spoke about it before. Those AWACS will have the ability to shoot down a penetrating bomber. No matter how much faster the B–1 goes than the B–52—and it goes faster—no matter how much lower it flies—and it flies lower—it will still be vulnerable.

No matter how much smaller its radar cross section is, it will still be vulnerable.

Those of us on the committee who are opposed to the B–1 are not principally opposed to it because of its cost. We are opposed to it because conceivably by the 1980's, in the late 1980's and the early 1990's, the plane will be obsolete, and there is a suitable alternative.

What we need to do now is to take a look at a standoff bomber that can fire cruise missiles on Soviet targets. Our cruise missile technology is making tremendous advances. The cruise missile does not have the electronic countermeasures the B–1 has, but it does have the advantage of a much smaller radar cross section. It does not fly as fast the B–1, but it does fly as low, and in terms of cost, we can buy more of them. Cruise missiles can be fired at targets with greater advantage than that achieved by SRAMS or by gravity bombs.

Mr. Chairman, there is a military alternative. The Members of this Congress who are opposed to the B–1 do not want to denude this country of a bomber strike force. We understand it is a necessity, and we understand its requirement. However, we do want to prepare for the 1990's and the year 2000 with cruise missiles because we believe the B–1's will just not be able to penetrate to their targets.

Mr. DAN DANIEL. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from Virginia.

Mr. DAN DANIEL. Mr. Chairman, it is gratifying to this Member that no amendment will be offered to strike the money for the B–1 bomber. The committee proposal is in harmony with that of the President of the United States, and it is the judgment of this Member that the B–1 is needed.

Mr. Chairman, for purpose of this discussion, it would be well to restate a proposition with which no one disagrees.

Every credible review of this program and other strategic programs has concluded that there is a requirement for Triad.

This includes not just studies by those who favored the program from its begin-

ning, and who might reasonably be expected to stand by original positions.

It also includes the Brookings Institution, as reflected in its bomber study of a year ago, and the Congressional Budget Office, as stated in its study of strategic nuclear forces.

The question then becomes, not whether we will have Triad, which means whether we will have bombers, but what bombers will we have?

It has been suggested that upgraded B–52's, or other aircraft equipped with cruise missiles, be substituted for the B–1.

But why?

B–52's are old, in terms of technological comparability.

And no one has suggested they can match the B–1 in any contest of capability.

A spokesman for organized labor put it well when he said that the B–52 is a "noble warrior" that "will not be able to perform effectively against evolving Soviet technology."

Cruise missiles might have been a reasonable alternative, but what happens to the bomber leg of Triad if during SALT a range limitation is placed on them, as has been mentioned?

It is clear we have no logical choice—in fact, no choice at all—but to proceed with the B–1.

Now, we are not talking about starting from day one.

The development contract for the B–1 was awarded almost 7 years ago; the aircraft made its first flight more than 2 years ago; the technical risks have been taken; the aircraft is flying, and is meeting design specifications.

Twenty percent of the total cost for this program has already been spent, and this year's request of $1.87 billion represents some 8 percent of program cost.

Last year, we were told the program should be stretched out, so that the new President might make the decision on production.

Well, President Carter has reviewed this, he has requested funding at a reduced level, and he has also requested our support for this program.

Our committee has approved this.

No one agrees with everything that any President proposes, but if this were the reason for requesting delay last year, where does that put us today?

We are not operating here in a vacuum you know.

While we debate the virtues of one aircraft or another, the Soviet Union proceeds on its own.

Their Backfire bomber is flying—and no one questions its strategic potential.

And this strategic potential—this known capacity—is what we are really dealing with.

The decision to produce the B–1 cannot be intertwined with Soviet intentions.

There is only one logical factor to be considered, and that is Soviet capability.

The Soviet Union right now is developing and putting in place the weapons to destroy our land-based Minuteman Missiles.

They are actively engaged in antisubmarine technology, which could threaten our ballistic boats.

The B–1 fleet may well be one of the President's most important assets in the coming months of SALT negotiations.

As I said, there is no disagreement about the importance of bombers to TRIAD.

Stripping away the razzle-dazzle, it comes down to this:

More than half of our strategic megatonnage is carried by a bomber force, and the question—the only question in this regard—is, can we afford to rely on a bomber fleet more than 30 years old to perform this mission?

I think not.

Mr. DORNAN. Mr. Chairman, throughout the last few years some groups and individuals have questioned the need for the B–1 bomber. A few have actually called for the dismantling of the entire B–1 program. I believe that these groups and individuals are misinformed and possibly shortsighted. Competing national priorities have led them to believe that the costs of the B–1 program—and they are great—far outweigh the benefits of our national security and to the world's peace.

Mr. Chairman, I could not disagree with them more.

The acquisition of the new strategic bomber is central to overall national security, and since it is, it is imperative that any discussion of its merits be based on the fact and not on emotional rhetoric and misinformation.

Those critics of the B–1 who use emotional rhetoric need no rebuttal. They are easily identified and discounted. But those who have based their criticism on misinformation should be made aware of the true facts surrounding the production of the B–1 strategic bomber. Better and more complete information will improve the quality and validity of discussions in this area. I would like to take this opportunity to lay some of the important data before my colleagues today.

The Department of Defense has studied and analysed this critical issue in depth and has come down solidly on the side of the B–1. The Department views the U.S. strategic forces as a triad—three different components of force which are essential to the deterrence of nuclear war. The three aspects of this triple deterrent are intercontinental ballistic missiles, sea launched ballistic missiles and manned strategic bombers. When these three are put together in a coherent whole, their ability to deter attack on this Nation is enhanced. Each element complements and supports the other and the overall level of deterrence becomes greater than the sum of the individual weapons systems.

The importance of the B–1 must be seen in its relation within this triad. In times of crisis, it is the safest and most flexible of the three defense systems. Because it requires more time to reach its target than a ballistic missile, and since it can be recalled, it provides time for assessment and decision on both sides of the crisis. It reduces the potential for rapid, irreversible escalation. Most importantly, the B–1—and all manned bombers—involves human judgment throughout its mission, from launch to final weapons delivery.

Moreover, by utilizing the manned bomber in conjunction with missiles, the national vulnerability to a disarming attack is decreased. The bomber compounds the enemy problem in defending himself against a retaliation in response to an attack. Once airborne, a manned bomber is virtually invulnerable to nuclear attack. To catch the bomber force on the ground the attacker must use a weapon swift enough to prevent the bomber from launching and escaping its effects. Such weapons are available but they are not accurate enough to also pose a threat to U.S. ICBM's.

The reverse of this situation also shows the value of a mixed deterrent force. To successfully attack our ICBM's, the attacker would have to use a very accurate ICBM. But because ICBM attacks can be detected early enough for all our U.S. bombers to escape attack, ICBM's may threaten our ICBM's but they do not significantly threaten our alert bombers.

These examples illustrate how each element of the triad protects the other for greater security against attack. To defend against nuclear retaliation, a potential enemy would have to spread himself much thinner than he would were he able to concentrate his defenses against only one type of weapon.

The United States has an extensive background in the employment of bomber aircraft in combat. The manned bomber is an excellent hedge against any technological breakthrough that might challenge the retaliatory effectiveness of U.S. ballistic missiles. If the B–1 goes ahead at full production, it will modernize the strategic bomber force and the triple defense of our Nation.

I would like to take the opportunity to rebut the misinformed statements which have been bandied about during the debate on this part of the Defense authorization.

"The manned bomber is obsolete in a missile age."

This is not correct. The manned bomber in general and the B–1 in particular can be a vitally important part of our defense network.

Only the bomber offers the President a rational alternative to pushing a button that would irrevocably send massive numbers of U.S. missiles to the Soviet Union. The President can launch all or some of his bombers and keep them subject to recall, gaining several hours in which to negotiate. Because the bomber is recallable its very slowness is a virtue.

Retaliation is assured with a manned bomber. A bomber could carry out the difficult task of seeking out the many dispersed targets which, if destroyed, would deny the Soviets or other nuclear-age enemies victory in war and survival as a superpower.

The options offered by the manned bomber are more flexible than that of missiles. The bomber would provide a special capability for limited attacks. Using bombers instead of missiles for early, small responses would create less psychological incentive for escalation.

For these reasons, it is important to continue to have an effective bomber component in our strategic forces. And some of the opponents of the B–1 program agree with this point—but they

argue that there are more reasonable and cost efficient means to meet this need.

"There are better alternatives to the B–1."

This is not correct. The plain fact is that there is no better alternative at this time.

In the misinformed critic's mind, the cruise missiles are a better alternative since the B–1 is not the ultimate bomber and is too costly. B–1 opponents propose that a cheaper, better substitute for the B–1 would be the new cruise missile, launched outside the Soviet or enemy territory from a wide-bodied aircraft like the Boeing 747. The problem with this alternative is time.

It takes time to design, test, and produce both the long-range cruise missiles, and a new transport. It would mean that the system would not be ready until the late 1980's at the earliest. The United States needs new forces by the early to mid-80's not 5 to 10 years later. The B–1 would be ready in time.

Moreover, even if the cruise were ready in time, there are serious doubts whether it could perform all the necessary missions, whether the 747 type carrier would survive and whether the combined system would be cheaper, let alone as effective as the B–1. The cruise missiles which could be built in the next 8 to 12 years could not carry the "penetration aid" which insures that the bombers get through the Soviet defenses. The B–1 does have this penetration ability. Nor does the cruise missile have the ability to perceive that a given target has already been hit and to select another target. The manned B–1 does.

The B–1 bomber is clearly the best bomber for its purposes that can be built now.

"The B–1 is the most costly weapon available."

Many other weapon systems procurement activities have been far more costly than the B–1. The procurement costs of some of the Nation's nuclear submarine programs are excellent examples of such procurement actions.

Furthermore the $92 billion figure for the 244 B–1's which has been thrown about is inflated by a series of accounting tricks. It includes 30 years of operating costs; it includes predictions of inflation; it includes new tankers which will be built for other purposes and at most only shared by the B–1; and it includes improved weapons that will be built for the B–52 if there is no B–1.

In reality, the 244 B–1's will cost about $1 billion a year in 1976 dollars, if they are used for 30 years, or 1 percent of the defense budget. This is far less than the amount that has customarily been allocated to strategic bombers.

The Air Force estimates that the total cost of the program—244 aircraft, spares, ground suport equipment and development costs—to be approximately $21.4 billion allowing for inflation through 1985. If this cost is compared to the cost for the initial procurement of the B–52 force of 744 aircraft in terms of constant, uninflated dollars, the B–52 cost is more that 34 percent higher than the B–1.

The B–1 will not be an expensive system to operate and support. Under similar operating practices, it will use 25 percent less fuel than the B–52. However, it is programed to fly substantially less. On an equal basis, it will use about half the fuel of the B–52. Twenty-year operating and support costs for the planned B–1 force are several million dollars less than for the same number of B–52's.

When discounted for inflation and compared to alternatives using common criteria, the expense of the B–1 becomes both reasonable and justifiable.

"The B–1 would harm the environment."

Some critics of the B–1 base their opposition to the supposed effects the B–1 will have on the ozone layer in the atmosphere. This is not correct. The B–1 would seldom fly at extremely high altitudes where the ozone layer is encountered, since it is designed primarily for operation at much lower altitude.

Nor would the B–1 pollute the air we breathe. B–1 engines meet or surpass auto emission standards established by the government. The 99.5 percent combustion efficiency of the smokeless General Electric F101 engines has never been surpassed.

"The B–1 cost overruns show the lack of cost effectiveness of the system."

This is not correct.

Inflation, not overrun, is the sole cause of about 88 percent of the increase in the B–1 cost estimate since 1970. Testifying before the Senate Armed Services Committee in April 1975, former Air Force Secretary John McLucas pointed out that the B–1 program has an outstanding record compared to some other major programs of the past. The program's real cost growth since 1970—including the necessary design changes and excluding inflation—amounts to only about 12 percent.

Mr. Lucas told the House Committee on appropriations, May 20, 1975, that:

> This is an increase of less than 12% in real program growth over five years, which we believe is not unreasonable for a large, complex program involving relatively new and high-performance technology.

"The B–1 would be obsolete in a few years."

This is not correct.

With a planned life span of nearly 30 years, the B–1 represents the most cost effective design for a strategic bomber, and is a 25 year improvement in technology over the B–52. The B–52 illustrates how a well-designed strategic bomber can maintain effectiveness over a long life. In comparison with the strategic missile force, the life of the B–52 has spanned such missiles as tee Atlas D, E, and F; the Titan I and II; and Minuteman I, II, III. The B–1 incorporates advanced technologies which assure its effectiveness at the time it joins the U.S. arsenal and for years to come. The B–1 incorporates design features which provide growth potential to meet the uncertainties of future enemy developments.

The Air Force states that it expects B–1 service life would more than match that of the B–52. Unlike the B–52, the B–1 has been designed with a tough structure for low-level flight. It should last a very long time and require few, if any structural modifications.

"The B–1 is a pork barrel for a small segment of the economy."

The Department of Defense ordered design and development of the B–1 not to create jobs, but to satisfy a critical need for bomber modernization to insure that the United States maintains a credible deterrent to an attack on our Nation. If the B–1 goes into production, the first aircraft is expected to be delivered to the Strategic Air Command in late 1979. At that time, the latest models of SAC's B–52 will be nearly 20 years old.

The direct jobs created by the B–1 will number approximately 65,000. These include the Rockwell International employees who are working on the B–1 project, the subcontractors, and other support workers.

But the indirect jobs, created by the project—through a ripple effect—would total approximately 192,000 across the Nation.

These 192,000 jobs are only a side benefit of maintaining a strong, credible national defense.

Mr. Chairman, in closing, I would like to recall an article which was published in U.S. News & World Report on June 5, 1972. The relative strengths and weaknesses of the U.S. and Soviet forces was reviewed. The trend in relative strength was not pleasant to view. Unfortunately, I believe that this trend has continued during the 5 years since that article.

In the article, the whittling away of America's nuclear lead was graphically illustrated. In 1965, the United States had a lead of 8 to 1 in the number of missiles and bombers. In 1970, the lead was cut to 4 to 1. Not only was the numerical lead cut by half but also the United States imposed upon herself a ceiling of 1,710 land and sea missiles. The bomber fleet was cut to 600, with more than 1,000 scrapped. In 1975, the lead had been dissipated. The American force was roughly that of 5 years before, except for improvements in quality.

Now, I do not know what the figures are at the present moment, but I can venture with some assurance that this trend has not been reversed. Moreover, I have seen a growing sentiment in this body to make light of that trend. This should not be so. The Soviets are out in front and are widening the gap. This body must see that and act. The B–1 can go far toward narrowing the gap and protecting our shores. The Congress must act now to support the B–1.

Mr. BINGHAM. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to engage the chairman of the subcommittee, the gentleman from Florida (Mr. BENNETT), in a brief colloquy at this time.

Mr. Chairman, I am concerned about the relationship between the various strategic weapons programs authorized in this bill and the ongoing strategic arms limitations talks. As you know, in the SALT talks currently underway the administration has submitted proposals to place limits on the numbers of various types of launchers for strategic weapons, on the numbers of missiles which can be MIRV'ed, and on qualitative improvements to existing missiles and the development of totally new ones.

This bill, H.R. 5970, contains no explicit explanation of how the weapons programs it authorizes might relate to the SALT talks.

Would I be correct in assuming that there is nothing in this authorization bill that would preclude the President from pursuing the SALT negotiations, and specifically from pursuing the proposals he has made.

Mr. BENNETT. Mr. Chairman, will the gentleman yield?

Mr. BINGHAM. I yield to the gentleman from Florida.

Mr. BENNETT. Mr. Chairman, I assure the gentleman there is nothing in this bill that would prevent that.

Mr. BINGHAM. Mr. Chairman, I thank the gentleman.

Mr. SYMMS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, fiscal year 1978 B–1 bomber production should be increased from five to eight aircraft—as originally proposed by President Ford—for the following reasons:

In cutting the planned production for fiscal year 1978 down to five aircraft, President Carter stated that the slowdown was primarily designed to adjust the pace of development and acquisition of the strategic programs to an efficient level while we examine the test results and the possibilities of further arms limitation agreements.

But, the reduction from eight to five B–1 aircraft could certainly not be considered as efficient. This reduction and the plan to likewise reduce the fiscal year 1979 procurement from 19 to 13 airplanes as part of the overall administration plan, will add a significant amount to the cost of the B–1 program. General Slay has stated that the slowdown would add $2 billion to the cost of the program. Cutting $280 million this year will drive the program cost higher and add almost $8 million to the per-unit cost of the aircraft. This $2 billion projected increase, as a result of program slowdown, is a reflection of inflation in later years, the cost of rephasing the program with the contractors and the direct costs introduced by buying smaller quantities at higher prices.

The reduction in B–1 bomber procurement in fiscal year 1978 certainly cannot be considered an "efficient" adjustment as characterized by President Carter. Defense procurement should be managed like any other business and manufacturing procedure, as efficiently as possible. We need the B–1 in our inventories as soon as possible; it is perhaps our most vital defense program today. We will save taxpayers' dollars by procuring these aircraft at an efficient rate.

The test results of the B–1 during the last year have shown exceptional progress. Following a thorough program review last November and December the Secretary of Defense, Rumsfeld, concluded that all preproduction test objectives had been achieved. Two independent organizations also firmly supported the production decision. In the recent GAO report on the B–1 it was concluded by GAO that "the flight testing of the development aircraft has proceeded reasonably well and has disclosed no major problems which would dictate a delay in production."

The other reason given by President Carter for a slowdown in B–1 production was the status of the SALT negotiations. However, the recent experience and breakdown in SALT would not justify a slowdown in B–1 production. In fact, they suggest otherwise. The Soviet Union is continuing its rapid buildup of strategic forces. On the eve of the recent meeting between Secretary Vance and Brezhnev in Moscow they test fired a 5,500 mile range submarine launched ballistic missile. This range exceeded earlier U.S. intelligence estimates for the Soviet SS–N–8 by a substantial percent.

Consequently, we should return to the original B–1 production schedule of eight aircraft in fiscal year 1978—actually we should accelerate it further—and at the same time save the taxpayers money in the long run.

Mr. ROUSSELOT. Mr. Chairman, I rise in vigorous support of continued funding for the B–1 bomber program. I am well known for my opposition to wasteful government spending programs and my proposals to significantly reduce Federal spending; however, it is my position that the B–1 Bomber program is one that we cannot afford to cut and one which is essential to the American people and our national security.

This authorization bill contains funding for procurement of five of the original eight B–1 Bombers that were scheduled to be constructed during the coming fiscal year. I am in favor of funding for all eight bombers and would encourage the Administration to support procurement for the additional three bombers.

We do need the B–1. We need its penetration ability; we need its range and we need the best bomber possible when we consider that over half our strategic weight is currently being carried by the B–52, a plane that is becoming rapidly outdated. Development of the B–52 was started back in 1945, more than 30 years ago, and although the versions retained in the Strategic Air Command have been upgraded, improved and modified a number of times, the basic airframe technology will be about 40 years old by the time the B–1 is fully operational in 1986. By that time, even the newest B–52 will be almost 25 years old. If the United States is to continue to have the flexibility and the survivability represented by the bomber component of the strategic triad, these ancient B–52's will have to be replaced. Only the B–1 can fill this role in time.

As my colleagues know, the strength of this Nation's strategic deterrence lies in the combination of forces that constitute the "Triad" or triple deterrent—strategic nuclear forces, tactical nuclear and nonnuclear. Within the category of strategic nuclear forces, we have another category of land-based, sea-based, and bomber-carried missiles. If we do not continue the B–1 bomber program, we will be virtually abandoning the manned bomber program as part of our defense capabilities. We must have this combination of forces to act as an effective "first strike" deterrent with the promise of this system continuing to be effective into the future.

Many of my colleagues have expressed concern over what they believe the exorbitant costs of the B–1 bomber program are. In a speech before the Council on World Affairs in Dallas on April 15, 1976, the then Secretary of the Air Force, the Honorable Thomas C. Reed, put the cost of the B–1 program into proper perspective:

The B–1 program through 1985 is expected to cost 21.4 billion dollars, including expected inflation between now and then. By dividing that total cost by the number of airplanes we expect to buy over a ten-year period, the average cost of each airplane is 87 million dollars in what are known as "then-year" dollars.

To look at it another way, let's look at "flyaway" costs, that's the cost of manufacturing a B–1 airplane. It doesn't include a proration of the development costs. You might think of it as the cost of adding, or replacing, one aircraft to the fleet. The B–1 flyaway cost, in fixed 1976 dollars, is $47 million.

To put these costs in perspective, consider the cost of a 747, about $40 million each. Those commercial transports must be hardened and upgraded to operate in the military environment: in-flight refueling and other endurance features, increased power supplies, structural and electromagnetic hardening, rapid start and fast escape features, and so forth must be added.

We have had experience in doing just that. We bought four 747s to use as airborne command posts. To simply "militarize" one costs an additional $25 million. That does not include any modifications for cruise missile carriage and launching. Thus, a military 747 starts at $65 million and could end up closer to the $100 million that our airborne command posts are costing. That's not exactly a "cheap and easy" alternative to the B–1.

None of this is to minimize a $21 billion investment. But let's put it in context. At the height of World War II, defense consumed almost 40% of our gross national product. During Korea that figure was about 13%. By the time of Vietnam, the figure was about 9%. Today it's under 6%. Development and acquisition of the B–1 will account for less than 2% of that total defense commitment over the next 10 years. To say that we cannot afford the B–1 does not make sense to me. The logical questions are whether it is needed and will work.

It is also interesting to note that a majority of Americans are in favor of retaining the B–1 bomber program according to reliable polls. The January 1977, edition of the Washington Report of the American Security Council reported the following:

1. An Opinion Research Corporation study released in December showed that 64 percent of the voting age public approved of the decision by the Air Force to proceed with production, only 18 percent disagreed, and another 18 percent were undecided.

2. A poll conducted in August by Roger Seasonwein Associates for Rockwell International agrees very closely with the Opinion Research Corporation results. In the Seasonwein poll, 57 percent favor the B–1 bomber program, only 16 percent oppose it and 27 percent "don't know."

Both polls showed overwhelming popular support for the United States to be militarily stronger than the Soviet Union.

While no questions were asked specifically about the B–1 bomber program, another poll, this one conducted by Gallup for Potomac Associates, showed that 52 percent of the American people were in favor of maintaining our "dominant position as the world's

most powerful nation at all costs, even going to the brink of war, if necessary." In the same poll, 71 percent wanted the defense budget increased or kept where it is while only 20 percent wanted the defense budget cut.

In conclusion, I feel it is important to remember several facts about manned bombers. First, considering our reduction of Armed Forces throughout the globe, the manned bomber may be the only weapon we have left that has the mobility and versatility to respond quickly to emergency situations—such as the *Mayaguez* incident. Second, the presence and knowledge that we have manned bombers with this versatility and mobility can be a deterrent to armed conflicts such as the Cuban crisis when the presence of our manned bombers was a deterrent to the Russian ships which attempted to enter Cuba in violation of our embargo. And third, to scrap the B–1 bomber would creat a serious time lag before anything could be developed to replace our aging B–52's. There is little doubt that such a time lag could jeopardize our defense posture.

Mr. KEMP. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the administration, as well as the Congress, is now facing an important decision with respect to the future composition and capability of our strategic nuclear forces. The most immediate decision at hand concerns the future of the B–1 bomber. As a member of the Defense Subcommittee of the Committee on Appropriations, I have had an opportunity to hear virtually all of the significant points of view with respect to the B–1 controversy. A crucial issue in my view, is whether or not procurement of the B–1 bomber will enhance the number of alternatives available to the President, both in terms of providing for the national defense, and retaining a viable posture for international negotiation.

A particularly new and fresh perspective on these issues has been provided in a recent study published by Georgetown University entitled "Slow to Take Offense: Bombers, Cruise Missiles, and Prudent Deterrence" by Francis P. Hoeber. This scholarly and well documented study deflates many of the popular cliches about manned bombers and cruise missiles. Mr. Hoeber finds that bombers are neither provocative nor obsolete. ICBM developments by the Soviet Union introduce destabilizing first-strike problems for the 1980's. Only by producing a survivable delivery system which can credibly be employed to deliver nuclear weapons to a target that is not vulnerable to the same set of countermeasures to which our ICBM's are now threatened can deter in the 1980's. Mr. Hoeber has also resolved once and for all, the assertions made in the oft-quoted Brookings Institution study that a large aircraft equipped with cruise missiles would be a cheaper alternative to the B–1. Mr. Hoeber demonstrates that not only is the B–1 as "cheap" as the Brookings alternative, but the latter would simplify the Soviet defense problem, thereby reducing costs for the Soviet Union. This would make it possible for them to pour even more resources into the deployment of additional offensive systems, further weakening deterrence. I include the text of Mr. Hoeber's conclusions to be printed in the RECORD at the conclusion of my remarks:

SLOW TO TAKE OFFENSE: BOMBERS, CRUISE MISSILES, AND PRUDENT DETERRENCE

(By Francis P. Hoeber)

CHAPTER VIII

Conclusions

It is hoped that this study will have clarified the principal issues in the ongoing national debate on procurement and R&D policy for the U.S. strategic bomber force. Though it has been necessarily brief, both in number of pages and in the time for its preparation and publication, and has been constrained to utilize unclassified information only, it is believed that the study justifies the following conclusions on matters of great import for the security of the United States.

The need for a strategic bomber force

Whatever the origins, rationale, and future fate of the concept of a Triad of U.S. strategic forces—ICBMs, SLBMs, and bombers—the strategic forces should for the foreseeable future include a manned-bomber component, for the following purposes:

To continue to complicate enemy planning for surprise or preemptive attack and to make infeasible a disarming first strike by the USSR.

To continue to provide insurance against the serious impairment or catastrophic failure of the missile forces, whether by enemy offensive or defensive action or by mechanical or command-control failure.

To provide an alternative to the use of ballistic missiles, whether in a large-scale or a limited fashion, an alternative that is highly survivable, slow, controllable, and recallable, providing considerable time for negotiation, hope for control of escalation and for early war termination, and protection against accidental nuclear war.

To keep the opportunity open for inclusion of strategic bombers in any future SALT agreements, even at significantly reduced total strategic force levels. To drop the strategic bomber component, for whatever reasons, would make it difficult and unlikely in a SALT context to reinstate it, if those reasons, or U.S. perceptions of them, changed.

To provide the most accurate means of warhead delivery, now and for some years, for the implementation of evolving doctrines that emphasize attack on military forces and, eventually if not now, sanctuary for civil populations, rather than threat to populations and sanctuary for military forces, as in the Assured Destruction doctrine. This is valid at both low and high levels of nuclear exchange and does not lessen the importance of the bomber in retaining a large, survivable, usable potential for all-out nuclear attacks with maximum destruction as the ultimate deterrent to uncontrolled escalation.

To retain in one arm of the U.S. strategic forces an accurate, global, nonnuclear capability as an additional flexible option that might in a crisis permit dampening fires of conflict before they escalate to nuclear levels.

The need for the B–52

No matter what other choices are made, the B–52 will continue for several years to be the backbone of the U.S. strategic bomber force. It should be kept in service in the 1980s, despite declining capabilities due to improvements in Soviet air defenses as well as slow attrition of the force level due to aging of the earlier planes, accidents, and even possible additional nonstrategic use. Pending potential SALT limitations on U.S. bomber numbers, the B–52 should be kept in the strategic forces as long as it is structurally sound and operationally effective, even if the B–1 is deployed, in order to maximize U.S. forces and the approach to equivalence during a period of Soviet potential strategic superiority.

Major modernization and rebuilding of the B–52Gs and B–52Hs should not be undertaken, for two reasons:

This would mean downtime for a major portion of the force during the crucial period of the early and mid-1980s;

In the longer-run the large resources needed for major rebuilding of the B–52 can better be allocated to the procurement of new systems that will be much more capable against the Soviet defensive threat of the 1980s, 1990s and beyond.

The need for the B–1

The B–1 should be procured on present schedules, starting immediately, because:

The B–1 is the only new bomber system that can be deployed in the period of urgent need when the Soviets will have strategic superiority in the 1980s;

Some or perhaps all of the B–52s will have to be phased out in the late 1980s, if they are not rebuilt (as we concluded above that they should not be), and in the 1990s, even if it is rebuilt;

The air-launched cruise missile with a standoff carrier has not been demonstrated to be capable of taking over the strategic bomber role by itself, and, even if it eventually can do so, such a system cannot be ready in the crucial period of the early and mid-1980s;

Initiation of production on present schedules will preserve the option for accelerating the rate of deployment and/or prolonging deployment to achieve higher levels, should failure of SALT and continued Soviet growth so require;

Failure to proceed with the B–1 procurement could weaken the prospect for an equitable, acceptable SALT II agreement;

Failure to go forward with B–1 procurement on schedule would signal to the Soviets acceptance of their approaching strategic superiority;

B–1 procurement could be the first step in signaling to the Soviets a U.S. determination to achieve and maintain equivalence for as much of the 1980s as possible.

The need for the air-launched cruise missile

The air-launched cruise missile should not at the present time be considered as a potential substitute for a penetrating bomber. This substitution implies the use of the ALCM in a standoff mode, with a new carrier as a launch platform. Such a system cannot be an adequate substitute for a penetrating bomber in the 1980s.

However, air-launched cruise missile research and development should go forward at a strong pace. The technology of the cruise missile, with its high accuracy, low altitude, low radar cross section, and no crew at risk, offers great promise for the future, both in strategic applications and in a variety of nonstrategic missions. As soon as an adequate ALCM is available, it should be added to the strategic bomber forces, with initial development on B–52s for use against appropriate undefended or lightly defended targets, and potential subsequent deployment on B–1s or new carriers. It can contribute to the efficiency of the forces by permitting shorter bomber exposures as well as fuel and tanker economies, and by complicating Soviet air defense requirements.

The prospects are dim for verifiable limitations on cruise missiles and for limitations that do not foreclose important nonstrategic options, and we should not unilaterally negotiate ourselves out of any options in SALT.

Vigorous R&D on cruise missiles can be an added signal—and terminating R&D would be the opposite signal—to the Soviet Union that the United States has the will to strive for equivalence in the 1980s.

Research and development on a carrier aircraft, whether new or a modification of an existing model, for use as a standoff launch platform for cruise missiles should not be pursued at this time but should wait until the air-launched cruise missile concept is more fully developed and its launch platform requirements more adequately defined.

The need for new SALT initiatives

The urgent need for deployment of the B–1 bomber and for further development of the air-launched ballistic missile indicated in the above conclusions signifies that these actions should not be foreclosed by any SALT agreement that is not verifiable with high confidence and does not insure equivalence. Recently-reported options for a SALT II agreement do not appear to meet these criteria. There is an urgent need for the development of imaginative new recipes for the use of SALT, while resisting the temptation to agree to using recipes that do not meet U.S. security needs.

Mr. BADHAM. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would at this point like to indicate in as few words as possible my support, and, I believe, the absolute necessity to this Nation of the B–1 bomber.

The B–1 bomber has been criticized as too costly, but I believe the cost would be far greater to the people of the United States if we were to deprive our defensive capacity of this system.

Criticism of the B–1 has also in large part centered around a somewhat fuzzy contention that by the time the B–1 is deployed, it will be obsolete. I suppose based on the theory that new weapons inspire production of counterweapons, and it is indeed true that if we continue to play games with the B–1 as far as stretching out production is concerned, as far as testing is concerned, it could happen that with this kind of delaying tactic that the system would become obsolete before full deployment. However, even if the B–1 system is delayed, as it already has been in deployment, the fact remains that it is the only up-to-date strategic bomber available. The aging B–52, a great system in its time, is simply outdated as a strategic weapons system.

I should like to make a few comments on the testing program of the B–1 and the results. I think it would be safe to say that never in the history of aviation has a single system been tested so exhaustively. Commercial aircraft, upon which we, our loved ones, and American citizens, as well as people throughout the world fly, are tested only a fraction of the amount of tests accomplished by B–1. Static and fatigue tests on B–1 were begun in 1970. Over 6,200 structural element tests have been completed: 1,800 fracture mechanics, 2,000 material static and fatigue, and 2,400 fastener tests conducted to assure compliance with specifications on very small aircraft elements.

Major structural components of the aircraft were built and then subjected to static loading which exceeded by 50 percent the loads they were expected to experience on the aircraft in flight.

A completely assembled aircraft was subjected to design loads on the ground and through flight testing has confirmed analytical airloading estimates and ground test results. Fatigue testing to several lifetimes of expected service life has been accomplished. Over 23,300 wind tunnel hours have contributed to refining the airframe and engine design and defining performance characteristics. Some 14,500 hours of engine operation have been completed to date. The flight test program is in its third year, and overall the tests are demonstrating that this system with maximum speed to Mach 2.1 capacity, of terrain following capacity of Mach 0.85 at 200 feet, has performed in all tests at expectations or has in fact exceeded many of the expectations.

Mr. Chairman, I am convinced that this strategic system is the finest thus far developed anywhere in the world, and the time is now to move ahead with this system. Our defense capacity requires a strategic triad of manned bombers, ICBM's, and submarine launched ballistic missiles. It is unwise to assume we can defend this Nation with an imperfect strategic balance. As we cannot depend on any one element of the triad alone, neither can we shortchange any one of the elements while supporting the other two.

Mr. YOUNG of Missouri. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of H.R. 5970, the Defense authorization bill for fiscal year 1978. The Committee on Armed Services, under the very able leadership of my colleague from East St. Louis, the Honorable MELVIN PRICE, has done an outstanding job of separating the wheat from the chaff on this bill. The funds authorized to be appropriated will continue the modernization of our Armed Forces and will provide an adequate defense posture.

I am particularly pleased by the committee's action in recommending the continued production of the F–15 fighter at a rate of nine aircraft per month. The proposal to reduce the production rate to 6½ aircraft per month was unsound from both cost and military preparedness standpoints. The committee recognized this and in its report stated, and I quote:

The Committee concluded that the "cost savings" claimed in the budget amendment is purely cosmetic and recommend reinstating the full 108 aircraft per year production rate. . . .

I commend the Armed Services Committee for its wise judgment.

The F–15 is not an untried, unproven airplane. To date, more than 150 aircraft have been delivered to the Air Force. The first F–15 squadron achieved its initial operational capability at Langley Air Force Base last October. The first squadron overseas will be activated in West Germany by the Air Force in a matter of days. This airplane has established an unprecedented safety record during its development and operations. Just 2 years and 9 months after the first flight, F–15 established a new standard for the fighter aircraft development by completing the initial 5,000 flight hours without a major accident or personnel injury. As of March, the F–15 had accumulated 5,450 hours of flight test and 27,700 hours of flying with U.S. Air Force squadrons and the Israeli Air Force with only three major accidents and no loss of life or major injuries. That is an outstanding record.

It should be obvious to my colleagues that the F–15 is a superior airplane which is meeting all performance requirements and should not be tampered with by schedule stretchouts or delays. I urge the House to support the recommendation of the Armed Services Committee and continue the production of the F–15 at the already established rate of nine aircraft per month. If any adjustment is to be made, it should be to increase the production rate as proposed by the contractor as recently as February 1977 and thus effect a savings of several million dollars per aircraft.

Mr. BENNETT. Mr. Chairman, this year the House Armed Services Committee is recommending a bill calling for the new construction of 19 Navy vessels with long lead for 18 more new combatant vessels for a total of $5.7056 billion. This compares with the Carter budget request of $5.7512 billion for 22 new construction ships and long lead for 14 new construction ships. The main difference between the two budgets is the House Armed Services Committee increased the number of combatant ships while reducing the number of tugs and oilers.

The Armed Services Committee program differs from the Carter program as follows:

First, two SSN–688 nuclear attack submarines, in place of one, for $700.8 million;

Second, long lead for CSGN nuclear-powered cruiser program, in place of none, for $187 million;

Third, two fleet oilers, in place of four, for $322.7 million;

Fourth, three fleet tugs, in place of five, for $52.7 million; and

Fifth, in cost growth a reduction of $333 million for $233.1 million.

The committee program is $45.6 million under the Carter program.

Mr. Chairman, the responsibility of the Navy flows from title 10 of the United States Code which requires that—

The Navy shall be organized, trained and equipped primarily for prompt and sustained combat incident to operations at sea. It is responsible for the preparation of naval forces necessary for the effective prosecution of war. . . .

What the Armed Services Committee is trying to do with the present shipbuilding program is to see that the Navy can be successful in any combat operations it may be required to undertake. In so doing, the committee is recommending that the House exercise its constitutional authority to "provide and maintain a Navy" which will, in accordance with the provisions of title 10, be "effective" in the "prosecution of war."

As early as 1961, the Armed Services Committee reported that the Navy would not be effective in the prosecution of war for very long, for its ships were approaching block obsolescence. Still the

Navy was able to get an average of only 19 combatant ships authorized and appropriated each year from 1962 through 1967 when it shrank to only six combatants a year through the end of the war in Southeast Asia in 1971. Then it climbed again but to only 12 combatants a year. In 1967 the Navy had 974 ships with 484 combatants. Now it has 470 ships with only 240 combatants. On the face of it, the Navy is going to be hard pressed to carry out "prompt and sustained operations at sea" leading to the "successful prosecution of war."

What has happened?

The major decision was made in 1970 to decommission aging ships so that their operating funds could be used to buy new ships. Since that time the Navy has continued to decommission old ships.

However, the new ships have not been approved as readily as the Navy anticipated. Thus, in 1973 the Navy estimated that in 1980 it would have over 350 combatants, but now it foresees only about 270 combatants in 1980. In 4 years its combatant force has shrunk by 80 ships, with its total force dropping from 580 to 480 or a total force drop of 100 ships.

I have complained in the past about this drop in the Navy, without realizing just how drastically the Navy's wings were to be clipped. I have seen the need for some very capable ships and numbers of less capable ships. Yet the capable ships now are getting postponed. I have been told that they are present in the "out" years of proposed 5 year shipbuilding programs. They are not within the present year's program. Each year they are put off further into the future. Indeed, even when the Congress authorizes and appropriates funds to start the capable ships, the funds are rescinded by the executive. We have just witnessed that the rescission of the new nuclear-powered attack aircraft carrier and the planned conversion of the cruiser *Long Beach*, each of which would have provided the Navy with capability for the "effective prosecution of war," thus have been dropped before even 1 year has passed after their authorization. This reshuffling of programs goes on even with the newer, smaller types of ships. Thus the Department of Defense has just announced the rescission of the plan to build five small, fast, new technology ships using hydrofoils.

One of the programs which the committee supported was that for the construction of new fast submarines. Nuclear-powered submarines have been found to be very effective in a number of new roles, including antisubmarine warfare. The Navy has been authorized to have a fleet of about 90 nuclear-powered submarines. In the early 1970's there was a program of constructing five new submarines every year. At that time there were four builders of these submarines—Electric Boat, Newport News, Ingalls, and Mare Island. Then the production rate was dropped to five every 2 years, and Ingalls and Mare Island were dropped as new constructors. Now the administration wants to go to building one submarine every year. Testimony before the committee has clearly shown the many new roles these ships can play and the great need for them. To maintain a fleet of just 90 ships of proper age, there has to be a level sustained building rate of 3.6 ships a year. Therefore the committee voted to return to at least the latest schedule of building five submarines every 2 years. To drop to a production rate of 1 per year could lead to further reduction in available building facilities and to an impossibility of achieving the 90 submarine fleet requirement.

In order to provide a Navy capable of meeting its statutory requirement of "prompt and sustained combat at sea" leading to the "effective prosecution of war," the Armed Services Committee has taken the position that, in accordance with the provisions of title VIII of Public Law 93-963, the new ships entering the Navy's strike forces should be nuclear powered. Of all propulsion systems, nuclear power has proven itself capable of "prompt and sustained combat at sea." With 115 nuclear-powered ships in the fleet, no mission has ever had to be aborted because of the failure of the nuclear-powered propulsion. With nuclear power, no ship ever has to break off any engagement merely for replenishment of its propulsion fuel. What we are authorizing today, will be in the fleet into the early 2000's. At that time the oil situation will be most questionable. The CIA report just released by the President says:

> In the absence of greatly increased energy conservation, projected world demand for oil will approach productive capacity by the early 1980's and substantially exceed capacity by 1985. In these circumstances, prices will rise sharply to ration available supplies no matter what Saudi Arabia does.

We cannot have a strike fleet dependent upon oil flowing from other nations—it is foolish to have a strike fleet dependent upon our own oil, especially when we have the nuclear energy already at hand.

Largely because of our disposition to favor nuclear energy, we have included the first long lead funds for a new nuclear-powered strike cruiser. But, we are interested in this ship for other reasons. The Congress has been critical of the limited firepower that has been put on Navy ships in the recent past, and rightly so. The strike cruiser will have the heaviest firepower and the greatest amount of protection available to make it the mightiest warship in the world. We are authorizing one other ship—the Aegis destroyer this time, but the strike cruiser will have these advantages over the destroyer:

First. Nuclear power, giving it unlimited range.

Second. Substantial armor to protect vital spaces like the combat intelligence center, the computer center, and the magazines.

Third. Forty-five percent more standard missiles in its reserve.

Fourth. Twice as many Harpoon missiles.

Fifth. An 8-inch gun with nine times the area of coverage as the two 5-inch guns of the destroyer.

Sixth. Capacity to take the Tomahawk missile when it is ready.

Seventh. Capacity to take VTOL planes when they are developed.

Eighth. Superior chemical-biological defense potential.

Ninth. Superior air blast resistance—in atomic defense.

Tenth. Provided with electronic intelligence analysis space.

Eleventh. Room for a group commander and staff instead of smaller unit commander staff.

Above all while the Aegis antiair warfare system will be the same on both ships, the strike cruiser will not have to leave the scene of an engagement to replenish its propulsion fuel—or have a tanker come into the high threat area—at the height of the battle.

The Navy has strongly supported the strike cruiser because of its capacity to engage in independent action as well as to participate in nuclear task force operations. We have provided authority to use these funds to buy long leadtime items for a *Virginia* class cruiser with Aegis if the President finds it in the national interest.

For the rest of the bill, the committee generally followed the administration's request for combatants:

First. Two Trident submarines this year, continuing the production rate of three every 2 years.

Second. One Aegis destroyer—the lead ship of this line.

Third. Nine patrol frigates—FFG—seven class frigates.

The committee recommends reducing the oilers from four to two, the tugs from five to three, and the cost growth by $333 million.

I urge your support of H.R. 5970.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TITLE II—RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

SEC. 201. Funds are hereby authorized to be appropriated during the fiscal year 1978 for the use of the Armed Forces of the United States for research, development, test, and evaluation, as authorized by law, in amounts as follows:

For the Army, $2,365,232,000;

For the Navy (including the Marine Corps), $3,753,913,000, of which $2,000,000 shall be available only for improvement of the extremely low frequency (ELF) test bed system near Clam Lake, Wisconsin;

For the Air Force, $3,687,270,000;

For the defense agencies, $759,310,000, of which $25,000,000 is authorized for the activities of the Director of Test and Evaluation, Defense;

For the Director of Defense Research and Engineering, $377,051,000.

SEC. 202. (a) The funds authorized to be appropriated under section 201 for the Director of Defense Research and Engineering during fiscal year 1978 shall be obligated only for the following purposes:

(1) An amount not to exceed $3,900,000 for analysis of the feasibility and utility of developing a ground-launched cruise missile.

(2) An amount not to exceed $321,100,000 for the development of a cruise missile capable of being launched from a ship or from a submarine, with emphasis to be placed on early deployment of an antiship cruise missile, and for the continued development of the Air Force AGM-86 air-launched cruise missile.

(3) An amount not to exceed $52,051,000 for 5-inch and 155-millimeter guided projectiles, but no funds for such purpose shall be

obligated until the Secretary of Defense submits a plan to the Committees on Armed Services of the Senate and House of Representatives providing (A) for the immediate conduct of engineering development of the 155-millimeter guided projectile and of the current Navy 5-inch guided projectile which shall provide for maximum implementation of common components for such projectiles and an initial operational capability for both such projectiles before January 1, 1980, and (B) for the immediate conduct of an effort by the Army and the Navy, to be performed by personnel of the Department of Defense, to validate the technical data packages for such projectiles, through actual fabrication and testing, to insure that such packages are adequate for manufacture of such projectiles by a source other than the developer.

(b) Competitive cruise missile development programs shall continue until the Secretary of Defense certifies to the Committees on Armed Services of the Senate and House of Representatives that (1) a single airframe for the cruise missile can be selected which meets all operational requirements, and (2) cost data clearly establish that termination of the competitive cruise missile development programs will result in lower development and procurement costs for the cruise missile.

SEC. 203. (a) No funds authorized to be appropriated under section 201 shall be obligated for the Roland Missile System until the end of the thirty-day period beginning on the date the Secretary of the Army provides written certification to the Committees on Armed Services of the Senate and House of Representatives that—

(A) all Roland Missile System engineering development models and equipment ordered in any Department of Defense contract in effect on March 31, 1977, for contractor use or delivery to the Department of Defense, shall continue to be ordered in the number of units specified in such contract or contracts;

(B) system performance specifications for the Roland Missile System will not be degraded from specifications in any Department of Defense contract in effect on March 31, 1977, with respect to the Roland Missile System;

(C) there shall be test, evaluation, data reduction, and analysis of the Roland Missile System conducted which shall include (i) flight tests against maneuvering targets, targets in electronic countermeasures environments, and targets in adverse weather, and (ii) all other tests required to determine the capability of the Roland Missile System to meet the specifications referred to in subparagraph (B);

(D) not less than 350 field-replaceable unit subsystems of the Roland Missile System shall be interchangeable with the comparable subsystems of the European Roland II Missile System;

(E) a complete technical data package, not containing proprietary data, for the Roland Missile System shall be ordered by the Secretary of the Army for delivery not later than October 1, 1979, in sufficient detail that the Roland Missile System can be manufactured from such technical data package; and

(F) the procurement cost of the Roland Missile System in fiscal year 1976 constant dollars will not exceed an average unit cost of $31,340 for 4,095 missiles and will not exceed an average unit cost of $2,126,000 for 135 fire units.

(b) None of the funds authorized to be appropriated for research, development, test, and evaluation for the Army by any Act approved after August 4, 1974, shall be obligated or expended in excess of $265,000,000 for the Roland Missile System.

SEC. 204. No funds authorized to be appropriated under section 201 shall be obligated for the fabrication of hardware required to accommodate a specific 120-millimeter gun in the XM-1 tank turret or for the installation of a 120-millimeter gun in an XM-1 tank full-scale engineering-development vehicle unless and until—

(1) comparative testing of the 105-millimeter gun system and the candidate 120-millimeter gun systems of the United Kingdom and the Federal Republic of Germany is completed;

(2) all the test results of such comparative testing are evaluated by the Secretary of the Army;

(3) the Secretary of the Army makes a recommendation to the Congress consistent with such test results and evaluations for development and procurement of a specific 120-millimeter XM-1 tank main gun; and

(4) sixty days, excluding periods of recess of more than three days by either House of Congress, elapse from the date on which the Secretary of the Army submits a recommendation under paragraph (3).

SEC. 205. The Secretary of the Army shall conduct a study to determine the feasibility of deploying the XM-1 tank with integral chemical, biological, and radiological warfare defensive equipment and shall report the results of such study to the Committees on Armed Services of the Senate and House of Representatives by January 1, 1978. The addition of any such defensive equipment as a result of such study shall not delay the initial operational capability date for the XM-1 tank.

SEC. 206. (a) The Secretary of the Army shall not obligate any funds authorized to be appropriated under this or any other Act for the improvement of the M-139 gun as an interim weapon system for use on the Mechanized Infantry Combat Vehicle or for the integration of the Tube-launched Optical-tracked Wire-guided (TOW) weapon system on the Mechanized Infantry Combat Vehicle before production of the Mechanized Infantry Combat Vehicle is initiated.

(b) Of the funds authorized to be appropriated under section 201 for the Army, $36,151,000 shall be available only for development of the Mechanized Infantry Combat Vehicle with a two-man armored turret.

(c) The Secretary of the Army shall structure the development program for the Mechanized Infantry Combat Vehicle to provide for initiation of production of the Mechanized Infantry Combat Vehicle not later than December 31, 1980.

Mr. BENNETT (during the reading). Mr. Chairman, I ask unanimous consent that title II be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENT OFFERED BY MR. DELLUMS

Mr. DELLUMS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DELLUMS: Page 5, line 4 after "for Air Force" strike the figure "$3,687,270,000" and insert in lieu thereof the figure $3,552,870,000".

Mr. DELLUMS. Mr. Chairman and members of the committee, today I am offering an amendment to the military authorization bill to end the MX missile development. The aims of this program include an increased number of much more accurate warheads, and the mobile development of the missile in long trenches. In my view, both of these goals will decrease our security. The greater accuracy of the missiles will pose a constant threat to the Soviet ICBM's, thus increasing the chances of a preemptive first strike. The mobile development will make arms control verification almost impossible. Another arms control difficulty is created by the possibility that these will be "cold launched" missiles—"cold-launched" means that the same launcher can be "reloaded" after each missile is fired—thus vastly increasing the number of missiles that can be fired from a single launcher. This in turn will greatly decrease the value of the SALT agreements that are based on the number of launchers not missiles. Since SALT limits the numbers of launchers rather than missiles, there is as yet no theoretical limit to the number of MX missiles we could fire at the Soviets or, for that matter, to the number of SS-18 missiles—also "cold-launched' which they would fire at us."

The value of strategic nuclear weapons should be based on its deterrence value, not the concrete political goals which can sometimes be attained by other weapons. We cannot use these missiles to impose our will on OPEC, or make European countries less friendly to the Soviet Union, or keep Zaire within our sphere of influence. Nuclear weapons are simply not a credible threat in situations like these.

On the other hand, the MX development does not aid deterrence. At present, the credibility of our deterrence rests on the invulnerability of our bombers and the third leg of the triad, the ICBM missiles, will progressively become more and more vulnerable to a first-strike attack, in the opinion of most experts. To try to avoid this problem through mobile deployment would make arms control impossible. What is so sacrosanct about the triad? We can fire 5,000 warheads from our submarine-launched missiles. If that is not deterrence, what is? This expensive and destabilizing program will only succeed in temporarily shoring up a part of our strategic defense that is already creating more obstacles to security than contributions to it.

In the end, the MX program will probably cost us at least $40 or $50 billion. That is a lot of money for a weapon that has been called "an arms controller's nightmare." President Carter has already expressed his desire to ban it altogether. But owing to the vertification problems it will cause, it may be too late to ban it after we have developed it.

The military budget is under a lot of pressure. I believe that those who defend it will find that they can save a great deal of money that would not really buy any security by joining me in voting to terminate the MX development program.

Mr. DICKINSON. Mr. Chairman, I move to strike the last word.

Mr. Chairman and members of the committee, I am strongly opposed to the amendment to delete funds for the MX program. I cannot understand the rationale behind a move to terminate a program that is so essential to the successful negotiations with the Soviets in the next SALT meeting.

Mr. Chairman, three Secretaries of Defense have endorsed the requirement to press on with the research and development, not for the production of, but for the research and development of the MX program. Two Secretaries of State

have endorsed the program to date. The issue is not a partisan issue since the MX has been supported by both the present and past administrations.

Secretary Schlesinger testified 3 years ago that our ICBM forces will be vulnerable within the 1980 time frame.

Contrary to the belief of the gentleman from California, the MX program is not destabilizing. Quite to the contrary, it is the key to survivability. It is the very system that will turn around Secretary Schlesinger's frightening statement.

Mr. Chairman, I cannot stand up here today and promise my full support for so costly a program. As a matter of fact, I am not even convinced that this is the way to go.

As the gentleman from California has pointed out, to dig a trench 14 miles long, and to, perhaps, harden it, and then to have a trolley or a track and a cover over it to hide any missiles, is sort of like guessing under which shell the pea is. As I say, I do not know that this is the answer or the way we should go. However, we are in the research and development stage now and to deny ourselves, in this country, the right to proceed to develop the technology prior to our going to the SALT negotiations with the Soviets, is the height of absurdity, in my opinion.

So, Mr. Chairman, while I agree it is a terribly expensive program, and while I agree that this might not be the way for us to go, certainly we should not preclude ourselves from the opportunity of developing the concept, of proving or disproving it, so as to make our decision as to which way we should go.

In conclusion, Mr. Chairman, just let me say: Think where we would be today if we had no ICBM's? Where would we be? We would be entirely at the mercy of the Soviet Union.

We know that we are becoming more and more vulnerable as the ability to aim and to maneuver the Soviet missiles increases. We know that this is happening daily. We are, in effect, giving away our best defense in this country if we do not continue to develop this capability.

Mr. Chairman, I oppose the amendment and hope that the Members will oppose it also.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from California.

Mr. DELLUMS. Mr. Chairman, I appreciate the statement made by the gentleman from Alabama. It is obviously thoughtful and very sensitive.

I would simply like to ask the gentleman this question: With respect to research and development, because I think this weapon poses extreme difficulty of variability. In that 20-mile trench we do not know how many missiles are deployed.

Mr. DICKINSON. That is the idea.

Mr. DELLUMS. Then how do we ever accomplish arms control? The President of the United States says he would like to eliminate all nuclear weapons. The point is once we deploy this weapon it becomes an arms controller's "nightmare."

But the real question I want to ask is this:

Is it not true that once we develop this weapon that the Soviet Union then is forced to develop this weapon? And it becomes a verification problem. The United States realizes that the Soviet Union has already developed it and must deploy it once it is developed. The Soviet Union realizes we have deployed it so they then must deploy it, too, so that it becomes sort of a catch-22 question where we are spending between $30 to $40 billion of the taxpayers' money that I think ought to be used to solve other problems.

We are creating a nightmare for ourselves.

Mr. DICKINSON. Was that the question?

Mr. DELLUMS. I was trying to offer it in the form of a question.

Mr. DICKINSON. Let me say in reply to that that there is nothing unique certainly, or nothing desirable about it. Every time we have developed a system, or every time we see that the Soviets have developed a system, then we do our utmost to come up with a counter to it. So there is nothing new about it.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. DELLUMS, and by unanimous consent, Mr. DICKINSON was allowed to proceed for 3 additional minutes.)

Mr. DICKINSON. But when the gentleman points out the inability or the difficulty in verifying it, then that is the very thing we are trying to accomplish. We have been at a disadvantage in verifying through our national intelligence means with any degree of accuracy that the Soviets have lived up to the SALT agreements so far. But when they cannot be sure of where our missiles are, when they cannot be sure that they have the accuracy to knock out our hard targets, then they are off balance. In that respect, then, I feel that this is a stabilizing factor. That is the reason I would support development of the concept, even though we do not at this time authorize the production, and we are not going to go full scale or commit ourselves at this point.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I will be glad to yield to the gentleman from California.

Mr. DELLUMS. I thank the gentleman for yielding.

My point in rather simple terms is, say we have two sides. Say that each side is going to have a rifle. One side has one bullet; then the other side puts a clip in and says, "We are even. We both have one gun."

The development and the ultimate deployment of the MX missile is like putting a clip in one weapon and saying, "We are even." The other side is going to put a clip in, and then we have escalated the arms race at a point in history when I feel we should be deescalating the arms race.

Mr. DICKINSON. I think the alternative to what the gentleman has said and what he would have us do is to unilaterally say we will not go ahead and develop through research and development any further capability. We do not know what the Russians are doing, and I think we would be very foolish to take that position.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from New York.

Mr. KEMP. I thank my friend for yielding and congratulate him on his outstanding statement and his leadership. The gentleman has made very solid arguments on the need to proceed with the M–X R. & D. money. I want to say to my friend, the gentleman from California, author of this amendment, that I think he has reached a logical conclusion but from a faulty premise. The premise upon which the gentleman's argument is based is that the United States is provocative and that the Soviets have not developed mobile land-based missiles. That is wrong. They do have right now a 3,000 to 4,000 nautical-mile range mobile SS–20. If they combined the SS–20 with the SS–16, it gives them a mobile intercontinental ballistic missile. It would have hard-target capabilities. It is the SS–20 that is destabilizing, not our M–X R. & D. program.

We should be giving the President the flexibility to go into SALT II negotiations with the support of this Congress by not tying his hands in this important weapons program, stopping it unilaterally.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. SYMMS, and by unanimous consent, Mr. DICKINSON was allowed to proceed for 1 additional minute.)

Mr. SYMMS. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from Idaho.

Mr. SYMMS. I thank the gentleman for yielding.

I would just like to say further in response to what the gentleman said that I think the question that should be asked that my friend, the gentleman from California, failed to ask is the question: Who is it in the Soviet Union who is seeing that an amendment will be passed over there that they will not build more Backfire bombers, the SS–17, SS–18, SS–19, and now the SS–20, where they are increasing their accuracy every year? That is the question we have to ask, and from that premise I share the position of the gentleman from Alabama (Mr. DICKINSON).

Mr. DICKINSON. In answer to the gentleman's question as to who is going to offer such an amendment, I very seriously doubt that they will have anyone to offer such an amendment since it is not a free and democratic society.

Mr. ICHORD. Mr. Chairman, I move to strike the requisite number of words.

(Mr. ICHORD asked and was given permission to revise and extend his remarks.)

Mr. ICHORD. Mr. Chairman, like the gentleman from Alabama, I too can just not understand the rationale behind the amendment of my good friend, the gentleman from California (Mr. DELLUMS).

I might say that indeed I am surprised that the gentleman from California would offer this amendment at this particular time because he is striking out precisely at the program of President Carter. I say he is striking out at the program of President Carter because he amended the program specifically in light of the SALT II. We brought his program from the Research and Development Subcommittee to the full committee and the full committee brought his program to this House—the exact program of President Carter. The Ford administration had recommended $299.4 million for the MX program. The Carter administration reduced that program to $134.4 million.

Let me point out to the gentleman from California this chart:

U.S. ICBM's—1,054.
U.S.S.R. ICBM's—1,600.

That is a ratio of 1.5 to 1.

Then we have:

U.S. SLBM's—656.
U.S.S.R. SLBM's—739.

That is a ratio of 1.3 to 1.

The gentleman from California talks about loading the clip. Let me state to the gentleman from California that the Soviet Union already has the clip loaded. They have a mobile ICBM in the form of the SS–20 in existence today.

The gentleman from California, with all due respect, has made some very inaccurate statements, I believe. For example, he referred to this new program as a $40 or more billion trench program. I do not know whether we will have a trench or a shelter program. I do not know where he gets his figures. I have been on the Research and Development Subcommittee for 14 or 16 years. I am chairman. I have never heard such figures tossed around. I have heard some figures but they are much lower than the amount stated by the gentleman from California. We do not know even what kind of program we are going to have. That is the purpose of this program and the $134.4 million to definitize the type of mobile system that we will have.

The gentleman in his letter that he sent out to the colleagues on Wednesday concurs that the third leg of the triad, the ICBM missiles will progressively become more and more vulnerable to a first strike attack in the opinion of most experts, and that is what we want to avoid—we want to reduce the vulnerability in this program. That is what the money is for.

But the gentleman, by striking out with this amendment, is cutting the legs out from President Carter, because this is the leverage that we want to use to get the Russians to the bargaining table in SALT II, to really reduce arms.

I cannot understand the gentleman from California offering this amendment because time and time again he has stood in the well of this House and said we need to reduce armaments on the part of both the Russians and the United States. Why does the gentleman want to cut the legs out from under President Carter by this amendment?

I yield to the gentleman from California.

Mr. DELLUMS. To summarize very quickly, first of all to spend the extraordinary amount of money in research and development of this weapon means ultimately we are going to deploy, and if we deploy it will mean between $30 and $40 billion. If the gentleman will yield, let me respond, please. We will spend that many billions of dollars worth of resources that we ought to be spending somewhere else. That is A.

Mr. ICHORD. All right, I will reply to that.

Mr. DELLUMS. Does the gentleman yield briefly further?

The CHAIRMAN. The time of the gentleman from Missouri has expired.

(By unanimous consent, Mr. ICHORD was allowed to proceed for 1 additional minute.)

Mr. ICHORD. Mr. Chairman, the gentleman from California is going to let the Russians have the mobile system and we are going to deny it to the United States of America. I cannot understand it.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield further?

Mr. ICHORD. I yield to the gentleman from California.

Mr. DELLUMS. Mr. Chairman, for example, the gentleman indicates on the board that the Soviet Union has 1,600 ICBM's and the United States has 1,054, but does not mention the fact that the United States has had MIRV's for a long time and we so far exceed the Russians in that regard there is no comparison.

Mr. ICHORD. Is the gentleman keeping up with the progress of the Russians? That is the question. Does the gentleman think that the Russians do not have MIRV technology? Of course they do.

Mr. DELLUMS. They are developing them now. We have had them for over a decade.

Mr. ICHORD. I think the gentleman will find they have had MIRV technology and have advanced it a great deal.

Mr. DOWNEY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I had not intended to speak on this particular amendment, because while I understand and appreciate what my friend, the gentleman from California, is trying to do, I do not believe we should take the money out of the R. & D. budget for the M–X missile. What the President has suggested is to take out the R. & D. money for the mobile portion of the missile.

I want to refer to this chart. There is a very simple way of determining what the hard target lethality of our weapons is. We have talked about it before on the floor of the House. A hard target capability is $(NY)^{2/3}/(CEP)^2=K$. This gives us the hard target capability of our nuclear arsenal. Anyone can do that and take a look at our capabilities with ICBM's and SLBM's and find that we have a substantial lead, both now and in the future, in hard target capability.

What the gentleman is trying to do and bring to the attention of the House is the fact that if we go ahead without questioning the M–X we may make it more difficult to ever work out any sort of treaty with the Soviet Union.

The gentleman from New York, who is an esteemed member of the Committee on Appropriations and knowledgeable in this area talks about the SS–20 and the SS–16 and combining them, presumably to make it a SS–32. If we take the SS–16 and the SS–20 and take a look at their hard target capability, we find some interesting things about the SS–20. It is not an ICBM. It is an IRBM. The SS–16, while not mobilely based, does not have the accuracy and cannot destroy missiles in the silos.

I want to point out that the chart is terribly misleading in a number of areas. Yes, we have 1,054 ICBM's. Of course it does not mention how many of them are MIRV'ed.

In April 1977, that is today, these are only guestimates, but I believe reliable guestimates, the Soviets have less than 200 MIRV's. We have 550.

The chart shows the Soviets to have 730 and the United States 656. It implies that the Russians are ahead of us in SLBM technology and deployment. There is not one SLBM that the Russians have MIRV'ed, not one, whereas the United States has 448, all MIRV'ed. That simply means we cannot only deploy more warheads, but we have infinitely better dispersal and targeting capabilities at sea.

Let me get back to Mr. DELLUM's point. The gentleman is attempting to impress upon this House the understanding that President Carter has that we need to move cautiously when we consider mobile missiles.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from California.

Mr. DELLUMS. I thank the gentleman for his very intelligent and thoughtful response on this amendment. I would simply say that I also appreciate the gentleman laying out the philosophy of this chart, but that is precisely the point.

We are frightening ourselves with these charts that are misleading, and frightening the American people with propaganda which is misleading. We are frightening the Soviets, who in turn frighten us, and we are in a never-never land. That is the tragedy of the whole thing.

Mr. DORNAN. Mr. Speaker, I move to strike the last word, and I rise to speak against the amendment.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. DORNAN. I yield to the gentleman from New York.

Mr. KEMP. Mr. Chairman, I appreciate my friend yielding to me. I would just like to clear up the record with regard to some previous remarks.

The gentleman from New York, preceding me, said I was mistaken in suggesting that the SS–16 had intercontinental capabilities. According to most estimates, the SS–16 does have a range of around 5,700 or plus nautical miles. The SS–20 mobile missile has a range of between 1,500 nautical miles to 4,000 nautical miles and is, indeed, an IRBM, intermediate range.

My point was that if Soviets combine the SS–20 with two stages of the SS–16,

they would have a mobile intercontinental ballistic missile deployment capability; those of us who raise this issue, do so, not because we want to frighten people but because as we look on into the 1980's at what the Soviets are deploying and developing it is frightening to us.

This is not a scare campaign. This is an attempt to bring to the American people the facts about the Soviet strategic buildup and allow them to make the decision about what the strength of our country should be and the posture of our SALT negotiations. I submit that the American people understand very clearly that the purpose of our strength is to deter war and help assure peace and freedom.

Mr. DORNAN. May I please continue with my time.

Oftimes, we tragically divide up on each defense issue along ideological lines, forgetting that many times conservatives will cut out fat from military contracts such as today the oil tankers and tugboats, which are better utilized from private sector. Conservatives mistakenly often feel that liberals are united in ignoring the malignant growth of Soviet military power. This is not so. The gentleman from New York, unfortunately, took some offense concerning my pointing out earlier that today was the birthday of Lenin. I meant no inference in regard to his attempt to cut our national defenses. I only meant to point out that the most evil world mover and shaker in this century, Lenin, left such a legacy of hatred and blood that people are still dying because of it on every continent. Look at pathetic little Cambodia, where over 1 million to 2 million people are slaughtered because of Marxist-Leninism.

These charts on defense and Soviet growth are not misleading. If anything, they are an underestimation of U.S.S.R. power. I found it rather tragic, as a new Member of Congress, that so few Congressmen participated in the discussions here last month with people like U.S. negotiator Paul Nitze, during the 1972 SALT talks. They came over to our security-proof room, the former Atomic Energy Commission room, right inside the Capitol dome itself to talk to Congressmen about the Soviet threat, and I doubt very much that there were more than 8 to 10 Members who showed up on any one of the four Tuesday nights which concluded a few weeks ago. No wonder so many Members are uninformed on Soviet intentions.

There was another significant birthday 2 days ago relative to another evil force in world history. April 20 is the birth date of Adolph Hitler. I specifically submitted in the RECORD of April 20, because our lack of preparation against Hitler is discussed, a statement by a group of thoughtful, openminded liberals who formed themselves together under the title of, "The Committee on the Present Danger." They refer, of course, to the danger of Soviet military growth. Paul Nitze is in that group, together with John P. Roche, Dean Rusk, Eugene Rostow, Adm. Elmo Zumwalt, and others. I wish the Members would refer to the RECORD of 2 days ago where this committee's excellent report appears. I want to read just one part of this statement made by some of our finest liberal foreign policy thinkers. They say:

> In theory and in practice, Soviet grand strategy conceives military power as only one weapon (albeit a central and indispensable one) in a large arsenal of means of persuasion and coercion.

Further on it states:

> The attainment of the ultimate Soviet objective—a Communist world order—requires the reduction of the power, influence and prestige of the United States, the country which the Soviet leaders perceive as the central bastion of the "capitalist" or enemy camp. They see the global conflict as a drawn-out process with the Soviet Union and America the two principal contenders.

In that contest they see their task as isolating America and despite temporary reverses for their side reducing the United States to impotence. Further on, it states:

> Particular Soviet attention is paid to energy resources, especially oil. The USSR wishes both to make oil more costly (in part to profit from its own oil exports) but more importantly to be in a position to control oil supplies necessary to the West and thus to be able to exert political and economic pressure.

This point is important to consider because of our President's proper attention to our energy crisis. The Soviets also track our oil dependency with intense interest and plan to exploit it any way they can.

> The U.S.S.R. can also mobilize its population at will, whether to undergo compulsory military training or to participate in civil defense. Nor is it inhibited internally in the way it disposes of these forces; it can send military aid or dispatch its military forces to any part of the world where opportunity beckons. It can also influence client states to take similar action. These inherent advantages cause the Soviet leadership to rely heavily on military policy as an instrument of grand strategy not only in the strictly military sense of subduing and conquering, but also in the political sense of intimidating potential opponents.
>
> The Soviet military buildup of all its armed forces over the past quarter century is, in part, reminiscent of Nazi Germany's rearmament in the 1930s. The Soviet buildup affects all branches of the military: the army, the air force and the navy. In addition Soviet nuclear offensive and defensive forces are designed to enable the USSR to fight, survive and win an all-out nuclear war should it occur.
>
> To ignore declared Soviet intentions and demonstrated Soviet capabilities in an erroneous conviction that we have enough to defend ourselves and that there is always "time" to strengthen ourselves could prove to be fatal shortsightedness. In the nuclear age "enough" may not be enough, and "time" may run out unless our efforts keep pace.
>
> We live in an age in which there is no alternative to vigilance and credible deterrence at the significant levels of potential conflict. Indeed, this is the prerequisite to the pursuant of genuine detente and the negotiation of prudent and verifiable arms control agreements that effectively serve to reduce the danger of war.
>
> Weakness invites aggression, strength deters it. Thus, American strength holds the key to our quest for peace and to our survival as a free society in a world friendly to our hopes and ideals.
>
> The Soviet Union has a massive megatonnage lead, and in just one nuclear weapon area, sea launched ballistic missiles, SLBM's, as of the end of this fiscal year, they will have 1,600 to our 900. This type of malignant growth of Soviet power is what is destabilizing the world. I first heard this word "stabilization" used irresponsibly by a former Member of this body, while he was in Africa. I have heard nothing but the best about him while he was in Congress but since moving on to an assignment at the United Nations, his statements have the ring of absurdity. He stated that guerrilla mercenary troops of the Cuban Communist regime 90 miles off the coast of Florida, who are killing black Africans, that these murderers are somehow or other "stabilizing" the world. In that sick sense Hitler stabilized Europe until we interfered in his system of stable slavery.

The CHAIRMAN. The time of the gentleman from California (Mr. DORNAN) has expired.

(By unanimous consent, Mr. DORNAN was allowed to proceed for 2 additional minutes.)

Mr. DORNAN. Mr. Chairman, now we find that when the United States is trying to defend itself with a renewed civil defense program, when it is trying to defend itself with an advance warning control system, AWACS that when we allocate money for R. & D. on the M–X, somehow or another we are "destabilizing" the world. This is an affront to logic. It is as serious as watching a senior Member of the other body going down to Cuba recently and verbally licking the boots of Fidel Castro.

There has been unrefuted testimony from Ambassador Spruille Braden, a former Ambassador to Cuba, that Fidel Castro in his college days in a student union election, shot to death the leading opponent who was beating him in that election at the University of Havana. He then murdered in front of the man's wife and children, a security guard named Ortiz who had witnessed the first killing. This was in Fidel's youth. As he came to power he murdered over 100,000 people. Now that is what I call "destabilizing."

In this House if we want to find out how the vote is running today on any issue we look at the Control Data-made computers, at four positions throughout this Hall. The irony is that that company, Control Data, is making the words of Lenin, whose birthday is today, come true. He said we would "sell them our hanging rope."

We are not only not selling them the rope with which they will hang us, we are not even giving to them free. We are bribing them to take the rope at a loss to us. We give them advanced computers at a loss so they can bury us with ease.

We must begin to recognize the present danger, this malignant growth of raw Soviet power. The Press Gallery may be almost empty, but this is one of the most important subjects we are ever going to discuss in this body, our national existence and security, and we are going to have to cease using the word "destabilizing" when we defend ourselves against the horrors confronting

this Nation, or soon we will meekly submit when we are told to bug out of any section of the world where the Soviet Union finds our presence annoying.

Ms. SCHROEDER. Mr. Chairman, I move to strike the last word.

Mr. DOWNEY. Mr. Chairman, will the gentlewoman yield?

Ms. SCHROEDER. I yield to the gentleman from New York (Mr. DOWNEY).

Mr. DOWNEY. Mr. Chairman, I want to know if the gentleman (Mr. DORNAN) happens to know Fidel Castro's birthday, because if he does, I would hope that the defense appropriation bill not come up at that time.

Mr. DORNAN. I do not know Castro's birth date, but I can assure the gentleman from New York that I will speak on that day to remind the House that Castro is a first-degree mass murderer and I will again point out those U.S. businessmen and Senators who are down there licking his boots.

Mr. BENNETT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I wish to express my opposition toward any amendment to delete funds or place restraints upon such strategic programs as the MX, B-1, and Trident.

We as a nation are secure today because of our actions in the past. In 1958, this country decided to produce the Minuteman and Polaris submarine. In 1952, this country made a commitment to the B-5 bomber. I wish to insure that we take the same steps toward insuring our future security by supporting the essential strategic programs that will play the same role in enabling us to reach our tricentennial as the Minuteman, the B-52, and the Polaris helped us reach 1976, our Bicentennial Year.

Mr. Chairman, everything the Soviets do in defense has to some extent, some bearing on what we as a nation must do.

In the 12 years since Brezhnev and Kosygin took over, the Soviet national defense has grown at the rate of 3 or more percent per year. Since 1965, the size of the Soviet rocket force has increased from 225 to over 1,600 ICBM's. Today, they enjoy a 4-to-1 throw-weight advantage over the United States.

In that same year they had a few dozen simple submarine ballistic launch tubes. Today, they have close to 800 submarine launch tubes and are deploying new modern Delta class nuclear submarines with missiles having ranges comparable to our, as yet to be deployed, Trident.

Mr. Chairman, these numbers are very accurate and can not be disputed by even the most staunch defense critic. The Soviet intentions are rather clear. Their negative attitude toward the first U.S. proposal to seriously limit arms is rather clear. I would like to emphasize the words of Alexandr Solzhenitsyn of last summer and I quote:

> There is no guarantee for anything in the West. You want to believe otherwise, so you cut down on arms, you cut down on research, but, believe me, the Soviets are not cutting down anything. Soon they will be twice as powerful as you, and then 5 times, and then 10 times, and someday they will say to you "We are marching our troops into Western Europe and if you act, we shall annihilate you" and the troops will move and you will not act.

Mr. Chairman, I want to insure that this Congress takes every measure to disprove Mr. Solzhenitsyn's speculation. I want to insure the viability of the Triad. To do so, we must constantly improve each leg of the Triad commensurate with advances in Soviet technology and advancement. We must make sure there is no known way to successfully attack all three legs of the Triad simultaneously. The ongoing strategic programs that we have today are helping reach this objective. The M-X program will significantly enhance the survivability of our ICBM forces. The B-1 program will insure the strength of the bomber leg of our Triad. Keep in mind that over half of our strategic megatonnage is bomber carried. Keep in mind that by the time we have any significant inventory of B-1's, the newest B-52's will be over 20 years old.

Mr. Chairman, the disturbing Soviet trends of the past decade continue almost unabated. I have not seen a strong indication or restraint in Soviet ICBM deployment, Backfire bomber production or submarine construction.

There is an increase in production in their tactical system and there are substantial differences between the United States and the Soviet Union that have hindered our efforts to achieve an acceptable SALT II agreement. Mr. Chairman, I strongly urge your support and the support of the Members here today for strategic programs. I wish to emphasize that the most important service that we, the Congress, can provide the people we represent is to keep them alive and free.

Mr. FASCELL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I appreciate this discussion on the ideology involved, but I want to ask a mundane question about the amendment if the chairman of the subcommittee or some member of the subcommittee can answer the question for me. I would like to know this:

First of all, I would like to know how much money we are talking about.

Mr. ICHORD. Mr. Chairman, will the gentleman yield?

Mr. FASCELL. I yield to the gentleman from Missouri.

Mr. ICHORD. Mr. Chairman, the amount is $134.4 million. The gentleman from California (Mr. DELLUMS) is trying to strike that amount.

Mr. FASCELL. That is for fiscal year 1978?

Mr. ICHORD. For fiscal year 1978.

Mr. FASCELL. And the R. & D. money, is that for the missile, is it for the launcher, or is it for the trench?

Mr. ICHORD. It is for the design of the missile. The gentleman uses the word, 'trench," but it would not necessarily be for the trench but for a mobile missile, a mobile launcher and missile.

Mr. FASCELL. How does the trench get into this? In other words, the gentleman is telling me now the R. & D. money is only for the missile?

Mr. ICHORD. That is just one of the proposals.

Mr. FASCELL. I want to vote for the R. & D. if I can get my questions answered.

In other words, what the gentleman is saying is that the R. & D. as far as the committee is concerned, and as far as the language of the report is concerned, is not specific. It is for a land-based mobile missile system?

Mr. ICHORD. That is true.

Mr. FASCELL. There is no specification with respect to the launcher or with respect to the characteristics of the missile or the trench?

Mr. ICHORD. Those items will be definitized, I will state to the gentleman.

Mr. FASCELL. No, I am asking these questions in relation to the committee report.

Mr. ICHORD. Mr. Chairman, the gentleman asked me a question, and I will try to answer it. The original program as proposed by President Ford was $294 million.

Mr. FASCELL. The gentleman means with respect to the R. & D.?

Mr. ICHORD. Yes, including R. & D. President Carter cut the amount back to $134.4 million, and this is the program we are bringing to the Members today. This is President Carter's program which he needs as leverage to deal with the Russian organization.

Mr. FASCELL. Mr. Chairman, I understand all that, and I appreciate the gentleman's logic. But what I would like to know is this: What is the R. & D. that is going to be carried forward, and what are the specifications that the committee has written, if any, in the report? That is all I am asking.

Mr. ICHORD. It will be to develop the mobile system that we will eventually use.

Now, the gentleman from California (Mr. DELLUMS) has tossed around the word, "trench." That would not necessarily be the one that will come out. This is just going to be the same old shell game. But this is the missile that will be used.

Mr. FASCELL. Mr. Chairman, perhaps I am not asking the question properly.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. FASCELL. Let me finish first, and then I will yield.

Mr. ICHORD. Mr. Chairman, if the gentleman will ask the question properly, I will attempt to give him the answer.

Mr. FASCELL. Whatever is in the report, apparently I am going to have to read that for myself eventually. I have been asking what is contained in the report, and I guess I will have to go and read it and find out about the specifications with respect to this R. & D.

If it is not in the report, then I would respectfully ask the chairman of the subcommittee to tell me what the administration's justification is for the R. & D. I am simply trying to find out what this is for. I know it is for a land-based mobile system. I know that, but I want further details.

Mr. ICHORD. Mr. Chairman, if the gentleman will yield further, I will state to the gentleman that this money that is requested by our President is to lay out

design concepts. It is not to build anything.

Mr. FASCELL. No, I understand that.

Mr. ICHORD. It is simply to develop a concept.

What further question is the gentleman asking?

Mr. FASCELL. Well, I thought my question was quite clear.

Mr. DELLUMS. Mr. Chairman, will the gentleman yield?

Mr. FASCELL. I yield to the gentleman from California.

Mr. DELLUMS. Mr. Chairman, I agree that the gentleman from Florida (Mr. FASCELL) has been very articulate. He asked a very clear, unequivocal question, and the answer is that there are no specifications. It is an open-ended situation, and that makes it even more dangerous.

Mr. FASCELL. Wait. I do not know if I agree with that or not, but at least I did get a definitive answer.

Mr. DELLUMS. There are no specifications in the reoprt.

Mr. DICKINSON. Mr. Chairman, will the gentleman yield?

Mr. FASCELL. I yield to the gentleman from Alabama.

Mr. DICKINSON. Mr. Chairman, as I understand it, we had originally been involved in the program for R. & D., and we and the Russians are going down the road simultaneously. They were going to develop the concept of how it would be transported and launched, and they were developing the missile also.

The CHAIRMAN. The time of the gentleman from Florida (Mr. FASCELL) has expired.

Mr. SYMMS. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, during the early 1980's time period the present U.S. Minuteman ICBM force will become vulnerable to a Soviet counterforce attack on the Minuteman silos. By 1984 the Soviets may have a "kill probability" of 75 percent—that is, an excellent chance of killing 75 percent of our land-based ICBM force in a first strike. This Soviet capability will result from the Soviet advantage in heavy throw-weight ICBM's of the SS–17, SS–18, and SS–19 class; the latter two are being deployed with MIRV's. By 1984 the Soviets are sure to have accuracies better than 0.2 nautical mile with these missiles and with warhead yields in excess of 1 megaton. This clearly gives them an effective hard-target counterforce capability.

So, the question is, What are we to do about this vulnerability problem with regard to our land-based ICBM force? Does anyone deny that this vulnerability problem will exist in the 1980's? It can be argued that "If the ICBM force is substantially negated we will still have our bombers and SLBM's intact," but the same people opposing continued development of the MX are also opposing the B–1 bomber program and some are even opposing the Trident submarine program.

The MX program is necessary if we are to be sure of having a survivable land-based ICBM during the next decade. Deployed in a hardened mobile mode it would be next to impossible for the Soviets to successfully attack the MX system. In any case, they would have to expend so much of their throw-weight and warheads in an attempt to kill the MX that they would be in a worse position militarily vis-a-vis the United States after the initial strike, thus making the attack futile. This, Mr. Chairman, is the essence of deterrence or strategic stability.

The MX, along with the B–1 bomber, is absolutely necessary if we are going to maintain a high quality deterrent during the 1980's and 1990's in the face of a Soviet strategic doctrine that emphasizes nuclear war survival/war winning capabilities. Consequently, I urge my colleagues to reject this amendment.

Mr. KEMP. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I want to just make two very brief points.

Mr. Chairman, I rise in opposition to this amendment and wish to make the following brief points:

Deterrence is now threatened by the fact that our landbased ballistic missile forces are vulnerable to direct attack by a new generation of Soviet ICBM's equipped with accurate, high-yield MIRV warheads.

Unless circumstances change, the United States will be faced with circumstances in the early 1980's where a major fraction of U.S. land-based ICBM's, submarines in port, and manned bombers not on strip or airborne alert will be subject to direct attack by Soviet nuclear forces.

The perception that such a Soviet attack is possible will erode deterrence, and make the United States vulnerable to nuclear blackmail in a crisis with the Soviet Union.

The only way this horrendous prospect can be avoided is by reducing the vulnerability of our land-based forces, and by improving the capacity of our strategic nuclear forces to threaten the survival of large, highly accurate Soviet land-based forces.

Mr. Chairman, our land-based forces can no longer be made more survivable by increasing the blast-resistance of the silos themselves. The missiles must be made mobile so they are not vulnerable to being pretargeted by the Soviet Union. The M–X system is the best bet for a land-mobile system because, while it cannot be pretargeted—since it cannot be known in advance where in the long trench the M–X missile will be—the number of missile launchers can be counted accurately for arms control purposes. Thus, deployment of M–X will be conducive to a new SALT agreement.

Further, the Soviet Union has invested billions of dollars in its land-based ICBM forces which now threaten the stability of deterrence. What is required is to persuade the Soviets that their investment has been wasted because the United States will deploy a highly accurate, but survivable ICBM force of its own that will threaten the survival of these dangerous destabilizing forces.

The M–X system is one of the best alternatives we have to prevent nuclear war.

When one weighs the vulnerability of the existing Minuteman force that is certain to emerge in the 1980's, the M–X is a far more cost-effective system to guarantee that deterrence of nuclear war will last through the end of the century.

Let us soundly defeat this amendment.

Mr. MARRIOTT. Mr. Chairman, I rise in opposition to the amendment to cut authorization of the M–X program.

We need the M–X program because projections for the 1980's show that the Minuteman survivability in times of a nuclear attack would be in question. Unless we maintain the survivability of the ICBM force, our deterrent capability will be greatly diminished.

Our strategic force, the Triad concept, which includes the land-based ICBM's, would have about the same value as a three-legged stool with only two legs.

Unless we proceed at once, the M–X will not be operational until it may be too late. It will require at least 6 years to develop and deploy the first M–X missile.

Continued delay on the part of Congress will only slide IOC—initial operational capability—further into the future. It is now 1985. The Soviets have developed and deployed many systems while we have been attempting to develop and deploy only three, none of which are yet operational: the B–1, the ALCM and the Trident.

The Soviets' program includes: 4 new ICBM's—the SS–16, 17, 18, and 19; 80 new Backfire bombers; and 3 new classes of ballistic missile submarines—D–1, D–2, and D–3. They have test fired a 5,500-mile range ballistic missile, the SS–N8 for submarine launch. They have developed two new SLBM missiles—the SS–NX–17, and the SS–NX–18, MIRV. And we were told in hearings this year that the Soviets are developing a new, more advanced series of ICBM's as well as a new heavy bomber.

While it is true that we have improved our existing systems, so have the Soviets improved all of their systems; but they are moving far ahead of us in the development of new system capabilities.

I feel that had we had the M–X operation or in development, the Soviets would not have been so quick in rejecting President Carter's recent strategic arms proposal. Its absence will probably result in a hard and rocky road to successful negotiations of a new, effective agreement.

The M–X is critically important to our defense capabilities, and I urge defeat of the proposed amendment.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. MARRIOTT. I yield to the gentleman from New York.

Mr. KEMP. Mr. Chairman, I would like to commend the gentleman from Utah (Mr. MARRIOTT) for his outstanding statement and his clear statement of the issue at hand.

As he points out, not only are the Soviets moving ahead with the development and deployment of the SS–16, SS–17, SS–18, SS–19, and SS–20, much of which are MIRV'ed, but in the face of this unilateral Soviet arms buildup the administration wants to stop the produc-

tion line of the only free-world, land-based intercontinental ballistic missile, the MM III. Not only are we slowing down the M–X by about $160 million or $170 million, what is worse we are doing these things unilaterally.

Mr. Chairman, again, I congratulate the gentleman in the well and I thank him for his leadership.

Mr. MARRIOTT. Mr. Chairman, I thank my colleague, the gentleman from New York (Mr. KEMP).

Mr. DAN DANIEL. Mr. Chairman, for those of you who may not have heard the morning news, yesterday, a Soviet "Bear" reconnaissance aircraft penetrated our air defense identification zone and came within about 60 miles of our coastline. I understand that it overflew a U.S. task force off the Georgia coast before it was driven off by two U.S. F–4 aircraft.

It is indeed interesting that while we are here arguing against the B–1 and the M–X and how the Soviet Backfire bomber cannot reach the United States, this 1954 vintage Soviet plane paid us a visit. Maybe if we kill M–X we will get a chance to get a closer look at their missiles.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. DELLUMS).

The question was taken; and on a division (demanded by Mr. DELLUMS) there were—aves 11, noes 89.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. CARR

Mr. CARR. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CARR: page 5, line 4, delete "$3,687,270,000" and insert in its place: "$3,682,270,000, *Provided, however,* That funds authorized to be appropriated by this act shall not be obligated for research, development, test, or evaluation of the Advanced Medium STOL Transport".

Mr. CARR. Mr. Chairman, I offer an amendment which, very simply stated, deletes $5 million from the research and development budget for what is known as STOL technical cargo aircraft.

This is the kind of an amendment which lacks the sex appeal of a B–1 bomber, or a *Nimitz* class carrier but one which I believe just makes good practical sense from the standpoint of our military budget.

Let me explain to the Members why I oppose the AMST and hope that the Members oppose it as well.

First and foremost we have a great, strong, tactical cargo capability in our armed services known as the C–130. This is a plane that is built by Lockheed. It has given us great service. We are building new and modern C–130's. In fact, in our budget here we are going to buy some more. These planes will be good into the 1980's and beyond. They are fuel efficient. They are turboprop aircraft. They are flown around the world by the armed services of our allies and our friends. In short, they are darned good aircraft and we ought to keep them.

Waiting in the wings, however, is an effort being put together by the Air Force and the Army to develop a new kind of aircraft known as the AMST, the advanced medium STOL aircraft.

Unfortunately the AMST would cost twice as much as the C–130's. Unfortunately, particularly in view of our President's pleas this last week, the AMST is half as fuel efficient as the C–130. The AMST flies a little faster but its range is a little shorter.

In short, what is the big advantage of the AMST? The big advantage, we are told, is that its cargo box is 1.7 feet wider and 2.3 feet taller. Why do we have to spend all that money for a new aircraft that would cost twice as much and be half as fuel-efficient for such a small incremental size in cargo capability? We are told that the Army needs to have its self-propelled armored personnel carriers and mobile missile launchers and radars transported by aircraft and that they cannot get them inside the C–130. The problem with that analysis is that the Army originally came to the Congress and asked us to make these things self-propelled because they could not rely on the fact that the Air Force was going to be able to fly them at all. They are self-propelled, and the Army's needs, which still, incidentally, have not yet been quantified; they will not be quantified until September—their projects needs they state would be of marginal need for the kind of expense that this new aircraft is going to cost us.

The new aircraft would cost about $13 million. The C–130 costs about $6 million. The important thing about the C–130, in addition to its hardware fly-away cost, is that we are very high on the learning curve of the C–130. We know how to fly it. We have crews that know how to fly it. They know how to repair it. They have well-worn documentation on the aircraft. We have ground support equipment for the aircraft.

If we choose the AMST, this new airplane, there is going to be new training, new ground support. We are going to be fairly low on the learning curve. Furthermore, except for possibly Iran, there is no other country in the world that has expressed an interest in buying the AMST. Furthermore, there is, according to the people at Boeing and McDonnell Douglas, the two competitors for the AMST, no anticipated commercial application for the AMST such as where we went from the KC–135 and ended up with the Boeing 707 that we put into our commercial fleets. They are not going to do that either.

So I just ask the Congress, the House of Representatives, to make just a darned practical decision here and cut out this nonsense and vote for my amendment.

Mr. DAN DANIEL. Mr. Chairman, I rise in opposition to the amendment.

Mr. WHITEHURST. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Virginia.

Mr. WHITEHURST. I thank the gentleman for yielding.

I should like to ask the gentleman from Michigan (Mr. CARR) a question with reference to his chart, a copy of which he sent to all of us in the House. This is with reference to the column entitled "volume." I should like to have the gentleman explain how he arrived at a figure of 726 cubic feet per million for the C–130, because it is my understanding that the C–130 has a total usable volume of about 3,000 cubic feet. The current cost of the C–130 is not $6 million, as the gentleman just mentioned in the well; it is $7½ million. If I divide 3,000 by 7½, I arrived at 400 and not his figure of 726. I would like to know how he explains the discrepancy in his figures.

Mr. CARR. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Michigan.

Mr. CARR. I thank the gentleman for yielding.

I tried to follow the gentleman, and I may have to ask him to repeat his analysis. The raw figure that we have for the C–130 is 4,650 cubic feet.

Mr. WHITEHURST. If the gentleman from Virginia would yield further, that is a mistake. We are talking about a usable figure of what can be carried in the aircraft. That is 3,000 cubic feet. Those are present Air Force figures.

Mr. CARR. If the gentleman from Virginia would yield, the ratio would stay the same, though. The ratio between the AMST and the C–130 in terms of usable space would stay about the same.

Mr. WHITEHURST. The gentleman's AMST figures are correct but not the figures on the C–130.

Mr. CARR. We got all of these figures from DOD.

Mr. WHITEHURST. I think they are in error. I think that is a fundamental question here, because it is very misleading. Furthermore, I submit to the gentleman that his cost figure—and I repeat this—on the cost of a C–130 is not $6 million right now; it is $7½ million. That is a substantial difference.

Mr. CARR. All of our figures were arrived at from the Air Force. We asked them repeatedly to supply us with data. They were reluctant to supply us with some data. For that data we had to go and get it out of the manufacturer's brochures.

Mr. WHITEHURST. We are talking about 726, are we not?

Mr. CARR. Yes.

Mr. WHITEHURST. I challenge the gentleman's figures. I think they are in error.

Mr. ROBERT W. DANIEL. Mr. Chairman, will the gentleman yield?

Mr. DAN DANIEL. I yield to the gentleman from Virginia.

Mr. ROBERT W. DANIEL. I thank the gentleman for yielding.

Mr. Chairman, I would like to ask the gentleman from Michigan a question, if the gentleman from Virginia will yield to the gentleman from Michigan to respond.

Mr. DAN DANIEL. I will yield to the gentleman from Michigan.

Mr. ROBERT W. DANIEL. The gentleman from Michigan has given us ample evidence of his homework and I would like to get a bit of input into this presentation. I realize that, of course, because of the newer ultimate systems, the AMST will require three crew members whereas the C–130 requires five crew members. Is this saving in crew members reflected in the costs the gentleman has given us?

Mr. CARR. The costs I have given the gentleman in this particular chart are

hardware costs, not operational costs, but I might add the C–130 has a tremendous growth potential in the same kinds of ultimate systems that are the AMST's which can be applied to the C–130 or the C–130 STOL stretch, which is not reflected at the present time.

Mr. ROBERT W. DANIEL. But they do not reflect the crew savings which would result?

Mr. CARR. They do not reflect the crew savings which would result.

Mr. ROBERT W. DANIEL. I thank the gentleman.

Mr. DAN DANIEL. Mr. Chairman, I confess to some occasional confusion regarding this body.

We insist on streamlining our defense capability, then balk at providing the funds to do it.

The advanced medium STOL transport is not a new Pentagon toy.

It is not an untried concept.

Two competitive aircraft are flying.

It is a modern aircraft, designed to perform certain functions which are required by a modern American Army.

It is designed to respond to need with respect to air mobility. We accomplish little when we recruit and train our Army, and develop sophisticated weapons unless they can be efficiently and rapidly transported.

The committee recommends a reduction of $20 million from the Air Force request of $25 million.

The committee felt a compelling need to save this $20 million pending formulation of a better development and acquisition plan.

The plane is vitally needed, and the $5 million will be used for this purpose.

A quarter-century ago, 16 of the 19 Army divisions could be transported by C–130's, along with all the equipment they would require.

Today, only 3 of 16 divisions could be so moved, and retain a creditable combat capability.

The AMST can carry single items as large as the main battle tank, the 8-inch/155-millimeter self-propelled howitzer, the mechanized infantry combat vehicle, the M–578 armored recovery vehicle.

The C–130 can adequately carry none of these.

Certainly the C–130 is an excellent aircraft.

It has performed in a highly reliable manner the function for which it was designed.

And there is no question but that it will continue to serve a vital function.

But the C–130 is not enough.

The argument has been made that the C–130 has proved its worth in the Middle East, and so it has.

The AMST is designed to meet different conditions.

It is designed for use in a variety of ground environments, and under a variety of potentially hostile conditions.

It can move in and move out in less time and less space than the C–130, carry twice the payload at higher speed and requires half the operational space.

Although it sounds contradictory, it is nevertheless true: the Army of the eighties will be leaner, but heavier, as we replace man muscle with mechanical muscle.

If we do not improve our transport fleet, we will be moving a modern Army without sufficient equipment to perform the job for which they are trained; one result would be higher casualties.

Several years ago, the then Secretary of Defense stated that there would be a realinement of the military to provide a greater "tooth-to-tail" ratio.

Almost all of us applauded that.

But without the AMST or its equivalent, our Armed Forces will roughly compare to a man gone out to dinner who has left his dentures on the shelf.

Mr. HILLIS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to make several points concerning this amendment because I think it focuses our attention on a change in technology and a moving forward of 1960 to 1977 technology. While volume and productivity are very important and the case has been made by my colleague, the gentleman from Michigan, about the carrying capacity of the C–130, if we are talking about carrying small combat items, let us talk about the small arms ammunition or hand grenades, the C–130 would undoubtedly compare very favorably with anybody in the world.

Unfortunately our ground forces in the future will require something more than small arms and hand grenades if they have to respond in a conventional war in a NATO environment.

The day of the soldier walking into war carrying his equipment on his back with which to wage war are fading. They are over. The Army is phasing out this type of foot soldier in the infantry and replacing him with what is known as heavy mechanized divisions. All of our plans are to upstage the infantry divisions and make them heavy divisions. This is a vital point.

These divisions are composed of large increments of firepower, such as the 8-inch self-propelled howitzers, for example, and they are expected to go to 150-millimeter rapid-fire weapons which would have to be deployed to move rapidly with the foot soldiers.

The anticraft unit is another type equipment that could be carried by the AMST but not by the C–130.

This is the crucial point. We are talking about out-sized equipment and whether we can move out-sized equipment. The gentleman from Michigan says that has not been formalized yet. The figure I was given from the OSD was that 32 percent of the Army's total tonnage in the first 30 days combat in the NATO environment would be outsized and would be unavailable to be moved by the C–130 or the 141 but it could be moved by AMST, and that is the basic difference we are talking about. That is the out-sized equipment.

That is the basic difference here. What we are talking about is the outsize equipment.

There is another point or two I want to make in the little time that is available to me, points that are of great importance. The runway length and type of runways that are available to the two aircraft, for the C–130 is limited to runways of over 3,000 feet in length, generally I would say hardened or improved runways.

The AMST aircraft can operate in 2,000 feet of unimproved runways. Something like a soft golf course will take an AMST, but will not handle a C–130. Available to the AMST would be 242, 2,000-foot runways. Available to the C–130, in comparison, are only 84, so we have a ratio of 3 to 1 in availability.

The aircraft has tremendous lifting power, the YF–15, the Boeing version, with 247 engines. Another thing is the sweep over the wings, one of which was 62,000 pounds in the aircraft's air lift on take-off on a normal day on a 2,000-foot unimproved runway. The C–130 cannot touch that; so we have the short field capacity.

I maintain that the graph here shows a rough comparability between the C–130 and the AMST, but that has to be based on a 3,500-foot improved length, and not the 2,000, because the C–130 cannot even maneuver in the 2,000 feet.

There is another very vital point of technology. In the caissons: we had to pull the C–130's back because they were shot at from ground fire. They were making a low, flat approach on a climbing slope of roughly 2½ degrees ascent and they were very vulnerable at 500, 600, or 700 feet to people on the ground with small arms.

The AMST is engineered in a STOL-type configuration that can approach at 6½ degrees.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

(By unanimous consent, Mr. HILLIS was allowed to proceed for 1 additional minute.)

Mr. HILLIS. It can make its approach at 6½ degrees into an unprepared 2,000-foot runway with 62,000 pounds of cargo. This means a very minimal time of exposure to hostile ground-fire activity.

For technical aircraft equipment, the AMST is the airplane of the future. The fact is we need both aircraft. We need the C–130 for the small size nonhostile operation at 3,000 feet or more runway, but we need the AMST and nothing else will do the job.

Mr. ICHORD, Mr. Chairman, I move to strike the requisite number of words.

Mr. DAVIS. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from South Carolina.

Mr. DAVIS. Mr. Chairman, I rise in opposition to the amendment. I realize that the chairman of the R. & D. has some charts of his own that will portray the need for this new airplane where it is required.

Pending the gentleman's presentation, Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. One hundred and one Members are present, a quorum.

The Chair recognizes the gentleman from Missouri (Mr. ICHORD).

Mr. ICHORD. Mr. Chairman, I do not want to get into the battle of the charts, and I apologize for the fact that my chart does not look as good as or as attractive as the chart of the gentleman

from Michigan. I do not know who prepared the chart for the gentleman from Michigan. I will tell the Members that this chart was prepared—and I hope the Members can see it—by the staff of the House Armed Services Committee. It is a little small and not as pretty, but in answer to the gentleman from Virginia (Mr. ROBERT W. DANIEL, JR.), this chart is much more accurate, I submit, than the chart and the mailout of the gentleman from Michigan (Mr. CARR).

I would state to the gentleman from Michigan (Mr. CARR) that I supported the gentleman from Michigan last year when he offered an amendment to strike out the COD. I did so because I thought that the information the gentleman had was right. Some of the other members of the committee have told me that I was taken, but I still believe that I was right when I supported the gentleman.

However, I think the gentleman probably got his information from a different source as far as the AMST is concerned. For example, in his mailout he says that the AMST is not a clear improvement over the C–130. He says that the U.S. Air Force says they are just responding to an Army requirement, but the screams on the cancellation came from the Air Force, not the Army. It is the Army that needs this airplane, I would state to the gentleman from Michigan, not the Air Force.

Members of the committee, the kev to the outcome of any battle is the ability to concentrate maximum fire power at the critical time and the critical place. The ability to move our self-propelled artillery and our air defense systems quicky around the battlefield is nonexistent today because the C–130 cannot do the job.

The alternative, I would state to the gentleman from Michigan, of increasing fire power with a larger number of units is neither attractive nor economical. With high manpower costs, the AMST is the attractive economic approach to the problem that we have. I am not challenging, and the committee does not challenge, the ability of the C–130. The C–130 will be in the inventory for a long time. The C–130 can be used to carry out many bulk cargo missions such as ammunition, POL, and so forth. However, it cannot satisfy the requirement to move outsized cargo.

Now, since we have the battle of the charts, let us look at the chart prepared by the House committee staff. This is what the Army needs. We need to be able to use the AAH, the advanced attack helicopter, and move it fast in a battle situation.

We need to move the UTTAS and move it fast. We need to move the SAM–D. We need to move the I–Hawk. We need to move the air defense gun.

The CHAIRMAN. The time of the gentleman from Missouri (Mr. ICHORD) has expired.

(By unanimous consent, Mr. ICHORD was allowed to proceed for 3 additional minutes.)

Mr. ICHORD. Mr. Chairman, we need to move our radars into the battle situation. We need to move the 155-millimeter howitzer. We need to move the 8-inch howitzer. The Roland system, which is in this bill, we need to move to the place where we need it. We also need to move the MICV, and our tanks.

What can the C–130 move? Only the UTTAS. The AMST can move all of those weapons systems that I have just mentioned.

This is the reason why I do not know where the gentleman from Michigan got his facts and statistics, but it reminds me, I would say to the gentleman from Michigan that he is using his facts and his statistics like the drunk who leans on the lightpost, more to support himself rather than to shed any light on the situation.

Mr. CARR. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Michigan (Mr. CARR).

Mr. CARR. I thank the esteemed chairman, and I want to comment that I think he has done a tremendous job with respect to all but this particular portion of title II of the bill.

Mr. ICHORD. Particularly on the Seafarer program, which we adopted at the request of the gentleman from Michigan because he was right. Now I ask the committee to support the Armed Services Committee because in this situation he is wrong.

Let me state that we have already cut $125 billion out of this program.

Mr. CARR. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Michigan.

Mr. CARR. I thank the gentleman for yielding.

Mr. Chairman, I would like to ask the gentleman a question about the chart which he said the staff prepared.

Mr. ICHORD. Who prepared your chart, may I ask? Your staff? It is much prettier, and I apologize for mine.

Mr. CARR. I want to thank the gentleman about the kind remarks he has made about my chartmaking ability.

Mr. ICHORD. It is much more attractive.

Mr. CARR. As to the gentleman's chart, I have a briefing paper, which was supplied to me by the Air Force, which is strangely coincidental to the exact chart the gentleman has there, except the C–130 is on top, and the Army needs are in the middle. I would like to ask the gentleman, for the edification of the membership of the House, the AAH is a helicopter, is that correct, and it is able to fly itself?

Mr. ICHORD. That is the advance attack helicopter, yes.

Mr. CARR. It will fly itself?

Mr. ICHORD. But not as fast as the AMST will fly.

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

(By unanimous consent, Mr. ICHORD was allowed to proceed for 3 additional minutes.)

Mr. CARR. If the gentleman will yield further, the AAH has the advantage because it is armed, and the AMST or the C–130 are not? The AMST and UTTAS, the rest of those items, they are self-propelled, are they not?

Mr. ICHORD. Many of them are. Of course, we cannot move them fast. We can only move the UTTAS with the C–130.

Let me tell the Members what this airplane, the AMST, is going to do. The STOL concept in the AMST will greatly enhance its survivability, and this is almost unbelievable. Its rate of climb will be such that it can climb almost three times as fast as the C–130. It can get in the air and get there fast. It will be able to get to 10,000 feet faster than the F–4 aircraft today and carry all of this cargo. That is why we need it.

The C–130 is here to stay, but it is not the followup airplane we must have. We have the C–130, we have the C–7, and we also have the C–17, but that is not sufficient for the future, I will state to the gentleman from Michigan (Mr. CARR).

Mr. CARR. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Michigan.

Mr. CARR. Mr. Chairman, I will state to the gentleman that compared with the AMST, the C–130 falls short with regard to its STOL capacity, but the C–130 can also have an adequate STOL capacity. It can have a better short field performance than the AMST.

I would also remind the House that the operational budgets for maintaining pure jet engines is about twice as great as for maintaining turboprop engines. The C–130 makes a lot of sense from the standpoint of maintenance as well.

Mr. ICHORD. Mr. Chairman, if I may reclaim my time, the gentleman on his chart did not take into consideration—and that is why I say he shuffled the facts and figures—the fact that the AMST can be operated by only three men. It takes five men, as pointed out by the gentleman from Virginia, to man the C–130.

Mr. WHITEHURST. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, in accordance with JCS directives, the Air Force is responsible for providing airlift for both the strategic deployment and the tactical employment of Army mobility forces. The C–130 aircraft has been the tactical intratheater workhorse since its introduction in the early 1950's. However, during its operational life, evolving Army combat equipment has outgrown the performance capabilities and the narrow fuselage dimensions of that airplane.

As the Army transitions from a posture heavy with infantry divisions to its future concentration of mechanized and armored divisions, basic firepower weapons such as the 8 inch and 155 MM self-propelled howitzers, the Vulcan, Patriot, Chapparral, MICV, the M–60, and the XM–1 tanks have outgrown the C–130 capacity. There is only one airborne division remaining within the Army; it is now considered a light infantry unit and its equipment is designed around the capability of the C–130. The C–130 can carry 55 percent of the equipment programed for the fiscal year 1982 Army, but only 4-percent of its firepower.

The AMST is designed to carry 100 percent of the current and future Army combat firepower.

While simple parametric analyses may indicate that the AMST is a poor substitute for the C–130, a real-world analysis reflects otherwise. Jet speeds and increased payload capacity make the AMST more than twice as productive as the C–130. This can best be illustrated by the AMST's ability to meet the Army's stated requirement to move division and brigade maneuver elements rapidly within a combat theater; 335 C–130 sorties complemented by 104 C–5 missions are required to move a mechanized brigade 500 miles. The C–5 missions are necessary to move the unit's essential heavy firepower. A total of 84 C–130 and 18 C–5 airplanes can complete this movement in 48 hours. Only 85 AMST's are necessary to do the same mission; they would require no C–5 augmentation.

This analysis is positive proof that when real world requirements are considered, the types, weights, and size of the equipment to be moved dictates the effectiveness of the particular vehicle employed. The Volkswagen automobile is an energy effective transportation vehicle, which carries four people fairly comfortably over short distances, but it is of limited value when the Washington Bullets basketball team or the Redskins need a ride, either across town or to their next away game. Such is the case with the C–130; it does a good job moving beans and butter but when combat firepower equipment vital to the needs of the modern Army have to be airlifted within the combat theater, the C–130 cannot do the job. The AMST is vital to the mobility capability of American conventional warfare forces.

Mr. DOWNEY. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I would like to direct some questions to my friend, the chairman of the subcommittee.

Despite the black-and-white nature of the gentleman's chart, I think it is very effective, and one of the things I heard the gentleman say that I think is important is the fact that the AMST will be able to carry outsizes of cargo, and that the C–130 would not be able to carry those sizes.

I am curious about this. The MICV is one of the things that we want to have to move around very quickly on the battlefield; is that not correct?

Mr. ICHORD. Mr. Chairman, the AMST will move it, and the C–130 will not move the MICV.

Mr. DOWNEY. What I would like to ask the gentleman is this: Approximately how many MICV's will the AMST's carry?

Mr. ICHORD. I believe it will only carry one MICV.

Mr. DOWNEY. It will carry one MICV.

Approximately how many MICV's will we need on the battlefield?

Mr. ICHORD. It is going to carry much more than the C–130 can carry. The C–130 cannot carry nearly as much.

Mr. DOWNEY. Mr. Chairman, giving the gentleman that, I just want to establish the fact that the AMST can carry one MICV, which is a mechanized infantry carrier that protects our men on the battlefield.

Approximately how many MICV's do we need for mechanized infantry maneuvers?

Mr. ICHORD. Mr. Chairman, I will have to refer that question to some Member who is more expert on battlefield maneuvers than I.

Mr. DOWNEY. Perhaps I could ask the gentleman from Indiana (Mr. HILLIS) that question.

For the gentleman's edification, there are approximately 682 MICV's needed for one mechanized infantry division. The gentleman has just finished telling us that the AMST can carry one MICV.

If it—AMST—is going to go 400 miles, and assuming we have 100 AMST's available to us, which is approximately 50 percent of all the AMST's we will be building, it will take approximately 4 days, given a 4-hour round trip, to move the MICV's to the battlefield. The MICV goes approximately 40 miles an hour or perhaps a little faster than 40 miles an hour. and we can drive the MICV's to the battlefield. Perhaps we could also fly the UTTAS and the AAH.

Mr. ICHORD. Can we fly in the radar also, I will ask the gentleman?

Mr. DOWNEY. We might not be able to fly all those things in the C–130 but the question I want to ask is this:

Can some of these items be carried by truck, or are we going to have an R. & D. program for an airplane just so we can carry a few big trucks or a couple of tanks in it? Or can we just put some of those tanks, some of those MICV's and some of those radar units on a truck that will be in Germany perhaps and drive it to the battlefield? Why do we have to fly everything in to the battlefield with a new cargo aircraft that is going to cost as much money as the gentleman is talking about?

Mr. HILLIS. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from Indiana.

Mr. HILLIS. Mr. Chairman, the gentleman has raised a good point. It seems to me that we have to take into account the fact that the aircraft can move a relatively great distance in a short period of time, say 500 miles.

Mr. DOWNEY. Yes, it can carry one MIVC very quickly.

Mr. HILLIS. Right. It can carry it very quickly, and then it can make another trip, and in 48 hours it can make many trips.

Mr. DOWNEY. But by that time they could be driven.

Mr. HILLIS. In 48 hours they can move 50 MICV's, and perhaps 80 MICV's can be moved in 48 hours for the mechanized infantry division.

I think we should look at this from a realistic standpoint. A small number of aircraft can move a great number of MICV's in a very short period of time over a distance of, say, 500 miles.

Mr. ICHORD. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from Missouri.

Mr. ICHORD. Mr. Chairman, I have been advised that a brigade—and this came from information furnished by the Army—can be moved 500 miles in 48 hours. That is 84 AMST's, according to this information, that would be used.

Mr. DOWNEY. Well, we have to be on station and ready to go.

Mr. ICHORD. They can make several sorties.

Mr. DOWNEY. Mr. Chairman, could the gentleman explain the components of the brigade and what exactly they are going to do?

Mr. ICHORD. The gentleman should explain that that material appears on the chart.

Mr. SYMMS. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from Idaho.

Mr. SYMMS. Mr. Chairman, I want to know if that will run on water or if we are trying to get across a river and if the bridge is blown out, what happens?

Mr. DOWNEY. That is a very interesting thing about the MICV. We are trying to make it run under water, as a matter of fact.

The CHAIRMAN. The time of the gentleman from New York (Mr. DOWNEY) has expired.

(By unanimous consent, Mr. DOWNEY was allowed to proceed for 1 additional minute.)

Mr. DOWNEY. Mr. Chairman, I would be happy to respond to the gentleman from Idaho (Mr. SYMMS) if he would like.

As to a question whether the AMST will cross the ocean, I ask, is the AMST prepared to fly across the ocean with this cargo?

Mr. SYMMS. If the gentleman will yield, it is after having refueled, as I understand it.

Mr. DOWNEY. If the gentleman understood a little more about the AMST, he would realize that it is for the battlefield and to fly equipment around the battlefield. It is not to fly outside cargo across the ocean. The C–5A does that—when the C–5A is able to fly.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. CARR).

The question was taken; and on a division (demanded by Mr. CARR) there were—ayes 25, noes 51.

Mr. CARR. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. VANDER JAGT

Mr. VANDER JAGT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. VANDER JAGT: On page 4, line 24, strike out "$2,365,232,000;" and insert in lieu thereof "$2,375,232,000.".

Mr. VANDER JAGT. Mr. Chairman, compared to the amendments that have gone before and the arguments for and against them, this is a very simple and a very short amendment. Yet, I think that it will have significant impact on our program.

Mr. STRATTON. Mr. Chairman, will the gentleman yield?

Mr. VANDER JAGT. I yield to the gentleman from New York.

Mr. STRATTON. Mr. Chairman, the gentleman's amendment provides $10 million for further testing of the diesel engine in the XM-1 tank.

On page 37 of the committee report we point out that the turbine engine is going to require a good deal more testing. Since this is a less mature engine, it might well be proper for us to continue the testing of a standby diesel engine.

Mr. Chairman, the gentleman has been kind enough to show me his amendment. I have checked with the members of the committee on this side and with the chairman, and I think I can say for myself and, I believe, for the Members on the Democratic side that we are prepared to accept the gentleman's amendment.

Mr. BENNETT. Mr. Chairman, if the gentleman will yield, we accept it.

Mr. VANDER JAGT. Mr. Chairman, I thank the gentleman from New York (Mr. STRATTON) and the gentleman from Florida (Mr. BENNETT) very much.

To demonstrate appreciation for their cooperation, I will not deliver the speech that I had prepared.

Mr. HILLIS. Mr. Chairman, will the gentleman yield?

Mr. VANDER JAGT. I would be happy to yield to the gentleman from Indiana.

Mr. HILLIS. Mr. Chairman, I thank the gentleman from Michigan for yielding to me.

Let me say that on our side of the committee that we see merit in the gentleman's amendment and we will be most happy to accept the amendment.

Mr. VANDER JAGT. I thank the gentleman from Indiana and thank the gentleman, as well, on all of his work on this subject. This will make possible the continuation of the development of the diesel engine for the XM-1 tank.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. VANDER JAGT).

The amendment was agreed to.

Mr. GOLDWATER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I wonder if I might have the attention of the chairman of the committee, the gentleman from Florida (Mr. BENNETT), and perhaps some of the other members of the committee in order to have some clarification on a particular section. I refer to section 809 on pages 26 and 27 of the bill. That is the section that deals with the prohibition of contracting out.

Mr. BENNETT. Mr. Chairman, if the gentleman from California will yield, let me say that we had not intended to get to that portion of the bill today. If the gentleman wishes, I could explain the section to him.

Mr. GOLDWATER. I would like to have that. I wonder if we could arrive at some kind of an explanation on this? Because, depending on that would determine whether, in my opinion, it would be necessary for some clarifving language to be inserted. Therefore I would like to engage in a colloquy with the chairman.

Mr. BENNETT. If the gentleman will yield, let me say that there has been emphasis by the executive branch to contract out with private enterprises. This has given rise to a lot of problems. In the first place, we have spent hundreds of millions of dollars, perhaps billions of dollars when we include the NARF and things like that, to provide facilities and personnel for performing these functions by the Government. So, to just close these things and put it out into private industry may not be the right answer. So we thought we ought to have a study made.

Mr. GOLDWATER. Mr. Chairman, I support the effort of the gentleman from Florida. However, the language itself appears not to be quite clear. That is what I would like to get some explanation on. An explanation as to certain words in specific subsections under section 809.

Specifically, does the committee agree that section 809 is a flat prohibition on any new contracting out or any additional contracting out?

Mr. BENNETT. No, it does not prohibit that which is underway but it does prohibit additional contracting out.

Mr GOLDWATER. Any new additional contracting out would be prohibited?

Mr. BENNETT. Until the study is completed, they could still contract out but not convert jobs.

Mr. BOB WILSON. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from California.

Mr. BOB WILSON. Mr. Chairman, if I am not mistaken, the provision pertains to contracting out of personnel services of individuals, such as firefighters or janitorial services. It does not pertain to contracting out for goods and services and materiel, as I understand.

Mr. GOLDWATER. These are for services that are contracted out but not for procurement?

Mr. BOB WILSON. Personnel services, right.

Mr. GOLDWATER. But there is a flat prohibition against any further contracting out; is that correct?

Mr. BENNETT. Until the study is completed.

Mr. GOLDWATER. Until after the study is completed?

Mr. BENNETT. That is correct. In the meantime if the gentleman wishes, I will give him some of the horror stories on how much we have spent.

Mr. GOLDWATER. I can understand the purpose of it. I am merely asking these questions for clarification of the language.

Mr. DICKINSON. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from Alabama.

Mr. DICKINSON. Mr. Chairman, let me say, just by way of clarification that perhaps it would be better understood if we knew the history of this.

Mr. GOLDWATER. The gentleman from Alabama does not need to recite the history in the 5 minutes that are available to me.

Mr. DICKINSON. Very well. I will try to explain it briefly simply by saying that the Department of Defense has ordered various services to make studies on where they can contract out services, instead of doing it in-house.

Since they are planning on making many other such arrangements, we wrote this in here to say that there would be a moratorium for a year until we could take a look at it. In some instances they are going as high as 130 percent or better over the in-house costs in contracting out.

Mr. GOLDWATER. I have no problem with that.

I have the further question: Does subsection 809 in any way prevent extension of contracting out or reissuance of a contract prior to March 15, 1978? In other words, if a contract terminates between passage and the submission of the report, can that contract be reissued?

Mr. BENNETT. Yes, it can.

Mr. NEDZI. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from Michigan.

Mr. NEDZI. I thank the gentleman for yielding.

Pursuing the point which the gentleman raised, which I think is very, very timely, I should like to direct my question to the chairman, and I seek an explanation of what he meant about nothing being contracted which is underway—his meaning of the word "underway."

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. GOLDWATER was allowed to proceed for 5 additional minutes.)

Mr. NEDZI. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield very briefly.

Mr. NEDZI. I think all of us are aware of studies underway at various installations for the purpose of contracting out. Some of these studies have gone to the point of tentative decisions being made to contract out, but no contracts are let. Some of them are under review.

Mr. BENNETT. If the gentleman from California will yield, this study is the overall study.

Mr. NEDZI. I understand, but does the limitation on the Department of Defense, or the departments of the Department of Defense, which pertain to March 15, 1978, apply to all of these which have not been finalized?

Mr. BENNETT. If the gentleman from California will yield, it does.

Mr. GOLDWATER. Mr. Chairman, I reclaim my time, if I may.

I ask the additional question: Why is there no authority given to the Secretary of the Department of Defense permitting him, if he makes a finding that it is in the national interest or consistent with national policy, to authorize activities that are not consistent with the restrictions of this act?

Mr. ICHORD. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from Missouri.

Mr. ICHORD. I thank the gentleman for yielding.

I offered this amendment in committee. It is my amendment, and the reason behind and the purpose of the amendment are that all of the services are making studies at the present time.

Mr. GOLDWATER. I wonder if the gentleman would address himself to the specific question. I have only 5 minutes,

and I am trying to get some clarification.

Mr. ICHORD. I would state to the gentleman that if he had been here during general debate, the gentleman from Florida (Mr. SIKES)—and it is in the general debate record—did answer specific questions clarifying the meaning of the amendment. But if the gentleman will propound a specific question, I will attempt to answer it.

Mr. GOLDWATER. The specific question again is, There is no standby or permission for the Secretary?

Mr. ICHORD. That is true, there is not. We intend to look at it ourselves after the report back to us on December 31, 1977.

Mr. GOLDWATER. I have an additional question: What does the term "activities" mean? Are these custodial? Security? Procurement? Services, like food? Maintenance?

Mr. ICHORD. All personnel services. And I will state that the answer to that question is already in general debate answered by the gentleman from Florida (Mr. SIKES).

Mr. GOLDWATER. All right. What about new functions under this provision? Can new functions be contracted out?

Mr. ICHORD. It would not apply to actual workloads, as far as that is concerned.

Mr. GOLDWATER. All right. In addition, in subsection (b), lines 4 and 5, there is reference to industrial or commercial activities. What does "activities" mean?

Mr. ICHORD. The word is "functions," I believe, rather than "activities." The gentleman is referring to line 19 on page 26? It is not "activities." It states:

The Secretary of Defense shall conduct a complete and comprehensive study of the criteria used in determining whether commercial or industrial type functions at any Department of Defense installation should be performed by Department of Defense personnel or by private contractors.

Mr. GOLDWATER. All right, but on lines 4 and 5 there is reference to commercial or industrial activities.

Mr. ICHORD. Lines 4 and 5 on what page?

Mr. GOLDWATER. I do not have the page.

Mr. ICHORD. Is the gentleman speaking about page 27, the study required by subsection (a)?

Mr. GOLDWATER. Subsection (b), lines 4 and 5.

Mr. ICHORD (continuing):

The study required by subsection (a) shall be submitted to the Committee on Armed Services of the Senate and the House of Representatives not later than December 31, 1977, and no further conversion of commercial or industrial activities to be performed by contractors shall be made before March 15, 1978.

The purpose of that is to give the House Armed Services Committee and its counterpart in the Senate Armed Services Committee a chance to study to see what they are doing and to see whether we want to act on the situation or not.

Mr. GOLDWATER. OK. In subsection (b) are the prohibitions on contracting out in terms of functions, dollars, people, or installations, or what? I am talking about subsection (b).

Mr. ICHORD. In (b) or (c) it is in terms of functions, not activities.

Mr. GOLDWATER. It is in terms of functions.

Mr. Chairman, I thank the Committee for its indulgence.

The CHAIRMAN. There being no further amendments to title II, the Clerk will read.

The Clerk read as follows:

TITLE III—ACTIVE FORCES

SEC. 301. For the fiscal year beginning October 1, 1977, and ending September 30, 1978, each component of the Armed Forces is authorized an end strength for active duty personnel as follows:

(1) The Army, 790,425;
(2) The Navy, 536,000;
(3) The Marine Corps, 192,000;
(4) The Air Force, 572,000.

AMENDMENT OFFERED BY MR. DELLUMS

Mr. DELLUMS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DELLUMS: On Page 10, after line 25, add the following language:

"SEC. 302. The Department of Defense is authorized an end strength for active duty personnel as follows: For the fiscal period beginning October 1, 1977 and ending September 30, 1978: 2,040,425. Within this authorization figure of 2,040,425 for active duty personnel of the Armed Forces, no more than 363,850 military personnel may be assigned to active duty on land outside the United States and its possessions and territories during this fiscal year."

Mr. DELLUMS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. DELLUMS. Mr. Chairman, before I go into a detailed discussion of my amendment. I would like quickly to summarize the practical effects of the amendment.

The amendment would reduce our overseas forces by 17,000. It would not only require that those overseas forces come back to this country but it would also deactivate those 17,000. It would also require a reduction in our end strength of a total of 50,000.

Again, to summarize, 17,000 reduction of our overseas land-based troops and an additional 33,000 to be deactivated for a total end strength deactivation of 50,000 troops.

My Chairman, my amendment would cut our overseas troops commitments by 17,000. I arrived at this figure in the following way. Last year, Mr. Chairman, I offered an amendment to reduce our overseas troop levels by 47,000. Although this amendment was opposed by the Administration, and by the Armed Services Committee, and defeated by this body, the Pentagon actually cut over 30,000 of our American troops from overseas.

What my amendment simply is trying to do is to get the additional 17,000 that I thought the committee lacked the wisdom in cutting last year.

This is the 5th year I have proposed an amendment to our overseas troops and last year in attempting to interject some humor into what often becomes a discussion where we tend to take ourselves too seriously and maybe we do not zero in on the question too seriously, as my annual exercise in futility—but I am an eternal optimist, Mr. Chairman—these amendments have never succeeded in the Congress. Yet the Pentagon seems to have been convinced of the logic behind the amendment. Published figures show that we had 497,000 troops stationed overseas in the year 1975, which was reduced to 462,850 in 1976.

Over the entire 5-year period, overseas troops have declined by 172,150—which means that approximately 33,000 troops were returned to this country, but not deactivated, and many of us took the floor and said we need those troops overseas and if they are not overseas, we do not need them. Well, the Pentagon has brought home 172,000 troops. Last year they brought home over 30,000. Therefore, the argument on the floor of the Congress last year was we need these troops overseas, but the Pentagon brought those troops back. What I would like to do in my amendment is deactivate those troops. If we do not need them around the world, why do we need 33,000 additional troops stationed in the United States?

Thus, these trends seem to show that my amendment has only anticipated the actual withdrawals by a year or two. It, therefore, seems there is little controversy about the desirability of our overseas troops returning home. The question seems to be whether we Members of Congress should say so, or whether it should be left up to the discretion of the Pentagon.

I would add, parenthetically, that I have always stated it is proper to leave military decisions to the military, but it seems to me that if we are going to earn our incomes, it is our responsibility as policymakers to be an inherent part of the process of making policy, not the Pentagon. Whenever the military is allowed to make political decisions, they are outside their baliwick; when we attempt to make military decisions on the floor of Congress, we are outside our bailiwick.

All I am attempting to do is get us to assume our responsibility.

There is also the question of whether authorized end strengths should be reduced, or whether withdrawal will be seen as merely shifting troops from one foreign base to a home base with little reduction in costs.

Mr. Chairman, I am offering this amendment because I strongly believe that Congress should make this policy decision. Our military budget at the present time is based on self-canceling confusion.

The CHAIRMAN. The time of the gentleman from California has expired.

(By unanimous consent, Mr. DELLUMS was allowed to proceed for an additional 3 minutes.)

Mr. DELLUMS. Mr. Chairman, on the one hand, we continue to vote for a costly military budget, but not near high enough to sustain a foreign policy based on interventionalist assumptions.

I have mentioned many times that

former Secretary Schlesinger was fired because he said we are not spending enough money to play the role of interventionalist in the world. I do not believe we ought to be playing that role in the world, but he was fired because he stood up and talked about it; but I am simply pointing out our rhetoric on the floor, which is to represent ourselves as the policemen of the world and the gunrunners of the world, but politically we are not willing to spend enough money to play that role, so we forget to balance it. I think that contradicts our stated policy and it violates the politics I am attempting to advocate as I represent my own district in the well.

On the other hand, whenever it becomes clear that the American people will not make or support the requisite sacrifices, the move is stopped.

Angola is a classic case in point. In either case, Congress becomes the subject of political rhetoric and abuse.

By trying to do too much, we merely deny ourselves the chance to do some things well. By refusing to face up to the real costs of our ambitions, we let our actions be determined by events, not by our will. To believe we can sustain our present goals, given present financial commitments, is to be trapped into a self-defeating illusion. The only way we can resolve this impasse is through explicit congressional decision.

As an example of one important area where a troop reduction could make a needed foreign policy statement is, obviously, in South Korea. The end of the present large-scale military presence would serve to loosen the close U.S. embrace with the present regime under which there has been a drastic increase in repression of political dissent, which I find totally contradictory to our stated principles of freedom of expression and dissent.

Since our troops are there more for political reasons than military necessity, troop withdrawal will give us a breathing space before heavy involvement, instead of the automatic trip wire strategy now in effect.

It should be noted, Mr. Chairman and members of the committee, that if actual end strengths are not reduced and the troops deactivated, there is very little in the way of savings. As I mentioned before, there is a gap of 33,000 troops that have not been deactivated, although they have returned home. Therefore, my amendment calls for an end-strength reduction of 50,000, which includes the proposed 17,000 withdrawal from overseas. The Pentagon has established that it costs between $14,000 and $15,000 per year for each troop we have stationed overseas, excluding transportation costs. To lower end strengths by 50,000 would result in a one-time saving of at least $750 million, and approximately $900 million annually thereafter, since we are not replacing these troops.

In conclusion, Mr. Chairman and members of the committee, I hope the Members will join me in making the choices that will move beyond rhetoric of a bygone era to the shaping of national policy for years to come.

Mr. JOHNSON of Colorado. Mr. Chairman, will the gentleman yield?

Mr. DELLUMS. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Chairman, I want to congratulate the gentleman. I supported him every year on this amendment in trying to withdraw from the mainland of Asia. I think perhaps one day we will finally get this across. I want to join the gentleman once again, although I do not know whether we will succeed this year or not.

Mr. DELLUMS. I thank the gentleman.

Mr. SEIBERLING. Mr. Chairman, in past years, I have frequently taken the floor to argue against procurement of the new B–1 bomber. Over the last year, no new evidence has been presented to alter my view that production of the B–1 is ill-advised at this time.

The United States has a perfectly adequate bomber fleet right now to fulfill its designated role in the TRIAD. The latest B–52's were built only 15 years ago and since then have been and continue to be upgraded with the latest navigation aids, electronic countermeasures, terrain avoidance equipment, structural rework, and numerous other improvements.

Last year, Secretary Rumsfeld, like Secretary Schlesinger before him, said that the B–52G's and H's would be good into the 1990 time frame. On April 15, 1976, Air Force Secretary Reed stated:

> We envision over 300 B–52's remaining in the active inventory for the rest of the century.

And the Brookings Institution, in its exhaustive study "Modernizing the Strategic Bomber Force," concluded:

> There is only a remote possibility that any potential enemy action could threaten the military effectiveness of the B–52 force before that time.

So let us stop talking about the aging B–52 fleet. We have a good strategic bomber fleet and will continue to have one for years—long enough to explore less expensive and more effective alternatives to the B–1.

By producing the B–1 bomber now we would only be prematurely locking ourselves into a technology which, if not obsolete already, may well become so by the time the production run would be concluded. The very same potential developments in Soviet anti-bomber defenses that could threaten the future effectiveness of the B–52 fleet, for example an airborne look-down radar capability, would in all likelihood also threaten the B–1.

As the cost of the B–1 continues to increase to ever higher and higher levels, the case for its procurement becomes more tenuous. Senator CULVER of the Senate Armed Services Committee now estimates that each B–1 will cost $117 million, and that is if the presently planned fleet of 244 planes is produced. If there is a substantial reduction in the size of the fleet, and such an option is apparently being given very serious consideration now at the Pentagon, the per plane cost is going to skyrocket. There has to be some point where our sense of priorities, indeed our commonsense, tells us that we just cannot afford it.

Last year at this stage of the authorization process, I asked the House to delay B–1 funding until after the next President could make a thorough review of the program. In modified form, my proposal was eventually adopted by Congress, limiting funding to a month by month level so that the President would have the opportunity for such a review.

In accordance with the wishes of Congress, President Carter is currently conducting a National Security Council study on the B–1. The President stated recently that the administration's decision on the future of the B–1 program will follow receipt of this study in May.

I commend the President's course of action in this matter, and would do nothing to foreclose his options now.

I feel confident that after a thorough review of our strategic bomber needs, the President will conclude that immediate production of a B–1 bomber fleet would not be in the national interest.

Mr. BENNETT. Mr. Chairman, in view of the tacit agreement that the House would adjourn at 3 o'clock, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ROSTENKOWSKI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5970) to authorize appropriations during the fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense, and to authorize the military training student loads, and for other purposes, had come to no resolution thereon.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Chirdon, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

> H. Con. Res. 198. Concurrent resolution to correct the enrollment of the bill H.R. 4877.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4877) entitled "An act making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes," and, that the Senate agreed to the amendments of the House of Representatives to the amendments of the

Senate numbered 7, 43, 45, 50, 52, 59, 60, 61, 83, 90, 91, 173, and 211 to the above-entitled bill.

And further, that the Senate receded from its amendment numbered 35 to the above-entitled bill.

LEGISLATIVE PROGRAM FOR WEEK OF APRIL 25, 1977

(Mr. RHODES asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. RHODES. Mr. Speaker, I take this time to inquire of the distinguished majority leader as to the program for the balance of the day and for next week.

Mr. WRIGHT. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield.

Mr. WRIGHT. Mr. Speaker, there is no legislative business scheduled for the remainder of this week. On Monday next, the House will meet at noon. There are no District bills, but there are four bills currently scheduled under suspension of the rules. Votes on all these suspensions will be postponed until the end of all suspensions.

The bills are:

H.R. 2210, to name a certain building the "Gerald R. Ford Building";

H.R. 5675, authorization for investment of public moneys;

H.R. 5638, United States-Canadian Fisheries Agreement legislation;

H.R. 6370, International Trade Commission.

On Monday, we also will hope to conclude consideration of the bill H.R. 5970, the Department of Defense authorization for fiscal year 1978.

On Tuesday, the House would meet at noon. There are no bills currently scheduled under suspension, but we would take up House Concurrent Resolution 195, the first budget resolution for fiscal year 1978, subject to a rule being granted.

We would hope to conclude general debate that day, and if we do so, to get into the amending process.

On Wednesday, the House would meet at 3 p.m. and complete consideration of House Concurrent Resolution 195, the budget resolution.

Perhaps we will begin consideration of H.R. 2, Surface Mining Control and Reclamation Act, subject to the granting of a rule.

If it is possible to begin consideration of that bill on Wednesday, we would conduct general debate only and bring it over until 11 a.m. on Thursday, and complete consideration of H.R. 2 on Thursday and the balance of the week.

The House would adjourn by 3 p.m. on Friday and by 5:30 p.m. on all other days except Wednesday until May 15, according to the previous agreement.

Conference reports, of course, may be brought up at any time, and any further program will be announced later.

Mr. RHODES. Could the distinguished majority leader give me the benefit of his opinion as to whether or not H.R. 2, the Surface Mining Control and Reclamation Act, should not be properly referred to the newly established Select Committee on Energy? This is certainly an item which bears on the energy supply of the United States, and it just seems to me that since we do have this committee, rather than bring this matter directly to the floor, the select committee should have some input.

Mr. WRIGHT. If the gentleman will yield further, it is the understanding of the majority leader that this bill has been under consideration for some time in the Interior Committee and that that committee has reported it by a substantial margin to the floor.

It is further the understanding of the majority leader that the President has made one recommendation for change with respect to this legislation and that a committee amendment will be offered when the bill reaches the floor to accommodate that request on the part of the President.

That being the case, it was felt useful to proceed with consideration of this legislation next week.

Mr. RHODES. Mr. Speaker, the distinguished majority leader is correct that this bill has been around a long time, not only several months, but several Congresses, and I just thought it might be appropriate, since it has been here so long, to just let it go over until the Energy Committee had a chance to work on it. I understand the gentleman's problem, however.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. WRIGHT. I yield to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. I thank the gentleman for yielding.

Mr. Speaker, I want to thank the majority leader for informing members of the committee that there will be a committee amendment offered, because this is the first time this gentleman, who is the ranking minority member on the Subcommittee on Energy and the Environment, which reported this bill, has heard of this. We have had no committee meeting. The bill is to be filed. This is another reason why it should be delayed.

Mr. WRIGHT. Mr. Speaker, I might say that it is a pleasure for the majority leader at any time to be able to inform the gentleman from Maryland.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

ADJOURNMENT TO MONDAY, APRIL 25, 1977

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 12 o'clock noon on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

ANNUAL REPORT OF SECRETARY OF THE INTERIOR—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Education and Labor:

To the Congress of the United States:

In accordance with Section 511(a) of the Federal Coal Mine Health and Safety Act of 1969, I hereby transmit to you the Annual Report of the Secretary of the Interior.

Part I of the report details the activities of the Mining Enforcement and Safety Administration. Part II describes the mining research activities of the Bureau of Mines.

The report covers a period of time before I took office.

JIMMY CARTER.

THE WHITE HOUSE, *April 22, 1977.*

1976 ANNUAL PLAN FOR FISCAL YEAR 1978–1982—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Interstate and Foreign Commerce:

To the Congress of the United States:

Pursuant to Title IV, Part A, Section 401A(b) Public Health Service Act, as amended (42 U.S.C. 286e(b)), I hereby transmit the 1976 Annual Plan for FY 1978–1982. This Plan was prepared prior to the beginning of my administration.

JIMMY CARTER.

THE WHITE HOUSE, *April 22, 1977.*

REFORM OF DAVIS-BACON ACT

(Mr. HAGEDORN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HAGEDORN. Mr. Speaker, I have introduced legislation designed to effect substantial reforms in the Davis-Bacon Act, about which I will be speaking more later in the day. I would, however, like to briefly describe a typical example of how the act operates with respect to a small subcontractor on a small project in Minnesota. It is, by no means, an extreme case but simply the kind that is repeated hundreds of times daily throughout the country.

In 1976, the city of Mankato, a city of less than 35,000 in my district, decided to build a regional library with Federal assistance from the Department of Housing and Urban Development. The subcontractor, a plumbing and heating firm from a smaller town near Mankato, paid his tradesmen an average of $10.23 per hour. In the apparent belief that this amount was inadequate, HUD reestablished minimum wage rates for these employees at $10.80 per hour, thereby subsidizing each of them by $.057 per hour at

Federal and local taxpayer expense. Payroll costs were increased by 5 percent.

In addition, the contractor has estimated compliance costs of the act, including the additional bookkeeping required for weekly payroll reports at $3,073, adding an additional 1.5 percent to total costs.

On the whole project, the compliance costs of all contractors and subcontractors totaled more than $17,000. These costs were imposed on the entire project solely because of the fact that the Federal Government contributed $139,000 of a total cost in excess of $1,400,000. Thus, on this project 12 percent of the total Federal contribution was consumed purely by the paperwork and bookkeeping costs that were required by Davis-Bacon.

Thus, as a result of Davis-Bacon, a group of upper middle-class workers were treated to a healthy pay raise, and dozens of Federal employees were undoubtedly kept busy shuffling around thousands of wage forms. At the same time, apart from the increased taxes that had to be levied to pay these costs, Mankato has less money available for new books, less money to pay personnel to keep the library open for longer hours and, generally, less money to do what libraries are supposed to do.

Multiply this single, unspectacular example of the working of Davis-Bacon thousands of times, in the areas of school construction, water resources projects, rural development assistance, military construction, housing and highway programs, and one gets an idea of the costs of this outdated piece of legislation. Undoubtedly, there are similar cases in the districts of each and every Member of Congress. I hope that you will ask yourself whether or not we can continue to afford an act whose sole assurance is that the public will never get the most value for its tax dollar.

THE ROLE OF RESEARCH, DEVELOPMENT AND DEMONSTRATION IN ENERGY POLICY FORMULATION

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 5 minutes.

Mr. BROWN of California. Mr. Speaker, as we embark on our attempt to formulate a comprehensive national energy policy and program, it is important that we recognize the contribution of every approach to solving our energy problems. In the recent past the Congress has recognized the need to change our taxing policy, our regulatory policy, our human assistance policy, and our research, development and demonstration policy to meet our energy needs. The proposal by President Carter for a new Department of Energy, and the energy package released this week recognize the contribution of each of these areas.

The news media, not surprisingly, has focused on the tax regulatory issues. Unfortunately, they have greatly neglected the research, development and demonstration issues which are so very important to our ability to solve our energy problems. President Carter's energy message did devote considerable attention to the research, development and demonstration issues, and his proposed Department of Energy is really an expanded Energy Research and Development Administration.

The factsheet on the proposed Department of Energy shows that of a total budget of $10,611,600,000, $7,485,000,000 comes from ERDA. The bulk of these funds are under the authorizing jurisdiction of the Committee on Science and Technology. In terms of personnel, 9,052 slots come from ERDA, although this figure does not include the more than 100,000 people who work at our national laboratories, which work under contract to ERDA.

Mr. Speaker, I do not believe the Congress has any serious doubts about the need for a strong and vigorous research, development, and demonstration program in developing new energy sources; including energy conservation, and developing environmental and safety control technologies for those energy sources. The Subcommittee on Environment and the Atmosphere of the Science and Technology Committee, of which I am the chairman, has direct responsibility for the environmental and safety research of several agencies, including and especially ERDA and the EPA. In this role, and through my other assignments, I have developed a special awareness of the role of research, development, and demonstration in formulating our national energy policy.

An excellent book on this subject was recently published, entitled "Our Energy Future: The Role of Research, Development, and Demonstration in Reaching a National Consensus on Energy Supply." I would commend this document to all of my colleagues. A very good summary of the findings of this book was recently brought to my attention by the National Conference of State Legislatures in their April 11, 1977, "Energy Report to the States."

At this time, I would like to place in the RECORD this report, and recommend it to my colleagues.

The material follows:

[Energy Report to the States, National Conference of State Legislatures, Monday, Apr. 11, 1977]

THE ROLE OF R, D&D IN ENERGY POLICY FORMULATION

The 1973 OPEC oil embargo generated widespread calls for energy independence and the development of a national energy policy. Three years later, we still have no policy and are even more dependent on foreign sources for petroleum. The Nation is divided not only on the choices which must be made among energy resource alternatives and available technologies, but on issues such as the scope and pace of energy development activities. Thus, energy policy decisions must be made in a manner which tends to accommodate potentially conflicting interest groups.

State legislators and other public officials will ultimately have to balance these competing interests in a manner which best serves the public interest. One potential source of useful and reliable information in these ongoing policy debates—a resource that has not been fully utilized to date—is energy research, development and demonstration (R, D&D).[1]

The study[2] from which this article is drawn says that R,D&D can make a major contribution to the resolution of national energy policy conflicts. Financed by a National Science Foundation grant and undertaken by a group of University of Oklahoma researchers, the study concludes that the production of information useful for energy-related decision making ought to be the "primary purpose" of R,D&D.

At present energy R, D&D is almost totally concerned with serving the information needs of those charged with development responsibilities. This focus fails to respond to the essential needs of any policy in a democratic society: The need to build a broad-based constituency before any major new policy initiative can be taken.

In the absence of a widespread consensus on policy, the American system is so constructed that opposing groups can successfully frustrate energy supply initiatives. The critical national need, then, is to accelerate the process of accommodation. R, D&D can help fulfill this need if it is consciously designed to serve the information requirements of the whole range of potentially conflicting interest groups.

What follows is a summary of the study team's views on R, D&D and energy supply; some procedural and organizational changes that are needed to assure that the resulting R, D&D information will be useful; and an appropriate 5-year R, D&D program.

THE ROLE OF R,D&D

The primary purpose of R,D&D should be to produce information useful for energy-related decision making. This requires that energy R,D&D be designed to answer questions that are far broader than ones limited to technological capabilities.

The principal reason for a broader conception of R,D&D is a change in the past two decades in the way energy supply decisions are made. They now involve as participants a wide range of groups and interests in society: federal, state, and local governments; industry; labor; national and local citizens' groups, and others. Although it is widely recognized that the demand for energy in the United States is outstripping domestic supplies, this enlarged group of participants has been unable to reach a consensus on energy supply policy, in part, because of four types of uncertainty about energy decisions:

(1) Institutional uncertainty: appropriate public/private sector relationships; the historical separation between coal, oil, gas, electricity, and nuclear energy policy.

(2) Performance uncertainty: the efficiency, safety, and economic costs and benefits on new energy technologies.

(3) Demand uncertainty: future demand

[1] The National Conference of State Legislatures in cooperation with the National Science Foundation is engaged in an ongoing project to strengthen the ways in which science and technology can be applied to the needs of state government. The transfer of useful energy R,D&D information from its source to state legislatures, which must deal with technical issues, is very much a part of this project. For more information, contact John Reuss, Director of NCSL's Science & Technology Project, 1305 Curtis Street, Suite 2300, Denver, Colorado 80202. 303/623-6600.

[2] Copies of the study, entitled "Our Energy Future: The Role of Research, Development, and Demonstration in Reaching a National Consensus on Energy Supply," are available from the University of Oklahoma Press, Norman, Okla. 73019 for $5.95.

levels, prices, and international relations.

(4) Impact uncertainty: the impacts of new energy supply technologies on their sites, with a particular concern about negative impacts.

A variety of policy tools are available to reduce these uncertainties: for example, the possibilities include foreign policy initiatives, legislative/regulatory actions, and the commitment of resources for R,D&D activities. Since the oil boycott in 1973, the most consistent response from both the public and private sectors has been the promotion of R,D&D, at least partly because it is politically easier to create new technologies than to induce changes in lifestyles.

Solving the nation's energy problem by R,D&D, however, has turned out to be difficult because the mere demonstration of technical feasibility has not been sufficient to resolve all the kinds of uncertainty listed above. It has not led to the rapid implementation of new energy supply technologies or the rapid development of new source areas, because technical feasibility is not the primary concern of many of the participants in energy decisions.

Consequently, if R,D&D is to serve as an instrument for achieving a broad political consensus regarding U.S. energy supply, it must be redefined as a generator of a broad range of reliable and credible information, not just a producer of new technologies.

Given this broadened use of R,D&D as a policy tool, three interrelated categories of activity need to be reviewed: (a) hardware R&D, which generates information about the performance characteristics of energy supply technologies; (b) non-hardware R&D, which produces information about the relation of the technologies to the social, economic, biological, and physical environments in which they will be used; and (c) demonstrations. Hardware and non-hardware R&D activities coverage at the point of commercial scale demonstrations, which provide integrated hardware and non-hardware information in the most credible and reliable form. But the energy supply R,D&D effort in the United States has neglected the need for non-hardware research, and it has overlooked the importance of commercial-scale demonstrations as a possible focus for political accommodation. Because the four kinds of uncertainty require substantial lead times for resolution; this is a serious mistake.

PROCEDURES FOR EFFECTIVE R,D&D

The effectivenes of an R,D&D program for increasing domestic energy supply capabilities depends not only on what is done, but also on how it is done. Consequently, some procedural and organizational changes are desirable in how R,D&D is conducted, especially in its more advanced stages. The changes relate both to how information is generated and to how it is disseminated.

Unlike the suggested R,D&D activities discussed later on in this article, which are identified without a definition of the best division of effort between the public and private sectors, the procedural recommendations are explicitly focused on the federal government. In part, this recognizes the role of government as a meeting point for different segments of American society as they make demands for assistance, regulation, and direction. It also recognizes the very broad involvement of the federal government in energy R,D&D at the present time. And it reflects the conclusion of the research team that procedures under the jurisdiction of the federal government have turned out to be constraints on energy supply rather than solutions.

Generating Reliable and Credible Information. Reducing uncertainty about a variety of energy supply options is central to finding a social and political accommodation that will allow domestic energy supplies to be boosted. And the key to such a reduction of uncertainty is the generation and diffusion of reliable and credible information.

Several procedural modifications would be useful. Information should be gathered earlier, involving more of the interested parties at a time when the mood is more exploratory. For commercial utilization decisions, information can be based on facilities whose characteristics can be observed by all parties at commercial scale—verified side by side by the entire range of participants. And comprehensive information can be provided freely and easily to all interested parties from a central location. Initially, the effect of these changes may be to slow the energy supply decision making process, but it will significantly speed decisions once the reliable and credible information is available.

More specifically, the following policies are recommended:

(1) For every step in the development phase of an R,D&D program there should be a parallel technology assessment by a group without a vested institutional interest. This requires two institutional initiatives:

(a) An independent agency for supporting non-hardware R,D&D should be established (analogous to NSF) to fund and monitor technology assessments for energy technologies in the development phase of the R,D&D spectrum. The agency would identify needs for assessments, select and fund groups to do the studies, and assure that each assessment involves representatives of the entire range of interested parties as consultants and reviewers.

(b) Institutions should be created that have the capability of conducting credible non-hardware R,D&D. The institutional-support for these organizations should involve an assured floor level of support on a continuing basis from the previously recommended independent non-hardware R,D&D agency.

(2) As a general rule, every new energy technology or new technology application should be demonstrated at commercial scale before a decision is made on commercial utilization. Such a demonstration would include a series of related procedures:

(a) Broadly-conceived baseline studies (including social data) should be initiated for each demonstration facility at the time possible sites are first identified. All interested parties should be consulted about the phenomena and processes to be included, in order to reduce the likelihood of overlooking important impact categories or interpretations.

(b) The requirement for a preconstruction environmental impact statement should be suspended for energy demonstration facilities, because of the importance of obtaining information from the following step.

(c) A comprehensive post-demonstration assessment should be prepared for each commercial-scale energy demonstration facility. Conducted under the auspices of the independent agency proposed above, and assuming the full participation of all interested parties, this assessment should serve as the basis for decision on commercial utilization of the technology.

(d) The decision to undertake commercial utilization of a technology should not be made until the post-demonstration assessment has been prepared and studied. A negative assessment of the demonstration facility should result both in shutting down the facility and blocking commercial development.

(3) In order to assure full and effective participation, a program should be established to provide financial support for the development of technically competent staffs for interest groups concerned with the technology assessments and demonstrations.

(4) Every effort should be made to increase the openness of mission agency non-hardware RD&D. Because the credibility of non-hardware information depends on broad-based participation in the process of generating and evaluating it, this work should be characterized by unrestrained access and widespread consultation with diverse interests.

Disseminating Reliable and Credible Information: Once reliable and credible information is generated, it should be made readily accessible to the public, so that alternatives can be characterized and compared by any interested party. At present, the available data are plagued by overlaps and gaps; many kinds of data are fugitive, in the sense that they are accessible only to parties who are familiar with informal channels of information and the information system is unresponsive to parties who lack access to a technical staff.

Three types of information would benefit from an improved federal dissemination system: resource/reserve data for all energy sources, hardware performance data for all energy technologies, and siting prospects for all proposed commercial-scale demonstrations and proposed commercial energy facilities.

Consequently, a national energy data center should be established as a central repository for these kinds of information. Such a center should be user-oriented, highly professional, and have as its sole function the collection, analysis, and dissemination of energy data. Three purposes should be defined for the center.

(1) to develop a data presentation format which facilitates comparison among alternatives and is usable by the layman;

(2) to facilitate access to energy data for all participants in energy decision making and to use this participatory process as a means of data verification; and

(3) to provide data analyses that serve a full range of parties at interest.

A PRIORITY R,D&D PROGRAM

A suggested five-year R,D&D agenda for energy supply that emphasizes high priority tasks would cost between $18–19 billion. (A more ambitious program would cost about $28 billion).

Starting with the point of view that R,D&D can contribute to political accommodations and ought to be structured to do this, it is possible to identify domestic alternatives for supplying energy, to characterize the major constraints that limit the production of energy from each alternative, and to suggest R,D&D programs that can help to resolve the constraints.

In determining specific R,D&D items for inclusion in a five-year program "high priority" indicates that the activity provides information that is potentially so critical to resolving energy supply constraints that R,D&D must proceed as rapidly as possible, with full funding. "Middle priority" means that the item is of importance to resolving constraints but, if funding is limited, it could proceed more slowly than would be the case with unrestricted funding. "Low priority" refers to a program that would contribute to resolving constraints but, given limited funding, it need not be funded in the next five years.

General Priorities: In establishing priorities, some basic facts about the U.S. energy picture should be recognized.

(1) There is no persuasive evidence to support optimism about domestic energy supply to the year 2000. Most forecasts of supply, such as those in FEA's National Energy Over-

look, are unrealistically optimistic because they fail to recognize the importance of nontechnological constraints.

(2) Any energy demand projection is highly uncertain. R,D&D strategies should be designed to work within this inherent uncertainty rather than being planned to meet a specified demand at some point in the future.

These conditions call for an emphasis in energy supply R,D&D on: multiple options, the short-term time frame, and non-hardware R&D. Developing and maintaining multiple resource and fuel options is a direct response to pervasive uncertainty; when the future is unpredictable, it is sensible to keep many possible options open. Emphasizing items with potential short-term payoff is desirable because short-term domestic energy supply prospects are troubling. answers to questions about resource availability are important for future decisions, and the resolution of many social constraints to short-term options will also contribute to energy supply in later time frames. R,D&D aimed at reducing institutional, demand, and impact uncertainty has a high priority because the primary short-term constraints are of these types—and because it makes a direct contribution to addressing the concerns of many of the new participants in energy decision making.

Coal as a Solid Fuel: The primary R,D&D emphasis in the solid fuel area should be the resolution of uncertainties about the availability and environmental acceptability of coal. In particular, it is essential to test available technologies for the precombustion clean-up of coal, and it is essential to reduce uncertainties about the impacts of large-scale surface mining.

The two largest high-priority items are an assessment of the enviromental/health effects of using fossil fuels and commercial-scale demonstrations of available precombustion coal clean-up processes. Other important items concentrate on other approaches to clean coal combustion, coal mining, information about coal resources, and institutional questions.

Nuclear Power: As part of an effort to assure multiple options for electricity generation, the highest priorities should be given to (a) resolving systemic constraints on an expansion of the use of nuclear power (waste disposal and safeguards) and (b) clarifying current constraints on light-water reactor (LWR) deployment (uranium resource limitations, reactor safety questions, and fuel cycle needs). Another emphasis should be on the continued development of multiple nuclear options, including the high temperature gas-cooled reactor (HTGR), because of the uncertainties surrounding any one alternative.

Oil: Oil R,D&D should be focused on additional crude supplies in the near-term from new sources: the outer continental shelf, Alaska, and enhanced recovery techniques. Other needs have to do with research on incentives and regulatory schemes. It is important to stress that this offers the only possibility of significant increases in the domestic supplies of liquid fuel in the short term.

Natural Gas: For natural gas, the picture is similar to that for crude oil. The R,D&D should emphasize new sources: offshore, Alaska, and techniques for recovery from tight formations. Other items deal with resources and reserve estimation and institutional questions. This effort is the only possibility for increasing domestic supplies of gas fuel in the short term.

Synthetic Fuels: The primary R,D&D emphasis for synthetic fuels should be on demonstrating at a commercial scale available technologies for producing synthetic liquid and gas fuels: the above-ground retorting of oil shale (the only method for producing synthetic crude oil that is now technically feasible) and Lurgi-type coal gasification with a methanation step (the only method for producing synthetic natural gas that is now technically feasible). Other high-priority items are relatively inexpensive assessments that offer the possibility of a relatively large payoff.

Other technological alternatives for synthetic fuel production are assigned a middle priority because they are unlikely to contribute to energy supply in the short-term, regardless of their funding level.

Solar Energy: Most of the solar energy R,D&D items are high-priority, including all solar heating and cooling, solar thermal electricity, and windpower activities. In addition, there is a critical need for institution-building and technology assessment activities in the field of solar energy. Recommended budget levels are limited not by a lack of need but by the lack of an established organizational research base of sufficient size to use large amounts of money effectively.

Nuclear Fusion: Under a restricted budget, it is recommended that the commitment on the fusion R,D&D program to the tokamak concept be delayed until a comprehensive evaluation of the direction of the program is conducted.

Other Alternatives: Recommendations for other R,D&D activities include (a) the continued attention to multiple options, even if their contribution to the nation's energy supply picture is likely to be relatively small (geothermal and organic options), and (b) the systemwide R,D&D activities for electricity—items that will be of value whether electricity is generated from coal, nuclear energy, or some other energy source.

THE DAVIS-BACON ACT—ANACHRONISTIC LEGISLATION

The SPEAKER. Under a previous order of the House, the gentleman from Minnesota (Mr. HAGEDORN) is recognized for 30 minutes.

Mr. HAGEDORN. Mr. Speaker, while there are great differences among Members on the proper role of Government and on which public programs ought to be funded and to what extent, there is general agreement that, through the elimination of wasteful and unnecessary expenditures, the Government ought to make sure that it gets the most value for its money. Whether or not one favors the development of a B-1 or the construction of a new public housing project, one normally wants to get the job done for the lowest cost.

The Davis-Bacon Act makes this objective impossible. It is a perfect example of anachronistic legislation which has remained unchanged on the statute books long after the problems toward which it was directed have not only ceased to be problems, but long after it has begun generating its own problems.

The act was enacted in 1931 for the purpose of protecting local wage rates on Federal construction from the competition of lower wage, nonlocal labor, the first Federal law regulating the wages of non-Federal employees. It was alleged by supporters of the act that successful bidders were in the habit of importing substantially lower paid laborers from one region of the country for work in another region. To remedy this situation, the Davis-Bacon Act required that, on all Federal construction projects in excess of $2,000, contractors and subcontractors would be required to pay their employees the wage rate that was determined by the Secretary of Labor to be prevailing in the city, town, village, or other civil subdivision of the State, in which the work is to be performed.

In effect, the result was to transform a prevailing, or average wage for an area into a minimum—or superminimum—wage rate for the purpose of Federal construction. By virtue of Davis-Bacon, the Federal Government was assured of having to pay more than the private sector for comparable construction. As a result of the fact that, on at least 80 occasions, Congress has chosen to make the provisions of Davis-Bacon applicable to federally assisted construction as well, including work done with revenue sharing funds, State and local governments have increasingly been treated to this same assurance.

By effectively prohibiting all wage competition, Davis-Bacon results in the grossly wasteful misallocation of scarce public resources. The General Accounting Office estimated in 1971 that the act typically results in increased public construction costs of 5 to 15 percent, translating into approximately $1 to $3 billion annually. A 1975 study published by the Wharton School of Business reached similar conclusions. Even these figures, however, underestimate the true cost of the act in a number of ways.

These figures reflect costs attributable to inaccurate prevailing wage determinations by the Department of Labor and do not attempt to estimate further savings that might be effected by modifying the prevailing wage concept itself. Nor do they reflect administrative costs incurred by the Labor Department and numerous other Federal agencies in administering the act, the compliance costs incurred by covered contractors and subcontractors—who must file millions of wage certification statements each year—nor the impact of Davis-Bacon upon construction costs in the private sector. It is unrealistic to suppose that wage rates on the 30 percent of total national construction that is covered by Davis-Bacon does not affect rates on the 70 percent that is not, especially among contractors who do a high percentage of public construction work. One noted economist has suggested that construction unions have become increasingly intransigent in insisting upon large increases in negotiated rates at least partly because of the propensity of the Labor Department to equate union rates with prevailing rates.

The costs of Davis-Bacon are felt in a wide variety of public programs. They are strongly felt in public employment and job-creating programs which are able to put fewer unemployed persons to work. A study at the State University of New York at Buffalo concluded that Davis-Bacon was an extremely important factor in limiting the job-creation aspects of public works legislation. Arthur Burns, Chairman of the Federal Reserve Board, has argued that Davis-Bacon effectively hinders the number of hard-core unemployed persons who can be absorbed on Government projects due to the high wages that would have to be paid them.

Another study by Dr. Armand Thieblot of the University of Maryland has ana-

lyzed the costs of school construction in those States which had their own versions of "Little Davis-Bacon" laws and those which did not and concluded that the prevailing wage concept increased school construction costs by at least $240 million annually.

It has also been estimated that Davis-Bacon has added, cumulatively, at least $3 billion to the costs of the Federal highway program. Earlier this month, Virginia Governor Mills Godwin complained that rates set by the Department of Labor on work on Interstate 66 in his State were as much as 125 percent higher than rates which had been previously established. Kansas Governor Robert Bennett recently estimated that Davis-Bacon will add 38 percent to the total cost of highway construction in his State over the next 5 years.

Davis-Bacon also drives up the costs of water resources projects, establishes needlessly high military construction costs, and insures that HUD interest subsidies are often entirely consumed by exorbitant wages rates. Prof. Yale Brozen of the University of Chicago has stated that—

> Federal subsidies for housing are largely consumed in paying higher rates to construction workers. As a consequence, little benefit emerges for the families who are presumably to be assisted.

At a time when Federal, State, and local budgets are being squeezed from every direction, Davis-Bacon serves to frustrate public objectives and add needlessly to the costs of hundreds of public programs.

As questionable is the basic concept of the prevailing wage, even more objectionable is the administration of the Davis-Bacon Act by the Department of Labor. Considerable discretion to administer the act has been left with them, as a result of the original act's failure to spell out precisely procedures for determining prevailing wages. They define the geographical area in question, how projects are to be classified, how workers jobs are to be classified, within what time period to look for similar projects upon which to justify a prevailing wage, what projects are of a similar character, as well as a number of other factors important in computing the final project wage rates.

The initial shortcomings of the Davis-Bacon Act have been seriously compounded by the frequently inaccurate wage determinations of the Department of Labor. While in 99 out of 100 cases, the errors are on the high side, the basic inability of the Department to accurately assess area wage rates is called into question by each of these cases. While the Department is expected to obtain wage rate information from a number of sources, a study by the American Enterprise Institute concluded that—

> In practice, it appears that an overwhelming proportion of wage determinations carry union wage rates regardless of area or type of construction. . . . The bias in favor of union wage rates is also likely to be a consequence of the very large number of determinations that have to be made each year and resulting pressure for expedience in making determinations.

Another factor contributing to this is the Department's own unreviewable regulations which authorize the use of a 30-percent rule in computing prevailing wage rates. The rule states that any single wage rate which is paid, to the penny, to at least 30 percent of the work force in an area may be used as the prevailing wage. The effect is to enable the Department to avoid long, drawn-out wage surveys and simply use collectively bargained rates as the prevailing wage rates in areas which are at least 30 percent organized. The wage rates of the remaining 70 percent of the area workers is then completely ignored.

The impact of wage determinations is especially marked when union wage rates from large urban areas are imported to rural areas by the Department, ostensibly because no other data is available. After such rates have been posted for a project, urban firms, who customarily pay these rates, are often the sole bidders, with local firms incapable of bidding competitively. The result is the exact problem that Davis-Bacon was originally designed to combat: The use of atypical area wage rates on Federal construction projects. Instead of lower rates being imported to higher rate areas, the exact opposite result has occurred. It is not unusual for the Department of Labor to look to urban areas more than 100 miles away in order to justify prevailing wages for small rural projects. GAO studies have confirmed that a large percentage of wage determinations made by the Department import union rates into noncontiguous counties. Union contractors commonly obtain Government construction contracts in nonunion localities, excluding in the process local workers and local contractors from the jobs.

I have introduced legislation which would affect substantial reforms in the operation and administration of the Davis-Bacon Act. Economists, and other observers, representing all spectrums of opinion have recognized the shortcomings of the Davis-Bacon Act and urged major changes. In a letter to former President Ford, Walter Heller, chairman of the Council of Economic Advisers under President Johnson stated that—

> A government that is dead serious about fighting inflation ought also, at long last, under your leadership, put an end to the laws, regulations and practices that make government an accomplice in many cost and price-propping actions, running from over-regulation of transportation rates and under-enforcement of antitrust laws to fair trade laws and the Davis-Bacon Act. . . . Such actions will step on the toes of articulate, well-heeled pressure groups, but now is the time, under your leadership, to take those political risks.

Major reforms in the act have also been urged by economists as diverse as Hendrik Houtthaker, Paul McCracken, and Milton Friedman, by the General Accounting Office, the Council on Wage and Price Stability, and—in an interim report—by the Joint Economic Committee. The National Association of Minority Contractors, noting the act's reinforcement of discriminatory apprenticeship practices, has recommended suspension of the Davis-Bacon Act.

During the last session of Congress, we overturned the blatantly anticompetitive fair trade laws, once considered, like Davis-Bacon to be untouchable legislation. I believe that we now ought to consider long-overdue reforms of Davis-Bacon. Our country is no longer experiencing a depression, itinerant contractors are no longer a prevalent phenomenon, and building trades unions are no longer in need of the massive subsidies or protections accorded them by Davis-Bacon. During the recent debate on common situs picketing, these unions carried the banner of equal rights. That is exactly what my reform of Davis-Bacon would achieve.

The following is a brief summary of the changes in Davis-Bacon which would be called for by my bill. While leaving intact basic minimum protections for all workers on Federal construction sites, it would, I believe, introduce important elements of wage competition and wage flexibility, benefiting, in one fell swoop, both the tax payers and the tax users of the country. I would very much welcome the cosponsorship of interested Members.

FEDERAL CONSTRUCTION COSTS REDUCTION ACT

PROJECT COVERAGE

The Act would increase the threshold level for Federal and Federally-assisted construction to be covered by Davis-Bacon from $2000 to $40,000 to eliminate nuisance coverage, and to reflect the inflation of the past forty-five years. The threshold limit would be "indexed" on an annual basis to reflect further cost-of-living changes.

PREVAILING WAGES

A "super-minimum" wage would be retained for all employees on public construction projects based upon the "prevailing" or average wage for unskilled laborers. Skilled tradesmen would be removed from further "prevailing wage" coverage, although market conditions and collective bargaining agreements would ensure that their wages would continue to be established in rough proportions to those of unskilled laborers. While the cost to the government of construction would still be slightly above comparable private costs, because of the use of an average wage as a minimum, the difference would be much less than under current law because only unskilled wage rates would be rigidly set in this manner.

GEOGRAPHIC AREA

The Department of Labor would be limited in its discretion as to what geographic areas it could look to in order to determine "prevailing area wages". It would not, for example, be able to base wage rates for a project in a rural community upon wage rates for a similar project in a large urban community 100 miles away.

SUFFICIENCY OF DATA

In order to justify a prevailing wage determination, the Department of Labor would be required to find a minimum of three similar projects in the contract area. It would be limited in its discretion to go back indefinitely in time in order to find earlier construction work upon which to base a prevailing wage. Under the Act, it would be permitted to go back no further than two years and, upon finding comparable projects within that period, would be required to consider all such projects, not simply the highest paying ones.

PROJECTS OF A SIMILAR CHARACTER

One of the most controversial aspects of the Department of Labor's administration of Davis-Bacon is their practice of basing prevailing wage determinations upon projects varying substantially from the contract work. The Act would expressly require the Secretary to consider a number of factors prior to making these decisions, e.g. similar-

ity of engineering, architectural, and construction operations, etc. This would help eliminate Labor Department actions, as have occurred on I-66 construction in Virginia, where equipment operators grading roadways are paid $6.50/hour, while equipment operators performing the same work in the median are classified differently and paid $11.45/hour.

APPRENTICES AND HELPERS

Apprentices, helpers, and trainees would be exempt from Davis-Bacon, and the Department of Labor would be prohibited from promulgating rules or regulations interfering with the apprentice, helper, or trainee practices of contractors and subcontractors, provided that such practices were of the sort customarily followed on non-Davis-Bacon work.

WAGE DETERMINATION DEADLINES

Wherever possible, final wage determinations would be required by the Department of Labor no later than 60 days prior to the opening of invitations for bids. This would provide opportunity for bidders to assess fully their possible participation, and time for interested parties to challenge improper determinations.

ADMINISTRATIVE REQUIREMENTS

In the absence of evidence of violations of Davis-Bacon, the Department of Labor could require nothing more from contractors and subcontractors than weekly affidavits of compliance signifying that proper wage rates were being posted for all employees and in fact being paid. This would eliminate most of the immense paperwork burdens now imposed upon these parties, and, likely, enable the Labor Department to more effectively monitor public construction work. Where evidence of violations existed, the Department could require the submission of whatever information it considered necessary.

FEDERAL CONSTRUCTION APPEALS BOARD

For the first time, a wage appeals board would be provided for in the Davis-Bacon Act. Three members would be appointed by the President for six-year terms subject to Senate confirmation. Any interested persons (defined to include contractors likely to bid on a project, labor organizations whose members are likely to be employed on a project, and communities likely to be impacted by costs of a project) would be able to appeal wage rate determinations, or other Labor Department rules or regulations likely to have a substantial impact upon future wage rate determinations. Expeditious consideration would be required to be given all appeals, with judicial review available.

EFFECTIVE DATE

The Act would take effect 90 days after enactment and would not affect existing bids or contracts.

THE NEED FOR ALTERNATIVES TO THE TELLICO PROJECT

The SPEAKER. Under a previous order of the House, the gentleman from Tennessee (Mr. DUNCAN) is recognized for 15 minutes.

Mr. DUNCAN of Tennessee. Mr. Speaker, I think it is well known that I am an advocate for completion of the Tellico project in Tennessee. The vast majority of the people in my district have also indicated, by and through private polls, my legislative questionnaires, and other means of conveying opinion, that they also want the project completed.

There are however a dedicated number of people who seriously believe that the project should not be completed. It is my opinion that everyone should be allowed to have his views known. I am therefore including with my remarks—an essay, "The Need for Alternatives to the Tellico Project." This essay was sent to me by my constituent, Mr. James Lyle of Knoxville, Tenn.:

THE NEED FOR ALTERNATIVES TO THE TELLICO PROJECT

(By James Lyle)

Although Congressman Duncan has stated that the majority of people in the area affected by the dam would like to see it completed, there certainly exists strong opposition to it; the majority of speakers at all three of his legislative hearings concerning the project have opposed it. It's also questionable whether those supporting the project have taken a good look at its alternatives.

The most frequently stated reason for completing the Tellico Dam is that so much money has been spent on it, and that the electricity it would produce is badly needed. Yet out of the $116 million needed for the project, only $25-30 million was actually spent for the dam and lake. Another $15 million has not been spent yet. The rest was spent to buy the land and build roads and bridges, which could be used for agricultural development. Intensive agriculture on the bottomland in the Little T valley would generate $130 million in revenue in 8 years at the 1975 prices. TVA claims that industrial development would bring $10-15 million into the area each year, yet agriculture would bring in at least $28-30 million each year.

Although the lake could be used for industrial development, none is planned at the present. The area would probably remain unused like many other similar areas nearby, due to a nation-wide decline of industrial development of this sort. Yet agriculture would produce 300-350 jobs each year. The people living in this area would be better served by guaranteed employment, rather than a pie-in-the-sky indefinite possibility. As for electricity, the dam would only supply one-tenth of 1% of TVA's power needs, and in 10 years, TVA estimates there will be a surplus of electricity in the areas they serve. Yet if we lose these 25,000 acres of rich farmland, we may create a food shortage by not planning ahead for more important future needs.

Of equal importance is the historic and recreational value of this area. TVA claims the recreational value of the Tellico reservoir to be $1.44 million each year. The Tennessee Wildlife Resources Agency estimates that use of the Little T for a trout river would exceed its use for a dammed reservoir by $44 million each year—and that's just from leaving this area the way it is! Although there are 22 lakes within a 50 mile radius of the Tellico Project, the Little T is the last big, clean river in the state, and the finest trout stream in the southeastern United States. Approximately 80% of the fish stocked are taken, compared to 15% in a lake. The trout fishery is far more attractive to the fisherman-tourist than a lake fishery, which already exists in abundance.

The river area has fantastic potential as a co-ordinated multi-purpose development area, combining recreation, agriculture, historical preservation, and a scientific study in a co-ordinated manner. It could be used for an extremely broad spectrum of recreational activities, while another lake would only dudplicate the surplus of existing areas, without having these benefits.

The reason the Little T is so clean and pure is that its watershed comes from the adjacent Cherokee National Forest and the Great Smoky Mountains National Park, which already attracts more visitors than any other national parks. Together those areas complement each other both in ecological inter-relatedness and tourist attractiveness. This protected watershed affords a unique and scenic free-flowing river, an extremely productive cold water trout stream, and one of the very few remaining areas of its kind. Since the Smokies are so overcrowded, visitors could be diverted to the Little T area where they could enjoy recreational benefits which the more mountainous National Park can't provide. It's frightening to think what increased visitor use of the Smokies will do to the ecology of the area in the years to come. This would implement a visitor dispersal plan which is already recommended by Park officials to preserve the integrity of the Park. Thus ecological and economical needs would be served by the Great Smoky Mountains' steady flow of pure clean water and increased tourism into the Little T River area. The Little T controversy effects both the residents of that area and the rest of the nation, in view of its potential for absorbing increasing tourism demands. It could make the difference between tourism hurting, or tourism helping, this part of Tennessee.

It is also important to consider the wealth of archeological remains in the Little T valley. This area was the cradle of the Cherokee nation, which existed as an advanced civilization all over the southeast United States long before the white man inhabited this area. The old Cherokee center of government—the capital town of Chota, and over a hundred other sites which have not been fully studied, might well be the most outstanding archeological heritage in Tennessee. The preservation and perhaps the reconstruction of these and other Anglo-American sites, combined with continued exploration and excavation which may lead to new discoveries, would promote an understanding and knowledge of this important but relatively unknown culture, and would create attractions for tourists.

In a 1964 meeting with the local residents of the Little T Valley, TVA board member Aubrey Wagner stated that if the majority of the people did not want the project, TVA would not built it. Not one person spoke in favor of the project or dam, but in 1966 the money was appropriated for the project, TVA bought over twice as much land as they needed for the reservoir, so that they would profit from industrial and residential development. This land not needed for the reservoir itself should have been left with the people who owned it—and this represents a dangerous trend, when a government agency can take away people's land in such a manner. Many land owners did not want to sell, because they knew the land would soon be worth far more than what they were paid, and such is now the case. Many took a loss from the land purchases, and were unable to find similar farms for what they were paid.

At that same meeting, Aubrey Wagner also stated that the electrical generation, flood control and recreational benefits of the project would be "relatively insignificant." As a matter of fact, at 7 percent annual interest, the money spent for the project would buy twice as much electricity from TVA's competitors as will be actually produced by the Tellico Dam. In regard to flood control, TVA claims that "given an average flood, the Tellico Dam would reduce the flood crest at Chattanooga by some 7 inches," and tried to blame environmentalists who opposed dams for the 1973 flood damage to Chattanooga. Yet the year before TVA recommended that Chattanooga relax its flood plain zoning ordinance to allow 2,600 additional acres for development—much of which was damaged. This relaxation lowered the elevation at which building was permitted by 21 feet. Seven inches is less than 3 percent of the difference between the 1961 Chattanooga flood plain ordinance and the current shore-

line development regulation. The Tellico Dam would have only a miniscule effect on the problem of flooding in Chattanooga, and the sum total of TVA's recent actions appear to have worsened, rather than alleviated the problem.

There is a serious question in regards to TVA's adherance to the law of the land—that is, the Endangered Species Act of 1973. Sixty-five million dollars was spent on the project after the Endangered Species Act was passed and the Snail Darter's existence established. The money spent on the dam is TVA's main reason for closing it, but the tax-payers' money should never have been spent in the first place, while this controversy was unresolved. It is being used to pressure the courts and the government to change the law to suit TVA. The money of the people should not be used to finance the buying and selling of our nation's laws. Furthermore, TVA ignored the July 27, 1976 temporary injunction issued by the Sixth Circuit Court of Appeals to halt construction on the dam. After the Snail Darter was placed on the Federal Endangered Species list, TVA began a 24-hour-day construction schedule, and bulldozed Coytee Springs, the site where 80% of the Snail Darters were captured and where the majority of the species spawn. It is obvious that the agency's concern was to complete their project regardless of any laws which might make it illegal.

This kind of blind progress is responsible for so many of our problems today. In a few short years, decisions have been based upon maintaining the political power and economic profit of a few, instead of the health and well-being of the people and their world as a whole. This trend must be reversed if our world is to continue to support us, and if our lives are to continue to be meaningful. An endangered species, an irreplaceable river, and beauty itself must be preserved and protected from blind progress and violations of the law. Because the Tellico Project is both an environmental and economical mistake, as the facts bear out, it demands a just and firm "No" to its completion.

HIGHER TAXES DO NOT INCREASE THE SUPPLY OF ENERGY: WHY SHOULD THE PEOPLE HAVE TO SUFFER FOR THE MISTAKES OF GOVERNMENT?

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 15 minutes.

Mr. KEMP. Mr. Speaker, earlier this week President Carter addressed the Nation on energy goals for 1985. Later in the week, he addressed a joint session of Congress in greater detail.

The President is to be applauded for moving quickly on this energy issue, making it one of the first tasks of his administration. It is a problem of major proportions for modern, technological societies, for everything will grind to a halt without fuel.

It is not the existence of a long-term energy shortage that is at question here. Unless the world develops new energy sources, it has to be taken as a given fact that we will not long have enough energy resources to meet energy demands.

But just because we recognize the existence of a malady, we do not have to accept a specific remedy offered—by President Carter or anyone else.

There are few issues in which I have been more deeply concerned and involved over the past 7 years than energy, and I frankly believe the specific remedies put forth by the President in his messages are counterproductive.

The President said in the opening paragraphs of his remarks to us that the problem could be solved only through the Federal Government. That is as wrong as wrong can be. To solve this problem we will need the combined, cooperative, and understanding efforts of both the public and the private sectors.

His energy proposals will cost this country higher taxes, reduced supplies and jobs. That runs directly counter to any economic recovery program.

His proposals will fuel inflation, causing substantial cost rises for the average American family. That also runs counter to economic recovery.

His proposals concentrate almost exclusively on reducing demand. They do almost nothing to increase supply. In an economic scheme of things, there are two factors in an equation: supply and demand. He has concentrated on reducing demand—which penalizes the American people—when he should have concentrated on increasing supply.

The President has asked the American people to sacrifice, to assume the hardship of resolving this crisis, when the American people have not done one thing wrong for which to be penalized. And let there be no mistake about it, the American people would be penalized by the proposals he has set forth.

The American people are being asked to take it on the chin for what Government policies have done in the energy picture. It is those Government policies which are the greatest causes of the energy shortage we face.

It was the Government that created the natural gas shortage.

It was Government that encouraged American oil companies to develop foreign oil, a policy that led to our present dependence on that foreign oil.

It was Government that held up the construction of powerplant after powerplant across the country.

It was Government that told the utility companies to switch from coal to natural gas and oil because coal was dirty, and then turned around after they had made those switches and told those same companies to go back to coal.

It was Government's usurpation of the private sector's research and development of new energy sources which has led to a virtual halt in new initiatives.

And who has paid the bill for all these mistakes? The average American consumer, the American worker trying to make a living and trying to get ahead. They have had to pay more for natural gas, more for oil and gasoline, more for commodity made with or by these energy sources.

President Carter cannot be held responsible for these past mistakes. He was not part of the Government during the years in which these mistakes were made. But he will be held accountable for the policies set in motion during his term in office. He still has an opportunity to set a new course, one which would take those prior experiences as sound lessons on what not to do.

In reporting on the President's decision to back away from his $50 tax rebate plan, several Washington columnists with contacts inside the White House have indicated the President never really favored the plan anyway, that he had let himself be talked into it by the so-called economic experts, and that when he returned to his own, original gut reactions about the proposal, he abandoned it. I hope he is inclined to do the same here.

WHY THERE IS AN ENERGY SHORTAGE TODAY

I intend to offer some comments on the specific components of the President's messages in a moment. But I think it is important to understand more fully how we got into this mess.

I wish to discuss natural gas, oil, and electrical power in that context and in that order.

The Natural Gas Act was passed by Congress in 1938. The gas pipeline companies were regulated under that act, the commerce clause of the Constitution being the legal justification for control. After the Second World War, the issue evolved that the Government could not effectively regulate the natural gas in the pipelines unless it regulated the producers of that gas. The debate over this issue continued for a period of about 6 years.

In June of 1954, the Supreme Court of the United States interpreted the Natural Gas Act to apply to the gathering of natural gas for sale or resale. The dissent to that decision was by Mr. Justice Douglas. The ramifications of that landmark decision were apparent. Congress moved to override the decision, but President Eisenhower vetoed the measure. That is where we have been for the past 20 years.

The Federal Power Commission administered the natural gas program in conformity with the law and the Supreme Court decision. The agency held the regulated price of natural gas below the true market costs—below what it would have been had it been left to market forces operating between producers, distributors, and consumers.

Two very undesirable consequences arose from this.

First, because the regulated price was below what the market price would have been, the policy artificially stimulated demand. It gave natural gas a preference, in the fuel pricing scheme, over other energy resources in almost every area of the country. That, in turn, depleted our country's natural gas supplies much more rapidly than would have otherwise been the case.

Second, because the regulated price was so low in relation to real costs, natural gas companies had inadequate returns on investment with which to carry out substantial exploration and recovery of new natural gas supplies. That worsened the shortage.

That is why we have a natural gas shortage today, and in the face of the worst shortages of natural gas in our history, Congress has still refused to act.

What about oil and gas?

Oil and gas are another example of misdirected Government policies having created shortages. And in this instance,

substantial dependence on foreign supplies.

In the early 1960's, Congress passed into law a foreign investment tax credit which created a preference for investment in foreign countries, instead of our own. The rationale for this was an altruistic notion on the part of the internationalists in our Government that we should use American capital and know-how to develop energy for the underdeveloped and developing countries. Tax policy has always steered private investment policy, and that was certainly true here. To put it in laymen's terms, as a result of this law, U.S. oil companies got more for their dollar by putting it into the ground in foreign countries, than by putting it into the ground here. Exploration and recovery of oil in foreign lands zoomed, while exploration and recovery of new sources here at home just moseyed along. Each year that went by, we imported a greater share of our total oil consumption, all as a result of Government policy.

Then the Yom Kippur war flared up in the Middle East in October 1973. The Arab countries embargoed oil shipments to the United States, and the waiting lines at gasoline stations in this country grew to miles in length.

Did Congress adopt policies to lessen dependence on Arab oil? Did Congress create new incentives to explore and recover here in the United States? No, in both instances. As a matter of fact, Congress repealed the depletion allowance which was the oil industry's only immediate hope of stepping up domestic production. And, of course you have to keep in mind that Congress also delayed for nearly 7 years the construction of the pipeline to bring the crucially needed supplies of oil down from the North Slope in Alaska.

Again, it was the American consumer who bore the brunt. It was the consumer that had to wait in line for hours and hours. It was the consumer who saw the price of gasoline at the pump go up over 100 percent and then start toward 200 percent. And the same for his home heating oil, his crankcase oil. And, of course, he saw it in the increase in prices of goods made from oil and its byproducts—from house paint to cattle feed—and delivered by gas and oil power vehicles—especially trucks.

What about electric power?

It is nearly the same case.

This country would not be short of electrical power today if it were not for Government policies. Powerplant production in the United States was held up by extreme environment considerations. The point of the criticism here is not that we have given too much weight to environmental considerations, but rather the inordinate amount of bureaucratic redtape in reaching final decisions on the environmental factors. Decisions which could have been made just as wisely in a year have taken 3, 4, or more years.

Out of concern for the environment, Government policy directed the electric utility companies to stop using coal and convert over to natural gas and oil. That was a questionable decision to start with, because while we have almost unlimited coal resources—at least enough for 400 years—we have very limited natural gas and oil supplies. Thus, Government was telling these companies to use precious supplies of natural gas in order to generate another type of power—electricity. So all the powerplants converted—at great expense. Then Government reversed itself, deciding natural gas and oil were too scarce, and told the companies to convert back to coal—just like they were when Government decided to stick its nose into the matter. So, now they are going back to coal.

Who paid for the billions of dollars in conversions from coal to natural gas and oil and back to coal? The consumers paid for it in higher electric utility bills each month.

It seems to me that there are many lessons in this recitation of how we got where we are. The biggest lesson is that Government intervention produced shortages and higher prices. Yet the American people want—and have every right to expect—adequate supplies and reasonable prices.

I hear it said so many times that most people take it as the gospel truth that the day of cheap energy is over. The day of cheap natural gas, oil, gasoline, and any other fossil fuel may be over, because we have increasing demands and dwindling supplies of fossil fuels. Now, we have waited so long for Government to get its act together that even if we did have mamoth exploration and recovery programs, our supplies would run out at some point in the not-too-distant future—viewed from the perspective of history.

But in every situation that I have read about, when available fuels started into short supply, other fuels were found. When England depleted its forests at the end of the Middle Ages, it turned to coal. When coal and whale oil did not meet our demands in the 19th century, we developed means of harnessing oil and gas. It is just like our shift to the automobile from the horse, a shift occasioned by our desire to end the waste pollution on the streets in our metropolitan areas. The human mind has unlimited potential for building those proverbial better mouse traps. I see no reason—unless it is Government's strangling of the creative process through the bureaucracy it has laid on research and development in the energy field—why, if we are running out of one type of fuel, that we cannot devise and harness others. And do it at less cost to the consumer.

I have spent this time talking about the mistakes made heretofore by Congress because it is obvious that the President's messages put the ball squarely in our court to act on these energy questions.

I think we can examine the President's messages more perceptively in light of this background.

THE CARTER PLAN: HIGHER COSTS, MORE INFLATION, FEWER JOBS AND LESS SUPPLY

As I said at the outset, while I agree with the Presidents' motivation, I cannot agree with his specific plan. It just boils down to higher costs, more inflation, fewer jobs, and less supply. That is not what the American people want. It is certainly not what they expected.

My able colleague, BUD BROWN of Ohio, the ranking minority member of the House Energy and Power, has prepared an analysis of the President's messages. It supports out my conclusion.

Let me run through some of the most critical points.

The program provides for billions of dollars in new, additional taxes, but very few dollars for additional supplies of either gas or oil. Here, again, we see him concentrating on reducing demand instead of increasing supply. Those taxes will take between $25 billion and $35 billion from the private, productive sector of our economy, funds the private sector must have to develop new sources and supplies. The program almost completely ignores necessary production incentives for development of oil and gas.

The conservation measures relating to the automobile are misdirected and discriminatory. A gasoline tax and a tax on larger automobiles discriminates against rural and suburban areas in favor of urban areas—where mass transit is more readily available. They also discriminate against those in the lower, lower-middle, and middle-income groups. When the cost of gasoline goes up, well-to-do people will be able to afford it. Businesses will be able to pass the cost along in the form of higher prices for the goods they produce and distribute, and we must keep in mind that these businesses will find it almost impossible to cut fuel consumption. Trucks cannot stop taking goods from factories to warehouses to retail outlets.

The program overemphasizes collecting taxes, rather than giving tax credits. In other words, it concentrates on punishing, instead of rewarding; it focuses of the stick, not the carrot.

The use of the tax and rebate mechanisms is an inefficient use of our resources. The administrative costs of collection and redistribution of funds—that is, what the Government skims off the top to administer the program—will be enormous and will add to the already too high cost of government. The United States must slow its ever-increasing rate of fossil fuel consumption, but the tax mechanism is an inefficient method of raising energy prices to reduce consumption.

How can rebates be distributed equitably? Who is to determine what is equitable and what is not? The most equitable way to determine anything is through the interplay of market forces. Anything else is the biased socioeconomic judgment of a small group of policymakers—department or agency personnel, Congressmen, or whatever—masquerading as equity.

You can rest assured of one thing: The tax on some cars and the rebates on others will vastly favor foreign manufacturers over domestic ones. I thought this administration and this Congress were committed to restoring American jobs, to reducing dependence on foreign imports, to improving our foreign trade balance. I must have been mistaken.

Of course, this will not only affect jobs, it will also affect environmental quality, especially air pollution. What happens when a family needs—has to have—a large or medium-sized car, let us say a

station wagon, but cannot afford to buy a new one because of the heavy new tax? It will keep the old one. That, of course, destroys jobs in Detroit and other car manufacturing towns, but it also means less-efficient, old-style pollution control devices on a greater number of cars. Instead of getting a new car embodying the latest air emission technology, the family keeps the old one.

What about the President's natural gas plans?

Extending Federal controls into both the intrastate and interstate market after the serious distortions that have occurred in the interstate market will not encourage added natural gas supply. As a matter of fact, the $1.75 is a rollback from the present new contract prices of $1.80–$2 prevailing in the majority of the intrastate markets and thus is a disincentive to exploration. The extremely narrow definition of new natural gas qualifying for a $1.75 Mcf—instead of the current $1.45—will bring a negligible supply response for the interstate market.

Of course, no one really knows whether the President's vastly increased coal use program can be implemented, in light of two other legislative measures he is also supporting—restrictive strip mining legislation and new Clean Air Act amendments. His programs are, here, working at cross-purposes.

We have a long way to go before a unified, consistent national energy policy. The debate is a healthy one and to that end I commend the President for shaking up the apathy of the Congress.

GOLDWATER INTRODUCES AIRCRAFT NOISE CONTROL BILL

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. GOLDWATER) is recognized for 30 minutes.

Mr. GOLDWATER. Mr. Speaker, the issue of aircraft noise impact on communities around U.S. airports, both civil and military, has frustrated aviation growth and derogated the quality of life for many Americans.

The question of aircraft noise was recognized 25 years ago in the report of the President's Airport Commission. Known as the "Doolittle report," it was submitted to President Truman May 16, 1952.

The President's Airport Commission accurately assessed the projected magnitude of the aircraft noise problem some 6½ years before the first jet transport was operated in commercial service in this country.

Unfortunately, the prophesy of Gen. James Doolittle and Messrs. Jerome Hunsaker and Charles Horne who comprised the Commission has not been fulfilled because its recommendations have gone largely unheeded. Recognizing the lack of implementation of regulatory controls on noise from aircraft, the Congress enacted in 1968, the Aircraft Noise Abatement Act and in 1972, the Noise Control Act, each dealing specifically with aircraft noise. In addition to statutory enactments, congressional committees have held interminable hearings and produced innumerable reports. Indeed, three committees of this House are holding hearings this month.

Apart from Congress, a great many other organizations across the country have met and organized to seek relief from aircraft noise. Millions of our citizens have become increasingly annoyed and frustrated by the absence of aircraft noise abatement. I believe, Mr. Speaker, this long-standing issue has contributed in no small part to the cynicism with which many of our citizens are viewing this Government. Noise impacted airport neighbors would not be so annoyed if they did not realize as more and more they have, that there are available numerous measures to significantly reduce the impact of aircraft noise.

The common thread running throughout this issue of aircraft noise is the apparent lack of institutional incentive on the part of the FAA to promulgate regulations for noise control. Actually, there are positive means available to obtain present relief from aircraft noise. One is the subject of a bill I have introduced "to require the Secretary of Transportation to establish mandatory operating procedures to reduce noise, conserve fuel, and improve the degree of safety in the operation of civil turbojet powered aircraft in the United States and for other purposes."

It provides relief through safe, fuel efficient reduced noise flight procedures. Such procedures are demonstrably available having been in use on a system-wide basis by Northwest Airlines since 1970 and before. It is interesting to note in this connection that Capt. J. J. O'Donnell, president of the Air Line Pilots Association, testified before the Aviation Subcommittee in support of Northwest's procedures as compared to others recommended by either the FAA or the Air Transport Association.

In adddition, it would prohibit the retrofit of JT–8D engined aircraft—B–727, B–737, and DC–9—with sound absorbent materials—SAM. Such a retrofit is both costly, time consuming and of questionable benefit in terms of noise reduction. Further, and of increasing relevance to the Congress, this retrofit would act to perpetrate the service life of older technology which cannot be considered either fuel efficient or quiet—even when retrofitted.

I have learned that the applications of operating procedures which Northwest Airlines has perfected would result conservatively, in greater than 50 percent reduction in the current area of noise impact if enforced upon all jet operators, foreign as well as domestic, and without regard to arbitrary weight cutoffs of 75,000 lbs, etc.

Frankly, Mr. Speaker, I dislike having to incorporate specific measures and time deadlines in legislation. However, in the absence of administrative agency action, Congress in this case has no alternative but to specify how a new law is to be implemented.

Another purpose of my bill is to put to rest the suggestions that individual airport operators or even State aeronautical agencies should prescribe aircraft or airport operating procedures for noise abatement. The FAA and no other agency, Federal, State or local, should enforce such procedures. However, the FAA must undertake measures for noise control which have demonstrably been available for many years.

The text of my bill is as follows:

H.R. —

A bill to require the Secretary of Transportation to establish mandatory operating procedures to reduce noise, conserve fuel, and improve the degree of safety in the operation of civil turbojet powered aircraft in the United States and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That not later than the ninetieth day after the date of enactment of this Act, the Secretary of Transportation, after consultation with the Administrators of the Environmental Protection Agency and the National Aeronautics and Space Administration shall, by rule, establish mandatory operating procedures to reduce noise, conserve fuel, and improve the degree of safety in the operation of civil turbojet powered aircraft which shall be applicable to the operation of any such aircraft during its operation in the United States. Such procedures shall be established for each type of civil turbojet powered aircraft and shall include, but not be limited to—

(1) with respect to the takeoff procedure for any such type of aircraft, a requirement that an expedited flap retraction schedule in combination with a reduced thrust level commensurate with actual weight, elevation and atmospheric conditions which produces the minimum amount of noise without decreasing the degree of safety be used; and

(2) with respect to the entire landing procedure under normal operating conditions for any such type of aircraft, a requirement that the flap configuration to be used be the minimum flap configuration which the Administrator of the Federal Aviation Administration by regulation has certified for use in the landing of such type of aircraft, taking into account the maximum degree of safety for that particular operation.

SEC. 2. The Secretary of Transportation, in consultation with the Administrators of the Environmental Protection Agency and the National Aeronautics and Space Administration, shall study the advisability of requiring the use of new flight instruments in the landing operations of civil turbojet powered aircraft which would result in the reduction of noise and an increase in the degree of safety in such landing operations. Not later than the three-hundred-sixty-fifth day after the date of enactment of this Act, the Secretary of Transportation shall submit the results of such study to Congress.

SEC. 3. No two or three engine civil turbojet powered aircraft having an engine bypass ratio of less than 1.5 shall be subject to any standard or regulation prescribed under any provision of law which permits the acoustic retrofit of such aircraft after a specified date.

HOMEOWNER TAX DEDUCTION FOR NEW WELLS IN DROUGHT AREAS

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. MCFALL) is recognized for 5 minutes.

Mr. MCFALL. Mr. Speaker, I am today introducing legislation that provides a tax deduction for homeowners who, because of drought, must repair or replace a well that is the principal source of water for use in their home. Businessmen and farmers can now deduct the cost of replacement wells as a business expense, but the homeowner is offered no relief.

This deduction will only be available to homeowners in areas the President de-

clares to be drought emergency areas or major disaster areas due to drought. Additionally, the deduction will not be available to homeowners who receive insurance compensation to cover well repair or replacement costs or homeowners who receive any assistance—including direct loans, loan guarantees, and insurance of loans—from the Federal Government with respect to such well repair or replacement.

California, and my congressional district in particular, is presently experiencing the worst drought in its recorded history. In providing drought relief to drought victims, the Federal Government must strive for equal treatment of all persons and interests. The legislation I am introducing will correct a present inequity, and I urge its prompt consideration by the House.

Mr. Speaker, I include the text of this legislation as part of my remarks:

H.R. 6562

A bill to amend the Internal Revenue Code of 1954 to allow individuals a deduction for certain repairs, improvements, or replacements of residential water wells

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by redesignating section 221 as section 222 and by inserting after section 220 the following new section:

"SEC. 221. QUALIFIED RESIDENTIAL WATER WELL EXPENDITURES

"(a) ALLOWANCE OF DEDUCTION.—In the case of an individual, there shall be allowed as a deduction the qualified residential water well expenditures paid or incurred by the taxpayer during the taxable year.

"(b) DEFINITIONS.—For purposes of this section—

"(1) QUALIFIED RESIDENTIAL WATER WELL EXPENDITURES.—The term 'qualified residential water well expenditures' means any amount paid or incurred by the taxpayer for the repair, improvement, (including altering the depth or slant of such well), or replacement of any eligible residential water well to the extent that—

"(A) such repair, improvement, or replacement is necessary, as a result of any drought which is determined by the President to be an emergency or a major disaster under the Disaster Relief Act of 1974, to maintain an adequate quality and quantity of water available from such well (determined under regulations prescribed by the Secretary) for the duration of such emergency or major disaster,

"(B) such amount is paid or incurred—

"(i) after the date such drought is so determined to be an emergency or major disaster, and

"(ii) before the date such emergency or major disaster terminates,

"(C) the taxpayer is not compensated by insurance or otherwise for such repair, improvement, or replacement, and

"(D) the taxpayer does not use any assistance (including direct loans, loan guarantees, and insurance of loans) from the United States with respect to such repair, improvement, or replacement.

"(2) ELIGIBLE RESIDENTIAL WATER WELL.—The term 'eligible residential water well' means any well—

"(A) which, before the drought described in paragraph (1)(A) in connection with which the deduction under this section is claimed, was used as the principal source of water for use in any residence of the taxpayer; and

"(B) which is owned by the taxpayer or of which the taxpayer is the lessee.

"(3) RESIDENCE.—The term 'residence' means any house, condominium, apartment, or mobile home which is located within the United States and which is used to provide living accommodations for individuals; except that such term does not include any unit in a hotel, motel, inn, or other establishment which is used primarily to provide living accommodations on a transient basis.

"(c) NO DOUBLE DEDUCTION.—Any qualified residential water well expenditure shall not be taken into account under subsection (a) to the extent the taxpayer is entitled to take such expenditure into account under section 167 or 212."

(b) The table of sections of such part VII is amended by striking out the last item and inserting in lieu thereof the following:

"Sec. 221. Qualified residential water well expenditures.

"Sec. 222. Cross references."

(c) Section 62 of the Internal Revenue Code of 1954 (relating to adjusted gross income defined) is amended by inserting after paragraph (13) the following new paragraph:

"(14) QUALIFIED RESIDENTIAL WATER WELL EXPENDITURES.—The deduction allowed by section 221."

(d) Paragraph (1) of section 263(a) of the Internal Revenue Code of 1954 (relating to capital expenditures) is amended by striking out "or" at the end of subparagraph (E), by striking out the period at the end of subparagraph (F) and inserting in lieu thereof ", or", and by adding at the end thereof the following new subparagraph:

"(G) qualified residential water well expenditures allowable as a deduction under section 221."

SEC. 2. The amendments made by the first section of this Act shall apply to taxable years ending after the date of the enactment of this Act.

THE HONORABLE THOMAS L. ASHLEY, CHAIRMAN OF THE COMMITTEE ON ENERGY

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, on behalf of the Ohio delegation in the 95th Congress, I want to take this opportunity to express our pride on the occasion of the appointment of our distinguished colleague, THOMAS LUDLOW ASHLEY, as chairman of the House Committee on Energy.

"LUD" faces the greatest challenge of his public career in his chairmanship of the Energy Committee, the first "super" committee of the Congress dealing with the most serious domestic problem of our time.

We wish him well in this opportunity to lead America to energy independence.

DESIGNATING APRIL AS "FAIR HOUSING MONTH"

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. DODD) is recognized for 5 minutes.

Mr. DODD. Mr. Speaker, yesterday I introduced a resolution, House Resolution 510, designating the month of April as Fair Housing Month. Nine years ago this month, the Fair Housing Act of 1968 which guarantees all Americans the right to live where they wish to live, when they wish to live there, for as long as they can afford to do so became law.

Although this act has done much towards insuring that every American has decent housing, the last 9 years have also revealed weaknesses in the law which need to be corrected in order to provide for its effective enforcement. So, on this ninth anniversary of the enactment of the Fair Housing Law, let us dedicate ourselves to making the necessary changes in the law which will make good the promise of protection against discrimination that the Federal Government made to all Americans in 1968.

The resolution I offered calls on the Congress to rededicate "itself to the promulgation and practice of the letter and spirit of the Fair Housing Law so that fair housing will become a right that can be realized by every American."

With the passage of this law, the Federal Government extended to housing its formal acceptance of the principle that black Americans so valliantly fought for all through the 1960's—no American should be denied his constitutional right to equal protection of the laws because of his race, religion, or national origin.

While many still hailed the passage of this landmark piece of legislation, it became more and more clear that the law's failure to grant the Federal Government strong enforcement powers made it almost impossible for HUD to process housing discrimination complaints in a timely manner, and therefore greatly reduced the number of cases that HUD could successfully resolve.

In testimony last September before the Subcommittee on Civil and Constitutional Rights of the House Judiciary Committee, on which I had the honor of serving in the last Congress, former HUD Secretary Carla Hills said:

> Respondents know all too well that HUD has no meaningful enforcement power . . . and many have virtually ignored (HUD's) conciliation efforts because they have no inducement to cooperate.

Similarly, the U.S. Civil Rights Commission has also found that the law needs to be significantly strengthened.

Mr. Speaker, justice delayed is justice denied—and a right that is thwarted is a right denied. No longer can we in the Congress deny all Americans their rights by not giving HUD and the Justice Department the kind of strong enforcement authorities they need to make fair housing a reality in practice and not just meaningless words, once stated and now forgotten.

A lot can be done by the administration acting under its own authority, by assigning more people to enforce the law, but unless the Congress gives HUD the statutory authority it needs, these additional personnel will not have the tools they need to make this law work.

I am happy to say that legislation has already been introduced in this Congress which will significantly strengthen the law. A bill, H.R. 3504, introduced by Representative DON EDWARDS, chairman of the Subcommittee on Civil and Constitutional Rights, would grant the administration important new enforcement powers such as the authority to issue cease-and-desist orders and the authority to

initiate a suit without having to establish a pattern or practice of discrimination as is now required.

Mr. Speaker, with these authorities HUD and the Justice Department can make this law work, but they need our help. I ask all my colleagues to support both this resolution and the strengthening of the Fair Housing Act of 1968.

Mr. Speaker, at this time I would like to introduce the text of my resolution into the RECORD:

H. RES. —

Resolution recognizing the month of April as Fair Housing Month

Whereas it is the policy of the United States to guarantee to every citizen the right to fair housing; and

Whereas this right and the responsibilities attendant on it are set forth in the National Fair Housing Law, title VIII of the 1968 Civil Rights Act; and

Whereas, since 1968, the month of April has been set aside each year for commemoration of the Fair Housing Law; now, therefore, be it

Resolved, That the House of Representatives (the Senate concurring) recognizes the month of April as Fair Housing Month and that the Congress of the United States hereby rededicates itself to the promulgation and practice of the letter and spirit of the Fair Housing Law so that fair housing will become a right that can be realized by every American.

GENERAL LEAVE

Mr. BEILENSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to include therein extraneous material, on the subject of the special order today by the gentleman from Connecticut, (Mr. DODD).

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

ASSISTANT SECRETARY GENO BARONI

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. ASHLEY) is recognized for 5 minutes.

Mr. ASHLEY. Mr. Speaker, this week my good friend Msgr. Geno Baroni was sworn in as the new Assistant Secretary of Housing and Urban Development for Neighborhoods, Non-Governmental Organizations and Consumer Protection. Geno Baroni is certainly one of the most exciting appointments that President Carter has made, especially in the Department with which I have the most familiarity with—the Department of Housing and Urban Development.

Geno Baroni has been called a "pesky gadfly" by numerous people and groups, and he has been a "pesky gadfly" in seeking to draw the attention of the Congress and the Executive to view the urban community as a network of local community groups, rather than one urban entity. Geno Baroni is an outspoken man whose deep perceptions of American society are increasingly gaining respect by all of us who are concerned with the plight of urban America.

Last week Assistant Secretary Baroni was in my district speaking at a 3-day conference on the role that community organizations can play in revitalizing urban neighborhoods, sponsored by St. Stephen's Catholic Church in Toledo. Geno Baroni's appearance as usual stimulated considerable excitement and discussion and I am pleased that he was able to be in Toledo for this occasion. Mr. Speaker, I would like to include in the RECORD my statement welcoming Monsignor Baroni, as well as an article appearing in the Toledo Blade Saturday, April 16, an article appearing in the Washington Post, Saturday, April 16, and an article appearing in the New York Times, Wednesday, April 20:

STATEMENT OF CONGRESSMAN ASHLEY TO CONFERENCE ON ROLE OF COMMUNITY ORGANIZATIONS

Conference Members, Reverend Hernady and, of course, Monsignor Geno Baroni: I regret very much that my schedule did not permit me to be present tonight to congratulate all of you on the success of your conference, and more particularly to pay tribute to my good friend, Father Geno Baroni. Several long years ago, many would have doubted that there could even be such a conference, or a meaningful agenda for discussion. That there can be is, in large measure, a tribute to Father Geno.

A number of us in Congress, and many at HUD have maintained an interest over the years in the process of revitalizing America's neighborhoods. We stand now on the verge of seeing a neighborhood commission established, and formal administration recognition of the concept that neighborhoods do matter and can be a significant force for urban change. As chairman of the Housing Subcommittee, I have been in a unique position to monitor the sometimes-rocky course of this progress. I feel confident in stating that Father Geno, more than any other person, is responsible for that progress.

In the past several years I have seen Father Geno wear several hats. In his advocacy of the cause of neighborhoods. That of president and founder of the National Center for Urban Ethnic Affairs. That of dynamic leader of the campaign for human development. That of visionary community consultant and organizer, from Toledo to Washington. And that of ghetto priest. During all that time and in all those roles, he has been this country's leading proponent of strong, vitalized neighborhoods. He now brings all of that energy, all of that vision, and all of that commitment to HUD—as assistant Secretary for Neighborhood Development and Consumer Affairs. You and I know that there isn't a better man for the job. If inclusion of Geno Baroni in the Carter administration is going to be typical of their efforts to seek out commitment and excellence, then I think all of us ought to offer our congratulations to President Carter and to Secretary Harris.

Father Geno's appointment indicates an administration and Agency commitment to the revitalization and significance of neighborhoods. That, ladies and gentlemen is an indication from which we can all take heart.

In the next several weeks the conference committee of the Senate and House will be hammering out the final version of the supplemental housing authorization bill. It is very likely (and very encouraging) that the final version will contain provision for a national neighborhood movement in this country, and it is a tribute to Father Geno's drive and tenacity. It is especially fitting that he will have a critical ongoing role in the commission's functioning.

You are meeting at a hopeful and exciting time. I offer you all my congratulations on your conference, and I offer my special congratulations to Father Geno. Those of us in Toledo will always have a special regard for him.

HUD AID URGES FEDERAL SHIFT IN ATTITUDE ON NEIGHBORHOODS

The Federal Government should end its negative policies toward neighborhoods and adopt policies that will encourage their preservation, an assistant secretary of the Department of Housing and Urban Development said here Friday.

Msgr. Geno Baroni, interviewed prior to his appearance before a regional conference on "parishes and neighborhoods," said that most policies in the past have been destructive toward neighborhoods.

"Urban renewal was really urban removal, and whole areas, with rich cultural and ethnic heritages, were destroyed and never rebuilt," he said.

Expressways likewise have destroyed and split neighborhoods, since they were built with little regard for the effect on neighborhoods, but rather with the objective of providing fast transportation between the central cities and suburbs, Monsignor Baroni added.

THREE OFFICIALS TO SPEAK

He is one of three Washington officials who are featured speakers at the three-day conference at St. Stephen's parish hall. The meeting is dealing with what roles that parishes and community organizations can play in revitalizing urban neighborhoods.

Monsignor Baroni took his post a month ago, with responsibilities in consumer affairs and regulatory functions. One of his objectives will be to help form a policy to encourage people to stay in ethnic communities, rather than move away.

"People don't live in cities, they live in neighborhoods. But for years, neighborhoods have been used up, then thrown away like paper towels."

Housing policies should be changed to make it easier for families to keep homes, rather than losing them by foreclosure to the Government, Monsignor Baroni said.

He said that HUD is foreclosing on 360 homes each month in Detroit and has 51,000 defaulted homes on its hands. This has cost the government $10,000 on the average for each home that it has repossessed, he added.

FAVORS CHANGE IN PLAN

"We don't need these homes to go back to the Government. My job will be to help people stay in these homes, and it will probably cost less than it does to foreclose," he declared.

He suggested that the federal Section 8 housing plan, whereby homes are offered on a subsidized rental or purchase arrangement, be liberalized to permit a larger share of the population to have housing.

"Four out of five U.S. families cannot afford to buy a new home, and the idea of a home on a half-acre lot in the suburbs is beyond their reach and probably will remain so for many years."

A bill, co-sponsored by Toledo Congressman Thomas L. Ashley, would establish a national neighborhood policy committee, Monsignor Baroni said. It would establish a panel to examine present federal policies which adversely affect neighborhoods and make recommendations on how they should be changed.

Monsignor Baroni has appeared here several times, he said. In 1971, he spoke to several Toledo-area parishes on the social plight of white urban ethnic groups. Three years ago, he announced a grant for Toledo to train city officials in methods of neighborhood revitalization. At the time, he was president of the National Center for Urban Ethnic Affairs, an independent, nonprofit organization which he still heads.

More than 175 persons have registered for the business sessions, which are being held at the Quality Inn in Northwood through

Sunday, Peter Ujvagi, conference director, said.

A dinner meeting will be at 8 tonight in St. Stephen's parish hall.

GENO BARONI: WAR STORIES

(By Eugene L. Meyer)

Before "Roots" became a best-seller, television series and national pastime, there was Geno Baroni.

Since the fabled melting pot boiled over in the racial and ethnic polarization of the 1960's, Geno Baroni has been talking about "who am I, the identity issue, the issue that won't go away, the issue of background."

For the 46-year old Catholic priest, roots means neighborhood. Both are in these days, suggesting that Geno Baroni may just be a man whose time has come. Social activist-cum gadfly to the liberal establishment, Baroni is moving into a new arena as assistant secretary of Housing and Urban Development for, according to his own job description, "neighborhoods, non-governmental organizations and consumer protection."

"I don't think a lot of people understand what I'm going to do or where I come from," Baroni said recently. Where he's coming from is easier to understand, however, than how that translates into policies and programs at HUD.

Like a veteran retelling war stories, Baroni reviewed his life and times over a hamburger at Trio's Restaurant, a neighborhood eatery around the corner from his National Center for Urban Ethnic Affairs at 1521 16th St. NW. Trio's is an informal place where his friend, the late Dr. George Wiley, launched the welfare rights movement of the 1960s. It was a sort of a war room then, where social activists would meet to draw up strategies for change.

Like a battle tactician, Baroni drew circles and lines on any available scrap of paper to illustrate his points. It was like a nostalgia trip through a turbulent time that is only yesterday but seems light years away.

He came from the coal mining region of Western Pennsylvania where his father, an Italian immigrant, worked for 47 years. "The Episcopalians owned the coal mines, the Methodists and Lutherans were the bosses, and the Italians, Hungarians and Appalachians, we dug the coal," he said.

"We all went to the same company store and the same public school, and the bosses' daughters were our teachers in the grade school. They were great Americanizers, you know. Melting pot. 'These are the foreigners kids,' you know. I didn't speak English until I went to grade school."

He lived in the small mining town of Acosta, whose children "were looked down upon because we came out from the sticks on the school bus" to Somerset, the county seat, to become Americanized in "the Protestant school."

Baroni was ordained in 1956 from Mt. St. Mary's, a small Catholic college in Emmitsburg, Md., near the Pennsylvania border. He is now on the school's board of directors, along with Peter F. O'Malley, an Irish kid from Clinton, Mass., who is president of the Washington Capitals hockey team.

After a stint as a parish priest in working class neighborhoods of Altoona and Johnstown, Pa., Baroni came to Washington in 1960 to attend Catholic University, but there was a bureaucratic snafu and he wound up walking the streets of Shaw, in the inner city, and living at the St. Paul & Augustine Rectory at 1425 V St. NW.

Before the federal war on poverty, Baroni was becoming involved in neighborhood programs from the church as well as coordinating Catholic participation in the 1963 March on Washington for jobs and equality.

With the advent of the Great Society, he became part of a clerical mafia that dominated the District's politics of poverty. The also group included Walter E. Fauntroy, now D.C. Delegate to Congress, Channing E. Phillips and others. "We were like traveling in a little pack," Baroni recalled.

The ghetto priest was pushing social programs for poor blacks his own family in Pennsylvania could not comprehend. His truck-driving brother-in-law would say, "We're making it. Why can't they?"

"We'd get into an argument," said Baroni, "and my mother would say, 'Shut up and stop fighting. It's Thanksgiving.'" Baroni's youngest brother, meanwhile, had gone to Vietnam. "He didn't relate to Abbie Hoffman, Angela Davis, Dr. King. He went off to war because my old man said, 'We beat Hitler. You're supposed to fight for your country, America.' I say, 'This war is no good.' He says. 'You ain't the President.'"

By 1968, the brother-in-law had been laid off, the antiwar movement was in full swing, "and I was getting concerned about the alienation of Middle America—the alienation was economic, social, cultural, political—and wondered how was I ever going to get support for what I was concerned about, justice, poverty, the cities . . .

"Here I come from the working class, and here I was in the ghetto," Baroni said. "At the same time in the 60s, there was kind of intellectual/minority thing going on. Some guy at Harvard gave a lecture. He said, 'Some of us up here are enlightened. Let's help the people at the bottom.' The people in between were the enemy."

The 1968 assassinations and civil disorders deeply affected Baroni's thinking. "Here I was a white person in a black community. I became concerned about the relationship between white and black in the cities, about polarization between groups."

He began looking for the "bridge issues" that could unite ethnic whites and urban blacks and left 14th Street in 1969 in search of those issues in industrialized northern cities.

"I was concerned about who was bearing the burden of social change, and who's going to shape and share the burden of social change," he said. "In the 60s, these (white ethnic) people were the enemy. The intellectual, far liberal left began to make fun of them. . . . So in 1972, here's Massachusetts and D.C. voting for McGovern. We went from the Lyndon Johnson landslide to the Nixon landslide."

Baroni founded the National Center for Urban Ethnic Affairs and, armed with public and private grants, initiated neighborhood programs in 45 cities. "I began to realize people live in neighborhoods. People got identity from them," he said.

From his programs emerged new leaders, such as Rep. Barbara Mikulski (D-Md.) from Baltimore. The Neighborhoods United Project (NUP), a citizen lobby in close-in Prince George's County, also sprung from his efforts.

In the five-towns area of Prince George's next to the District line, he found, blacks and whites were able to unite around community issues of transportation and health. "We didn't try to deal with the black-white thing right away," Baroni recalled. 'The issue was stop the freeway, a bridge issue."

Forsaking the melting pot for ethnic pride, saving the neighborhoods—how do these ideas translate into HUD programs, under Baroni's "consumer" mandate? Baroni paused to think about it.

"I intend . . . I hope to be part of the policy team in terms that will relate to the revitalization of the city," he said slowly, measuring his words. I'm going to try to develop some programs, some small programs, just like I did at the Center, involving third parties, non-governemntal groups, neighborhood groups. . . .

"See, neighborhoods have never been a part of urban policy. We ran freeways through them, right? We did urban renewal on them, right? We destroyed neighborhoods in order to save them. Remember? It sounds like Vietnam."

A PRIEST IS STIRRING THE MELTING POT TO REVITALIZE ETHNIC NEIGHBORHOODS

(By Robert Reinhold)

WASHINGTON, April 19.—When Msgr. Geno Baroni was growing up in western Pennsylvania, his teachers urged him to blend into the American melting pot and forget the language of his Italian immigrant parents. He has since tried valiantly and vainly to learn it, even taking a last-ditch fling at Berlitz, but to this day he can scarcely say "good morning" in Italian.

Monsignor Baroni's block against his ancestral tongue, symbolic of the heritage so many "ethnic" Americans have lost to assimilation, is tinged with irony. For he has emerged as perhaps the leading champion of the revitalization of the Italian, Polish, Irish and other ethnic neighborhoods that once so enlivened American cities.

LEARNING ABOUT BUREAUCRACY

The activist priest has finally been embraced by the Federal Government, whose policies he has long denounced as destructive of those neighborhoods. He is scheduled to be sworn in tomorrow as Assistant Secretary of Housing and Urban Development for Neighborhoods, Nongovernmental Organizations and Consumer Protection.

The ponderous title fits the gregarious, amply proportioned priest about as well as a business suit. He has been blithely breezing through the halls of Government in blissful ignorance of such hard facts of bureaucratic life as the President's Office of Management and Budget.

"It's like a secret place, like the Vatican curia," he said of the powerful budget office. "I don't know the address, I don't know who runs it, but they always say no."

KNOWN AS PESKY GADFLY

If Monsignor Baroni fails to get his plans past the managers, budgeters, lawyers and other nay-sayers in Government, it will not be for lack of social conviction or enthusiasm, or, for that matter, lack of such essential Washington commodities as political savvy and flair for publicity.

A Congressional aide who has watched the 46-year-old priest promote legislation against mortgage redlining and other concerns calls him a "problem solver" who can push minor conflicts aside to find "a community of interests" among competing groups.

On the outside for years, Monsignor Baroni was a pesky gadfly of banks that take deposits from central city residents and invest them in condominiums in Acapulco and Federal agencies that put highways through old neighborhoods. As founder of the Washington-based National Center for Urban Ethnic Affairs, he has helped channel millions of dollars in grants to local community groups in such cities as Newark, Providence, Baltimore and Toledo.

His elevation to a $50,000 a year sub-Cabinet post follows valuable service to the Carter campaign in smoothing the rift between Jimmy Carter and the Catholic bishops over abortion. It is the latest stop in an improbable odyssey for the coal miner's son, who was once fired for trying to organize a union in a factory, was roughed up in a civil rights march in Alabama, who helped blacks rehabilitate a Washington, D.C. neighborhood and sheltered antiwar protesters in Washington before turning to the needs of white ethnics, "my people," as he calls them.

Slightly disheveled, the buttons of his shirt barely able to contain his belly, the

Monsignor, who is known as Geno to everybody, peers at the world through gray eyes set deep in a furrowed face framed with thick wavy black hair. Words come out of his mouth in an avalanche and he seems unable to talk without paper and pencil. In a recent lunch conversation he filled six pages with a maze of circles, crosses, arrows, boxes and lines to illustrate his points.

Monsignor Baroni's argument is that the mostly Catholic ethnic groups represent a force for liberal social change in housing, health care and jobs, but that they are angry and alienated, feeling scored by the liberal left and threatened by the blacks with whom they must share the decayed inner cities.

"The grandparents of the people who supported [former Senator] Jim Buckley probably voted for Robert Wagner Sr.," he said. "But in the 1960's we drew the line very tight at class and race. Here were the student on one end and the blacks on the other, and here's my brother-in-law who works for Mack Truck in the middle. And the left began to dump on middle Americans, especially lower income whites who lived next to the blacks.

"So in the social and economic alienation the right was coming along—Agnew, Nixon, Wallace—and catering to them. Mayor [Frank] Rizzo in Philadelphia was a byproduct of liberal neglect."

The neglect of working class needs, he says, has sped the decay of the urban neighborhoods that form the fabric of older cities. The remedy, he argues, is to find "convergent issues" such as redlining, [the practice by some mortgage companies of withholding loans for homes in certain neighborhoods] jobs, drug problems and other concerns around which both black and white communities can coalesce rather than clash. "These people who live next to blacks do not necessarily want to move—they need help," he says.

If the cities are to be saved from becoming "black, brown and broke," the monsignor maintains, ethnic diversity must be nurtured.

"My little nephew studies Eskimos in schools," he says. "He thinks Eskimos are great, but he has no sense of his own identity. I'm afraid my nephews and nieces will grow up like Wonder Bread—no crust, no identity. People want to be somebody."

He disputed suggestions that the end result may be to create ethnic ghettos. "The issue is tolerance for diversity," he said. "Equity, be it racial, sexual, economic, comes in dealing with those tensions more honestly. So I am for doing away with the melting pot, which tried to level out the differences. We should deal with the differences. The diversity can be a strength."

Accordingly, his emphasis at H.U.D. will be on supplying local communities with the technical expertise to help themselves. He expects to build bridges to local unions, Urban League chapters, tenants groups. He wants to teach local groups the fine art of pyramiding private and public money to encourage investment in declining neighborhoods. "There's never been a Federal policy that respected neighborhoods," he said. "We destroyed neighborhoods to save them."

A top priority will be reversing the "disinvestment" that takes place once a neighborhood starts to decline, the reluctance of people and stores to fix up a dying area. "I am going to look at reinvestment strategies, and reinvestment starts with people."

PENSION RIGHTS OF SURVIVING SPOUSES

The SPEAKER. Under a previous order of the house the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 15 minutes.

Ms. HOLTZMAN. Mr. Speaker. I am introducing legislation which will amend the Employee Retirement Income Security Act of 1974 to protect the pension rights of surviving spouses.

It is crucial that our pension law provide full coverage for the people they are supposed to protect. Unfortunately the present law does not do this. Take the case, for example, of a woman whose husband has worked for the same company since he was 25 years old. He has been covered by a pension plan which has "joint and survivors" benefits and which gave him vested rights to those benefits when he had been with the company for 15 years—that is, when he was 40 years old. He suddenly dies at the age of 60. What happens to his widow under the new pension reform law?

She gets nothing.

The reason for this is that the new law contains a major loophole that leave widows—and widowers—completely unprotected. Behind the technical language of the new law is a provision which prevents a widow from receiving survivor's benefits unless her husband dies after he has reached retirement age. Retirement age in most cases is 65; some plans may have a lower age. This means that a man who has worked for a company for 15 or 20 years, and whose pension benefits have become fully vested by the time he reaches the age of 45 or 50, had better remain alive for another 15 or 20 years if he wants his wife to receive her share of those vested benefits even if he dies 1 day before he collects his first pension check, she will get nothing. The same situation, of course, applies to surviving husbands.

I believe that many of my colleagues as well as the public have the impression that under the new pension reform law, once a worker's benefits have vested, his wife will be provided for in the event he predeceases her. This was apparent to me during the debate on the new law (ERISA) last year when I introduced an amendment to close this loophole. Certainly most workers believe that under the new law, their vested benefits will automatically go to their widows or widowers regardless of when the workers die.

Such is not the case. This gap in the new law is particularly unfortunate, because it is not apparent from the language of either the law or the report which is supposed to explain the law. I am afraid that employees have a false sense of security that once their pension rights are vested, their wives or husband will be provided for, regardless of what happens to them.

My bill will correct this problem. It will allow a widow to receive survivors' benefits to which she would have been entitled if her spouse had lived to retirement age. A widow will be eligible to receive such benefits at the time that her husband—had he lived—would have been entitled to start receiving pension benefits. The same will be true for widowers.

Providing adequate survivors' benefits under private pension plans will help solve one of the most pressing needs of our over-65 population—the lack of income for older women. Women over 65 who live alone comprise the poorest segment of our population. Six out of every ten have incomes below the poverty level.

If pension plans are to be more than a gamble on survival and a bet on coverage, and if we sincerely want to protect the rights of the surviving spouse, then my bill should be adopted.

The text of the bill follows:

H.R. 6559

A bill to provide joint and survivors' annuity benefits under private pension plans based upon the participant's vested benefit

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

AMENDMENT OF ERISA

SECTION 1. Section 205 of title I of the Employees Retirement Income Security Act of 1974 (relating to joint and survivors' annuity requirements) is amended by striking out subsections (b) and (c) and inserting in lieu thereof the following:

"(b) A plan shall not be treated as satisfying the requirements of this section unless, under the plan if the participant dies before the earliest retirement age, the plan provides a survivor's annuity for the spouse (1) which begins on the annuity starting date (determined as if the participant had lived until such earliest retirement age) and (2) the payments under which are not less than the payments which would have been made under the survivor's annuity to which the spouse would have been entitled if the participant had separated from the service on the date immediately preceding the date of his death.".

AMENDMENT OF INTERNAL REVENUE CODE

SEC. 2. Section 401(a)(11) of the Internal Revenue Code of 1954 (relating to joint and survivor annuity requirements) is amended by striking out subparagraphs (B) and (C) and inserting in lieu thereof the following:

"(B)(i) which begins on the annuity starting date (determined as if the participant had lived until such earliest retirement age), and

"(ii) the payments under which are not less than the payments which would have been made under the survivor's annuity to which the spouse would have been entitled if the participant had separated from the service on the date immediately preceding the date of his death.".

EFFECTIVE DATE

SEC. 3. The amendments made by this Act shall apply with respect to plan years beginning after December 31, 1978.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CORMAN (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. COTTER (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. MANN (at the request of Mr. WRIGHT), for April 22 and 25, on account of official business of the Subcommittee on Criminal Justice.

Mr. SEBELIUS (at the request of Mr. RHODES), for today, on account of official business.

Mr. STANGELAND, for today after 2:30 p.m., on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legis-

lative program and any special orders heretofore entered, was granted to:

Mr. BROWN of California, for 5 minutes, today, and to include extraneous matter.

(The following Members (at the request of Mr. RUDD) to revise and extend their remarks and include extraneous material:)

Mr. HAGEDORN, for 30 minutes, today.

Mr. DUNCAN of Tennessee, for 15 minutes, today.

Mr. KEMP, for 15 minutes, today.

Mr. GOLDWATER, for 30 minutes, today.

(The following Members (at the request of Mr. BEILENSON) and to revise and extend their remarks and include extraneous matter:)

Mr. MCFALL, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. BADILLO, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

Mr. DODD, for 5 minutes, today.

Mr. LE FANTE, for 5 minutes, today.

Mr. ASHLEY, for 5 minutes, today.

Ms. HOLTZMAN, for 15 minutes, today.

Mr. ROGERS, for 60 minutes, on April 25.

Mr. VANIK, for 5 minutes, on April 25.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. RISENHOOVER, immediately prior to the vote on the Schroeder amendment on H.R. 5970 today.

Mr. SEIBERLING, on H.R. 5970, in the Committee of the Whole today.

Mr. ROUSSELOT to revise and extend his remarks following remarks of Mr. SYMMS on B–1 bomber.

Mr. DORNAN, immediately following the remarks of Mr. DOWNEY concerning the B–1 bomber on H.R. 5970 today.

Mr. DAN DANIEL, to extend his remarks immediately preceding the vote on the Dellums amendment in the Committee of the Whole today.

(The following Members (at the request of Mr. RUDD) and to include extraneous material:)

Mr. HILLIS.

Mr. STEIGER in two instances.

Mr. KEMP in two instances.

Mr. DERWINSKI in two instances.

Mr. GILMAN in two instances.

Mr. SYMMS.

Mr. ANDERSON of Illinois.

Mr. SHUSTER.

Mr. LAGOMARSINO.

Mr. MICHEL.

Mr. TREEN.

(The following Members (at the request of Mr. BEILENSON) and to include extraneous matter:)

Mr. CORNELL in two instances.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. CORRADA.

Mr. RAHALL.

Mr. PATTISON of New York.

Mr. LEHMAN.

Mr. HOLLAND.

Mrs. CHISHOLM.

Mr. PANETTA.

Mr. LUKEN.

Mr. MOORHEAD of Pennsylvania.

Mr. FARY.

Mr. KOSTMAYER.

ADJOURNMENT

Mr. BEILENSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 8 minutes p.m.), under its previous order, the House adjourned until Monday, April 25, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1324. A letter from the Chairman, Indian Claims Commission, transmitting the Commission's final determination in docket No. 73–A, *The Seminole Indians of the State of Florida, plaintiff,* v. *The United States of America,* defendant, pursuant to section 21 of the Indian Claims Commission Act; to the Committee on Interior and Insular Affairs.

1325. A letter from the Secretary of State, transmitting a draft of a proposed amendment to the International Security Assistance and Arms Export Control Act of 1977 to provide security assistance to Greece and Turkey; to the Committee on International Relations.

1326. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the intention of the Department of the Army to offer to sell certain defense articles to the Republic of Korea (transmittal No. 77–22), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

1327. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the proposed issuance of a license for the export of certain major defense equipment sold commercially to Zaire (Transmittal No. MC–31–77), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

1328. A letter from the Chairman, Federal Trade Commission, transmitting the 62d Annual Report of the Commission, covering fiscal year 1976, pursuant to section 6(f) of the Federal Trade Commission Act; to the Committee on Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of Committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 2. A bill to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes; with amendment (Rept. No. 95–218). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. DON H. CLAUSEN:

H.R. 6549. A bill to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impacts of the 1976–77 drought and promote water conservation; to the Committee on Public Works and Transportation.

By Mr. PHILLIP BURTON (for himself, Mr. SKUBITZ, Mr. UDALL, Mr. DON H. CLAUSEN, Mr. GUDGER, Mr. LAGOMARSINO, Mr. KASTENMEIER, Mr. KETCHUM, Mr. FLORIO, Mr. WON PAT, Mr. DE LUGO, and Mr. TSONGAS):

H.R. 6550. A bill to authorize certain appropriations for the territories of the United States, to amend certain acts relating thereto, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CORNELL (for himself, Mr. FISHER, Mr. STEERS, Mr. CORNWELL, and Ms. HOLTZMAN):

H.R. 6551. A bill to amend the Internal Revenue Code of 1954 to allow persons covered by certain other retirement plans to establish personal savings for retirement; to the Committee on Ways and Means.

By Mr. CRANE (for himself, Mr. FINDLEY, Mr. RAILSBACK, Mr. CLEVELAND, Mr. KELLY, Mr. LUJAN, Mr. DAVIS, Mr. MANN, Mr. JONES of Oklahoma, Mr. MAGUIRE, Mr. BAUMAN, Mr. GLICKMAN, Mr. STEERS, Mr. PURSELL, Mr. GRASSLEY, Mr. SNYDER, and Mr. STUMP):

H.R. 6552. A bill to require that the U.S. Government prepare and make public annual consolidated financial statements utilizing the accrual method of accounting, and for other purposes; to the Committee on Government Operations.

By Mr. CRANE (for himself, Mr. MANN, Mr. ROUSSELOT, Mr. DORNAN, and Mr. SYMMS):

H.R. 6553. A bill to limit U.S. contributions to the United Nations; to the Committee on International Relations.

By Mr. CRANE (for himself, Mr. COLLINS of Texas, Mr. KEMP, and Mr. KETCHUM):

H.R. 6554. A bill to amend the Securities Act of 1933, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GILMAN (for himself, Mr. BEDELL, Mr. EDWARDS of California, Mr. GEPHARDT, Mr. GLICKMAN, Mr. JENRETTE, Mr. KINDNESS, Mr. LAGOMARSINO, Mr. MADIGAN, Mr. MURPHY of Pennsylvania, Mr. PURSELL, Mr. SCHEUER, and Mr. STEERS):

H.R. 6555. A bill to amend the Internal Revenue Code of 1954 to allow a credit for amounts paid for insulation and solar energy equipment, and for other purposes; to the Committee on Ways and Means.

By Mr. HANNAFORD (for himself, Mr. BINGHAM, and Mr. CORRADA):

H.R. 6556. A bill to amend title 5, United States, to provide that any Federal employee who, as the time of retirement, does not elect a reduced annuity in order to provide a survivor annuity to a spouse or other person may make such an election within 1 year after retiring; to the Committee on Post Office and Civil Service.

By Mr. HARRIS (for himself and Mr. TUCKER):

H.R. 6557. A bill to amend the act of April 17, 1954, which preserved within Manassas National Battlefield Park, Va., important historic properties relating to the battles of Mannassas, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HOLLAND:

H.R. 6558. A bill to amend the Internal Revenue Code of 1954 to provide for the discharge of an unrecorded tax lien against a personal residence purchased from a de-

linquent taxpayer; to the Committee on Ways and Means.

By Ms. HOLTZMAN:

H.R. 6559. A bill to provide joint and survivors' annuity benefits under private pension plans based upon the participant's vested benefit; jointly, to the Committees on Education and Labor, and Ways and Means.

By Mr. LEHMAN:

H.R. 6560. A bill to amend the Immigration and Nationality Act, to make it unlawful to knowingly hire an alien not lawfully admitted into the United States, and for other purposes; to the Committee on the Judiciary.

H.R. 6561. A bill to reduce title II of the Social Security Act to reduce from 20 to 10 years the length of time a divorced woman's marriage to an insured individual must have lasted in order for her to qualify for wife's or widow's benefits on his wage record; to the Committee on Ways and Means.

By Mr. McFALL:

H.R. 6562. A bill to amend the Internal Revenue Code of 1954 to allow individuals a deduction for certain repairs, improvements, or replacements of residential water wells; to the Committee on Ways and Means.

By Mr. McKINNEY (for himself, Mr. BADHAM, Mr. BALDUS, Mr. BEDELL, Mr. BEVILL, Mr. BOLAND, Mr. COTTER, Mr. DOWNEY, Mr. EMERY, Mrs. FENWICK, Mr. HARRINGTON, Mr. JENRETTE, Ms. MIKULSKI, Mr. MURPHY of Pennsylvania, Mr. NOLAN, Mr. ROSE, Mr. SCHEUER, Mr. SEIBERLING, and Mrs. STEERS):

H.R. 6563. A bill to amend the Mineral Leasing Act of 1920 as amended by the Trans-Alaska Pipeline Authorization Act to insure domestic distribution of Alaskan crude oil through clarification of the 1973 Trans-Alaska Pipeline Authorization Act; jointly, to the Committees on Interior and Insular Affairs, and International Relations.

By Mr. MURPHY of New York (by request):

H.R. 6564. A bill to provide for the addition of certain lands in the State of Alaska to the National Park, National Wildlife Refuge, National Forest, and the Wild and Scenic Rivers Systems, and for other purposes; jointly, to the Committees on Interior and Insular Affairs, and Merchant Marine and Fisheries.

By Mr. PEPPER (for himself and Mrs. SCHROEDER):

H.R. 6565. A bill to amend the Elementary and Secondary Education Act of 1965 to provide grants to establish demonstration programs to educate, motivate, and encourage secondary school students from disadvantaged backgrounds to pursue professional training at the graduate level in the biomedical sciences; to the Committee on Education and Labor.

By Mr. PRICE (by request):

H.R. 6566. A bill to authorize appropriations for the use of the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1974, and for other purposes; to the Committee on Armed Services.

By Mr. RAHALL:

H.R. 6567. A bill to amend the Small Business Act to reduce the rate of interest on disaster relief loans under such act, to apply special provisions of such act to such loans made in connection with major disasters occurring after April 1, 1977, and before June 6, 1977, and for other purposes; to the Committee on Small Business.

By Mr. SARASIN:

H.R. 6568. A bill to amend title XVIII of the Social Security Act with respect to the types of transportation for patients which may be included in the definition of medical and other health services under such title; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. WHITTEN:

H.R. 6569. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CRANE (for himself, Mr. KELLY, Mr. BAUMAN, Mr. ROUSSELOT, Mr. SNYDER, Mr. MOTTL, Mr. COCHRAN of Mississippi, Mr. MILLER of Ohio, and KINDNESS):

H. Res. 513. Resolution insisting upon retention of undiluted U.S. sovereignty over the Canal Zone and the Panama Canal; to the Committee on International Relations.

By Mr. RAILSBACK (for himself and Mrs. HECKLER):

H. Res. 514. Resolution expressing the sense of the House of Representatives that the effect on our society of the level of violence depicted on television requires more consideration and study; to the Committee on Interstate and Foreign Commerce.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

101. By the SPEAKER: Memorial of the Senate of the State of Hawaii, relative to reforms in the food stamp program; to the Committee on Agriculture.

102. Also, memorial of the Legislature of the Territory of Guam, relative to a study of Chamorro aboriginal land claims; to the Committee on Interior and Insular Affairs.

103. Also, memorial of the Legislature of the State of Michigan, relative to visitor facilities at the Sleeping Bear Dunes National Lakeshore; to the Committee on Interior and Insular Affairs.

104. Also, memorial of the Legislature of the Territory of Guam, relative to relations between the United States and the Republic of China; to the Committee on International Relations.

105. Also, memorial of the Senate of the State of Hawaii, relative to establishment of a National Commission on Reform of Social Welfare Programs; to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1 of rule XXII,

89. The SPEAKER presented a petition of the Board of Election Commissioners, Jackson County, Mo., relative to the proposed Universal Voter Registration Act of 1977; to the Committee on House Administration.

SENATE—*Friday, April 22, 1977*

(Legislative day of Monday, February 21, 1977)

The Senate met at 12 meridian, on the expiration of the recess, and was called to order by Hon. DANIEL PATRICK MOYNIHAN, a Senator from the State of New York.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God, the light of those who seek Thee, grant to us in the affairs of government, that illumination without which we would walk in darkness, not knowing whither we go. Brighten our daily duties by an awareness that Thou art with us to strengthen and guide us, even when we are least aware of Thee. Show us clearly the things which must be changed and the things which should remain unchanged, and give us the courage to persevere as "one nation under God" for that better world according to Thy kingdom.

We pray in His name who is the Way, the Truth, and the Life. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 22, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. DANIEL PATRICK MOYNIHAN, a Senator from the State of New York, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. MOYNIHAN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Thursday, April 21, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT—AMENDING SENATE RESOLUTION 83, AS AGREED TO ON FEBRUARY 11, 1977

Mr. ROBERT C. BYRD. Mr. President, on February 11 of this year, the Senate agreed to Senate Resolution 83, amending paragraph 3 of rule XXV of the Standing Rules of the Senate. Paragraph 3 has three parts, (a), (b), and (c). As the resolution was worded, it would have the effect of striking all three parts of paragraph 3 and inserting substitute language for only 3(a) as adopted in Senate Resolution 4. In other words, parts (b) and (c) of paragraph 3 of rule XXV would be automatically eliminated. That was not the intent of the resolution.

Inasmuch as the Rules Committee is in the process of revising the pocket

manual of the Standing Rules of the U.S. Senate, I ask unanimous consent that the resolution be amended in three places to read amending paragraph "3(a)". This will avoid the elimination of 3(b) and 3(c) in the revised manual.

For the distinguished minority leader, let me state again the purposes of this resolution.

On February 11 of this year the Senate agreed to Senate Resolution 83 amending paragraph 3 of rule XXV of the Standing Rules of the Senate. That paragraph has three parts, (a), (b), and (c). The resolution really was intended to be addressed only to 3(a) of the rule, but as it was agreed to by the Senate it inadvertently knocked out the whole paragraph—3 (a), (b), and (c)—and left standing only the change that was intended in 3(a). In the revision of the Standing Rules, if we do not correct this now, there will only be the revision of 3(a), but 3 (b) and (c), which were not intended to be eliminated, will be automatically eliminated.

Therefore, I ask unanimous consent that the resolution now be amended in three places to read amending paragraph "3(a)" so that it will specificate 3(a) only, thus leaving 3 (b) and (c) as they now exist untouched.

Mr. BAKER. Mr. President, will the Senator withhold this for a moment?

Mr. ROBERT C. BYRD. Yes.

Mr. President, it really amounts just to a clerical error, but it would be unfortunate if it were allowed to stand.

Mr. BAKER. Mr. President, I have only just had this called to my attention, but I observe that there is no substantive change in the situation as we understand it and there is no objection.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

Mr. BAKER. Mr. President, for the moment I reserve my time under the standing order.

THE PRESIDENT'S ENERGY PROPOSALS

Mr. ROBERT C. BYRD. Mr. President, there is considerable discussion in the media concerning the economic impact of the President's energy proposals. It is, of course, essential that we gather as much pertinent information from economists and econometricians as is possible, and that we be aware of the possible impact on jobs, inflation, and growth of any action we take in the Congress. But I think a word of caution should be injected here. We have not yet seen the specific legislation. We have not yet received the total energy package. Neither have our friends in the press or in the academic or business world.

I noted a story yesterday in the newspaper that alluded to the statements which were being made by various respected economists throughout the country and, of course, they were of different and varying opinions in their views. But the headlines we are reading today are based on educated guesses, not necessarily real facts in every case. I believe it would be wise for all of us to keep that thought in mind.

Second, we must begin to examine each of these impact projections in terms of the alternatives. When we are told that "if we pass this part of the President's energy package," the economic impact will be thus and so, we should also ask, "What will be the economic impact if we do not pass that proposed part of the package? What are the alternatives?"

We are today, even more than we were prior to the Arab embargo, in hostage to OPEC, and our energy cancer is growing. I refer to the word "cancer." An individual looks well. He carries a cancer. He is unaware of that fact until he begins to feel the pain. All too often it is then too late.

So, this energy crisis is upon us. Like a cancer, it is not so readily apparent, perhaps, but the President has submitted a proposal which is calculated to deal with that energy crisis before the pain becomes unbearable and before it is too late to deal with it effectively.

We all may find justifications at the moment for being hesitant to embrace this or that part of the proposal. I can understand how it is going to create problems in various regions of the country. It is also going to cut across parochial interests.

However, there is plenty of time to shoot holes in it; plenty of time to knock it down. I think we should study it and if we can come up with better alternatives and refinements, that is fine. I hope, however, that as we talk about the economic impact of this or that particular component of the package, even though the economic impact may or may not be exactly what would be ideal under normal circumstances, we also consider the potential result against what will very likely be the situation, not only from the standpoint of our economic security, but also from the standpoint of our national security, if some action is not taken.

Certainly, we must be aware of the economic impact on the American people of any program we propose in dealing with the energy crisis.

But we must also be aware of the economic impact on our people of inaction on our part in failing to face up to the energy problem. I believe that most Members of Congress will agree that inaction would be disastrous. There are times in Government when no action is better than action, but this, in my opinion, is not one of those times.

Mr. BAKER addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee is recognized.

Mr. BAKER. Mr. President, I think it is appropriate to remark that I have no disagreement with the tone and tenor and most of the substance of the majority leader's remarks. I think they are appropriate. I might add to them and extend them with this one further admonition.

As I have said here from this place on other occasions and from other fora from time to time, there is only one place in the Government of the United States where the Founding Fathers institutionalized controversy. That is in Congress. There is a single President. He is the President of all the people of this country. We respect him, we are his partners whether he is of our party or not.

There is the Court, the only constitutional court, the Supreme Court, which is apolitical, as it should be. It is immune, in a way, from the political process, the forces and the vectors of force that play on the rest of us. That immunity is guaranteed by their Presidential appointment, by their Senate confirmation, and their life tenure. The Court is not a forum for energetic discussion and public debate. It is only in Congress, where there is a majority and a minority, where there is the considered design for debate and controversy.

So, you see, Mr. President, in that way and in that view, it seems to me that it is our opportunity to examine and understand the proposals of this and other Presidents from time to time, but it is also our obligation to do so.

My remarks are, in part, to say that sometimes I have observed that the country, even the press and the electronic media, as it is called, sensationalize that controversy. The country, from time to time, I suspect, is turned away by it, is afraid of the disagreements and the disputes of Congress. I think it is worthwhile, then, to point out from time to time that this controversy and this conflict are an essential, an integral, and an important part of the governing process.

There will be a debate on the energy policy of the United States. This President has rightly proposed to the country that it hear and understand his admonitions. His predecessors, President Ford and President Nixon, did the same thing. We Members of Congress, I think, did not give adequate attention to those previous admonitions, but we should now.

For my part, insofar as I can speak for the minority in the Senate, I assure these things: First, that I shall help and we shall help, to the extent that we can, to verify and validate the nature and the scope of the problem—indeed, of the emergency—and there is an emergency.

Second, that we shall hear and try to understand the proposals of the President of this administration, and to consider them; to agree with them if we can, to disagree if we must, but to debate them, in any event.

Third, to propose, as we can propose, alternatives, separate and different initiatives, and to reach the synthesis of ideas that will translate into public policy.

There is no doubt, Mr. President, that there is a great crisis before us in this country in terms of our energy requirements. There is no doubt that we have the constitutional responsibility to test, to debate, and, finally, to synthesize and formulate a public policy to serve the country for decades, indeed for generations to come.

There is no doubt that there have been few times in the history of the Republic when there is a greater charge to this body than now before us. So I urge, Mr. President, that the country understand that, as we disagree, as we debate, as we criticize, as we talk, as we originate new and different ideas, as we may dispute with each other and with the President, it is not because we do not serve the same interests; but because we are exercising the fundamental responsibility that the Constitution gave us as the legislature of this country.

It will be an energetic time, Mr. President, but I think it will be a good time for the country, because I foresee a genuine debate on the ramifications and the full spectrum of complications that beset us.

Mr. ROBERT C. BYRD. Mr. President, I agree wholeheartedly with the distinguished minority leader that there will be a national debate, and there ought to be one, on this very vital subject of energy and the solution to the energy problem.

What gave rise to my remarks was a story in yesterday's Washington Star entitled "Nongovernment Economists Less Optimistic on Carter Plan."

I can understand how the economists will disagree on this plan. I do not think they have ever been able to agree on any plan heretofore, and I do not say this in a pejorative sense. It was the same in the case of previous Presidents.

I take one sentence, for example, one quotation by one very highly respected economist:

> We are doing to ourselves about 15 percent of what OPEC did to us in 1973 and 1974 by raising prices.

Well, that may be true. I am in no position to say whether it is true or not. But what is the alternative? That is the point I am making. While one may raise questions about what we may be doing to ourselves by raising prices, I think we should also ask ourselves what is the alternative if we do not do something? Assuming that the distinguished economist is correct—that we would be doing to ourselves about 15 percent of what OPEC did to us in 1973 and 1974 by raising prices—the implication of that sentence, to me, is that if we do not take action, we shall be leaving OPEC in a position to do 100 percent to us next year, or 2 years from now of what OPEC did to us in 1973 and 1974.

Down the road, if we do not take action, they can do to us what they did 3 years ago, which will not be 15 percent. The economist I quoted says we will be doing 15 percent of what they did. Well, 15 percent is a bargain basement price. So if we do nothing, we are leaving it up to OPEC to do 100 percent of what they did 3 years ago, and the situation would be much worse at that time.

So I think we have to weigh the alternatives, Mr. President.

If we do nothing now, what will the alternative be to the economy, to the national growth rate, to jobs, to business, and to the national security?

So while the economists focus on it, and quite rightly so, I think we must also address the inconvenience, or the adverse effects, if need be, on the economy if we take no action to deal with the energy problem.

What would be the alternative on the economy, on the national security, on unemployment, on the national growth rate, on business investment, on the construction industry, if something is not done about the growing energy needs of our country and soon? That is my point.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, and this has been cleared with the distinguished minority leaders and others, that the distinguished Senator from Arkansas, the chairman of the Appropriations Committee (Mr. McCLELLAN) may call up at this time the conference report on the supplemental appropriations bill without prejudice to the distinguished Senator from New York (Mr. JAVITS) who was to be recognized at the close of the standing orders recognizing the two leaders.

Mr. BAKER. Mr. President, if the distinguished majority leader can withhold for just a moment, I need to try to obtain the attendance of one Senator who requested to be present when it was called up. So might we have a brief quorum call?

Mr. McCLELLAN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, if the distinguished Senator will yield, I ask that the committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SUPPLEMENTAL APPROPRIATIONS, 1977—CONFERENCE REPORT

Mr. McCLELLAN. Mr. President, I submit a report of the committee of conference on H.R. 4877, and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The report will be stated by title.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4877) making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The ACTING PRESIDENT pro tempore. Without objection the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of April 6, 1977.)

Mr. McCLELLAN. Mr. President, the committee of conference met on H.R. 4877, the supplemental appropriations bill for fiscal year 1977, on April 4 and 5. The report was finalized and filed in the other body on April 6.

Mr. President, the committee of conference considered a total of 237 amendments. Of that total, the Senate receded on 40, and the House receded on 77. A total of 29 Senate amendments were further amended and agreed to by the House and 91 amendments have been reported to the House in technical disagreement of which only 14 will require further action in the Senate.

The bill, as agreed to in conference, is $28.9 billion, which is $4.7 billion below the President's budget estimates; $1 billion over the House bill; and $3.8 billion below the Senate bill.

Mr. President, I ask unanimous consent that immediately following my remarks there be printed in the RECORD a summary table showing the conference totals and the usual comparative figures.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 1.)

Mr. McCLELLAN. Mr. President, I do not think it is necessary to go into the details of how the 237 amendments were resolved. The conference report has been available for 2 weeks and I am sure this has given the Members an opportunity to study the results of the conference.

I do want to assure the Members that the Senate conferees worked very hard to sustain as much as possible of the Senate amendments in conference.

Mr. President, I yield to my colleague, the distinguished Senator from North Dakota and the ranking minority member of the committee, Mr. YOUNG.

EXHIBIT 1

CONFERENCE TOTAL—WITH COMPARISONS

The total new budget (obligational) authority for the fiscal year 1977 recommended by the Committee of Conference, with comparisons to the budget estimates, and the House and Senate bills follows:

Budget estimates of new (obligational) authority [1] [2]	$33,621,799,315
House bill	27,892,597,271
Senate bill [2]	32,730,485,710
Conference agreement [2]	28,923,859,260
Conference agreement compared with:	
Budget estimates of new (obligational) authority	−4,697,940,055
House bill	+1,031,261,989
Senate bill	−3,806,626,450

[1] Includes $699,467,649 of budget estimates not considered by the House, contained in House Docs. 95–29, 95–89, and 95–97 and Senate Docs. 95–31 and 95–32.

[2] Includes $1,025,000 for fiscal year 1976.

Mr. YOUNG. Mr. President, the conferees have agreed in this conference report to an appropriation of $29.0 billion. This is $3.8 billion below the bill that was passed by the Senate. Included in this $3.8 billion reduction from the Senate bill is a cut of $3.5 billion for waste treatment plant construction grants. The remaining $300 million in reductions is an aggregate of various items in the bill.

There are provisions in this supplemental appropriations bill which have merit, and there are provisions which are necessary to provide funding for under existing law. However, as I stated when this bill was before this body previously, there are many items in this bill that could have been reduced without causing any undue harm or hardship.

Mr. President, I reluctantly signed this conference report because of those items in it absolutely necessary to be provided with funding. I am still concerned about the effect the spending contained in this bill and the $19.8 billion in the economic stimulus bill will have on inflation, the deficit and the debt.

Mr. President, I believe the Senate should approve this conference report.

Mr. President, one of the able, hard working, and effective members of the Committee on Appropriations is the junior Senator from Massachusetts (Mr. BROOKE). He is not able to be here this afternoon, and I ask unanimous consent that a statement prepared by him be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY MR. BROOKE

I am pleased to recommend the adoption of the Conference Report on the Labor-HEW chapter (Chapter VII) of the fiscal year 1977 general supplemental appropriations bill.

The Labor-HEW part, at $5.8 billion, is the largest part of this bill. However, much of this amount, more than $3.4 billion, is for health and education programs which could not be funded in the regular FY 77 bill because of the lack of authorizing legislation at that time.

I am glad to report that we were in substantial agreement with the House on most items in the Labor-HEW chapter of the Supplemental. We were successful in sustaining the majority of our amendments to the House bill and were able to reach acceptable agreements where there were differences in recommended dollar levels.

In the vital area of higher education we provide $3.1 billion for student assistance programs. Under the Conference agreement, it will be possible to provide a Basic Opportunity Grant (BOG) averaging $847 per student. For work study, we provide a program level of $420 million—an increase over FY 76. And I was pleased the Conferees agreed to my requests to provide increases for supplemental grants and direct loans. Taken together our student assistance package will help to ease the financial burden of colleges for disadvantaged and middle-income students.

I also was pleased the Conferees accepted a portion of the increases I recommended to provide proper growth for the effective Cooperative Education program, to train language and area specialists and to step up training of minority librarians.

The conference recommendations in the area of health total $616.8 million, or $19 million more than the House.

The increases provided by the Conferees include additional funds for immunization, biomedical research, alcoholism grants, health planning and for medical and other health professional schools experiencing financial problems.

At our urging, the House agreed to an additional $5.9 million for alcoholism project and formula grants. And within this increase the House agreed to my request to include $1.3 million and bill language to prevent 31 states, including Massachusetts, from losing funds under the formula grant program in FY 77.

In another helpful action the House agreed to our amendment providing $5 million to maintain average funding for state health planning agencies at no less than their 1976 level.

Our bill includes funds for a variety of health professions programs. The Conferees agreed to additional amounts for health service scholarships and, at my request, for financial distress grants.

In most instances both Houses were in agreement on the appropriate levels for health professions. This, I am glad to say, includes capitation funding for medical, osteopathic and dental (MOD) schools. Initially, our Subcommittee decided to reduce the capitation grants, but I urged that the decision be reversed.

The costs of attending medical school can be astronomical and it is vital that a private medical education not be put out of the financial reach of students of modest means. Capitation grants can be of substantial assistance in this regard, and I am pleased the Senate agreed with my amendment to maintain the House level for MOD at $101.1 million.

The House and Senate also were able to reach agreement on the need for additional funds to permit the development or expansion of regional veterinary schools at Tufts University in Boston, the University of Pennsylvania, Washington State University, and Tuskegee Institute.

I was particularly pleased that the House and Senate were in agreement on the need for a substantial increase in funding for Emergency Energy Conservation Services under the Community Services Administration.

Of the total provided, $200 million is to help low-income householders pay past due bills and avoid the threat of utility shut-off now hanging over many.

The additional $82.5 million for weatherization will permit the expansion of the program to insulate the homes of the elderly and low-income and thereby conserve fuel and hold energy costs down.

I think we have come out of conference with a supportable bill. I believe the level of the Labor-HEW chapter is reasonable considering the needs which we are addressing in this supplemental. I urge the Senate to adopt the conference report containing these funds and the President to sign the measure which we send him.

Mr. MAGNUSON. Mr. President, today we are going to vote on the conference report on H.R. 4877, the 1977 supplemental appropriations bill. I would like to briefly discuss some of the highlights of the Labor-HEW chapter of this bill.

This chapter includes nearly $6 billion, and is $839 million over the budget request. Each of the increases is for programs which the Congress has always placed a high priority on—new health programs and continuation of the national direct student loan program—plus initiatives in energy conservation and fuel assistance for those hardest hit by the severe winter just past.

Health programs will receive $616 million. After a long 3-year wait, we are finally able to provide funds for health training programs. Many people are saying that we have enough doctors and nurses now. While we may or may not have enough, here is a serious need to get these health professionals to underserved areas. That is exactly what we try to do in this bill—train doctors and provide incentives for them to go to underserved areas.

The Labor-HEW chapter also includes $3.6 billion to expand and improve education in our Nation's schools and universities. Contained in the bill are funds for vocational education and higher education, including over $2 billion for student assistance programs. The conferees also agreed to provide $17.5 million for emergency school aid. These funds will be used to assist local school districts to implement voluntary desegregation programs—programs designed to prevent crisis situations in our schools before they happen.

We are also providing $2 million to assist HEW in preparing for national health insurance and welfare reform. These funds will finance 50 or more positions in HEW so that we can begin a strong effort to lay the groundwork for these two important proposals by the Secretary.

Congress has made a strong commitment to all of these programs. We must continue our drive to improve education and health care in the Nation—these funds will continue this commitment

Mr. BELLMON. Mr. President, the conference report before us today on the supplemental appropriations bill, fiscal year 1977, is certainly an improvement over the bill originally passed by the Senate. I would like to commend my colleagues on the Appropriations Committee who served as conferees on this measure for bringing a bill back to the Senate which is more reasonable in its spending levels than the bill we took to conference.

The problems with the supplemental as originally passed by the Senate, Mr. President, was the result of a number of amendments which were added on the Senate floor. Having supported the bill as reported from the Appropriations Committee, I was disappointed to learn prior to final passage in the Senate that close to $1 billion had been supplemented to the supplemental through floor amendments. As a result of this, I voted against the supplemental when it was considered for final passage in the Senate.

However, Mr. President, since the conference report before us is more in line with the recommendations of the Arpropriations Committee, I intend to support this bill at this time.

As we all know, this conference report contains $28.9 billion in budget authority and $7.4 billion in outlays for virtually every department and agency of the Federal Government for the remainder of this fiscal year. While I am prepared to support this measure in its present form, I am very concerned over the need for the Congress to continually deal, year after year, with multibillion supplemental appropriations requests as contained in this bill. I have difficulty in understanding why the Government cannot conduct this business in accordance with the annual appropriations bills.

Mr. President, I realize fully that many departments within the Federal Government will unavoidably underestimate their budget projections from time to time. But for the entire Government to underestimate its budget projections by $30 billion is inconceivable.

It leads me to believe that the executive branch deliberately underestimates its original budget figures to make the formal budget look more palatable to the Congress and the taxpaying citizen. By doing so, the Congress is then forced to deal with such measures as the supplemental before us today, which falsely gives the impression to the American people that the Congress is made up of "big spenders."

The Federal Government, through the assistance of the Office of Management and Budget, is certainly capable of accurately estimating its annual expenditures and submitting these budget estimates to the Congress at the time the Federal budget is formally transmitted. If such a procedure were followed, the Congress would be in a much better position to deal with the overall picture rather than having to piecemeal the Federal budget together throughout the fiscal year. This would not only be helpful to the Appropriations Committee, Mr. President, but would be particularly beneficial to the Senate Budget Committee and the entire Congress as a whole in arriving at its spending targets and subsequent ceilings which are required by the Budget Reform Act of 1974.

Mr. President, the end result of such an undertaking by the executive branch would be to allow the Congress to deal in full force with the Federal budget through the regular appropriations process and reserve any supplemental action to emergency situations which require additional funding. I, for one, would be delighted to see the Government institute such practices so that the Congress would be precluded from dealing with supplemental appropriations bills to the tune of $30 billion.

I am sure that the chairman of the committee is concerned about this, as are the other members of the committee, and I hope the new administration will put an end to this practice. I believe that we should be very critical of these large supplemental requests and should turn them down until the administration does send us more realistic budgets.

Mr. HEINZ. Mr. President, I rise for the purpose of bringing to the attention of this body the fact that yesterday the House rejected an amendment that the Senate had included in the conference report, the Bayh amendment, to provide $20 million for snow removal in four States in which emergencies were declared; namely, Pennsylvania, Ohio, Indiana, and Michigan—and that the House insisted on its disagreement, which was carried to a vote. That vote was 124 to 279.

The Bayh amendment was approved by this body, and it was approved for a very good reason. It is well known how severe the winter weather was in many States, but it was particularly difficult in Ohio, Indiana, Michigan, and Pennsylvania.

The President of the United States recognized this difficulty when he made a series of declarations applying to each of those four States. To paraphrase the declarations he made, he determined that an abnormal accumulation of snow and ice resulting from a series of blizzards and snowstorms in the various States was of sufficient severity and magnitude to warrant a declaration of an emergency. He, therefore, declared that such emergencies existed in each of those States. He went on to say that the purpose of the declarations was to provide Federal aid for the opening of the vital transportation arteries, the provision of public health services, the reopening of blocked supply routes to educational, governmental, commercial, and industrial establishments, and such other emergency assistance as might have been required to protect the public health and safety.

The fact is that the Federal Disaster Assistance Administration did not meet the cost of any of those substantial additional expenses incurred in those four States. In the case of the 21 affected counties in Pennsylvania, the expenses borne by hard-pressed local governments, many of which do not have the strongest of tax bases, amounted to more than $4.8 million.

I express sincere regret, Mr. President, at the action taken by the House in insisting on its disagreement with the Senate. I do not want to let this rejection pass unnoticed. While I will not request that we insist on our position at this time, I want to make it very clear to the Members of the House that this issue remains of great concern to this Senator; that there may be an opportunity in the near future to resolve the issue more favorably both in the House and the Senate. I hope that the Members of the House who joined in rejecting this very real need will bear in mind that they should not vote simply parochial interests; that whether it is one area of the country or not, each area of the country gets into disaster problems, whether it is flood, snow removal, weather, or drought; that we should approach this matter on the basis of need, on the merits and the hardships, and particularly have a great deal more understanding regarding the tremendously severe tax consequences that ultimately must be inflicted upon the residents of the various counties affected.

At a time when Congress is enacting various measures involving countercyclical assistance, it seems tremendously inconsistent to me that the House should have rejected something that is totally consistent with the spirit of disaster relief. When our economy is unhealthy, we need countercyclical assistance in the form of an appropriation for fiscal assistance, in the form of a tax stimulus, which is to be considered not only today but also next week, and in the form of revenue sharing or seeded jobs.

Mr. MUSKIE. Mr. President, the conference agreement on H.R. 4877, the regular spring supplemental for fiscal 1977, provides for appropriations of $28.9 billion, which would result in an estimated $7.4 billion in outlays during fiscal 1977. These levels are $3.8 billion in budget authority and $0.1 billion in outlays lower that the Senate-passed version of this bill.

Mr. President, the conference agreement on this bill is below the levels passed by the Senate primarily for two reasons. First, the conferees reduced budget authority for Environmental Protection Agency construction grants from $4.5 billion as passed by the Senate to a level of $1 billion. Second, the conferees removed $275 million in budget authority and $100 million in outlays for Economic Development Administration and Small Business Administration disaster assistance.

However, I am disappointed that the conference did not sustain the full $4.5 billion for EPA construction grants. The water pollution program must be fully funded. Deadlines for water cleanup depend on an even flow of financial resources to meet community waste treatment needs. These funds were assumed in the congressional budget and the President requested full funding. But the Appropriations Committee has bowed to the House; and thereby to the intimidation of the House Committee on Public Works. By only making available $1 billion and then limiting these funds to the present formula for allocation among the States, only $223 million of at least $900 million in demonstrated needs are provided in this conference agreement.

Lack of new authorizing legislation was an ostensible objection to allowing the full $4.5 billion, but that may be remedied during the remaining 5½ months of the fiscal year. The issue of full funding for fiscal year 1977 for this important environmental program thus remains open and, assumedly, the additional funding can be included in a future supplemental appropriation. But that is not a sufficient reason for denying these critical funds.

Mr. President, when the bill was before the Senate, I pleaded for the conferees to uphold the Senate's position on full funding. I even went so far as to provide an option to the conferees. I said:

> I believe that a strong case can be made for appropriation of the full $4.5 billion. In that case, full allotment to all 50 states can be justified on the basis that adequate funds can be made available to all states. However, if an amount less than $4.5 billion is agreed upon in conference, I would urge that it be made available only to those states which need the funds—and only on a first come-first serve basis. This procedure would assure that funds are directed to the areas where they can be used, and would avoid tying up needed funds in states unable to use them.

This failure on the part of the conferees not only threatens the integrity of the water pollution construction grant program but it provides an opportunity for the House Committee on Public Works to continue to hold the program hostage to a series of unjustified and unwise amendments to the clean water law.

Mr. President, the water pollution program means clean water and economic activity. An appropriation of $4.5 billion represents an opportunity to reduce our backlog of needed waste treatment facilities by 10 percent and to provide 200,000 jobs. All of these facts were apparently ignored by the Senate conferees. I cannot understate my distress with the result with which the Senate is presented.

Mr. President, I ask unanimous consent that a New York Times editorial be included in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUDDYING THE CLEAN-WATER LAW

The Federal Water Pollution Control Act of 1972 was a major turning point in the long struggle to clean up the nation's rivers and protect its water resources. For the first time, Congress adequately responded to two grim facts: Every major river system in America is seriously polluted, and the nation's ponds, marshes and other wetlands have been systematically diminished to a dangerous extent. As a result of recent actions by the House of Representatives, the act is now in jeopardy.

The law set the bold goal of "zero discharge" of pollutants into the nation's rivers by 1985. It created a licensing system for the Army Corps of Engineers to control dumping into any stream, river or wetland. Previously, under an 1899 law, the Army Engineers regulated only streams and rivers used in interstate commerce.

The extension of Federal protection to small streams and to wetlands was of critical importance. Wetlands are nature's breeding grounds and also its backup system where water from storms and floods is absorbed, fish are spawned, and birds pass part of their life cycle. Dumping, particularly of materials containing heavy metals or toxic pesticides, has had a disastrous effect.

Last year, the House passed legislation that would have virtually repealed the law as far as regulating wetlands and small streams was concerned. That attempt died in a House-Senate conference, but this year the House has again passed a bill that would substantially weaken the licensing authority.

The bill as passed by the House contains other dubious amendments; they pose complex questions that the Senate Public Works Committee wants to restudy in hearings later this spring. This cautious approach is also favored by the Carter Administration. Unfortunately, in an effort to pre-empt the contest, the House attached its amendments to the President's $4 billion emergency public works bill, which must be dealt with promptly.

The Senate and the Administration may yet conclude that clarifying language is necessary to exempt normal activities in farming, ranching and forestry that have only minor environmental impact on rivers and wetlands. But the House amendments go well beyond any such necessary clarification. The nation's water resources are too scarce and precious to allow a return to the reckless practices of the past.

Mr. MUSKIE. Turning to other matters in the bill, the EDA and SBA disaster assistance funds were removed by the conferees pending passage of authorizing legislation which may yet be forthcoming during the remaining months of this fiscal year. Therefore, we should regard these two items, totaling $275 million, as possible later requirements for supplemental appropriations in fiscal year 1977.

From the viewpoint of human needs, we are an important step closer to enactment of funding for one program which sorely needs to get underway. I refer to the $200 million for emergency fuel bill assistance to low-income people, including the elderly, who are unable to pay the enormous fuel bills caused by the severe cold of this past winter. Many families who were able to survive the winter without fuel cutoffs now face the prospect of having their utility service cut off, because they have not been able to pay their fuel bills. This appropriation, therefore, is coming not a moment too soon.

Mr. President, this bill as approved by the conferees and the possible later requirements for EPA construction grants and EDA and SBA disaster assistance are, together, no higher than the Senate-passed version of H.R. 4877. They can be accommodated within the third budget resolution.

Mr. BAYH. Mr. President, the Senate is today considering the conference report on H.R. 4877, the supplemental appropriations bill for fiscal year 1977. This bill appropriates $29 billion for many vital programs including higher education, health programs, and waste water treatment.

I am particularly pleased that funding is provided in the legislation for several programs of specific interest to the citizens of Indiana. Contained in this legislation are amendments, which I sponsored, providing $300,000 for research into pseudorabies, a viral disease in hogs; $161,000 for completion of the headquarters at the Indiana Dunes National Lakeshore and an additional $1 million over the House-passed figure of $3 million for immunization against childhood diseases.

However, I would like to take this opportunity to express my disappointment that the House did not accept my amendment for $20 million to be used to reimburse communities in Indiana, Ohio, Michigan, and Pennslyvania for the cost of snow removal during the Presidentially declared emergency this winter.

This past winter was particularly difficult for several areas of the country. Many States in the West have suffered from severe drought and have been declared eligible for massive Federal assistance. Some areas in the East received disaster declarations as a result of heavy snowfalls and extremely cold temperatures. In the Midwest the States of Indiana, Michigan, Ohio, and Pennsylvania all suffered a series of severe winter storms.

The bad weather culminated in a storm during the last week of January causing these four States to apply for Federal assistance. Counties in all four States received emergency declarations from the President and were later turned down by the Federal Disaster Assistance Administration—FDAA—for major disaster declarations.

While I was most disappointed that Indiana did not receive a major disaster declaration which I believed was amply justified, this amendment was not designed to activate major disaster declarations. That decision has been made. The $20 million was to provide assistance which was both fair and justified under the terms of the emergency declaration for the duration of the actual emergency.

A snow emergency was very much in evidence in Indiana as of Friday, January 28. However, it took time for the Governor to make application for Federal assistance and more time for the Federal Government to respond. In fact the emergency declaration was not approved until February 2 and as a practical matter, not much Federal assistance was available until February 3. This was a full 6 days after the snow emergency began. Similar timelags occurred in the other three States involved.

Any community that immediately responded to the snow emergency and directed its scarce resources to clearing vital transportation arteries in order to protect the health and safety of its citizens has not been reimbursed by the Federal Government for any expenditures incurred during the 6 days it took the bureaucratic machinery to declare that an emergency existed. Communities that waited for the emergency declaration and delayed their response to the snow emergency have found the Federal Government paying for the cost of snow removal.

This interpretation of the Federal Disaster Relief Act by FDAA seems to me to be totally out of line with the congressional intent of this legislation. The Federal Government ruled that an emergency situation existed in Indiana, Michigan, Ohio, and Pennsylvania and it is obvious that the emergency began several days prior to the issuance of the declaration. It seems only just that the Federal Government cover costs directly related to the emergency even if they were incurred prior to the date the declaration was issued. In fact this is exactly the procedure followed by FDAA with major disaster declarations. Aid is given from the date of the disaster not from the date of the declaration.

Many of the 40 counties in Indiana covered by the emergency declaration expended their entire year's road maintenance budget clearing snow which resulted during the emergency and I think it is only just that they be reimbursed for the expenses incurred as a result of a federally declared emergency.

In the coming weeks I will be looking into possible amendments to the Federal Disaster Relief Act which will clearly spell out for FDAA what would be an equitable interpretation of existing law. I believe that the authority for the reimbursements sought by my amendment is already in the present law but it may be necessary to make that crystal clear to FDAA so that the situation which occurred in Indiana, Ohio, Michigan, and Pennsylvania this winter will not arise in the future.

I appreciate Senator PROXMIRE'S cooperation in permitting me to offer my amendment at the HUD Appropriations Subcommittee markup of the supplemental appropriations bill. I particularly want to thank Congressman BRADEMAS, who along with other members of the Indiana delegation in the House of Representatives, made a valiant effort to persuade the House to accept this amendment.

Mr. NUNN. Mr. President, I would like to ask the able chairman of the Appropriations Committee one question before the Senate votes on the conference report on the supplemental appropriations bill.

The Senate Appropriations Committee included language in their report on this bill that directs up to $250,000 of the $3,326,000 which will be available for startup assistance to Mercer University in Macon, Ga., for initial planning

and startup for a medical school. This program is authorized under section 788 (g) of Public Law 94-484, the Health Professions Educational Assistance Act. These funds are extremely important to the development of this medical program at Mercer since a commitment of Federal funds will release a substantial amount of State and local funds for use in the development of this school.

The committee, in its report, also directs HEW to submit a plan for the use of these funds within 60 days after the enactment of this bill. I would like to know if this language and instructions are still the intent of Congress under this bill.

Mr. McCLELLAN. Yes, the Senate report language regarding the Mercer University Medical School is still the intent of Congress under this bill.

Mr. EAGLETON. Mr. President, the conference report contains language which is somewhat critical of Amtrak's relations with Congress. While I share the concern of the rest of the conferees in this matter, I do want to say that I am encouraged by recent efforts on the part of Amtrak to correct some of the misunderstandings and problems that may have existed. I think Amtrak is aware of the need for good communication with the Congress and I want to make note of what I think is a good faith effort to fully cooperate with the committees.

Mr. PERCY. Mr. President, I am pleased that the 1977 supplemental appropriation bill, H.R. 4877, as passed by the Senate contained $4.5 million to the National Park Service for repairs to the John F. Kennedy Center for the Performing Arts—and that this Senate provision was retained in conference.

As Vice Chairman of the Board of Trustees of the Kennedy Center and as one who has maintained an interest in its affairs over the years, I have followed closely matters pertaining to it. It is my judgment that inclusion of this appropriation to the Park Service is very helpful and will facilitate the necessary roof and other repairs.

On March 22, I wrote the chairman of the Interior Appropriations Subcommittee, the distinguished majority leader, Senator BYRD, of West Virginia, requesting that funds be included in this supplemental bill and I thank him for his help and assistance. I understood this request was fully supported by the distinguished Senator from Idaho, Mr. McCLURE, and our distinguished minority leader, Senator BAKER.

Mr. President, I believe it is very important that this necessary repair work on the Kennedy Center commence as quickly as possible. I, therefore, strongly hope that the Senate and House conferees can expeditiously agree to authorizing legislation and that it will enable this appropriation to be obligated.

KENNEDY CENTER APPROPRIATION

Mr. McCLURE. Mr. President, I am very pleased that the 1977 supplemental appropriations bill contains $4.5 million to the National Park Service for repair and reconstruction of the John F. Kennedy Center for the Performing Arts.

I want to take this opportunity to especially thank the distinguished majority leader and chairman of the Appropriations Subcommittee for the Department of Interior and related agencies, Senator BYRD of West Virginia. On March 22, I wrote Senator Byrd stating that because of the need to begin emergency repairs promptly, I hoped the subcommittee could include the necessary repair funds for the Park Service in the supplemental appropriations bill. I appreciate his attention and assistance, and I am glad funds to the Park Service were included in the Senate bill and maintained in conference.

Mr. President, I ask unanimous consent that a copy of my letter to the distinguished subcommittee chairman be included in the Record at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Exhibit 1.)

Mr. McCLURE. As my colleagues may recall, when S. 521 was passed on February 24, the Senate adopted my amendment to authorize repair funds directly to the National Park Service, rather than to the Center itself. The purpose of my amendment was to fix responsibility in a Federal line agency, with an experienced service having capability and established procedures, and enjoying a recognized relationship with the Congress and within the executive branch. The Park Service has, since 1973, been responsible for operation and maintenance of the nonperforming arts functions of the Center under authority of Public Law 93-67. Placing responsibility and authority also for this repair work in the Park Service, I believe will facilitate the proper performance of the work and its more effective planning, budgeting, contracting, supervision and auditing.

Mr. President, the funds provided in this appropriation bill are contingent upon the enactment of S. 521, or similar legislation. The House-passed authorization bill directed the appropriation to the Board of Trustess of the Kennedy Center rather than to the National Park Service. With resolution of this point, I trust other differences may quickly be settled by our Senate-House conferees. Prior to the Easter recess I had occasion to speak—on behalf of myself and Senator BURDICK—chairman of our conferees—to Congressman MINETA, chairman of the House Public Works and Transportation Subcommittee on Buildings and Grounds. I am consequently hopeful that this matter can be completed so that the funds provided by this legislation can be obligated expedititiously.

I would also like to point out that I understand the distinguished senior Senator from Illinois, Senator PERCY, who is Vice Chairman of the Kennedy Center Board of Trustees, also supports this provision in the supplemental appropriation bill.

EXHIBIT 1

U.S. SENATE,
Washington, D.C., March 22, 1977.

Hon. ROBERT C. BYRD,
Chairman, Appropriations Subcommittee for the Department of Interior and Related Agencies, U.S. Senate, Washington, D.C.

DEAR BOB: You may recall that, on February 24, when the Senate passed S. 521, to authorize an appropriation for the repair of the Kennedy Center, the Senate adopted my amendment authorizing the roof and damage repair funds directly to the National Park Service. The House has enacted a somewhat different bill, but we have not yet been able to hold a conference to resolve differences.

Because of the need to begin emergency repairs, I hope very much that your subcommittee may include the necessary funds in the 1977 Supplemental bill as an appropriation to the Park Service. I fully expect completed authorization action to take place prior to final enactment of the supplemental.

The purpose of my amendment to authorize funds to the Park Service, rather than to the Center itself, was to fix responsibility in a Federal line agency, with an experienced Service having capability and established procedures, and enjoying a recognized relationship with the Congress and within the Executive Branch. The Park Service, as you know, has since 1973 been responsible for operation and maintenance of the nonperforming arts functions of the Center under the authority of P.L. 93-67. I believe this approach will facilitate the proper performance of the work and its more effective planning, budgeting, contracting, supervision and auditing.

I would be glad to discuss with you any questions you may have on this subject.

Sincerely,

JAMES A. MCCLURE,
U.S. Senator.

Mr. McCLELLAN. Mr. President, I move that the conference report be agreed to.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion.

The motion was agreed to.

(Subsequently the following occurred:)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to move to reconsider the vote by which the conference report on the supplemental appropriation bill was agreed to.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the conference report on the supplemental appropriations bill was agreed to.

Mr. CURTIS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The clerk will state the amendments in disagreement.

The legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 7 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter inserted by said amendment, insert:

AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

Agricultural Conservation Program

For an additional amount to carry out the Agricultural Conservation Program, $100,000,000, to incur obligations for the period ending September 30, 1977, and to liquidate such obligations for soil and water conserving practices in major drought or flood damaged areas as designated by the President or the Secretary of Agriculture: *Provided*, That not to exceed five per centum of the amount herein may be withheld with the approval of the State committee and allotted to the Soil Conservation Service for services of its tech-

nicians in the designated drought or flood damaged areas.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 43 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert:

Construction and Maintenance

For an additional amount for "Construction and maintenance", $600,000, to remain available until expended.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 45 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $800,000

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 50 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert: ", of which $4,025,000 shall remain available until September 30, 1978".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 52 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: "$90,855,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 59 to the aforesaid bill, and concur therein with an amendment as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 59 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: "$34,200,000, of which $15 000,000 shall be available only upon enactment of authorizing legislation".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 60 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $25,700,000, of which $15,000,000 shall be available only upon enactment of authorizing legislation".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 61 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment insert: "$22,460,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 83 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum inserted by said amendment, insert:

"$120,949,000, *Provided*, That allotments to each State under section 302 of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act shall not be less than the allotments made to such States in fiscal year 1976."

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 90 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter inserted by said amendment, insert:

"EMERGENCY SCHOOL AID

"For an additional amount for 'Emergency School Aid', $17,500,000 of which $7,500,000 shall be for carrying out section 707(a)(13) through 707(a)(15) of the Emergency School Aid Act and $10,000,000 shall be for activities under section 708(a) of said Act, notwithstanding any other provision of said Act, to provide assistance to school districts for which section 706(a) funding is insufficient to meet their needs and which are implementing voluntary plans to eliminate or reduce minority group isolation."

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 91 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum inserted by said amendment, insert: "$3,187,168,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 173 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert:

"OFFICE OF SPECIAL REPRESENTATIVE FOR TRADE NEGOTIATIONS, SALARIES AND EXPENSES

"For an additional amount for 'Salaries and expenses', $266,000: *Provided*, That not to exceed $3,800 shall be available for official reception and representation expenses."

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 211 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: "$167,680,000".

Resolved, That the House insist on its disagreement to the amendment of the Senate numbered 35 to the aforesaid bill.

Mr. McCLELLAN. Mr. President, I move that the Senate concur en bloc in the amendments of the House to the amendments of the Senate Nos. 7, 43, 45, 50, 52, 59, 60, 61, 83, 90, 91, 173, 211.

The ACTING PRESIDENT pro tempore. Without objection, the motion is agreed to.

Mr. McCLELLAN. Mr. President, I move that the Senate recede on amendment No. 35.

The ACTING PRESIDENT pro tempore. Without objection, the motion is agreed to.

HOUSE CONCURRENT RESOLUTION

Mr. McCLELLAN. Mr. President, I ask the Chair to lay before the Senate House Concurrent Resolution 198, which makes certain corrections in H.R. 4877, the 1977 supplemental appropriations bill and ask unanimous consent for its immediate consideration.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution.

Mr. McCLELLAN. Mr. President, this resolution merely authorizes the Clerk of the House of Representatives to make certain corrections in the enrollment of H.R. 4877, the 1977 supplemental appropriations bill. During the recess, it came to the attention of the House that a certain citation should have read "section 203" rather than "section 204." This resolution merely corrects the mistake.

Mr. President, I move the adoption of the resolution.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 198) was agreed to.

TAX REDUCTION AND SIMPLIFICATION ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, will the Chair lay before the Senate the tax bill?

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now resume consideration of H.R. 3477, which will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 3477) to provide for a refund of 1976 individual income taxes, and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

Mr. ROBERT C. BYRD. Mr. President, under the order Mr. JAVITS is to be recognized at this time.

I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AMENDMENT NO. 200

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from New York (Mr. JAVITS) is recognized.

Mr. JAVITS. Mr. President, our purpose today is to discuss an amendment to the pending measure which will be introduced by Senator DANFORTH and myself and, hopefully, other sponsors, which provides for a permanent income tax cut in the income tax rates in the personal columns and for incomes, generally speaking, below $20,000.

Now, we mean the adjusted gross income, the taxable income, upon which tax is paid, and this figure includes about 90 percent of all taxpayers and, at a given point in my stating my views upon this question, I shall lay out the various categories in which taxpayers are found.

Now, the amount of the reduction is somewhere between 4 and 14 percent, depending upon the individual tax bracket.

In dollar figures, the savings will run to something in the area of $200 a year in their taxes for the great bulk of the taxpayers, and it will, in a practical sense, have no effect upon those whom we encourage as the "working poor." It will give them back a kind of negative tax reimbursement, in accordance with recent laws which we have passed.

The percentage distribution of this tax benefit is important. Those who have

enjoyed taxable incomes of $5,000 to $10,000 per year will receive 24.5 percent of the aggregate reduction, which will mean that those taxpayers in that particular bracket, who are now paying roughly a 19-percent rate, under our plan will pay an 18 percent rate. Taxpayers with incomes of $10,000 to $15,000 will receive 26.8 percent of the benefit of the tax reduction we are proposing here.

They are normally now in the 22-percent range for income tax purposes, and will be reduced to 21 percent.

The taxpayers in the range of $15,000 to $20,000 will receive about 17 percent of the benefit of the tax reduction, and those in the $20,000 to $30,000 range will receive a comparable 17.5 percent.

From then on, it diminishes to practically nothing in terms of taxpayers having higher taxable incomes.

The amount of the cost of the Treasury which is involved here is an average of $6.2 billion for 1977 and 1978, and $7.9 billion in 1979. Actual revenue losses in monetary terms will be $2.2 billion for fiscal years 1977 and 1978, as not a great part of those fiscal years will be included, and $10.2 billion when we get into the first fully realized year, which will be fiscal year 1979. So the aggregate cost for the rest of fiscal year 1977, which we are in now, fiscal year 1978, and fiscal year 1979 is $12.4 billion.

This is not after considering the reflows which occur by virtue of these tax cuts. These include reduced Federal transfer payments and increased tax revenues generated by the tax reductions themselves, and hence the projected net revenue loss—I have given the gross net revenue loss, which is $12.4 billion—is $1.8 billion in 1977 and $7.1 billion for the next fiscal year, making a 2-year total, which is as far ahead as we figured, of $8.9 billion.

A very critical aspect of this matter is how it affects the individual family, and I would now like to detail that.

We have combined in our amendment the effect of the present standard deduction increase, which will result, it is our understanding from the Treasury, in about 90 percent of all taxpayers taking the standard deduction—and, by the way, that is to be contrasted with about 70 percent now, so there will be a very material increase in the number of taxpayers who will take advantage of the standard deduction. Combining that, plus the effect of the rate cuts that we propose, we find, among taxpayers having taxable incomes of $8,000—again, I repeat, that is adjusted gross income for tax purposes—there will be a total reduction in the existing tax at the lowest level of $210 per year; for those at $10,000, $263; for those at $12.500, $280; for those at $14,000, $247; and from that point on it diminishes, and we get down to the figure of $183 per year for those at $17,500; $198 per year for $20,000; at $25,000, $220; at $30,000, $220; at $35,000, $220; and at $40,000, $220.

I ask unanimous consent that the table from which I have just read be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FEDERAL INDIVIDUAL INCOME TAX BURDEN—MARRIED COUPLE WITH 2 DEPENDENTS

[Combined effect of Javits/Danforth rate cuts and standard deduction changes]

TAX CUT

Adjusted gross income	Rate cut effects	Standard deduction effects	Total reduction
$3,000	0	0	0
5,000	0	0	0
6,000	0	0	0
8,000	$36	$174	$210
10,000	58	205	263
12,500	83	197	280
15,000	108	139	247
17,500	133	50	183
20,000	156	0	156
25,000	198	0	198
30,000	220	0	220
35,000	220	0	220
40,000	220	0	220

TAX LIABILITY

Adjusted gross income	Under present law	Under the proposals	Reduction	Tax cut (percent)
$3,000	−$299	−$299	0	----
$5,000	−300	−300	0	----
$6,000	−200	−200	0	----
$8,000	294	84	$210	71
$10,000	651	388	263	40
$12,500	1,114	834	280	25
$15,000	1,519	1,272	247	16
$17,500	1,976	1,793	183	9
$20,000	2,480	2,324	156	6
$25,000	3,570	3,373	198	6
$30,000	4,808	4,588	220	5
$35,000	6,218	5,998	220	4
$40,000	7,778	7,558	220	3

Mr. JAVITS. Percentage cuts, of course, are very high in the $6,000, $8,000, and $10,000 ranges, and start at as high as 71 percent for $6,000. Then they come down, at the $40,000 rate, to a 3-percent tax cut. Hence, the figures which I have, give a range of roughly 4 to 14 percent, on the average.

Mr. President, we have just been through the proposition of a $50 rebate, which the President withdrew. There is one popular conception—perhaps popular only here in Congress, but nonetheless it may have some attention in the country as well—which I think we have to deal with immediately, and that is the question of whether or not the rate cut which we proposed was a rate cut simply proposed as an alternative to the President's rebate, or whether it has a substantive standing of its own and is required by the existing and prospective economic situation.

It is our case, and I think it is a critically important element of our case, that it has an independent standing of its own, and is not only dictated but demanded by the present situation, and that, indeed, the promise which we have of further and more taxation—as, for example, in the President's energy package, and in the continuation of an accepted, no matter how we slice it, deficit of the order of magnitude of $50 billion—dictates a reduction of this character. Especially it is an essential element of our case that the history if this kind of tax reduction develops the proposition that more rather than less revenue will be engendered. Indeed, we think the case is made very strong for the proposition that even if we engendered just about the same amount of revenue, the situation of our country demands this kind of approach.

With that in view, I ask unanimous consent to have printed in the RECORD a schedule of individual income taxes reported in returns showing significantly the situation in tax reduction years and the situation in ensuing years, which is taken out of a report of the Finance Committee, Report No. 95–66, prepared as of March 28, 1977. I ask unanimous consent that that be printed in the RECORD at this point.

There being no objection, the schedule was ordered to be printed in the RECORD, as follows:

INDIVIDUAL INCOME TAXES (AS REPORTED IN RETURNS)

[In billions of dollars]

Year	Amount	Tax reduction
1944	16.216	----
1945	17.050	----
1946	16.076	(1)
1947	18.076	----
1948	15.442	(1)
1949	14.538	----
1950	18.375	----
1951	24 228	----
1952	27.803	----
1953	29.431	----
1954	26.666	(1)
1955	29.614	----
1956	32.732	----
1957	34.394	----
1958	34.335	----
1959	38.645	----
1960	39.464	----
1961	42,225	----
1962	44.903	----
1963	48.204	----
1964	47.153	(1)
1965	49.530	(1)
1966	56.087	----
1967	62.920	----
1968	76.638	----
1969	86.568	----
1970	83.787	(1)
1971	85.240	(1)
1972	93.360	(1)
1973	107.901	----
1974	123.560	----
1975 (estimate)	120.514	(1)
1976 (estimate)	140.414	(1)

[1] Years in which taxes were substantially reduced.

Mr. JAVITS. That does show an extraordinary pattern going back to 1944 of tax reduction years and very interesting results as a result of tax reduction in terms of more individual income reported for tax purposes.

Mr. President, I am not so naive as to pretend for a minute that the sole and only reason why individual income tax returns increased in such large amounts to be the fact that there was tax reduction, but it certainly is an interesting statistical pattern. I believe, because it is so generally consistent as a pattern, we have the right to make it a point in favor of this approach to our situation.

Mr. President, I believe the main reasons for our case are:

First, the structural weaknesses which have been demonstrated in the U.S. economy. These structural weaknesses are slow growth in the gross national product; an absolutely sticky unemploy-

ment situation, which the Government and the most optimistic forecasters do not predict will ease at all materially in the next 1, 2, or 3 years, and a persistent inflationary bias which, the moment you have a hard winter and take your eye off the ball for 5 minutes, results in double-digit inflation and a ruinous situation for the United States with an unbelievably deteriorating social, economic, and political effect on interest rates and on about any other standard that we could have.

Because I think it is so critical, I ask unanimous consent that some economic forecasts from leading analysts of the Wharton School and the Chase Bank be printed in the RECORD. They illustrate the danger which I am describing for the period ending in the fourth quarter of 1978.

There being no objection, the forecasts were ordered to be printed in the RECORD, as follows:

ECONOMIC FORECASTS, WITHOUT STIMULUS FROM TAX REBATES

Forecast variable	1977 (quarters)			1978 (quarters)			
	2d	3d	4th	1st	2d	3d	4th
Real gross national product (billion dollars):							
Wharton [1]	1,320	1,341	1,364	1,386	1,406	1,422	1,437
Chase [2]	1,309	1,317	1,326	1,329	1,332	1,337	1,346
Data Resources [3]	1,306	1,316	1,337	1,362	1,378	1,394	1,411
Percentage change:							
Wharton [1]	8.7	6.3	7.2	6.5	6.0	4.5	4.3
Chase [2]	4.5	2.3	2.7	1.1	0.9	1.4	2.7
Data Resources [3]	3.7	3.1	6.6	7.5	4.6	4.6	4.9
Consumer Price Index (1972=100):							
Wharton [1]	180.0	183.3	186.2	189.1	192.5	196.1	199.5
Chase [2]	179.3	182.4	185.7	187.7	189.7	191.7	194.0
Data Resources [3]	180.2	182.5	184.8	187.2	189.6	191.9	194.3
Percentage change:							
Wharton [1]	6.8	7.3	6.6	6.3	7.4	7.7	7.2
Chase [2]	7.0	6.9	7.5	4.3	4.5	4.4	4.8
Data Resources [3]	6.1	5.1	5.0	5.2	5.1	4.9	5.0
Unemployment rate (percent):							
Wharton [1]	7.3	6.9	6.6	6.3	6.0	5.8	5.8
Chase [2]	8.0	8.1	8.3	8.5	8.7	9.0	9.2
Data Resources [3]	7.5	7.5	7.3	7.1	6.9	6.7	6.6

[1] Wharton Economic Forecasting Associates, Apr. 1, 1977, forecast.
[2] Chase Econometrics, testimony of Michael Evans before Ways and Means Committee, Feb. 4, 1977, comparison tables 1 and 2.
[3] Data Resources, Inc., Quarterly Model of United States. Simulation performed by House Budget Committee staff for Joint Committee on Taxation.

Note: Predictions are at annual rates.

Mr. JAVITS. The fact is, Mr. President, that the gross national product was only a little over an annual rate of 5.3 percent in the first quarter of 1977; that the long-term outlook, as shown by this analysis and by many others, is depressing in terms of what we have to look to for the future in the growth of the gross national product and, what is so critical, in unemployment.

It should alarm my colleagues to note the wide difference between the Chase econometrics analysis model for the future and the Wharton School model for the future.

According to the Wharton School we will be down to a 5.8-percent rate of unemployment, which has, heretofore, been considered horrendous for the United States anyhow—5.8 percent means that we have almost 6 million unemployed—at the end of the fourth quarter in 1978. According to the Chase econometrics testimony we will have materially increased our unemployment by the end of that quarter to 9.2 percent of the working force, which verges on 10 million.

Another excellent source, Data Resources, which is widely quoted, comes to a figure about in between. It gets up to about 6.6 percent, roughly speaking about 6.5 to 7 million unemployed.

None of these figures, Mr. President, can be regarded as anything but most depressing, concerning, and pessimistic on the future of the economy, because of the structural defects which are evidenced by these matters I have discussed.

Mr. President, what are some of those structural defects which have been uncovered in our economy? Probably the prime one is the seeming inability to absorb new workers into the economy, especially youth, with an extraordinary figure of one-half of the unemployed, roughly 3.5 million, who are young people between the ages of 16 and 24, and the proportion which is an unbelievably catastrophic element of many communities in the United States where that unemployment rate for the particular community, often a minority community, runs between 40 and 60 percent.

In one group, for example, female minority teenagers, it runs almost consistently at two-thirds of those who are eligible for work but cannot find it.

Mr. President, that is a structural element of unemployment of a first character. Other structural elements of unemployment are the presence of jobs which require given kinds of training as our industrial machine is becoming more and more sophisticated; the location of those jobs in given areas of the country, with a seeming inability to come up with the necessary training to equip people to occupy those jobs or to put people in those areas of the country where those jobs are located.

Also, we have, by no means, dealt with the demographic shift in the United States which also results in enormous unemployment, a shift in the civil rights struggles in the fifties and the sixties from the South to the North; a shift from Puerto Rico to industrial areas; an important move out of Cuba into the United States when hundreds of thousands came here and found a place and found jobs, and comparable demographic shifts including the movement of a very large number of people from Mexico into the United States, because of depressed economic conditions there.

(Mr. ANDERSON assumed the chair at this point.)

Mr. JAVITS. These are some, but far from all, of the structural defects to which I refer.

To complicate our problem even further we have the fact that there has been a very material fall in productivity in the United States which for decades was the great strength of this country, our ability to produce per man hour in a way in which no other nation could, both because of the methods of production and the machinery through which production was carried on. We are now in the cellar, as they say in baseball, among the 10 leading industrial nations of the world in terms of productivity.

These problems have presented us with certain results which also make the problems even more severe, to wit, and inadequate capital investment, a very disappointing capital investment development even in the recovery, which is ongoing right now, which leaves us, and threatens to continue to leave us, in the cellar on this issue of productivity.

Let us look at a figure which is interesting. The Council of Economic Advisers, in its 1977 annual report to the President, noted that, while growth and output per manhour in the private business economy averaged 3.3 percent in the years from 1948 to 1966, it fell by one-third, to 2.1 percent, in the years from 1966 to 1973. Though the data was not immediately available for the years following that, the Council, which is an official Council of the President, itself declared that—

> The decline in productivity growth has been appreciative and the report said the reasons for this slowdown are not fully understood.

One reason adduced by the CEA report is a marked slowing in the growth of capital relative to the growth of labor input as measured in hours of labor, increases in the capital-labor ratio, which have been associated closely with gains in labor productivity. So the growth of the labor force has accelerated since the mid-1960's, but the growth of the capital stock, which makes the labor force truly meaningful in terms of production,

has not kept pace. It is a very severe and serious problem.

Finally, many of our experts are now coming up with a proposition that our industrial plant is obsolescent. The vaunted and justifiably vaunted power of our country in terms of its productive machinery is getting out of date, simply because it has not been adequately renewed. We see now quite a number of demonstrations and stories which tell us that industrial plants of one kind and another, in countries which normally did not keep pace with the United States—in Western European countries, in Japan, and, indeed, in other parts of the world, even some of the less developed countries—are far ahead of our own in terms of the modern technologies which are employed. In short, because of the difficulties which I have described, the very elementary strength of our country in this particular field is ebbing. If we are going to do anything constructive with a stimulus program which depends upon taxation, we have to make a strong and definitive move in that regard.

Mr. President, I was pleased that the 12-percent figure was kept respecting corporations and other business concerns. I think that Congress, by a very decisive vote, evidenced its view that we have to stimulate business investment and business reemployment in the votes which were taken yesterday. It seems to me, Mr. President, that left an absolute vacuum on the question of stimulating the individual, both in his desire to put out as a worker and in his capacity to invest, because of his confidence in the future of the country.

Mr. President, which of us, and I speak of us as Senators, no matter what State we come from, does not feel the deep public costs respecting the fact that, somewhere, somehow, there has to be recognition of the incentive factor which comes out of taxation? Of course, we have the salient example of our sister country, the United Kingdom, where all or a great deal of the initiative has been sapped away because of the tax system, which has resulted in such a precipitate decline of industrial power and then of the political power and the security power of one of the greatest nations that has ever existed on Earth.

So, Mr. President, in debating this issue and this particular amendment, there are very serious and very permanent problems of the American economy which are involved. I believe that it dictates very clearly that in this measure, which contains other aspects of benefit to the taxpayer, if we wish it to have a meaningful economic effect—and that is, after all, its whole purpose and intent—we have to make a material contribution to that particular result. The way in which we can make it without a loss of such amount of revenue as to jeopardize the order of magnitude in which we are accepting a deficit in respect of what remains of 1977 and 1978 is by a reasonable cut in the permanent income tax rates. That is the history. That represents a very deep demand on the part of our people in terms of a stimulus to their own creativity and to their own initiative and development quality. It represents a response which seems appropriate to the particular situation in which we find ourselves.

Let us remember that what we need to do is create real demand in this country on a capital goods level. That is the big thing which is lagging in our existing situation.

One other observation, Mr. President, about the individual, which is interesting to me. Ever since I have been an adult and been engaged, whether as a practicing lawyer or otherwise engaged in the affairs of my city, State, and country, I have taken great pride in the fact that the total condition of our people was moving upward, improving. Now we have what perhaps is the most depressing statistic of all, which is that the real standard of living of the American people is somewhat depreciated, estimated to be down about 3 percent. If there is anything that proves more conclusively than anything else that there is something very deeply wrong in the system, it is that kind of figure. We are slipping back instead of moving forward as the remarkable example to the world which we have always been. Again, this dictates an approach to our situation which will give our people encouragement, a greater sense of confidence in the future, a sense that we know how to deal with our economic situation in intelligence terms, and that we intend to deal with them fairly whenever the situation at all allows, as it does right now—with, as I say, the vacuum created by the fact that we have no provision in this bill for the individual which equates with that which is made available to the business community.

That is a very, very critical reason for the amendment which we are proposing to the Senate.

The other matter which is critical right now is that our taxpayers have been put into—I do not like to use the word "artificial," but simply for the purpose of giving us a picture of the situation which we face, it is a useful word. They have been put into artificially higher brackets simply by inflation itself and, therefore, a readjustment of that situation is the reason why I say that it will contribute to a sense of confidence to give initiative for working and working better, initiative for investing in the future of the country and not being as intimidated as I feel investors are today by the specter of inflation.

We find that because of our progressive income tax percentages. The more dollars we earn, regardless of what they buy—and that is a critically important distinction—the more dollars we earn, regardless of what we buy, the higher becomes our tax rate and we get into what we call higher brackets.

Now, when this is attributable only to inflation, because we are getting more dollars through negotiations and relationships with our employer, but we are falling behind instead of catching up, there is no reason why we should not recognize that in the income tax rates we fix, and, as I say, to inspire confidence to get us to move forward in terms of the investment in the country which is so very badly lagging, this becomes a critical issue.

It is estimated that inflation alone will increase tax collections about $6 billion per year. In 1975, a family of four earning $12,000 paid 8.7 percent of its income in Federal taxes.

Under current law, under the current tax schedules, that percentage will increase to 10.5 percent, about a 25-percent increase in 1978.

The proposed cut in the tax rates which we make in this amendment, combined as they are with the proposed changes in the standard deduction, would reduce that tax liability to 8.7 percent in 1978.

Comparably, a family of four with an income of $18,000 in 1975 paid 12.1 percent of that income in Federal income taxes.

This is expected to increase to 13.5 percent, roughly a 10-percent increase, through inflation alone by 1978.

The tax cut in the rates proposed in our amendment would reduce the 1978 liability to 12.7 percent, or in round figures something like 3 or 4 percent increase.

Only a permanent income tax can offset the effect of inflation in moving taxpayers into successively higher progressive tax brackets, thereby eroding disposable personal income and, obviously, weakening consumer confidence, the desire or willingness to invest, and other comparable factors.

The former Council of Economic Advisers Chairman, Arthur Okun, has pointed out that a major cause of the decline in the disposable personal income which precipitated the 1974–75 recession was:

> The value of personal exemptions and the width of tax brackets are set in nominal rather than real terms. The progessivity of the tax system operated with respect to gains in nominal income.

Therefore, drawing my own conclusion, because of the earned personal income share that went to personal income taxes being increased out of line with what that money bought, it is necessary, for that reason alone, to adjust those figures, and our amendment just about does it. It just about does it and no more.

If we needed any absolutely final and decisive reason for our attitude on this amendment, it would be that one.

Mr. President, there is only one argument and that is the fiscal responsibility which is involved. I should deal with it, because our side of the aisle here has prided itself on this as one of its major political and public positions which would dictate against a cut in the permanent tax rates, and every other consideration, including the one of equity and fairness in readjusting the progressivity of the tax brackets into which people ascend purely in dollar terms regardless of what the dollars buy.

In other words, do we have a right to increase the deficit even momentarily in order to realize these objectives which I described?

That has not only been the result in considerations by me, but by many others concerned in this body, and with some of our leading economists around the

country, I believe that it is justified in this case on the same ground that we make an investment, in order to get a return or to get a result at a future date.

I know of no investment more desirable from the point of view of the United States than an investment in the creativity and the initiative of our people, giving a stimulus to that creativity and initiative, and an inducement to put it forth in the very great tradition which has represented the productivity of the United States.

That is why I spent so much time, Mr. President, analyzing in detail the structural deficiencies in the American economy which can be better dealt with if we have a people with confidence, real confidence in its future, in the soundness of its money, in the fact that its Government is not only compassionate—and I certainly will yield to no one in that practice and that preachment here on the Senate floor and in everything that I have done—but is also intelligently stimulating the resources of its own people by encouraging to continue the path which has characterized the growing strength of our country, the path of productivity, the path of investment, the path of confidence in the country's future.

Finally, Mr. President, I would not complete my argument for this amendment without a reference to its international implication. This is not because of hands across the sea, or being kind to my fellow men, or the fact that we cannot be a rich man on a poverty stricken street, all of which are classic arguments respecting the foreign aid programs of the United States and are absolutely valid and true today as they were beginning in the period after World War II.

But, Mr. President, this is even a superior point to the ones I have uttered, and for this reason. Notwithstanding our detractors all over the world, our detractors in the so-called free world and our detractors in the so-called Communist world, the fact is that the U.S. economy is the linch pin of the world's economy.

If our economy is not strong and prosperous, the whole world lags with the most devastating social effects and effects upon the prospects for peace and the prospects for freedom, let alone their economic and political effects.

Mr. CURTIS. Will the distinguished Senator yield?

Mr. JAVITS. Of course.

Mr. CURTIS. Mr. President, I commend the distinguished Senator from New York for his presentation of the need for a permanent tax cut.

I should like to ask the distinguished Senator a few questions.

Is it not true that the current inflation has caused many people to be moved into a higher tax bracket, while the purchasing power of their earnings has not increased?

Mr. JAVITS. That is absolutely true, borne out by the facts. They have even slipped back, because we show a 3 percent diminution in the real value of people's earnings.

Mr. CURTIS. The time may come when we will have what is called indexing. That is a complicated matter, and the formula must be worked out with care. But does not the presentation and adoption by Congress of a permanent tax cut, even though it is modest, assist people in meeting that problem, of having an increase in tax and no increase in real earning power?

Mr. JAVITS. It assists them in two ways. The Senator is absolutely right. It assists in absolute terms. They pay less money for taxes, and I have given the figures. It assists them also in the feeling that they have a government which understands the people's problems and that when it can, it acts in order to deal with those problems; that it is not just a compassionate government, but that it also is a just government.

Mr. CURTIS. I refer to those groups of people who have to watch their money carefully, but they are on the verge of perhaps buying a home or improving a home or buying some needed utility for the house, or even getting a new automobile. The fact that this tax consideration can be given to them and would be in the nature of a permanent tax cut, which they could depend upon, may assist that particular group in generating more activity in our economy. Is that not right?

Mr. JAVITS. I thoroughly agree with that.

It is a very interesting point that one of the bright spots in the recovery is even the marginal recovery in home acquisition. We are not at the 2 million mark yet, which should be the very minimum for our country. We are at 1,850,000. But the fact that that has been seized upon as showing recovery really is happening indicates that it is critically important.

My State has an enormous population, as the Senator knows—his own State may reflect the same thing—and many families have expressed it by saying that they see some light at the end of the tunnel, that government understands that we have to show that income tax rates can go down as well as up.

Mr. CURTIS. Is it not true, also, that when there are hands reaching in and taking part of the pay check, whether it is a heavy tax load or inflation, it follows that there is less money left in the pay check for the purchase of things?

Mr. JAVITS. There is no question about it.

We understand here—though the Senator and I do not necessarily vote the same way on many things—that we cannot always please everybody, that you cannot run a government without cost. With respect to armaments, the Soviet people are paying right out of their backs, almost one-third of the national sustenance, which is an unbelievable figure, but that is what they are doing. You cannot do that without it costing a great deal of money and a great deal of taxes.

Therefore, we cannot be popular all the time. We have to tax, too. But when we can, as in a situation such as this, as I have described it, we certainly should do it; and it certainly will contribute to the point the Senator makes—to wit, giving the individual more disposable income of his own.

Mr. CURTIS. When his disposable income is cut down, his purchases are reduced to the bare necessities of living. Is that not correct?

Mr. JAVITS. That is right.

Mr. CURTIS. And perhaps sometimes it has gone to a level where it should not be. This is related to our employment problem. Is it not true that it does not take very much of the work force of the country to produce merely the bare necessities of life?

Mr. JAVITS. We are operating today at about 80 percent of our plant capacity. I do not know of any shortages.

Mr. CURTIS. My point is this: If the tax load and inflation take so much of the income—the pay checks and other income—the people's purchases are reduced to bare necessities. They are not buying those things which lead to additional employment, such as rugs, draperies, new TV's, skis, boats, whatever they want to spend their money for.

That is one lesson that Washington must keep in mind all the time: That if we are going to have full employment in this country, our citizens must be able to purchase beyond the bare necessities of life.

Mr. JAVITS. That is right.

Mr. CURTIS. I will not take any more time of the distinguished Senator. I commend him for his presentation and the strong argument for the need of a permanent tax cut. I am sure he shares the view of many people that a sizable tax cut would be very welcome. But within limits, a tax cut can so encourage the people and spur our economy that the base upon which the taxes are levied goes up, and we actually lose no revenue. Is that correct?

Mr. JAVITS. That is the history. That is why I produced the table, with which the Sentor had much to do in preparing.

Mr. CURTIS. I thank the Senator for yielding.

Mr. JAVITS. Mr. President, I should like to finish my observations on the international level.

The economy of the United States is the linchpin of the world's economy. There was some talk here the other day about the less-developed countries which are being subjected to tremendous financial danger by the borrowings which they have to make in order to meet their international balances of payments, heavily attributable to the oil situation, the OPEC oil price, which is a highly uneconomic price; that the economies of the United States, Germany, and Japan, in terms of success and productivity, should be stimulated; that they would have a chance through foreign aid to make themselves more viable in terms of the enormous amounts of money they have had to borrow, including billions of dollars, as we all know, from U.S. banks, dollars which give us considerable concern, though we are well satisfied that our banks are well able to meet those responsibilities.

That was true not only of these less developed countries, representing almost three-quarters of the world's population, but also of the developed countries. They, too—Britain, Italy, and other countries, highly developed countries—felt that it was absolutely essential to stimulate the economies of these three unusually productive countries—to wit, the United States, the Federal Republic of Germany, and Japan—in order to assist them to avert the worst consequences of recession.

So, Mr. President, I feel it consistent with my philosophy. I am not known as a cutter or as necessarily the greatest economizer in Congress. I believe that we have to incur bills for things which need to be done for our people and to pay the tab.

But when, in a situation like this, it is possible and constructive and will reduce rather than increase inflation to adjust the tax rates to a situation which has been forced upon the American people through no fault of their own really, wars and other dislocations in our country, and which have put them into tax brackets in which they should not be in real purchasing power terms, when we have the opportunity to readjust those brackets I believe we should take advantage of it.

For those reasons, Mr. President, I hope very much the Senate will sustain Senator DANFORTH, myself, and our other colleagues who will join with us in respect to this amendment.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DANFORTH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. DANFORTH. I yield.

Mr. KENNEDY. Mr. President, I ask unanimous consent that Paul McDaniel be granted the privileges of the floor during the consideration of the tax bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DANFORTH. Mr. President, I am certain that the very able Senator from New York (Mr. JAVITS) has done an outstanding job of informing the Senate as to what is involved in this amendment.

If you examine the text of the amendment it appears to be an amendment containing charts with figures on them, and sometimes charts are not the easiest things to understand.

But putting it in the simplest possible terms, what this amendment does is to start out with the action that was taken in the Committee on Finance, and that is in the bill before us; namely, to adopt the modification in the standard deduction, and then to add on to that modification of the standard deduction a rate reduction in the marginal tax rates for taxable income of $20,000 or less.

This means that because the marginal rates on the first $20,000 are affected, all taxpayers will benefit by this tax cut. No taxpayer is left out as a result of this proposal.

However, what has been done in this amendment is that the effect of the rate reduction has been targeted on the first $20,000 of adjusted gross income, and that means that the beneficiaries of most of the effect of this amendment would be middle income and low income taxpayers.

People who have adjusted gross incomes of zero to $5,000 would receive 5.1 percent of the benefit of this amendment. Taxpayers falling between $5,000 and $10,000 would receive 24.5 percent of the benefit. Taxpayers with adjusted gross incomes of between $10,000 and $15,000 would receive 26.8 percent of the benefit, and taxpayers between $15,000 and $20,000 of adjusted gross income would receive 17.7 percent; and taxpayers between $20,000 and $30,000 would receive 17.4 percent of the benefit.

That leaves only about 8 percent of the total amount of dollars reduced in taxes going to people with adjusted gross incomes of over $30,000. However, typically, all taxpayers would receive a tax cut if they had a family of four. Taxpaying units with a family of four would typically receive a tax reduction as a result of this amendment of about $200. That would be the result of the amendment when combined with the effects of the change in the standard deduction, which we adopt in this amendment.

The way the proposal would work, typically, would be to knock a percentage point off the marginal tax rates for taxpayers with taxable incomes of $20,000 or less. For example, the marginal tax rate for a taxable income between $16,000 and $20,000 is now 28 percent. The effect of this amendment would be to reduce that from 28 to 27 percent.

Similarly, the marginal tax rate for a taxable income betwen $12,000 and $16,000 is 25 percent. This proposal would reduce that from 25 to 24 percent. The marginal tax rate for an income between $8,00 and $12,000 is 22 percent. Again, this would reduce that from 22 to 21 percent; and so it goes down the scale.

The tax rate between $1,000 and $2,000 is 15 percent, and that would go to 13 percent, a 2-percent reduction. Between zero and $1,000, it would go from 14 to 12 percent. So we are talking generally about a reduction of one point, or at some levels two points, in the tax rates for joint returns, which are the figures I have been giving, for joint returns for the first $20,000 of adjusted gross income.

The effect of this would be that if you look at the tax rates themselves of people in this category, $20,000 or less, the tax rate reductions for them would range between 4 and 14 percent.

The effect of this plus the standard deduction which is incorporated, as I say, in this amendment, the change in the standard deduction which is already in the Finance Committee bill, would be as follows:

For a married couple with two dependents now earning $8,000, their total tax reduction would be $210. Of that amount, $174 would be accounted for by the change in the standard deduction, and $36 would be accounted for by the change in the tax rate.

Picking another range, for a married couple with two dependents with adjusted gross income of $15,000, the total tax saving as a result of this amendment would be $247. Of that amount $108 would be accounted for by the rate reduction and $139 would be accounted for by the change in standard deduction as recommended by the Finance Committee.

For a married couple with two dependents with an adjusted gross income of $17,500, the total tax saving would be $183. Of that amount, $133 would be accounted for by the rate cut proposed in this amendment, and $50 of the change would be accounted for by the standard deduction.

For families of four with adjusted gross incomes of $20,000 or more, all of the benefits that they would receive would be a result of the rate reduction rather than of the standard deduction.

The basic theory of this amendment, Mr. President, is that a good part of the problem with the economy today derives from the fact that the average taxpayer, the low- and middle-income taxpayer, is being penalized by a combination of a high rate of inflation and a high rate of taxation, and the result is that for every marginal increase in a person's income, for particularly middle- and low-income taxpayers, much of that increase goes not into the pocket or into the bank account of the taxpayer, but instead is being drained away either directly by taxes or by inflation, and it is our position in presenting this amendment that the problems with the economy are built into the high rate of inflation and the high rate of taxation hitting this middle- and low-income group of taxpayers.

Mr. PERCY. Mr. President, will our distinguished colleague from Missouri yield for a unanimous-consent request?

Mr. DANFORTH. Certainly.

Mr. PERCY. Mr. President, I ask unanimous consent that the comments that I made following the President's speech on the energy crisis and certain editorials be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S NATIONAL ENERGY PLAN

Mr. President, I would like to take this opportunity to voice my strong support for the goals and objectives of President Carter's energy program outlined in his speech to the joint session of Congress last night. In future weeks, I will be commenting in greater detail on the specifics of the plan. But today, I simply want to voice my admiration for the President's effort to make fuel efficiency the cornerstone of the nation's energy policy.

In calling for substantial participation by all sectors of society, the President has acted boldly and courageously. As he publicly

acknowledged, special interest groups will inevitably object to the sections of his proposal which require sacrifices from them, while applauding the imposition of hardships on others. We would all do well to heed the President's advice and show ourselves willing to compromise our own selfish interests in the pursuit of the common good.

What makes President Carter's program so different from earlier attempts to resolve our energy problem is its heavy emphasis on conservation. Strong measures to curb our consumption of fossil fuels have been rejected in the past because a slowdown in energy-use growth was thought to lead to an inevitable slowdown in economic growth. This assumption has been resoundingly disproved by economists in government and academia. If anything, the President's program will improve the state of the economy through creation of jobs and through curtailment of costly energy waste.

If it has not been clear in the past, it is painfully clear now—conservation of energy is absolutely crucial. Heedlessly, we have been doubling and redoubling the amount of energy we consume, as though supplies were limitless. The end to the period of cheap and plentiful energy is now a reality, one we must accept.

We must reject the advice of those who tell us that the U.S. need only produce more and more energy in order to evade the crisis. For years we have listened to these soothing voices, and now we have drawn perilously close to an energy catastrophe. The time has come to reject this illusory solution and accept the need to curb our energy appetite by using fuel more efficiently. Conservation is the only lasting means of resolving the related problems of increasingly scarce fuel supplies, over-dependence on foreign oil, environmental degradation and capital constraints.

Cutting back on wasteful and inefficient uses of energy has long been one of my own personal projects. For this purpose, the distinguished Senator from Minnesota (Senator Humphrey) and I founded the Alliance to Save Energy, a private, nonpartisan, nonprofit organization dedicated to the promotion of rational energy-use habits in all sectors of our economy. It was very heartening to see included in the Carter plan many of the measures I have been advocating for years: a tax on gasoline a "gas-guzzler" penalty on automobiles which fail to meet minimum mileage standards, peak-load pricing for electrical utilities, and the encouragement of residential and industrial insulation, to name just a few.

Naturally, I have some reservations about the President's plan. I have long been an opponent of excessive government intervention in the private marketplace, and the proposals embodied in the Carter program for increased restrictions on energy pricing are troublesome to me. But all of us will have to make adjustments of some kind or another as we develop an oversee balance program.

We desperately need a comprehensive energy policy of the sort envisioned by President Carter. We will never have one unless we in the Congress approach the subject in a spirit of constructive compromise. But in our efforts to reject the one extreme of self-serving obstructionism, we must not fall victim to the other extreme of passive and uncritical acceptance.

There are several aspects of the plan which need careful scrutiny. For example, the "gas-guzzler" tax must somehow be reconciled with our long held support for freer trade and does not violate any of our existing trade agreements. Also, we must be sure that the plan provides sufficient help to low-income and elderly people, the groups hardest hit by higher fuel prices.

As suggested by President Carter, the Congress can best demonstrate its support of the goals of the National Energy plan by enacting a Joint Resolution committing the Nation to:

Reducing annual growth of United States energy demand to less than two percent;

Reducing oil imports from a potential level of 16 million barrels a day to less than 6 million barrels, about one-eighth of total energy consumption;

Achieving a 10 percent reduction in gasoline consumption;

Insulating 90 percent of all residences and other buildings;

Increasing coal production on an annual basis by at least 400 million tons; and

Using solar energy in more than two and a half million homes. I endorse these goals and urge my colleagues to enact a Joint Resolution committing us to them.

Reaction on the President's energy message are contained in a statement I released after the President's speech. The President has received thought provoking press coverage of his findings and plan of action. On April 20, 1977, there appeared three incisive editorials on this subject, one in the Washington Post and two in the New York Times:

STATEMENT BY SENATOR CHARLES H. PERCY ON PRESIDENT CARTER'S ENERGY MESSAGE TO CONGRESS

President Carters energy message to Congress is a bold and comprehensive challenge for a national attack on America's critical energy crisis. The President's proposals deserve the careful but prompt consideration of Congress. And, more important, the Congress and all sectors of our society must get behind a comprehensive plan to save energy or we risk the future well being of all Americans.

By emphasizing the necessity of energy conservation because of inevitably higher energy prices, the President has taken the tough approach to cutting our extravagant waste of both expensive foreign oil and dwindling domestic supplies of oil and natural gas. For consumers, conserving energy is one of the best ways to save money. The President also has provided sound incentives for environmentally-safe use of our abundant coal supplies and development of such new energy sources as solar power. Only strong incentives will work; voluntary measures have not worked.

Every American is being asked to join the energy conservation effort to avert what the President has correctly warned will be a national catastrophe if we fail to act. Sacrifice will be required by every citizen and every interest group, but it is far better to sacrifice now than to do nothing and eventually face the day when America would go into economic decline, hostage to the nations which control the world's energy resources.

It is absolutely essential that American motorists stop squandering energy. A higher Federal gasoline tax, along with an equitable income tax rebate, will place a realistic price on gasoline. What is more, stiff taxes on the purchase of gas-guzzling cars and rebates on the purchase of fuel-efficient cars will reward the purchase of cars that meet the nation's conservation goals.

The President has wisely provided consumers with attractive economic incentives to improve energy efficiency in their homes. Through tax credits for installation of insulation, storm windows and clock thermostats, along with requirements that utilities offer financial and technical assistance for the installation of these energy-saving devices, the national conservation effort will reach out to every homeowner, and at the same time will provide savings in fuel bills.

The President has correctly extended the war on energy waste to the artificially-low pricing of domestic oil and natural gas. Once again, realistic pricing is the best mechanism to end waste of cheap, underpriced fuel.

It is essential that Congress work diligently in the weeks ahead to assure that new energy policies enacted into law are fair to every American. We also must accommodate the needs of those hit hardest by higher energy prices—particularly the aged and the poor.

President Carter has delivered the strongest challenge to America of any peacetime President. There will be disagreement and debate over many of his specific proposals, but no one can soundly question the severity of the nation's energy crisis or the urgent need for action. It is up to every American to join the national energy conservation effort. This is the underlying purpose of the recently created Alliance to Save Energy.

[From the New York Times, April 20, 1977]

CARTER'S FIRST BIG CRUNCH

(By C. L. Sulzberger)

PARIS.—President Carter has addressed himself admirably to the greatest long-range problem of the United States and the rest of the industrialized world. If he succeeds in gaining national and international support for his energy program he will have shown himself able to act in the grandly effective manner of another Democratic leader, Franklin D. Roosevelt. But the road remains long, twisting and studded with pitfalls.

Mr. Carter's first step was to charge the brilliant, tough James Schlesinger with the principal task of coordinating a policy designed, in the very long run, to prevent America from either sliding into the paralysis of subzero growth, such as that toward which unhappy Cambodia now stumbles, or heading gradually toward old-fashioned recourse to war in search of raw material sources—in this case fuel. Neither extreme need ultimately be considered absurdly alarmist.

The nation's energy problem—as Mr. Carter said Monday night—is already worse "than it was in 1973 or a few weeks ago." Without enough energy a wasteful, over-industrialized society must grind to a halt just as inevitably as Cambodia doomed itself when it deliberately destroyed its few factories, such as sugar refineries and slew its few technicians.

As for war in quest of material gain—known familiarily as imperialism—this is a very old and ingrained habit in mankind, the only living species save the harvester ant to organize conquests for that purpose. Anyone who remembers those trial blimps floated during the Kissinger-Ford Administrations implying that Washington might encourage Israel to seize Saudi Arabia's petroleum wells, can see that the idea is not 100 percent removed from contingency "thinking."

The Carter energy program is the first fully thought-out prescription for one of the nation's crucial difficulties. Should it succeed, it will take its place among historic milestones such as the N.R.A. (National Recovery Administration) or the Lend-Lease Act. One inevitable short-term development will be Mr. Schlesinger's assumption of the Cabinet's principal post—coordinating all energy problems as a kind of souped-up, perhaps less crusty, certainly more intellectual Harold Ickes.

Already, though the barest blueprint has yet been outlined—stressing conservation of automobile fuel, air conditioning, etc.—so-called "special interests" (normal to any free society) have begun to holler: oil companies, automobile manufacturers, coal producers,

economists, consumer pressure groups. But Mr. Carter is on the right road, and he and Mr. Schlesinger will have to bulldoze their way down it.

It is beyond high time for the West's fat-dripping societies to cease choking themselves on the uninhibited exhaust of factory and engine pipes; stalling amidst traffic jams induced by overuse of cars (in two-, three-, or four-car families); freezing themselves in air-cooled summers and boiling themselves in air-cooked winters, all devouring petroleum we haven't got.

Is it unreasonable that a nation which can dispatch men to the moon should be unable to build more efficient automobiles with engines that expend less fuel for more power?

Even four years ago James E. Akins, then U.S. Ambassador to Saudi Arabia and later fired by Mr. Kissinger for being abrasively and profoundly right, wrote: "To look simply at the world's oil reserves and conclude they are sufficient to meet the world's needs can no longer be acceptable."

It is a fortunate coincidence that Mr. Carter's energy policy assumed shape just before his first Presidential trip abroad to London's economic summit and also as the International Atomic Energy Agency convenes a conference in Salzburg on nuclear power.

There have already been differences in energy approaches between the United States and other industrial nations. These seemed heightened by the President's attempt to ban the spread of weapons-grade plutonium, thus hindering certain reactor projects.

All aspects of energy—petroleum, natural gas, solar power, coal, hydro-electric power and nuclear—are indeed linked and some industrial lands—notably Japan and France—are woefully short on fossilized fuel. But Mr. Carter already has indicated to Roy Jenkins, president of the European Commission, that Washington's plutonium views won't harm Europe's energy plans.

Yet these remain details—crucial details but incidental to the problem of getting the world to agree on how to face future energy needs. And it is right that the largest industrial power and greatest energy consumer should lead the way in showing what can be done to conserve what exists, rationally share out what is coming, and pioneer in the development of new sources like the sea and air around us and the sun above.

[From the New York Times, April 20, 1977]

MR. CARTER'S CERTAIN TRUMPET

But even those two Midwestern potentates would never have been able to wreak such havoc had it not been for the . . . total incompetence of the last three men to occupy the White House, especially the fool who finished off our country by presiding over the Crash of '79.

That havoc, described in Paul Erdman's best-selling novel of petrodollar intrigue, is, of course, imaginary. But something approaching it is imaginable. The muscle and comfort of the United States depend on energy—and increasingly, on foreign oil. And, the world's oil supply is getting scarcer and scarcer all the time. The perils may not cause a "crash" by 1979 but they are already alarmingly evident.

Fortunately, as his first energy message demonstrates, Jimmy Carter is no fool. He has taken as his text the famous lines of William James: "What we now need to discover in the social realm is the moral equivalent of war, something heroic that will speak to men as universally as war does." In words as somber as his suit, Mr. Carter has called the nation, peaceably, to arms. There will be time enough, after Mr. Carter details his energy program tonight and in coming days, to assess the merits and the politics of specific proposals. For the moment, he is entitled to respect and support for a brave beginning.

Mr. Carter did more than he had to, as a politician concerned with the moment. He did all that a President concerned for the future could do. Rather than wrap an innovation or two in an otherwise familiar—and safe—catalog called an energy program, he outlined a complete, coherent strategy. His approach lays out the problem for the public to understand; but it also exposes the Administration to maximum political risk as it tries to press its strategy on several difficult fronts at once. As an example, note the haste with which Senator Howard Baker, the Republican leader, moved to pronounce, even before tonight's detailed message and without regard to need or alternative, that he is "unalterably opposed to a gas tax."

It is doubtful that the public will rally quickly to Mr. Carter's trumpet, no matter how certain its call. The embargo of 1973 has faded; it is almost an exercise in nostalgia to recall such emblems as the anti-Arab bumper strips that read "The faster you drive, the richer they get." Now, to the ordinary householder the problem of how to pay last month's fuel bill looms much larger than whether there'll be enough fuel, at any price, in the winter of '85.

Still, the President is right, as well as brave, to press this test of Americans' willingness to behave in their long-term best interests. He may not win on every front quickly. But the effort will make the development of a sound energy program steadily easier and the threat of upheaval steadily less fearsome, until finally the United States can gain energy security, and with it, the moral equivalent of peace.

[From the New York Times, April 20, 1977]

THE PRICE OF ENERGY INSURANCE

As the Congressmen trooped out of the briefings yesterday on the President's energy program, they agreed, apprehensively, that it would be "controversial." A truer word was never spoken. Sen. Howard Baker has already pledged undying hostility to the gasoline tax. He claims to see in it another attempt by the bloated East to fasten its hegemony on the sturdy motor-driven yeoman of rural Tennessee. Members from the oil states deplored the inadequate emphasis, they said, on increased domestic oil production. Meanwhile, the members from the automobile states deplored the excessive emphasis, they said, on automobiles. It was a busy day—and, remember, the legislative details won't begin to appear until the President speaks to Congress tonight.

Oil imports are currently just over half of our national oil supply. Depending on 9 million barrels a day of other people's oil is hazardous to your economic health. That huge volume, and the prospect of continuous increases, maintains a tight seller's market for OPEC.

Some Americans, including some in Congress, seem to have the idea that OPEC's current price, around $13 a barrel, somehow reaches the limit of possibility. On the contrary, OPEC could raise it to $20 tomorrow and, as a matter of economics, the United States couldn't do anything but to keep buying and keep crying. If the Arabs wanted to use the oil weapon again and cut off sales altogether, the whole industrial world would be thrown into chaos—again. This country and the countries of Europe have been pouring armaments into the Perisan Gulf region to pay for oil. If somebody ever begins to use those weapons, it wouldn't take much of a war to close the Gulf completely to oil tankers.

For people in politics, it's an awful position to be in. If Mr. Carter and Congress put through all these severe and unwelcome measures to reduce our oil imports, maybe the country can avoid the dire possibilities of embargo and extortionate pricing. But then no congressman could ever prove to his constituents that this insurance policy had been necessary. It's like taking a flu shot. You always remember the sore arm, but never the case of flu that you didn't get. Nobody can count the people who didn't die in the epidemic that didn't happen. Nobody can reckon the cost of an oil shortage that wise public policy prevented.

It's Congress' job to challenge and test each line of the President's energy program. As the President himself candidly observed, it's a complex structure, and there's something in it for everybody to hate. But for Congress and everyone else, in the end the question isn't whether you like it all down to the last nut and bolt. It's whether you can think of any better answer to a danger that is, unfortunately, a real one.

Mr. PERCY. I would incidentally like to point out that though I disagree with the President in some areas, in thrust I certainly agree with him, and I think that this tax bill is a wonderful opportunity for us to provide support for the President and, in the first instance, in many of those conservation measures that require tax incentives, so that tax incentives are being offered as an inducement, to offer people and industry an inducement to do something that is necessary in our national interest and in the interest of conservation of energy.

As to the parts of this bill regarding energy reported out by the Finance Committee, I commend the chairman and the entire Finance Committee for an excellent job.

Mr. LONG. Mr. President, will the Senator yield at that point, while he is still on the floor?

Mr. PERCY. I yield.

Mr. LONG. Let me state that I am anxious, too, to see that the President's energy program is presented for a vote, and that we pass as much of it as Congress can agree upon. I do think that those things which provide tax credits and tax cuts ought to be coupled with the tough proposals, the ones which provide some tax increases. For example, in my judgment, we ought to measure up to the President's challenge to put a tax at the wellhead on energy. It will increase the price of energy, but the President's plan is to return that same money to the taxpayers to buy whatever they want to buy with it, hoping they will not spend it all on energy.

This was the type of thing that was proposed by President Ford.

But I hope we will not just pass all the sweeteners, the tax cuts separate from the tough ones, the tax increases, because my experience is that when you do this we tend to find that all the easy things, the sweeteners, sail through and the tough ones are left behind.

The Senator from Illinois has been one of the leaders in the fight for fiscal solvency, and I know he realizes that we have to measure up to some of the difficult things as well as the easy ones.

Mr. PERCY. Mr. President, I concur

completely with my distinguished colleague, and I certainly concur that we have to move forward as rapidly as we possibly can, and I believe the part the chairman of the Finance Committee wants to put in is absolutely right.

The Senator from Illinois would like to point out that the sacrifices are not as great as sometimes they have been made out to be. There is a tremendous financial incentive to do a lot of these things. There is no better way than to insulate our homes and stop heating and cooling the outdoors. Tighten up. We can get a 40-percent return on our investment. That is the kind of investment of taxpayers' money I think we will get back very, very quickly.

I thank my distinguished colleague and, again, my friend from Missouri for yielding his valuable time this afternoon.

The PRESIDING OFFICER (Mr. HOLLINGS). The Senator from Missouri.

Mr. DANFORTH. Mr. President, just to provide the Senate with some examples of the plight of low income and middle income taxpayers today, let us suppose an example of a married couple with two children, a family of four, with wages of $12,000. It is not a high income group by any stretch of the imagination.

Let us suppose that this family of four with $12,000 income receives a wage increase. For $1 of increase, here is what would happen to that $1.

First of all, considering inflation, which is going along at varying rates depending upon the year but, say, about 6 percent a year, 6 cents of that $1 would be taken away by inflation alone. It would just be to keep up with the rate of inflation. Approximately 6 cents would be taken up in the form of social security taxes. That would leave 88 cents.

Nineteen cents would be taken up by Federal income tax on that $1, for a total of 31 cents, leaving 69 cents.

Assuming that State and local taxes, income and sales, would also go up by about 9 cents in a typical instance, the combined effect of a family of four, where the wage earner is earning $12,000 a year, would be that of the extra $1, 60 cents would be kept by the family to spend and 40 cents would be taken away by the combined action of Government.

I say that advisedly because on the 6-percent increase in the rate of inflation, while it has a number of factors contributing to it, a substantial portion of that inflation is accounted for by action which takes place here in the Congress.

In computing this 40 cents that would be taken up and only 60 cents of the $1 that would be left in the pocket of the taxpayer, this does not envision any effect of the proposed tax on energy which has been proposed by the administration. I hasten to say I am not entirely clear as yet as to what, precisely, the administration intends to do with the increased wellhead tax on oil.

I hope it is by understanding that it would intend to reflow or recycle that money back into the hands of the people who are struggling in this country, to make it possible for them to pay their utility bills. But insofar as the administration would not do that but simply tax it and keep it for further governmental programs, that would be even more of the $1 that would be increasing this individual's income that would be available not for his use and the use of his family but for the use of Government.

Let us take another example. This is a family of four, a husband, wife, and two children. The wages earned by this family are $15,000 a year. How much of that would be kept? What would happen to $1 extra income if the person got a $1 raise over the $15,000? What would happen to the $1. Again, 6 cents would be taken by inflation and 6 cents would be taken by socal security. In this case, 22 cents would be taken by Federal income taxes. Thirty-four cents would be taken directly or indirectly by act of Congress.

Then assuming State and local taxes of about 11 cents on this typical family, of the $1 extra earned, 45 cents would be taken away by government and 55 cents would be left for this family to spend.

In this case, we are talking not about the wealthy people of America, not about the privileged people in America, not about people who can afford the luxuries of life. We are talking about a family of four with $15,000. We are talking about the average wage-earning taxpayers of this country.

We talk so much about compassion. It is the favorite political word in America, that we have to have compassion for people. Indeed, we do. Government has to be compasionate. But when we are compassionate why can we not show a little bit of compassion for the taxpayers of America; for the wage earners of America; for the people who are trying to make do in this country.

The $15,000 is just about what the average family earns, or maybe it is just a little below the median income. Then we say, "OK, you will get $1 extra and of that $1 extra you can keep 55 cents. We want the rest."

We in Congress want the rest. We want to take 22 cents from them in income taxes on the theory that we want to spend it and not let them spend it.

Let us take another example. This is a slightly better off family. Again, the family is composed of a husband, a wife, and two children, with wages of $20,000. It is hardly a wealthy family in this day and age. And $20,000 does not seem to go very far. What happens if this family with $20,000 gets another extra $1 of earnings? What happens to that $1? Again, 6 percent is taken by inflation. They are over the social security base so none of the additional money in this case would be paid in social security taxes. Thirty-two cents, just short of one-third, of the extra $1 would be paid in Federal personal income taxes. So a total of 38 cents of the $1 would be taken up by income taxation by the Federal Government and by inflation caused largely by the the fiscal policies of the Government which we in this room are charged with setting.

Then assume State and local taxes of about 12 cents on this family, income taxes and sales taxes. They are left with about 50 cents on the $1.

This is what we are talking about.

We are talking about the first $20,000 of adjusted gross income in this bill. Again, everybody is going to benefit, because people who have $100,000 income are still going to get the benefit of a tax reduction on the first $20,000 of adjusted gross income. But, again, what we are doing in this amendment is targeting not the wealthy people of America but the ordinary people of America, the middle income, the low income taxpayers, the people who, right now, for every dollar that their earnings are increased, are allowed to keep—allowed to keep by us—50 cents or 60 cents on the dollar.

Sometimes I think that we have the wrong idea about the relationship between the American people and their Government. I met, with a group of Senators, with Charles Schultze a few weeks ago when the rebate was still on the agenda. Fortunately, that was an idea which did not float, a gimmick. But it was a very enlightening thing that he said during that discussion.

He could not understand the great opposition in this country to the rebate and the great popularity of a permanent tax cut such as we are talking about today in this amendment. He said, "What difference does it make if we give people $50 in a rebate or if we give them $50 in a permanent tax cut?"

As though a tax cut is a gift. What does that assume, that notion? That notion assumes that every dollar that we earn, you and I, properly belongs to the government and that tax reductions and laying off of people in the form of not taxing 100 cents on the dollar is a gift; that everything a person owns belongs to government and government gives people back whatever it does not tax from them. That is a misguided notion, in my opinion, of the relationship between government and the American people.

The distinguished chairman of the Committee on Finance was reported by an admirer of his to have opened up a tax reform hearing a number of years ago in the Finance Committee by saying something that I think is priceless. Nobody has a greater respect and admiration for Senator LONG than I do. He is one of the most able people I have ever known, and he has a great way of putting things in a way that can be understood by all of us. But he opened up this hearing on tax reform by saying that what most people mean by tax reform is, "Don't tax you; don't tax me; tax the fellow behind that tree."

Our idea of tax reform is that somebody else should bear the burden of taxation. What we are talking about today is the fact that the person behind that tree, the fellow behind the tree, is the ordinary citizen of America. It is the ordinary person. It is the middle-income person, it is the lower income taxpayer, who is paying such a tremendous proportion of every extra dollar he earns to

Uncle Sam. That is the fellow behind the tree.

We can raise taxes on upper income people and we can raise taxes on corporations, if that is what we want to do, and have a negative effect in doing so on capital formation and on investment in plant and equipment and jobs in the future, if that is what we want to do, and still, we are going to have this kind of tax bite on the ordinary citizen. That is what we are talking about today.

What has been the trend line on the portion of a person's earnings that have been taken by Government over the last couple of decades? We have described the condition today. We have pointed out that today, when you earn an extra dollar, this tremendous percentage—40 or 50 percent—is taken away by Government in one form or another. What has been the trend line over the past couple of decades in what Government has done and the portion Government has taken from a family's income? The answer is that the bite has gotten larger and larger over the past two decades. Again, some statistics are in order.

In 1953, government at all levels consumed 11.8 percent of the income of the average family. That is, taking at that time what the average family income was in America and then applying to that what the tax was at that time, government at all levels was taking 11.8 percent of the earnings of the average family in 1953. In 1975, that percentage had increased from 11.8 percent taken by government at all levels to 22.7 percent taken by government at all levels, a 94-percent increase in the size of the bite of government from the average family in this country.

Federal income taxes have increased from 7.6 percent to 9.6 percent of the income of the average family in America, and that is a 26-percent increase. When you take Federal income taxes plus social security taxes, the percent of the average family's income taken in 1953 by Federal income and social security taxes was 8.7 percent. In 1975, that number had increased to 15.5 percent.

What does the trend look like in the future? The fact of the matter is—and a lot of people do not understand that—but the great beneficiary of inflation is government, not the people. That is because the effect of inflation is that, if all we do with our earnings is keep up with inflation, if our incomes increase at precisely the increase in the rate of inflation and we are just standing still, although we have more paper dollars in our pocket, this places us in higher tax brackets so that the percentage of taxation on the increased number of dollar bills in our pocket goes up.

Mr. HANSEN. Will the Senator yield?

Mr. DANFORTH. Yes, I yield.

Mr. HANSEN. Mr. President, I must say in all candor that I think the remarks of the distinguished Senator from Missouri are most noteworthy. He has probably done as much work on this issue as anyone I know. He has been indefatigable in trying to learn what the effect of inflation has been on everyone in the United States. I know of no person for whom I have a higher regard for pointing out what the economic facts of life are in the United States today.

I must observe that while we were going through the debate on the steps that we took determining whether we should vote up or down the pay raise, I did not get any requests from constituents in Wyoming saying, "We hope you will pass an ethics bill." The average person in my State was saying, "It seems as though what you are doing is taking care of the problems of Members of Congress," as inflation has impacted upon them. They felt we were doing precisely what is now being pointed out by my distinguished friend from Missouri, and forgetting, at the same time, the other 217 million Americans, I make this point not to divert attention from what is being said by the Senator from Missouri but, rather, to underscore the importance in my mind of a broader understanding of what he is saying.

The sad situation is that we have altogether too few Members of this body to hear what he is saying. I am not going to suggest the absence of a quorum and let it become live to try to get Members here because I am not unaware of the fact that a number have good reason to be away from the Chamber this afternoon. But it certainly is true that no one can challenge the logic, no one can challenge the facts, no one can challenge the conclusions that inevitably must be reached by listening to the remarks of the distinguished Senator from Missouri.

I am strongly inclined to believe that if a cross section of America could hear what is being said by the Senator from Missouri, and then if one of the pollsters were to be called upon to respond to the question, Should the Danforth-Javits amendment be attached to this bill or should it not be attached to this bill, I venture to predict that by a vote of 4 to 1 or maybe 5 to 1 we would find support throughout America for precisely the concept that is embodied in the Danforth-Javits amendment.

I know that a few Senators likely will read what is said here. I do hope the press will take occasion to summarize the speech by Senator DANFORTH. Hopefully, those persons who are interested enough—and believe me I think most people are—to read something of what has gone into the deliberation of Senators as we tried to work the Senate's will on this issue will have an opportunity to read a summary of the remarks by my friend from Missouri.

I say that because I have great respect and admiration for his scholarship, for his objectivity, for the rightness of his conclusions. I am terribly sorry there are not more people here this Friday afternoon to hear what my friend from Missouri has said.

I thank my friend for permitting me to make the observation.

Mr. DANFORTH. I thank the Senator from Wyoming for his very kind comments.

Mr. CURTIS. Will the Senator yield for a few questions?

Mr. DANFORTH. I yield.

Mr. CURTIS. I ask the distinguished Senator, is it not true that because of the inflation, many workers and people of modest income, as well as others, have been moved up into a higher bracket, which really for tax purposes does not reflect any real gain in their purchasing power?

Mr. DANFORTH. That is exactly the right point to make, that even without any increase in the tax rate, even without any act of Congress to increase the rate of tax, inflation itself kicks people into higher tax brackets, even though their real income remains exactly the same.

I am sure that this particular amendment will be attacked as a budget buster. It is interesting to note that the estimated tax loss for 1979, two years down the road, as a result of this is $7.9 billion. That is a paper loss because it is anticipated that this will have a stimulative effect on the economy.

It is estimated that more people will be put back to work as a result of this amendment, if it is enacted into law, and that, in fact, revenues generated by additional people on the tax rolls and by less money being paid out of emergency unemployment compensation and welfare, as a result of getting people onto the payrolls of this country, may, in fact, even increase revenues.

But let us just take the paper loss of $7.9 billion in 1979.

It is interesting to note that each year the Federal Government makes an estimated $6 billion in additional revenue simply because of the effect of kicking people in higher tax brackets as a result of inflation.

Mr. CURTIS. In that connection, the proposal has been made that our income tax system should be indexed so it is automatically adjusted to inflation.

I am sure there would be a great deal of equity in that. To do it on a permanent automatic basis does call for some detailed and lengthy study and to write the correct formulas.

But in the meantime, the amendment proposed by the distinguished Senator from Missouri would very definitely help meet the problem of people who are having a tax increase because of inflated prices, would it not?

Mr. DANFORTH. It certainly would. I would like to illustrate that with some further thoughts because I think the Senator has put his finger on the problem.

We will have to keep the dollars constant, so we will use 1974 dollars constant and see what happens to a family which had an adjusted gross income of $15,000 in 1974.

In 1975, the Federal tax burden on that family was 11.2 percent. In 1978, under current law, if nothing is to be done by way of tax relief for that family, the percent of the Federal income tax burden on that family would increase from 11.2 to 12 percent.

Mr. CURTIS. Let me ask this, as a practical matter, when a paycheck or other earnings, whether it be from a

farm or small business, or what, is so diminished by inflation and the hand of the taxgatherer that there is only a minimum left, is it not true that, to a large degree, the total spending of that family will have to be for the bare necessities of life?

Mr. DANFORTH. Absolutely. I think this is why so many people who have income, families with income of $15,000 or $20,000, which a decade ago people thought, "Gee, that's pretty good income," now it is viewed as very hard to keep going with that kind of income because of the effect of inflation and the effect of taxation.

Mr. CURTIS. If we do not have inflation and taxes are not too high, individuals of low and modest income oftentimes have savings and they have money to buy things beyond the bare essentials of ekeing out a living, is that not correct?

Mr. DANFORTH. That is correct.

Mr. CURTIS. Does it take a very sizable portion of our workforce to produce just the bare necessities of life? If no family bought any more than just the meager things to exist, we would have a tremendous amount of unemployment in the country, would we not?

Mr. DANFORTH. There is no doubt about that.

Mr. CURTIS. I believe it is true that we have full employment when our people can buy beyond the necessities of life, when they can buy furnishings for their house, when they can buy boats and skis and automobiles, when a farmer can buy new machinery, when they can buy essential utensils and fixtures for their house, or add a new room or buy a house. Those are the things that bring about full employment in the country, are they not?

Mr. DANFORTH. Yes, they are.

Mr. CURTIS. If we permit our tax policy to drift and we grant no relief to our people who are forced into a higher tax situation by inflation when their real earning power has not increased, we are slowing down our economy and adding to a trend of unemployment, are we not?

Mr. DANFORTH. The Senator from Nebraska is absolutely correct.

I plan to illustrate—I hope persuasively—that this is an economic stimulus measure that we are talking about. The whole point of this particular tax bill is economic stimulus, and that is really a good part of the thrust of what we are getting at.

Mr. CURTIS. I know the Senator will do it. He is articulate and is able to do it. He has been very kind to me.

I wish to say one more thing. Our distinguished colleague from Wyoming expressed regret that the crowd here, listening to the Senator from Missouri, is very small; but I assure the Senator that it is a very good crowd.

I thank the Senator for yielding.

Mr. DANFORTH. It is an excellent crowd.

With respect to the so-called indexing problem, that is the problem in which, even without an increase in tax rates voted on by Congress, people find themselves pushed into higher and higher tax brackets because their paper income increases to keep up with the cost of living; yet, their real income is not increasing.

Here is the effect of this on various classifications of taxpayers today:

Assuming an income of $15,000 in 1974, inflation alone would increase the bracket so that that family of four would be taxed at a rate in 1978, assuming no change in the law, of 12 percent, as opposed to 11.2 percent.

Assuming a family of four with an income of $18,000, that family would find their tax burden from the Federal Government increased from 12.1 to 13.5 percent through the effect of inflation alone, putting them in higher brackets.

Assuming a family of four with an adjusted gross income of $22,000, they would find their effective rate increased from 14 to 15.3 percent as a result of inflation putting them in higher tax brackets.

Much has been said about indexing and about the desirability of trying to guard the American people from having their taxes increased not by a vote of Congress but by the effect of inflation.

This amendment, strictly speaking, is not an indexing move, but it has something of that effect. That is to say, the family with $15,000 of adjusted gross income would hold its own. Instead of having its tax burden increased from 11.2 to 12 percent, it would stay at 11.2 percent.

The family with the adjusted gross income of $18,000, instead of having its tax burden increased between 1975 and 1978 from 12.1 percent to 13.5 percent, would have it increased from 12.1 percent to 12.7 percent.

The family with an adjusted gross income of $22,000 instead of having its tax burden increased from 14 to 15.3 percent, would have it increased from 14 to 14.5 percent.

However, when inflation, itself, increases Federal tax revenue in real dollars by 6 percent a year, the time has come, I believe, to return some of that money to the people who have had their tax rates increased not by vote of Congress but by the effect of inflation.

One way to view current trends and the relationship between the Government and the American people is the extent to which the gross national product—the total output of goods and services in a year—is accounted for by the Government's activities.

In the late 1950's, the Federal share of the gross national produce was 18.5 percent. In 1975, it had increased to 22.5 percent. When we consider Government at all levels—Federal, State, and local—in 1955, Government at all levels accounted for 27.7 percent of the gross national product. In 1974 that had increased from 27.7 to 37 percent.

If we envision the total economy as a pie, the wedge of that pie taken up by Government at all levels has increased, from 1955 to 1974, from a wedge that was 27.7 percent to a wedge that is 37 percent.

What we really are talking about in debating this amendment has to do with that portion of the gross national product that is going to be taken up by Government and that portion of the gross national product that is going to be left in the hands of the American people.

As I pointed out in the colloquy with the Senator from Nebraska, what we are talking about in this bill is economic stimulus and the plight of the economy in America in 1977. What we are talking about in this amendment is not simply tax relief, although that is important in and of itself, but we are talking about the economy and, more specifically, we are talking about jobs.

The fact is that this amendment, by reducing taxes on individuals and families in this country, would create more jobs for the American people. The rate reduction alone which would be created by this amendment would create approximately 150,000 additional jobs in America by the end of 1977. That number would be on the increase, unlike the rebate idea, which was a quick influx of money into the American economy. The rate reduction approach would increase jobs to 150,000 by the end of 1977 and would increase that to approximately 350,000 by the end of 1978.

Combined with the change in the standard deduction—and this amendment incorporates the increase in the standard deduction with a rate reduction—the combined effect would be to create 225,000 additional jobs by the end of 1977, and 600,000 additional jobs by the end of 1978.

These are not just my figures; these are figures that were arrived at by the staff of the Budget Committee, and then concurred in by the Congressional Budget Office.

Much has been said in the last week or so about the economic recovery in America, and I am sure we are grateful for the fact that the economy has been improving somewhat in this past quarter, particularly in the month of March. But it is important to recognize that the recovery has been fragile, to say the least.

Unemployment rates are still, according to the last available figures, at 7.3 percent. In January when the President proposed his economic stimulus package, unemployment was at 7.3 percent. Data Resources, Inc., which projects trends in the economy, has estimated that unemployment by the end of 1977 will be at 7.1 percent.

The estimates for 1978 vary widely, and it depends on whom you listen to. Data Resources, Inc., has projected that unemployment at the end of 1978 will be 6.3 percent. Chase Econometrics, which is also in the business of predicting trends in the economy, has projected that unemployment by the end of 1978 will be 8.8 percent.

But no matter whose figures you are looking at, 6, 7, 8 percent is the range that the economists are talking about for unemployment over the next year and a half.

It is important to recognize that these percentages stand for something. They

stand for human beings. They stand for actual people, men and women, all over the United States who are trying to find jobs.

Sometimes we think only about statistics, and only about percentages, when what we are really talking about is the tragedy of human beings who want to have work. They do not want handouts. They want jobs, and they want jobs that last; not make-work jobs, jobs that last.

The human tragedy of somebody going out week after week, month after month, until he or she finally loses hope that there is any work that is available, that is what we are talking about, not just percentages.

When people are out of work, when people are suffering because of the lack of meaningful employment in this country, the Congress of the United States has an obligation to try to do something about it and to try to do something effective about it.

We cannot say to people who are out of work, "We don't care about you." We cannot say, "There is nothing we can do," not after all the campaign rhetoric we hear every 2 years or every 4 years about the great things that Government is going to do to get the economy moving again.

It cannot be just a matter of oratory. If we mean what we say in our campaign speeches, then we have got to do something about it, and we have got to do something effective about it in order to try to provide meaningful employment for the American people.

What we are talking about in this amendment are 150,000 more jobs by the end of 1977, and 350,000 more jobs by the end of 1978 over and above the employment that would be created by stimulus already in this bill.

Yes, we had some good economic figures come out a week or so ago, reasonably encouraging figures—not great, reasonably encouraging figures. But the unemployment problem has not gone away in America, and it is not going away in America in the foreseeable future.

There has been some talk about the fact that the attention to this particular bill has been eclipsed by our new concern with energy. Energy is, indeed, a crisis-type problem in our country and it deserves our careful consideration. But energy is not the only problem. Hopefully, we are not a people who rush from crisis to crisis, give each emergency perhaps a few weeks or a few months of attention and then sweep it under the rug and go on to something else.

We cannot sweep unemployment under the rug and then go on to the energy crisis. We have got to consider both at the same time, particularly when they are going to interrelate with each other.

Unemployment still deserves the close attention of the Congress of the United States. Effective programs in dealing with unemployment are called for today just as they were 2 weeks ago or a month ago, and the fact that statistics come out in 1 day do not turn the American economy on the dime.

It is true that the gross national product for the first quarter of 1977 was up by 5.2 percent. But as yesterday morning's Washington Post pointed out, economists are saying that a substantial portion of that increase in GNP was accounted for by replenishing inventory, which was at an artificially or unusually low level.

"Real final sales," which is an economist's term which includes most of gross national product other than the restocking of inventory, in the first quarter of 1977 was only up 3.9 percent.

On March 8 of this year Charles Schultze, the Chairman of the Council of Economic Advisers, said:

> In order to get Americans back to work our goal for 1977 should be an increase in gross national product in the neighborhood of 5¾ to 6 percent.

On March 30, Data Resources, Inc., projected an increase in gross national product of 4.4 percent. This does not consider the effect of the energy problem, and it does not consider the effect of any action Congress might take with respect to the energy problem on the economy and on gross national product.

But in yesterday's Washington Post, Dr. Otto Eckstein, the director of Data Resources, Inc., estimated that the energy program would reduce the growth rate in America in 1978 by approximately 0.2 of a percentage point.

What is the effect of this amendment on gross national product? What would it do?

In 1977, according to Data Resources, Inc., this amendment would increase the gross national product by 0.2 of a percentage point, faster than it would increase without the amendment. By mid-1978, this permanent tax reduction would increase the rate of growth of the gross national product by a full half of a percentage point. That would be the difference, for example, between a growth rate of 5.3 percent and a growth rate of 5.8 percent; and if we could get it to 5.8 percent, according to Mr. Schultze, that would go a long way toward getting the unemployment problem truly resolved in America.

It is also important to note that the effect of this amendment on inflation, far from being inflationary, would be a negligible effect, if any, on the rate of inflation. Chase Econometrics estimates that the effect on the Consumer Price Index by this amendment would be to increase it by 0.1 of a point. That is, if you assume a Consumer Price Index at, say, 175, it would increase it from 175 to 175.1—almost nothing.

Finally, I would like to address myself to one of the arguments against reducing tax rates at this time.

It was said by the chairman of the Finance Committee earlier in the day, in his colloquy with Senator PERCY, that you have to have some sweeteners in tax reform, and that we cannot give out all the goodies now, but that we are going to have to save them for a later day. The theory that has been articulated, and was also articulated by Mr. Schultze when he appeared before the Finance Committee, is that if you do not offer people rate reductions when you offer them so-called tax reform, you are not going to get the tax reform.

To that I would like to say, "What do you mean by tax reform?" When we talk about a tax reform package coming out late next September or early October, as the administration is proposing doing, what is the tax reform proposal? What does the administration have in mind in the way of tax reform?

If we ask administration spokesmen, they will not tell us what they have in mind by tax reform. They are simply using a term, "tax reform." We do not know what it is. We do not know if it is good tax reform or bad tax reform. But we have had one inkling of what is in it, and that is that whatever it is, it is going to be something that is going to be very, very unpopular in America. It is going to be something the people will not be willing to accept on its own merits. It is going to be something that, if people are going to accept it, it will have to be sweetened by rate reductions offered along with the tax reform.

What is tax reform? People talk about simplification of the Internal Revenue Code. Fine; let us make it simpler. But the last tax reform proposal passed by Congress just last year in the name of tax reform and simplification was a bill that was 1,500 pages in length. Is that tax reform? Is it simplification simply to call something reform, when it turns out to be 1,500 pages long?

Some people who have used the new so-called tax reform say it is more complicated than the tax laws ever were before. But what do people mean when they talk about simplification? Do they mean, for example, we are going to tax capital gains as ordinary income? Does it mean we are going to do away with the interest deduction on mortgages? Does it mean we are going to do away with the charitable deduction in the name of simplification and reform? Is that what reform is supposed to be? Because if that is what they have in mind for reform, no wonder they are scared to present it on its own merits. No wonder they want some sweeteners.

Let us be clear whom they are holding in hostage for tax reform. It is not the wealthy people. It is not General Motors and it is not IBM that is being held hostage if this amendment is not passed. It is the ordinary individual taxpayer in this country, and particularly the people with adjusted gross incomes under $20,000 a year. These are the people who are suffering now, and maybe it is a fair approach to say if we only keep the pressure on them a little longer, if we only twist their arms and create real pain on the part of the average American taxpayer, they will scream out for anything we call tax reform; they will say "uncle."

I do not think it is fair. I do not think it is fair to the ordinary person, who has been suffering too long. When you take a family with an income of $15,000 or $20,000 a year, and get them in a situation where 40 or 45 or 50 percent of every additional dollar they make is taken

away for government, I do not think it is fair to say, "We are not going to give you any relief now; we are going to wait until you are really suffering and cry out for whatever relief we come up with."

Tax reform is not something you get just by snapping your fingers. It is not something produced instantaneously, in just a short period of time. Let me give you the history of the so-called Tax Reform Act of 1976, and how long that took from the time it was first unveiled until the date it was finally enacted into law. This is that 1,500-page bill that has been called tax reform.

In February of 1973, hearings were commenced in the Ways and Means Committee of the House of Representatives on many of the items that turned out to be in the 1976 tax reform bill. In 1974, late in the year, Ways and Means held markup, and the tentative decision was that no bill was to be reported in that year.

In 1975, in June and July, the Ways and Means Committee of the House held hearings, and on November 12 of 1975, H.R. 10612 was reported.

On December 3 and 4, the House of Representatives passed H.R. 10612. In March and April of 1976, the Finance Committee of the Senate held hearings on this so-called tax reform bill. In June the bill was reported out by the Finance Committee. In August, the bill passed in the Senate. On September 16, the conference report was approved, and on October 4, 1976, the bill was signed into law by the President.

So it took from February of 1973 until October of 1976—3 years and 7 months—to enact into law what turned out to be the Tax Reform Act of 1976.

What is the point of going through this history? The point is simply this: We are asked, as I understand it, to put off even the kind of modest tax proposal contained in this amendment. We are told to put that off so we can have some mystery, which has been called reform. We are not told what the proposed reform is. It is indicated that it is going to be terribly unpopular, because it will take sweeteners in order to get it enacted into law. We are faced with a situation of waiting maybe a year or two or three before we get this so-called tax reform enacted with any rate reductions included.

I just do not think the American people should be asked to wait that long. I believe they have been suffering long enough under conditions where rates are too high, where inflation rates are too high, and the time has come for permanent tax relief as contained in this amendment.

Mr. President, I suggest the absence of a quorum.

Mr. HANSEN. Will the distinguished Senator withhold that suggestion for a moment?

Mr. DANFORTH. I do.

The PRESIDING OFFICER. Does the Senator withhold his request?

Mr. KENNEDY. What was the request?

Mr. DANFORTH. I requested a quorum call and I withhold the request.

Mr. HANSEN. The distinguished Senator from Massachusetts deserves to be recognized next.

The PRESIDING OFFICER. The Chair recognizes the Senator from Massachusetts.

Mr. HANSEN. Will the Senator yield to me for just a moment?

Mr. KENNEDY. I yield.

Mr. HANSEN. Mr. President, let me say once again how meaningful and thoughtful are the remarks of the distinguished Senator from Missouri.

As one of the conferees on last year's so-called tax reform bill—and I note the distinguished occupant of the chair was also one of those conferees—we had 4½ pages of revenue estimate, as I recall.

I cannot imagine how the Congress could have entered into a more exhaustive exercise trying to make the tax code complicated and more difficult to understand than resulted from our efforts last year.

The Senator from Missouri first spoke about the persuasive reasons why the Danforth-Javits amendment should be adopted. He spoke about the need to not only bring about some true reform, which this measure would achieve in significant degree, but also he intimated that we did not do anything last year to simplify, to make more easily understood, the tax law. Most people now require the services of an accountant in preparing their tax forms.

Is that not true?

Mr. DANFORTH. The Senator is correct. I think it does not necessarily make a bill a reform bill to simply call it a reform bill.

Mr. HANSEN. Of course, that was the point the distinguished Senator underscored more than one time.

Mr. DANFORTH. Absolutely. To be promised reform and not be told in advance what the reform is supposed to be causes somebody from the show-me State to say, "Show me."

Mr. HANSEN. I just have to say I think that the title was a ploy that has been used successfully many, many times. If you want to help insure the passage of certain legislation, hang a good, euphemistic title on it. That certainly does not hurt its chances of enactment. That is precisely what we did last year.

I appreciate the remarks and observations of the distinguished Senator. I hope they may be summarized in the press in order that persons who are unable to be here this afternoon have a chance, before next week, to read the cogent and persuasive arguments and the good logic that I find threaded and woven throughout his remarks.

Mr. DANFORTH. I thank the Senator from Wyoming.

Mr. HANSEN. I thank my distinguished colleague from Massachusetts.

The PRESIDING OFFICER (Mr. ALLEN). The Senator from Massachusetts.

Mr. KENNEDY. Mr. President, although I am sympathetic to the current proposal on the tax bill for approximately $10 billion a year in permanent tax cuts for individuals, I believe it would be unwise, on the grounds of both economic policy and tax policy, for Congress to adopt such reductions at this time.

With respect to economic policy, the proposal is, in effect, a proposal for a permanent $50 rebate. It is also a proposal for a rebate that will not have significant economic effects until a year from now—there will be only a $2.5 billion effect in fiscal year 1977, and the full $10 billion effect will not be felt until fiscal year 1978.

Just a few days ago, President Carter and his economic advisers determined that a $50 rebate costing $10 billion in 1977 is unjustified at this time, because of the improved condition of the economy. It would be even more unwise to legislate a revenue loss now of $10 billion for 1978, when we can do no more than speculate about the condition of the economy in the year ahead. It will be time enough, in light of future GNP, inflation, unemployment, and other data in the second and third quarters of 1977, to determine that a further economic stimulus is needed for fiscal year 1978.

The proposal also significantly aggravates the budget deficit for fiscal year 1978. The projected deficit for 1978 was put at $63.2 billion in the first resolution, as reported recently by the Senate Budget Committee. As a result of yesterday's action increasing the jobs credit, the deficit will touch $66 billion. To add an additional $10 billion to the deficit at this time can only be described as "budget-busting."

With respect to tax policy, a key ingredient of tax reform is necessarily tax relief. As a practical matter, the burden of increased taxes from urgently needed reforms can only be—and must be—offset by revenue reductions. President Carter has pledged to submit a proposal for comprehensive tax reform early in the fall. If massive permanent tax cuts are enacted now, President Carter's drive for tax reform may well be crippled from the outset.

The proponents of the present tax cuts argue that tax relief is being held hostage to tax reform. But it would be more accurate to say that the drive for massive immediate tax relief is a Trojan horse designed to scuttle comprehensive tax reform. Almost all of those who now advocate the proposal for immediate permanent tax cuts have been notoriously resistant to tax reform in the past. To yield to their views now would play into the hands of those who wish to destroy tax reform at the outset.

The biggest spenders in Congress today are those who so blithely accept massive Federal spending through the tax laws. Federal tax expenditures are mushrooming now at a faster rate than direct expenditures. In 1971, tax expenditures totaled $51 billion. In 1978, it is estimated that the total will be $124 billion, a rise of 141 percent. Over the same period, direct expenditures have climbed by only 117 percent. It is ironic, in light of these facts, that those who are the first to call for cuts in the Federal budget and direct expenditure are the last to call for cuts in Federal tax expenditures.

Nor is there likely to be a serious de-

lay before substantial tax relief is enacted as part of tax reform. If the present schedule holds, I would expect Congress to complete action on President Carter's tax reform proposals well before the adjournment of Congress next year.

In this situation, no persuasive case can be made for tax relief at this time, and I hope the Republican proposal will be defeated.

Mr. President, I welcomed the opportunity to listen to my colleagues, for whom I have a great respect, in terms of their intention as to how we best can meet our responsibilities in the cause of tax equity and justice, and also to insure that we are going to adopt a responsible position in terms of the economy of this country, to promote its real growth, and to deal with its problems of inflation and unemployment.

I take strong issue with some of the basic and fundamental premises which they advance here, preceding the amendment which, I understand from their commentary, will be offered this afternoon. I am very hopeful that after we have an opportunity to examine it, the amendment will be defeated. It really does not reach the legitimate goals of tax reform and tax relief which have been espoused by those who offer the amendment. I believe it also fails to meet our responsibilities, both in the short term and long term, to the American people in insuring that the Internal Revenue Code is fair, just, and equitable.

Mr. President, if we review the activities of the past few days, we see that President Carter withdrew the $50 rebate on the basis of the most recent economic information available to him. The first quarter statistics for 1977 showed surprisingly strong economic growth. Reviewing the rate inflation, the rate of unemployment, the real growth in GNP, he indicated to Congress that he did not believe it was necessary to move ahead on the tax rebate program or the other provisions for incentives to American business. And he so recommended to Congress. The Senate has acted on part of his proposal. We have dropped the $10 billion stimulus program which would have brought the $50 rebate to 87 million taxpayers. But we have declined to drop the $2.4 billion in business tax incentives.

We see that the death of the rebate has generally been accepted, even by those who have supported the current proposal for a permanent tax cut.

But, Mr. President, the proposal being advanced by our colleagues on the other side of the aisle is not related to 1977. They are talking about a proposal that is going to be related to 1978 in terms of its economic impact. They want a $10 billion stimulus for 1978, when we have just withdrawn a $10 billion stimulus for 1977. This is not a responsible attitude as a matter of economic policy. So I have reservations about that particular feature.

Beyond that, the question has been raised whether Congress can meet its responsibilities in attempting to insure tax equity and tax justice. They question whether we can act appropriately within a reasonable period of time on tax reform. President Carter made a firm and fundamental commitment across this country last year. It was about as clear and firm a commitment as we could expect to hear from any American political leader. It is one which I believe he will fulfill and must fulfill.

On the matter of timing, we know that Congress can act rapidly on tax reform. Look at the example of the tax reform act of 1969. We had a new administration, a Republican administration, in 1969. In the early period of that administration they appeared to be committed to tax reform. I admit, they were pushed out front a bit by the outgoing Democratic administration. The Senate Finance Committee and House Ways and Means Committee were deeply involved with tax reform that year. Within a single year, we enacted the Tax Reform Act of 1969. We made some fundamental, basic, and constructive improvements in the Internal Revenue Code which justified the name of tax improvement and tax reform.

If we look at the Tax Reform Act of 1976, we recall the extensive debates which were held here in the Senate in 1976 and in the House of Representatives in late 1975. One would have to agree, looking back over the period of legislative history, the debates were conducted within a single Congress. We had the Finance Committee committed to reform, a Ways and Means Committee committed to it, and a Congress that wanted to commit this Nation toward a sense of equity and justice.

We can meet these responsibilities quickly. The Senate Finance Committee has demonstrated that. We have now a firm commitment by an American President. We have the statesmanship of the chairmen and the leaders of our respective committees. They are prepared to live up to that fundamental commitment for tax reform.

In addition, Mr. President, the new administration has gone to the American people on the important issue of energy and the challenge which the energy crisis presents to this nation. The President has laid out the critical needs of this country on energy. He made his proposals to a joint session of Congress and also to the American people. He outlined an extremely challenging and an extremely constructive proposal to help guide Congress and the American people toward a realistic energy policy. The proposals are filled with a series of adjustments in the Internal Revenue Code. There are some which we may agree with and others which we may take issue with. It will have a variety of different impacts on the Internal Revenue Code, affecting what individuals will pay, what tax credits will be available, and what benefits and burdens will go to industries and individuals. The President has asked the cooperation of Congress in this area.

We have the commitment of the Congress to move expeditiously. We know that our action is going to have a significant impact on the Internal Revenue Code.

Welfare is another area where close relationships with the Internal Revenue Code are involved. The President has established a task force in HEW to try to deal with the complex, involved issues of welfare and welfare reform. These issues are going to have many implications for our tax laws.

What we are talking about, I believe, is what can be achieved in a constructive way by the Congress of the United States and how we can attempt to deal with the continuing significant challenges which are presented to us and on which the President has dared to stake out important and challenging positions.

So these matters are related to the issues which we are facing here today.

Mr. President, I also think it is important, when we are talking about this issue, that we recognize that the Committee on Finance proposal already contains an important and useful advance toward greater equity within the Internal Revenue Code, the change in the standard deduction. Even that raises some questions, but they have moved, I think, to help those people who deserve the greatest degree of tax relief and justice.

Even more important, Mr. President, I believe that the issues of tax reform and permanent tax reduction cannot be separated. What we do by permanent tax reform could make the rate changes proposed today completely inappropriate.

Mr. President, I think that we should not be considering this proposal, either from an economic point of view, in terms of the macro-economic implications of the proposals, or from the tax policy point of view. I do not think it is appropriate for us to consider it now from a timeliness point of view. The proposal is premature. It is closely related to energy reform, to welfare reform, and above all, to tax reform.

There are areas which I am very hopeful that a comprehensive tax reform review would consider. Take, for example, the enormous complexity of the marriage penalty, which this proposal would not affect. Under the existing law, unaffected by the measure which is being advanced here today, people pay more if they are married individuals who are working than if they are living together but not married. We are not going to affect this kind of inequity in terms of the lower rates they talk about. The inequity which is built into the Internal Revenue Code between the treatment of single persons and married couples will not be affected. but, as more and more families have two wages earners within the family, the issue becomes a central problem of tax relief and tax reform.

We can talk about the question of deductions and exemptions. The fact of the matter is that with the reduction in rates from 14 percent to 12 percent, the value of the personal exemption in terms of the tax benefit to an individual

is actually being reduced for low-income people as compared to those in the highest income brackets. It is a very interesting phenomenon. Even though the taxes paid by the individual might be reduced, the amendment will increase the discrimination against low-income persons in terms of the benefits they receive from tax deductions.

For a person in the 14-percent bracket, his $750 personal exemption brings him a tax savings of $105. The amendment would reduce the benefit to $90. Yet the 70-percent-bracket taxpayer gets a benefit of $525. The amendment makes this discrimination even worse.

So, Mr. President, these are complex issues which, reach to the heart of the entire Internal Revenue Code. Tax relief must be tied to tax reform.

Not long ago, we had a Republican Secretary of the Treasury, Mr. Simon, recommend a dramatic reduction of tax expenditures and a corresponding reduction across the board, in rates. He saw that as the best and the most effective and efficient way to reach tax equity and tax reform. Wipe out all the special tax benefits and loopholes and use the revenues we gain to reduce the rate of tax.

Maybe that is the way to do it. Maybe the way to do it is some modification of the proposal that is being advanced here today. What I am suggesting is that we cannot say for sure that either is the best and the most efficient way. What we can say is that we should not deal with these problems peacemeal. The basic inequities that work to discriminate to the disadvantage of middle-income people and lower middle-income people and working poor people are unaffected by the changes of tax rates that are proposed, as useful as they are and as worthwhile as they may appear and as legitimate as I believe the motivations are of those that put forward this amendment, and their attempt to target it to the low- and middle-income groups.

But, Mr. President, we cannot settle what is the best tax rate structure for low- and middle-income Americans until we get these basis structural inequities resolved.

There are a variety of other factors that reach the heart of the whole question of equity and justice. It is for those reasons, Mr. President, that we recognize the importance of following the recommendations made by the chairman of the Finance Committee and by the President in terms of attempting to meet our responsibilities to the American taxpayer and to consider tax relief and tax reform together.

Mr. LONG. Will the Senator yield for a question?

Mr. KENNEDY. Yes, I am glad to yield to the Senator.

Mr. LONG. I say first that I agree with the Senator's argument. I am pleased to see we are on the same side today.

I think the Senator has covered the arguments pretty well, but I would like to add one point.

When we try to correct inequities in the law, such as the marriage penalty, we find that it is easy enough to try to provide better equity by reducing taxes, for example by saying that married people will receive a greater standard deduction than they receive now.

But if we do not have slack in the budget so that we can stand the revenue loss, then we are compelled to do the kind of thing we have in the bill before us, where in order to reduce the marriage penalty we have to ask the single people to pay somewhat more.

When the House faced that same problem, they felt, "No, we can't ask anybody to pay more taxes; we want to have some tax relief for married people, but there can't be anything to require single people to pay more taxes."

In the Finance Comittee, we tried to bite the bullet and fix this problem in the bill.

Of course, an amendment will be offered to reverse what the judgment of the committee was. It may very well carry, for all I know. I am just saying that the area where we are going to want to reform injustice and inequity usually can be done much more easily if we can stand a revenue loss than if we have to put more taxes on somebody to accommodate the overall budget picture.

If we cannot anticipate a substantial amount of revenue to help sweeten the tax reform bill, I do not believe we can pass it, because there will have to be so many things to raise people's taxes. We know that nobody remembers very long when we cut their taxes, but they remember for a long time and with bitter resentment when we raise them even by a little bit. If we give away the revenue now in a permanent tax cut, frankly, I think the Senator is correct in saying we are not going to be able to pass a major tax reform bill, not one that is meaningful, that the President would like to advocate and each Senator would like to support.

Obviously, an across-the-board tax cut, as is being suggested, would assume that the tax system is fair the way it is now. The whole burden of the tax reform bill is the assumption that this is not necessarily so. We want some changes; we want to tighten up loose ends and loosen some tight ones.

But if we have to tighten a great number, every time we tighten we lose votes, and the bill will not pass.

Mr. KENNEDY. The Senator knows my respect in his being able to analyze where the votes are.

Mr. LONG. It is mutual.

Mr. KENNEDY. The Senator said it very well. I think he said it in a way which reaches the merits of the argument.

With all of the problems we are going to face, and differences that will be expressed here in terms of what deserves the label of tax reform, the Senator I believe is quite corect. If there is going to be a significant revenue loss at this time, it will make it virtually impossible to seriously consider the tax reform later, as a practical and political reality.

The Senator has stated it. I have heard him state it many times. He states it with great accuracy and I agree with the Senator.

This proposal being advanced does not really touch the heart of the many inequities which currently exist in the tax laws, and which I think we ought to examine in some detail, such as the need to shift from deductions and exemptions to credits, and the wide variety of other matters so familiar with the chairman of the Finance Committee. But I certainly agree with that. If we deal only with the rate structure, we are looking only at the tusk and missing the rest of the elephant.

Let me just ask if I am not correct—in excess of 40 percent of the families in my own State have two wage earners, and I believe it is about the same for the rest of the country. But, if we have two wage earners in a single family and they are married, they would be better off, in terms of the tax point of view, if they were separated. Is not that the practical effect of the Internal Revenue Code?

Mr. LONG. If we assume their incomes are relatively equally divided. As long as each spouse receives more than 20 percent of their combined income, there is a tax advantage to being single.

Mr. KENNEDY. The Senator puts it very well. There is a marriage penalty in the tax laws that is unfair to working couples.

Mr. LONG. That is correct. If they just lived under the same roof and did not marry, or if they were married and divorced, they would have better tax treatment and have substantial tax savings over a period of years.

Mr. KENNEDY. The point is a valid one, I think.

Mr. LONG. The tax penalty from marriage could amount to as much as 20 percent of their taxes.

Mr. KENNEDY. That is a significant amount. Yet, the proposal advanced here does not affect that kind of inequity at all.

If a single person marries, he is better off to marry somebody not working, under the current Internal Revenue Code, am I correct in that?

Mr. LONG. Yes. A woman would be better off marrying a man not a wage earner and a man would be better off taxwise in marrying a woman not a wage earner.

Mr. KENNEDY. This is a relatively new phenomenon that has developed in recent times. But it is a practical situation which affects millions of American taxpayers. It needs serious attention. I know it is a concern to the members of the Finance Committee, and we are not doing anything about that in this particular proposal.

Finally, I just mention that it is always interesting to me to listen to those who are advocating additional tax reductions. We are going to increase the deficit now anywhere from $10 billion to $11 billion and yet we have not heard very much discussion or debate about the impact on the deficit by the proponents of

this particular issue, or the problems of inflation and how future generations are going to have to pay for that.

The President has stated his intention to achieve comprehensive tax reform. We should not tie his hands and prevent him from meeting that responsibility by a premature tax reduction.

Mr. JAVITS. Mr. President, I have heard with the greatest interest the views expressed by my colleague, the Senator from Massachusetts.

I just wish to state the propositions he has made, as I understand them. I assure him that as the debate develops, we will address ourselves very thoroughly to those questions.

One is that we do not affect by our amendment the inequities. In the tax code now, one of the salient inequities is that married taxpayers, where both are working, fare worse because they are married than if they were single or living in sin.

The second is that we increase the disparity and reduce the tax benefit of the poor when contrasted with those better off, because under this provision we are giving the reduction to essentially middle class taxpayers in a range of income subject to tax from $8,000 to $20,000, while the taxpayer in lower elements, including those who get a refund, stand still. They are not reduced; they are not increased.

If I understand it correctly—I do not want to start it this afternoon—we will deal with it next week.

Mr. KENNEDY. Mr. President, will the Senator yield for an observation?

Mr. JAVITS. I yield.

Mr. KENNEDY. The lowest rate now is the 14 percent rate. Under the Senator's proposal, it is reduced to 12 percent. If we multiply the 12 percent by the personal exemption of $750, we are actually reducing the benefit of that exemption to individuals in the lowest bracket, as compared to wealthy persons in the 70 percent bracket.

I can understand and appreciate what the Senator is attempting to do for the lowest income groups. But one side effect of this amendment is to increase the disparity in terms of the benefit of deductions to low and high income persons.

Mr. JAVITS. I think I stated that, but I am glad the Senator has said it in his own words.

As I understand Senator LONG's point, "If we give away the revenue now, we will be unable to pass a tax reform bill later." I will deal with that, and so will my colleagues, as the debate resumes.

I just wanted to spread that on the RECORD so that those who read the RECORD this weekend may look for the answers, though I think we have given them in our presentations—Senator DANFORTH and I. But we will do it again and specifically divert it toward these questions.

I yield the floor, Mr. President, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT FOR PERMANENT TAX REDUCTION

Mr. DOMENICI. Mr. President, in rising to express my strong support for this amendment to reduce permanently individual income tax rates, I want first to commend President Carter for withdrawing his so-called tax rebate program. Many of us had long maintained, and apparently the President finally agreed, that the tax rebate was an inappropriate response to the economic circumstances that presently exist in this country.

I will not belabor these points, because the tax rebate plan is not at issue here today, but it does seem proper to observe simply that elimination of the tax rebate should not put an end to consideration of other fiscal policy options. The tax rebate was inappropriate because our economy is improving without the quick but temporary surge expected of such a huge, one-time infusion of money into the economy. Its stimulative benefits were questionable at best and it was a huge direct deficit item. People in my State were surprised, and not pleasantly, when they learned that it would have required all the Federal taxes collected from my entire State for the next 14.7 years to repay the $10.4 billion we would have had to borrow to pay out $50 a head under the Senate's version of the tax rebate plan. That just did not make sense to many people, including, in the end, the President.

Those of us who have from the first advocated the substitution of a permanent rate reduction for the rebate feel that our case was extremely strong. The question now becomes, whether a permanent tax cut is justified on its own merits. We who propose and support this amendment are convinced that the answer to that question is an unqualified "Yes." For my own part, I say yes for two reasons: First, the permanent tax reduction is good, sound fiscal policy. Second, the American people deserve a tax cut to make up for the effects of inflation and they deserve that cut now.

Mr. President, there can be no question that our Nation's economy is in a period of recovery, as most recently indicated by the GNP growth figures for the first quarter of 1977. Economic models also indicate that the current and near-term outlook is good, but the longer term outlook is not nearly so bright. This is particularly true when one considers the wide variety of complex and difficult structural defects in the economy, defects which take time to correct or eliminate.

A permanent tax reduction, creating an increase in the purchasing and investing power of the American people, would provide a solid base for continued economic recovery and noninflationary growth for the long term.

We cannot forget, even with the encouraging growth rate of the last quarter, that we still have more than 7 million Americans unemployed. It would be a mistake to fail to respond to this unacceptable condition and run the risk of a continuation of unemployment of this magnitude. Permanent tax cuts are, in my opinion, an opinion shared by many prominent economists, the best action the government can take to increase the availability of permanent, meaningful jobs that in turn further stabilize the economy.

There is a great deal of concern about the increase in the deficit caused by a permanent tax reduction. I share that concern, a bigger deficit does bother and alarm me and I must admit that this amendment would increase the fiscal year 1978 deficit. But, I am also aware that past experience with rate reductions of a more or less permanent nature indicates that for each percentage point reduction in the unemployment rate, revenues increase by about $14 billion a year and spending is reduced by about $4½ billion.

Further, Mr. President, from studies I have seen, I am convinced we will not reduce the deficit at any real growth rate of less than 5 percent and even at that rate it would take 7 to 8 years to reach a balanced budget. These studies indicate that we need to maintain a 5½ to 6 percent real growth rate, while restraining government expenditures to about 20 percent of GNP, if we are to balance the budget by 1981. We simply cannot generate that level of real growth without the added strength a permanent tax reduction for individuals would provide.

As good as most of the recent economic news has been, there is one factor pointing to a basic underlying weakness—the rate of business fixed investment. Nonresidential fixed investment still remains well below 1973–74 levels and is indicative of a lack of confidence which is necessary before consumers will undertake time payments on larger items or for business to increase investments to produce those items. Because, the tax cut we recommend is permanent, business will be encouraged to make long term capital investment decisions, thereby decreasing inflationary pressures that could be created by excess demand while at the same time substantially improving the productivity of this Nation's industry.

In that regard, Mr. President, productivity will also curb the upward trend of inflation we are beginning to experience. This creeping inflation eats away at every person's income, and we must counter this trend. To tighten the consumer's belt only elicits the tightening of our business sector, and this is detrimental for all. A permanent tax reduction is the most efficient method in the long-run for maintaining the demand side of our economy. By fiscal year 1979, Chase Econometrics estimates that a $10 billion permanent tax cut would increase nominal GNP approximately 20 percent more than would occur if the Government were to spend that same $10 billion retained from the income of the American people.

The choice is, therefore, between allowing the Government to decide how to spend the people's income with far less benefit to the economy, or allowing the

people the deserved right to spend their income in the manner they wish, with greater beneficial impacts on the economy. I do not find this decision a hard one to make.

Finally, on this matter, Mr. President, the current report of the Joint Economic Committee confirms the point I have made. On page 84, the JEC report states without qualification that "tax reduction will be needed in 1978 to sustain strong growth of the private sector." Surely, we all recognize that the private sector drives the great economic machine we depend on for the abundant blessings of living in America. We cannot fail to heed the recommendation of the Joint Economic Committee to provide steady, strong growth for the private sector.

Turning now to my other major reason for supporting this amendment, let me first point out that inflation has caused personal income tax collections to rise to 8.5 percent of GNP, up from 8 percent since the tax reductions of 1975. In other words, inflation has acted as an unlegislated tax increase for the vast majority of Americans with the unintended result that Americans make more money, but have less to spend for their own needs. Inflation, much of which has been the product of inappropriate government actions and policies, has eroded the purchasing power of American workers and destroyed the confidence of American investors. Are we to stand idly by while these factors continue to inflict these unfair burdens on our people or are we going to have the courage to reduce taxes and live with the charge of increasing the deficit momentarily. Again, for me, the decision is easy, the responsible course to me is clear—enact a meaningful permanent tax cut now.

A good deal has been said by administration officials about the need for tax reform. Such statements are usually quickly followed by assertions that true tax reform cannot be accomplished if permanent tax reductions are enacted now. Are we to hold the American middle class and its working people hostage, withholding from them the right to keep a greater proportion of what they earn, all in the name of tax reform? Are the American people to accept the proposition that the Congress must be pressured by the politically popular notion of lower taxes before we will move on tax reform?

The answer to both questions must be emphatically "No." Inflationary effects on taxpayers justify a rate reduction now. Effective economic stimulation through a permanent tax reduction is needed now. To delay permanent tax reduction in the name of tax reform is to deceive the American people.

Perhaps the real reason for delay is the reluctance to give up or reduce future revenues because future needs might not be met. Again I ask—are we to hold hostage American taxpayers because we refuse to recognize that permanent tax reductions are justified now for reasons my colleagues and I have stated? Are the American people to accept the proposition that the Congress will not follow the economically sound and politically responsible course of permanent tax reduction in order to preserve its ability to fund more costly programs in the future? These are serious questions that cannot be avoided. The Joint Economic Committee recognized that fact by emphasizing on page 84 of its report that we cannot continue to commit such a large share of the GNP to personal income taxes and that there must be a reduction in fiscal year 1978. I say—Why not now?

SENATE SHOULD PASS TAX REDUCTION AND STIMULATION BILL OF 1977 WITHOUT DELAY

Mr. NELSON. Mr. President, I support the Tax Reduction and Simplification Act of 1977 (H.R. 3477) as modified by the Senate Finance Committee, and urge that it be speedily approved by the Senate with a more effective small business provision included.

BILL IS BALANCED

In my view, this legislation is fairly balanced between individual taxpayers and the business sector. It continues for another year—1978—$12 billion of tax reductions for individuals and $2.3 billion of similar relief for business, which were carefully conceived by Congress in the emergency Tax Reduction Act of 1975. Additionally, the bill proposes a further $7.6 billion per year tax cut for individuals by way of liberalization of the standard deduction and about $2.4 billion for businesses for 2 years by way of an elective employment or investment credit.[1]

Thus, the 1975 ratio of individual-to-business benefits was 5.2 to 1. These 1975 benefits are extended by this bill. Over and above that, the ratio for the new proposals in the Senate version of H.R. 3477 in favor of the individual taxpayers, including the $327 million in relief from postponement of the 1976 sick pay provision, would be 3.3 to 1 for 1978. But, the $2.4 billion per year business incentives are temporary and their revenue effect ends in 1979. In contrast, the standard deduction changes are intended to be permanent, so the $6 to $7 billion in benefits to individual taxpayers should continue year after year into the indefinite future. That tips the ratio in H.R. 3477 even further in favor of individual taxpayers.

President Carter recently made the decision that the $50 per person individual tax rebate for 1976 on the grounds that the economy is reviving, and that adding the $10.7 billion needed to finance the rebate to the deficit was potentially inflationary. The President's judgment was reported to be a "close call," and he emphasized that a major stimulus program remains, which includes about $20 billion, of which $3.5 billion would fall into this current year.

NECESSITY OF REDUCING UNEMPLOYMENT

However, as a legacy of the 1974–75 recession, the United States currently has an unacceptable unemployment level of 7.3 percent, with over 7 million people looking for work. Because of the economic and human consequences of those statistics, I feel that we must pursue every avenue that is available to provide employment opportunities to those who are looking for work. This includes public works programs, public service employment, and tax incentives for the private sector to provide additional jobs. Jobs in business offer the greatest promise of developing into permanent and stable employment.

Small business deserves particular attention in this process because it provides about 55 percent of the jobs in the private sector.

We are all attempting to find the proper combination of measures to stimulate employment which will, at the same time, avoid stimulating inflation. In searching for this formula, there is special appeal in seeking additional capacity for business.

The greater capacity to produce, distribute and market goods and services reduces their prices and that helps to hold down inflation. An employment credit reduces the cost of labor and likewise exerts a dampening impact on inflation.

Stimulating the creation of jobs has many direct and indirect advantages for the economy. In 1975, a congressional study concluded that a 1-percent change in employment would produce a $16 billion change in Federal revenue.[2] A recent estimate is that the average job produces somewhat more than $2,500 in taxes of different kinds in each year. Therefore, a one-time temporary 25 percent employment tax credit of $1,050 as placed in the Senate bill by the amendment of the Senator from Texas (Mr. BENTSEN) or a 40-percent credit of $1,680 as in the House bill, or even $2,000 or $2,100 employment credit, would be a bargain in return for the greater amounts of taxes which would flow into the U.S. Treasury beginning in 1977 and continuing for every subsequent year in which the individual remained employed. In fact, the President's inflation program announced April 15 includes the following two items:

(4) Incentives for Increased Investment and Expanded Capacity. . . .

(7) Employment and Manpower Programs . . . (to) reduce both unemployment and inflation. . . .

SMALL BUSINESS AMENDMENTS DESERVE CONSIDERATION

It is for these reasons that I would support an amendment to increase the percentage credit for employment to either 50 or 33 percent of the Federal unemployment tax—FUTA—base—$2,100 or $1,386—from the 25 percent—or $1,050—level now in the Finance Committee bill.

In public hearings on February 22, 1977, the Senate Small Business Committee, led by the Senator from Colorado (Mr. HASKELL), received evidence from a broad spectrum of knowledgeable witnesses on the employment tax credit.

[1] "Tax Reduction and Simplification Act of 1977," S. Rept. 95–96, April 1, 1977, Table 1, page 20.

[2] "Inflation and Unemployment," Congressional Budget Office, June 30, 1976, page 46.

Considerable Committee effort went into the development of Senator HASKELL's proposal to the Senate Finance Committee to increase the employment credit to 50 percent of the FUTA base—or $4,200. While the 50-percent figure was not approved at that time several important parts of the small business amendment were adopted by the committee.

For the purposes of this debate, the committee amendment has been advanced again. It appears that a cap on the amount of credit that may be taken by each firm and raising the credit to 33 or 50 percent, would have the potential of assisting a very substantial number of small and independent enterprises.

According to the Joint Tax Committee, such a $100,000 cap would fully cover every firm which makes this election up to 72 workers and all but 10 or 15 percent of the work force. It would only reduce the credit below 100 percent for fewer than 2,000 large firms, many of which already enjoy alternative tax advantages.

We are also advised by the Joint Tax Committee that increasing the credit to 33 percent with a cap would not change the revenue impact of this measure, because the revenue saved by a reimposition of a cap at $100,000 compared to $40,000 in the House bill—would fully provide that revenue needed for increasing the credit to 33 percent. If it is the sentiment of the Senate, I would favor increasing this percentage to 50 percent as proposed by the Senator from Colorado.

Since the employment tax credit is proposed as a temporary stimulation device, in my view, it should be enacted at a meaningful dollar level to provide a fair test of its effectiveness. Because the FUTA base is scheduld to rise to $6,000 in 1978, while the credit base will not rise, an employment tax credit of $2,100 per worker will provide such an effective test. That sum would compare to approximately $21 per worker in the original administration proposal and is more likely to be perceived by the business community as a persuasive stimulus to employment.

SUMMARY

The pending tax reduction and simplification bill as reported by the Finance Committee appears to be equitably balanced as between individual taxpayers and business. It also attempts to recognize the needs of both large and small business, especially with the inclusion of the additional consideration in the employment tax credit area as I have described.

The condition of the economy, particularly the necessity of reducing unemployment, calls for action on all fronts, including encouragement across the spectrum of private sector businesses.

For these reasons, I hope that the Senate will act promptly in approving the Finance Committee version of H.R. 3477 with the inclusion of a stronger small business committee amendment.

TEAMSTERS' UNION CENTRAL STATES PENSION FUND 1977

Mr. ROBERT C. BYRD. Mr. President, there is one bill on the unanimous-consent calendar that has been subject to passage by unanimous consent for at least 2 days previous to today.

I ask unanimous consent that the Senate proceed to the consideration of calendar order No. 75 on the unanimous-consent calendar.

The PRESIDING OFFICER. The clerk will please state the resolution by title.

The assistant legislative clerk read as follows:

Calendar No. 75, Senate Resolution 139, authorizing the Committee on Human Resources to inspect and receive tax returns, and tax related matters of the Central States, Southeast, and Southwest Areas Pension Fund under sections 6103 and 6104 of the Internal Revenue Code of 1954.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the resolution.

The question is on agreeing to the resolution.

The resolution was agreed to.

The Preamble was agreed to.

The resolution (S. Res. 139), together with the Preamble is as follows:

Whereas, in order to conduct a study of and to discharge its oversight responsibility over the investigation of allegations relating to the Teamsters' Central States Southeast and Southwest Areas Pension Fund, it is necessary for the Committee on Human Resources of the Senate to inspect and receive tax returns, and tax related matters, held by the Secretary of the Treasury;

Whereas information necessary for such study and oversight cannot reasonably be obtained from any other source; and

Whereas, under section 6103(f) and 6104 (a)(2) of the Internal Revenue Code of 1954, a committee of the Senate has the right to inspect tax returns if such committee is specifically authorized to investigate tax returns by resolution of the Senate: Now, therefore, be it

Resolved, That the Committee on Human Resources of the Senate is specifically authorized, in conducting its study and in exercising its oversight jurisdiction over the investigation of the Teamsters' Central States Southeast and Southwest Area Pension Fund, to inspect and receive any tax return, return information, or other tax related matter, held by the Secretary of the Treasury, with repect to the Teamsters' Central States Southeast and Southwest Area Pension Fund, and any other tax return, return information, or other tax related matter held by the Secretary of the Treasury which the committee demonstrates, to the satisfaction of the Secretary of the Treasury, contains or may contain information directly relating to its study and oversight proceedings.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TRANSFER OF MEASURES TO UNANIMOUS-CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are three measures on the calendar which can be passed by unanimous consent at a later time. Calendar Order No. 77 can be placed on the consent calendar. There is no Budget Committee problem with that measure.

Calendar Order No. 78 can be placed on the consent calendar. There is no Budget Committee problem with that measure.

Calendar Order No. 79 requires a budget waiver. I have discussed this with the distinguished minority leader. It is my understanding that this measure can be passed by unanimous consent once the budget waiver is received.

Consequently, I would ask the clerk to move those three measures to the Consent Calendar with the understanding that the leadership will not attempt to call up Calendar Order No. 79 from the Consent Calendar until the budget waiver has been cleared.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. I thank the majority leader for yielding.

These three orders are cleared on the notation on my calendar, and as soon as the budget waiver is received on Order No. 79, of course, we are willing to proceed with it.

So I understand we are in agreement that Calendar Orders Nos. 77 and 78 will go now, on the majority leader's suggestion, to the Unanimous-Consent Calendar, as will Calendar Order No. 79, but 79 will not be acted on from the Unanimous-Consent Calendar until the budget waiver is received.

Mr. ROBERT C. BYRD. That is correct.

The PRESIDING OFFICER. The measures will be transferred to the Consent Calendar.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

ANNUAL REPORT OF THE SECRETARY OF THE INTERIOR—MESSAGE FROM THE PRESIDENT—PM–70

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was referred to the Committee on Human Resources:

To the Congress of the United States:

In accordance with Section 511(a) of the Federal Coal Mine Health and Safety Act of 1969, I hereby transmit to

you the Annual Report of the Secretary of the Interior.

Part I of the report details the activities of the Mining Enforcement and Safety Administration. Part II describes the mining research activities of the Bureau of Mines.

The report covers a period of time before I took office.

JIMMY CARTER.

THE WHITE HOUSE, *April 22, 1977.*

NATIONAL CANCER PROGRAM, 1976 ANNUAL PLAN—MESSAGE FROM THE PRESIDENT—PM-69

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was referred to the Committee on Human Resources:

To the Congress of the United States:

Pursuant to Title IV, Part A, Section 401A(b), Public Health Service Act, as amended (42 U.S.C. 286e(b)), I hereby transmit the 1976 Annual Plan for FY 1978–1982. This Plan was prepared prior to the beginning of my administration.

JIMMY CARTER.

THE WHITE HOUSE, *April 22, 1977.*

COMMUNICATIONS FROM EXECUTIVE DEPARMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1201. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report relating to the transportation and distribution of Alaskan North Slope crude oil (with an accompanying report).

Mr. CRANSTON. Mr. President, I ask unanimous consent that a communication from the Administrator of the Federal Energy Administration, relative to equitable sharing of North Slope crude oil be referred jointly to the Committees on Commerce, Science and Transportation; and Energy and Natural Resources.

The PRESIDING OFFICER. Is there objection? Hearing no objection, it is so ordered.

EC-1202. A letter from the Secretary of State transmitting an additional section to the draft bill previously transmitted entitled "International Security Assistance and Arms Export Control Act of 1977" (with accompanying papers); to the Committee on Foreign Relations.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-136. Senate Resolution No. 8 adopted by the Senate of the State of Tennessee to urge the National Park Service to permit Mt. LeConte Lodge in the Greaty Smoky Mountains National Park to continue in operation; to the Committee on Energy and Natural Resources;

"SENATE RESOLUTION NO. 8

"A resolution to urge the National Park Service to permit Mt. LeConte Lodge in the Great Smoky Mountains National Park to continue in operation

"Whereas, the National Park Service has indicated that it may not renew the contract under which Mt. LeConte Lodge operates in the Great Smoky Mountains National Park when the current contract expires at the end of this year; and

"Whereas, the Lodge has furnished food and lodging to overnight guests since 1926, under three different ownerships, and provides a valuable service which ought to be continued; and

"Whereas, the present owners have indicated a willingness to make substantial improvements to the property if they can get a contract extending for a term long enough to allow for the amortization of the expenses of such improvements; now, therefore,

"Be it resolved by the Senate of the Ninetieth General Assembly of the State of Tennessee, That the National Park Service is urged to permit the continued operation of Mt. LeConte Lodge in the Great Smoky Mountains National Park, as a lodging and meal facility for overnight guests.

"Be it further resolved, That copies of this resolution be forwarded to President James Earl Carter; Vice President Walter F. Mondale; United States Senator Howard H. Baker; United States Senator James R. Sasser; each member from Tennessee in the United States House of Representativs; Secrtary of the Interior Cecil Andrus; the Director of the National Park Service; and Mr. L. Caesar Stair, III, Chairman, Great Smoky Mountain Park Commission, 5617 Lyons View Drive, Knoxville, Tennessee 37919."

POM-137. A petition from Mr. L. E. Doxey of Decatur, Ga., urging the President and Congress to stop the surrender of the Panama Canal by the United States of America; to the Committee on Foreign Relations.

POM-138. House Concurrent Resolution No. 7 adopted by the Legislature of the State of Utah memorializing appropriate Federal agencies and Congress to prohibit the placement of Navajo Indians on lands in San Juan County; to the Select Committee on Indian Affairs:

"NAVAJO PLACEMENT RESOLUTION

"A concurrent resolution of the 42nd Legislature of the State of Utah, the Governor concurring therein; relating to the placement of Navajo Indians; memorializing appropriate Federal agencies and Congress to prohibit the placement of such Indians on lands in San Juan County

Be it resolved by the Legislature of the State of Utah, the Governor concurring therein:

"Whereas, the United States Congress, in 25 U.S.C. 640d provided that the approximately 3,500 Navajo Indians presently sharing lands in Arizona with the Hopi Indians should be given alternative land in Arizona or New Mexico;

"Whereas, the Navajo Environmental Impact Study Team has been instructed to study the environment impact on suggested parcels of land for said Indians;

"Whereas, said Study Team has been further instructed to investigate the possibility of relocating said Indians in San Juan County, Utah;

"Whereas, the United States Congress, in 25 U.S.C. 337a, has previously forbidden further allotments of lands to Indians in San Juan County, Utah;

"Whereas, the placement of said Indians in Utah would have a multiplicity of adverse effects on Utah, to-wit:

"(1) No benefits whatsoever would be derived by the residents of Utah;

"(2) No benefits whatsoever would be derived by the Navajo Indians presently residing in Utah;

"(3) The Navajo Indians presently residing in Utah would suffer a serious dilution of their 37½% Navajo Indian royalty fund;

"(4) The population density would be four times as much as the present population density in surrounding areas;

"(5) The proposed land area will not support the influx of 3,500 additional persons;

"(6) Educational systems would be overloaded.

"(7) The increase of non-taxpaying county residents would have a devastating effect on the ability of the county to provide necessary services;

"(8) Welfare costs would be substantially increased;

"(9) Such vesting of federal, state and private lands in said Indians would create a serious loss of tax revenues, future mineral receipts and in-lieu tax revenue;

"(10) Present land use would be seriously disrupted;

"(11) Valuable coal, gas and oil reserves would be lost to the State of Utah and its people;

"(12) Federal, state and private lands in Utah would be used to solve a problem of the State of Arizona;

"(13) Extensive archaeological resources would be lost to the State of Utah; and

"(14) Significant hunting and recreational assets would be lost to the State of Utah.

"Now, therefore, be it resolved, that the 42nd Legislature of the State of Utah, the Governor concurring therein, memorializes the Bureau of Indian Affairs, the Bureau of Land Management, and the United States Congress to cease any further action directed towards the investiture of any lands in the State of Utah to those Navajo Indians presently residing with the Hopi Indians in the State of Arizona.

"Be it further resolved, that copies of this Resolution be forwarded to the President of the United States, the Speaker of the United States House of Representatives, the President of the United States Senate; the Congressional Delegation from Utah, the Director of the Bureau of Indian Affairs and the Director of the Bureau of Land Management."

POM-139. House Joint Resolution No. 503 adopted by the Legislature of the State of South Dakota making application to the Congress of the United States to call a convention for the purpose of proposing a human life amendment to the Constitution of the United States in accordance with article V of said Constitution; to the Committee on the Judiciary:

"HOUSE JOINT RESOLUTION NO. 503

"A joint resolution making application to the Congress of the United States to call a convention for the purpose of proposing a human life amendment to the Constitution of the United States in accordance with article V of said Constitution

"Whereas, millions of abortions have been performed in the United States since the abortion of the Supreme Court of January 22, 1973; and

"Whereas, the Congress of the United States has not to date proposed, subject to ratification, a human life amendment to the Constitution of the United States; and

"Whereas, in the event of such congressional inaction, article V of the Constitution of the United States grants to the states the right to initiate constitutional change by applications from the Legislatures of two-thirds of the several states to the Congress, calling for a constitutional convention; and

"Whereas, the Congress of the United

States is required by the Constitution to call such a convention upon the receipt of applications from the Legislatures of two-thirds of the several states:

"Be it resolved, by the House of Representatives of the State of South Dakota, the Senate concurring therein:

"That the Legislature of the state of South Dakota does hereby make application to the Congress of the United States to call a convention for the sole purpose of proposing an amendment to the Constitution of the United States that would protect the life of all human beings, including unborn children.

"Be it further resolved, that this application shall constitute a continuing application for such convention pursuant to article V of the Constitution of the United States until the Legislatures of two-thirds of the states shall have made like applications and such convention shall have been called by the Congress of the United States;

"Be it further resolved, that certified copies of this resolution be presented to the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, the Clerk of the House of Representatives of the United States, and to each Member of the Congress from this state attesting the adoption of this joint resolution by the Legislature of the State of South Dakota."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. TALMADGE, from the Committee on Agriculture, Nutrition, and Forestry:

S. Res. 144. An original resolution authorizing additional expenditures by the Committee on Agriculture, Nutrition, and Forestry for inquiries and investigations. Referred to the Committee on Rules and Administration.

By Mr. EASTLAND, from the Committee on the Judiciary:

Without amendment:

S.J. Res. 16. A joint resolution to restore posthumously full rights of citizenship to Jefferson F. Davis (Rept. No. 95-100).

By Mr. WILLIAMS, from the Committee on Human Resources:

S. Res. 146. An original resolution authorizing additional expenditures by the Committee on Human Resources for inquiries and investigations. Referred to the Committee on Rules and Administration.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated

By Mr. HELMS:

S. 1354. A bill to reorganize the executive branch of the Government and increase its economy and efficiency by establishing Offices of Inspector General within the Departments of Agriculture, Commerce, Housing and Urban Development, the Interior, Labor, and Transportation, and within the Energy Research and Development Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, and the Veterans' Administration, and for other purposes; to the Committee on Governmental Affairs.

By Mr. CURTIS:

S. 1355. A bill for the relief of Martina Navratilova; to the Committee on the Judiciary.

By Mr. ANDERSON:

S. 1356. A bill for the relief of Aurora Munar; and

S. 1357. A bill for the relief of Soo Jin Lee; to the Committee on the Judiciary.

By Mr. CRANSTON (for himself and Mr. HAYAKAWA):

S. 1358. A bill to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis unit, Central Valley project, California, to mandate the extension and review of the project by the Secretary, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. MORGAN:

S. 1359. A bill to amend the Housing Act of 1949; to the Committee on Banking, Housing and Urban Affairs.

By Mr. CHURCH (for himself, Mr. MCCLURE, Mr. HATFIELD, Mr. PACKWOOD, Mr. MELCHER, and Mr. HANSEN):

S. 1360. A bill to establish an Advisory Committee on Timer Sales Procedure appointed by the Secretary of Agriculture for the purposes of studying, and making recommendations with respect to, procedures by which timber is sold by the Forest Service, and to restore stability to the Forest Service timber sales program and provide an opportunity for congressional review to the Committee on Energy and Natural Resources, by unanimous consent.

By Mr. HELMS (for himself, Mr. ALLEN, Mr. GARN, Mr. HATCH, Mr. MCCLURE, Mr. SCHMITT, Mr. THURMOND, and Mr. TOWER):

S. 1361. A bill to preserve the academic freedom and the autonomy of institutions of higher education and to condition the authority of officials of the United States to issue rules, regulations, or orders with respect to institutions of higher education; to the Committee on Human Resources.

By Mr. ROBERT C. BYRD (for himself and Mr. RANDOLPH):

S. 1362. A bill to amend the Small Business Act to reduce the rate of interest on disaster relief loans under such act, to apply special provisions of such act to such loans made in connection with major disasters occurring after April 1, 1977, and before June 6, 1977 to the Select Committee on Small Business.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HELMS:

S. 1354. A bill to reorganize the executive branch of the Government and increase its economy and efficiency by establishing Offices of Inspector General within the Departments of Agriculture, Commerce, Housing and Urban Development, the Interior, Labor, and Transportation, and within the Energy Research and Development Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, and the Veterans' Administration, and for other purposes; to the Committee on Governmental Affairs.

Mr. HELMS. Mr. President, the bill I am introducing today would set up an office of Inspector General or the equivalent for the purpose of conducting and supervising audits and investigations relating to programs and operations in each of the following departments and agencies: The Department of Agriculture, the Department of Commerce, the Department of Housing and Urban Development, the Department of the Interior, the Department of Labor, the Department of Transportation, the Energy Research and Development Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, and the Veterans' Administration.

The Office of Inspector General would follow the pattern of such an office established for the Department of Health, Education, and Welfare in the last Congress. I am pleased to note that my good friend and distinguished colleague from North Carolina, L. H. FOUNTAIN, has introduced similar legislation in the House of Representatives designated as H.R. 2819.

Mr. President, I will not indulge myself in a long-winded dissertation concerning the merits and purposes of this legislation. I believe that they are rather obvious. Further, I would be the first to acknowledge that this legislation is not the answer to all the problems of the Federal bureaucracy. However, its enactment will provide a very important—and very badly needed—step in the right direction.

This legislation will establish in these departments and agencies a high-level official, with no program responsibilities, who is charged with giving undivided attention to the prevention of fraud and program abuse and the promotion of economy and efficiency in the administration of Federal programs and operations.

If properly implemented, it will provide effective leadership in areas where it does not now exist. It will help coordinate the work of the many units, thereby creating some centralized responsibility for preventing fraud, abuse, and mismanagement. This responsibility is presently scattered throughout the bureaucracy in a disorganized fashion. It will provide a means for informing the Secretary and the Congress about serious problems and for helping to insure prompt corrective action.

It is time to take action to give this country's taxpayers some relief from the unwarranted and inexcusable burden being imposed upon them by massive fraud and abuse in many Federal programs. This legislation is badly needed, and I urge all Members of the Senate to join me in assuring its passage.

By Mr. CRANSTON (for himself and Mr. HAYAKAWA):

S. 1358. A bill to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis unit, Central Valley project, California, to mandate the extension and review of the project by the Secretary, and for other purposes; to the Committee on Environment and Natural Resources.

Mr. CRANSTON. Mr. President, I rise to introduce for myself and Senator HAYAKAWA for appropriate reference a bill to authorize appropriations for fiscal year 1978 for continuation of construction of distribution systems and drains on the San Luis unit, Central Valley project, California.

In addition the bill mandates the Secretary of Interior to appoint a task force to review the management, organization, and operations of the San Luis unit to determine the extent to which they conform to the purposes and intent of the act of June 30, 1960, the original authorization of the San Luis unit, and the act of June 17, 1902, our basic Federal reclamation law.

Finally, the bill provides that the proposed amendatory contract or any other contract amending the current water service contract or the current repayment contract cannot be approved by the Secretary until after completion of the task force investigation and the submission of its report on January 1, 1978, or before.

Mr. President, it is essential that this bill be given prompt consideration and hopefully reported on or before the May 15 Budget Act deadline. The additional authorization is urgently needed or construction will be forced to cease, jeopardizing a number of jobs in the Fresno area.

This bill is identical to legislation now being considered in the House Interior and Insular Affairs Committee. I look forward to its prompt and favorable consideration in the Senate.

By Mr. MORGAN:

S. 1359. A bill to amend the Housing Act of 1949; to the Committee on Banking, Housing, and Urban Affairs.

Mr. MORGAN. Mr. President, today I introduced a bill, at the request of the administration, to extend the authorizations for rural housing programs. As chairman of the newly created Rural Housing Subcommittee of the Banking, Housing, and Urban Affairs Committee, I am most concerned about the neglected state of rural housing. For far too long, low- and moderate-income persons residing in rural areas have been forgotten by Congress as we have attempted to provide a decent home for every American.

The Farmers Home Administration was initially created to provide low cost credit to farmers who could not obtain credit through normal channels but has now grown into a major financial agency providing assistance for agricultural and rural development. Supervised credit and grants for rural housing needs is a major function. Some of the authorities under which the Farmers Home operates terminate on specific dates, while others have no termination date. The bill which I am introducing today would extend the expiring authorities for 1 year, correlate them with the new fiscal year, and in the case of low-income repair loans and grants and financial assistance for labor housing, amends the authorizations for appropriations.

On April 29, we will be holding hearings on this bill and look forward to hearing from the administration and other witnesses as to whether or not increased demands on staffing can be met under the present budget authorization request. I might also add that on May 9 I will be holding field hearings in my home State of North Carolina on S. 1150 introduced by Senator HUMPHREY which seems to address many of the problems facing the Farmers Home Administration today.

Mr. President I am totally committed to the idea of a strong Farmers Home program and intend to work closely with the Carter administration during the additional year's extension provided by this bill to see that a cohesive and sound framework can be achieved to serve the needs of our rural Americans.

By Mr. CHURCH (for himself, Mr. MCCLURE, Mr. HATFIELD, Mr. PACKWOOD, Mr. MELCHER, and Mr. HANSEN):

S. 1360. A bill to establish an Advisory Committee on Timer Sales Procedure appointed by the Secretary of Agriculture for the purposes of studying, and making recommendations with respect to, procedures by which timber is sold by the Forest Service, and to restore stability to the Forest Service timber sales program and provide an opportunity for congressional review; to the Committee on Energy and Natural Resources, by unanimous consent.

Mr. CHURCH. Mr. President, I introduce a bill to establish an advisory committee on timber sales procedure appointed by the appropriate Secretary, and I ask unanimous consent that the bill be referred to the Energy and Natural Resources Committee.

The PRESIDING OFFICER. Without objection, the bill will be received and referred in accordance with the Senator's request.

Mr. CHURCH. I thank the Chair.

By Mr. HELMS (for himself, Mr. ALLEN, Mr. GARN, Mr. HATCH, Mr. MCCLURE, Mr. SCHMITT, Mr. THURMOND, and Mr. TOWER):

S. 1361. A bill to preserve the academic freedom and the autonomy of institutions of higher education and to condition the authority of officials of the United States to issue rules, regulations or orders with respect to institutions of higher education; to the Commiee on Human Resources.

ACADEMIC FREEDOM ACT OF 1977

Mr. HELMS. Mr. President, the policy of Congress against Federal intervention in the American system of higher education is consistent and long standing. Congress has recognized on many occasions that the fundamental premise of academic freedom is academic autonomy. On numerous occasions Congress has enacted laws to guarantee the autonomy of higher education. Even when Congress substantially increased Federal financial assistance to education in legislation such as the Higher Education Act of 1965, it provided:

> Nothing contained in this Act shall be construed to authorize any department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over the curriculum, program of instruction, administration, or personnel of any educational institution, or over the selection of library resources by an educational institution.

Yet, in the face of this clear intent of Congress to prohibit Federal intervention in the operation of America's colleges and universities, Federal bureaucrats have entangled college administrators and professors in a web of Federal regulations, reports and controls which have caused educators across the country to warn that the very existence of independent education in the United States is being threatened. These educators point with concern to the emergence in reality, if not yet in name, of a new and unauthorized national "Ministry of Education." I believe, Mr. President, it is time for Congress to fulfill its responsibility and regulate the Federal regulators, before Federal regulation of colleges and universities becomes Federal strangulation. Therefore, I am today introducing legislation to reduce the adverse effects of Federal regulation in interpreting congressional enactments which go beyond the scope of such legislation and impose upon academic freedom.

PAPERWORK MEASURED BY THE POUND, NOT THE PAGE

America's colleges and universities are laboring under a staggering amount of federally required paperwork. Government demands upon collegiate institutions to gather, analyze, and transmit information in confusing and sometimes contradictory form is increasing each year. Federal bureaucrats are producing a constant flood of new and revised laws, regulations, and guidelines that often leave college administrators confused, frustrated, and exhausted. Today, Federal paperwork is measured by the pound, not the page. For example, one report from the University of North Carolina in Greensboro to the Office of Civil Rights weighed more than 12 pounds.

Recently, the Southern Association of Colleges and Schools studied the impact of Federal regulation on its member colleges. The report found that the cost of compliance with Federal regulations required some institutions to spend as much as 50 cents to administer every Federal dollar received. Others stated that they must spend more to comply with Federal regulations than they do to operate many academic departments. One college reported spending over $2 million in a single year merely to comply with various Federal requirements. The response of one administrator was typical:

> All of us agree that for the most part the ideas behind the regulations are good and worthy; the difficulty is that when bureaucrats begin to write regulations, they become extremely complicated and, in many instances, difficult to administer as well as expensive in time and effort. They are becoming so numerous that they involve a genuine encroachment on the freedom of action of the private colleges.

This destructive governmental interference with academic freedom is not peculiar to universities located in southern States. Bureaucratic regulatory overkill is nationwide. Derek Bok, president of Harvard University, asserted recently that 60,000 hours of faculty time at

Harvard were spent complying with Federal regulations during 1975. Administrators at North Carolina State University estimate that, during the same year, their faculty and staff spent at least 61,000 hours in complying with Federal regulations.

Change magazine recently estimated that the cost to institutions of higher education of federally mandated programs reached $2 billion in 1976. This $2 billion figure is shocking in itself, but the real cost to colleges is revealed when it is remembered that the total amount of voluntary private contributions to institutions of higher education that year was approximately $2 billion. Change also estimates that for every new bureaucrat added to oversee university compliance another 150 university administrators must be hired to keep up with the increased workload.

Terry Sanford, president of Duke University, observes that—

The avalanche of recent Government regulations threatens to dominate campus management. At the present rate, it is not difficult to imagine a day when facilities and administrators spend all their time filling out Government forms. It is just preposterous. The regulators must be regulated.

Over 25 years ago, President Eisenhower warned that "the prospect of domination of the Nation's scholars by Federal Government, project allocation, and the power of money is ever present, and is gravely to be regarded." Today, American educators too often echo President Eisenhower's warning. Charles Saunders of the American Council on Education recently asked

Is regulation strangulation? The question aptly conveys our uneasy awareness that government legislation and court decisions are increasingly influencing the shape of higher education in America. . . . In practice, federal regulations too often impede and subvert the educational process by stifling diversity and imposing costly, burdensome, and unnecessary requirements.

During 1976, four private universities located in Washington, D.C.—American, Georgetown, Catholic, and George Washington—issued an unprecedented public declaration of independence from Federal control resolving to—

. . . affirm our intention to maintain institutional independence from any external intervention which threatens the integrity of our institutions, including refusal of Federal funds which carry such threats.

AFFIRMATIVE ACTION IS REALLY AFFIRMATIVE DISCRIMINATION

By far, the greatest cause of this flood of Federal regulations affecting higher education is the social engineering of Federal bureaucrats. And by far, the greatest mechanism to implement these regulations has been the use of affirmative action quotas and goals.

The concept of affirmative action first surfaced as a matter of substantial Federal regulation in Executive Order 11246, issued by President Johnson in 1965. Executive Order 11246 as amended prohibits employment discrimination by the Federal Government and Federal contractors on the basis of race, color, religion, sex, or national origin. It also requires employers to—

. . . take affirmative action to ensure that (people) are treated . . . without regard to their race, color, religion, sex, or national origin.

The inclusion of an "affirmative action" mandate in Executive Order 11246 distinguishes it from other Federal laws and regulations dealing with civil rights and nondiscrimination. A basic responsibility of Federal agencies administering this Executive order has been to articulate a constitutionally proper meaning for the ambiguous term "affirmative action" which is consistent with the intent of Congress in its landmark civil rights legislation.

The legislative history of the Civil Rights Act of 1964 clearly shows the intent of Congress to outlaw preferential employment practices on the basis of race or sex. The floor managers of the act in the Senate, Senators Joseph Clark and CLIFFORD CASE stated that—

It must be emphasized that discrimination is prohibited as to any individual . . . The question in each case is whether that individual was discriminated against. (110 Cong. Rec. 7213)

Senator Clark rejected any suggestion that the act could lead to the establishment of quota hiring of nonwhites. He stated emphatically that—

Such quotas are themselves discriminatory. (110 Cong. Rec. 12723)

Senator WILLIAMS stated that—

The Act would specifically prohibit the Attorney General, or any agency of the government, from requiring employment to be on the basis of racial or religious quotas. Under (the Act) an employer with only white employees could continue to have only the best qualified persons even if they were all white.

Senator HUBERT HUMPHREY, then majority whip, maintained that—

The proponents of the bill have carefully stated on numerous occasions that Title VII does not require an employer to achieve any sort of racial balance in his work force by giving preferential treatment to any individual or group. (110 Cong. Rec. 14331)

Despite this intent of Congress in the Civil Rights Act of 1964 to prohibit discriminatory hiring practices through the use of numerical quotas and goals, Federal bureaucrats have interpreted the term "affirmative action" as requiring quotas and goals.

The Equal Employment Opportunity Commission, as well as other Federal agencies, has time and again told employers that "any discussion of equal employment opportunity programs is meaningful only when it includes consideration of their results—or lack of results—in terms of actual numbers of jobs for minorities and women." The Office of Civil Rights has defined the mandate of "affirmative action" as follows:

The concept of Affirmative Action requires more than mere neutrality on race and sex. It requires the university to determine whether it has failed to recruit, employ, and promote women and minorities commensurate with their availability, even if this failure cannot be traced to specific acts of discrimination by university officials. Where women and minorities are not represented on a university's rolls, despite their availability (that is, where they are "underutilized") the university has an obligation to initiate affirmative efforts to recruit and hire them. The premise of this obligation is that systemic forms of exclusion, inattention, and discrimination cannot be remedied in any meaningful way, in any reasonable length of time, simply by ensuring a future benign neutrality with regard to race and sex. This would perpetuate indefinitely the grossest inequities of past discrimination. Thus there must be some form of positive action, along with a schedule for how such actions are to take place, and an honest appraisal of what the plan is likely to yield—an appraisal that the regulations call a "goal."

The interpretation of "affirmative action" as an obligation which "requires more than mere neutrality on race and sex" is fundamentally opposed to the equal opportunity mandate of title VII. Under this formulation, affirmative action is, in reality, affirmative discrimination. The inevitable result of affirmative action implementation within the academic community has been the creation of a system of reverse discrimination. Affirmative action quotas and goals inescapably produce a situation where de facto discrimination is commonplace. Edward Levi, former U.S. Attorney General and past president of the University of Chicago rejected HEW's claims that the "hiring goals" it repeatedly imposes are different than numerical quotas. Said Levi:

The country has been on a program where affirmative action requiring the statement of goals is said with great profoundness not to be setting quotas, But it is the setting of quotas.

The following quotations from letters from universities to applicants for faculty positions reveals the stark reality of affirmative discrimination.

Dear Sir: The Department of Economics at Chico State is now just entering the job market actively to recruit economists for the next academic year . . . Chica State College is also an affirmative action institution with respect to both American minority groups and women. Our doctoral requirements for faculty will be waived for candidates who qualify under the affirmative action criteria.

Dear Colleague: Claremont Men's College has a vacancy in its . . . Department as a result of retirement. We desire to appoint a black or Chicano, preferably female. . . .

I should very much appreciate it if you could indicate which of your 1972 candidates are either Negro or Mexican American.

Dear . . .: We are looking for females . . . and members of minority groups. As you know, Northwestern along with a lot of other universities is under some pressure . . . to hire women, Chicanos, etc.

Your prompt response to my letter of May 12 with four candidates, all of whom seem qualified for our vacancy, is greatly appreciated. Since there is no indication that any of them belong to one of the minority groups listed, I will be unable to contact them. . . .

Dear Mr. . . .: All unfilled positions in the university must be filled by females or blacks. Since I have no information regarding your racial identification, it will be pos-

sible for me to contact you for a position only in the event you are black.

Proponents of discriminatory hiring through affirmative action quotas and goals have been partially successful in blurring the distinction between nondiscrimination and affirmative action. In a classic example of Orwellian "newspeak" the Department of Labor's revised order No. 4, issued in 1971, characterized "affirmative action" as part of an employer's larger obligation not to discriminate. This fostered confusion between nondiscrimination and affirmative action has allowed a system to develop in which discrimination is being institutionalized under the guise of a nondiscrimination program.

A 1976 report by the University of North Carolina clearly identified the distortion of nondiscrimination programs developed by institutions of higher learning by this radical interpretation of affirmative action. The report states in part the following:

Can we not now acknowledge forthrightly that the critical difference (between nondiscrimination and affirmative action) is that under the "nondiscrimination" principle we seek to search for, identify, and fix some real blame at its real source, in order to identify the entity inherently responsible for remedy, whereas under the "affirmative action" principle we pass beyond consideration of specific blame and consequent responsibility and attendant questions about possible correlation of the two factors. "Affirmative action" is intrinsically different from "nondiscrimination," in that it requires individual employers to do more than eliminate and rectify the consequences of discriminatory practices for which they were responsible. It separately requires all covered contractors to share in the national responsibility for remedying the consequences of pervasive and long-standing social conditions, even though those individual employers in fact may have made no direct culpable contributions to those conditions.

The interpretation of affirmative action as requiring hiring and admission quotas and goals is not compelled by Executive Order No. 11246. Nor is it mandated by any act of Congress. Instead, affirmative discrimination through the use of quotas and goals is a bureaucratic creation.

Affirmative discrimination is being promoted by its supporters as the only practical response to discrimination. To the contrary, there are many Federal and State laws which prohibit discrimination in almost every area of life including education, employment, and accommodations. The continued vigorous enforcement of these laws has been the most effective method of eliminating discrimination in the recent past and is still the most effective method today.

Just as affirmative discrimination is legally unnecessary to promote equal opportunity in higher education, it is also unnecessary as a practical matter. Professor Thomas Sowell of UCLA observes that contrary to the myths fostering affirmative action plans—

The effect of the straightforward anti-discrimination loss of the 1960s and of the general drive toward racial integration had created a premium for qualified black academics, even before HEW's goals and timetables. Moreover, the improvements that have occurred since then need not be due to HEW pressures but may be thought of as a continuation of trends already evident before affirmative action programs began.

Robert Hall and Richard Kasten in a recent study for the Brookings Institute concluded that—

Young black men entering the labor market were just as likely as whites to find high-paying jobs and just as likely to escape from bad jobs . . . The sixties saw the nearly complete elimination of racial bias in the way that the labor market assigned individuals of occupations.

In another Brookings study, examining current changes in the labor market for blacks, Richard Freeman wrote:

While black-white differences have not disappeared, the convergence in economic position in the fifties and sixties suggests a virtual collapse in traditional discriminatory patterns in the labor market.

In the academic marketplace, Prof. Kent Mommsen reported in the Journal of Higher Education that the first national statistical study of the salaries of black academics revealed that the difference in salaries between white doctorates and black doctorates was only $62. Within specific fields of concentration, Professor Mommsen found that black doctorates were generally earning more than white doctorates similarly situated and they were also receiving more job offers per year.

ADVERSE IMPACT OF AFFIRMATIVE DISCRIMINATION

Quota hiring and special privileges often undermine the very benefits these measures seek to bestow upon the favored groups. Affirmative action programs injure not only those who are discriminated against by the policy, but also those who are the "beneficiaries" of this new discrimination. Every competent minority member who was hired without regard to race or sex will sooner or later fall under suspicion that his success was due more to special privilege rather than talent and hard work. The noted black professor, Thomas Sowell of the University of California of Los Angeles forcefully rejected the proposition that affirmative discrimination was the answer to past discrimination. In response to the typical "affirmative action letter," variations of which I quoted from earlier, Professor Sowell states as follows:

DEAR PROFESSOR PIERSON: This morning I was pleased to receive a letter from Swarthmore College, an institution for which I have long had respect, and reports from which have added to my admiration.

Then I opened the letter and learned that "Swarthmore College is actively looking for a black economist . . ." and the phrase that came immediately to mind was one from a bygone era, when a very different kind of emotionalism was abroad, and a counsel facing Senator Joseph McCarthy said, "Sir, have you no shame?" What purpose is to be served by this sort of thing?

Surely a labor economist of your reputation must know that unemployment among black Ph.D.'s is one of the least of our social problems, and has been for many years—long before "affirmative action." In general even, the salary is no higher at a top college than at less prestigious institutions for a given individual. So you are doing very little for black faculty members with broadcast recruiting campaigns like this (I note the letter is mimeographed). Maybe you think you are doing something for race relations. If you are going to find a Swarthmore-quality black faculty member, that is one thing. But Swarthmore-quality faculty members are found through Swarthmore-quality channels and not through mimeographed letters of this sort. Many of self-respecting black scholar would never accept an offer like this, even if he might otherwise enjoy teaching at Swarthmore. When Bill Allen was department chairman at UCLA he violently refused to hire anyone on the basis of ethnic representation—and thereby made it possible for me to come there a year later with my head held up.

Your approach tends to make the job unattractive to anyone who regards himself as a scholar or a man, and thereby throws it open to opportunists. Despite all the brave talk in academia about "affirmative action" without lowering quality standards, you and I both know that it takes many years to create a qualified faculty member of any color, and no increased demand is going to increase the supply immediately unless you lower quality. Now what good is going to come from lower standards that will make "black" equivalent to "substandard" in the eyes of black and white students alike? Can you imagine that this is going to reduce racism? On the contrary, more and more thoughtful people are beginning to worry that the next generation will see an increasing amount of bigotry among those whites educated at some of the most liberal institutions, where this is the picture that is presented to them, however noble the rhetoric that accompanies it.

You and I both know that many of these "special" recruting efforts are not aimed at helping black faculty members or black or white students, but rather at hanging onto the school's federal money. Now, I have nothing against money. I have not been so familiar with it as to have contempt for it. But there are limits to what should be done to get it, and particularly so for an institution with a proud tradition, at a time when the government itself is wavering and having second thoughts about this policy, and when just a little courage from a few men in "responsible" positions might make a difference.

Yours sincerely,

THOMAS SOWELL.

The cost of implementing Federal regulations adversely affects minority students as well. For example, at Duke University the cost per student of implementing federally mandated social programs has increased from $58 in 1968 to $451 in 1975. The cost of compliance has affected other private universities even more drastically. To take another example, the cost at Georgetown University has risen from only $16 per student in 1965 to $356 in 1975. This increase in the cost of attending college most affects minority and low-income students. These students can least afford any increase in the cost of attending school. Minority and low-income students are most dependent upon financial aid. The millions of dollars which are today spent implementing Federal regulations could be spent providing thousands of minority and low-income students with a college education.

A recent study by the American Council on Education of the cost of complying with Federal regulations at six institutions of higher learning in the United States found that the combined cost for only six colleges is approximately $10 million. And this $10 million figure does not include the cost of implementing those regulations which apply partic-

ularly to educational institutions under title IX of the Education Amendments of 1972 and the so-called Buckley amendment regarding student privacy. If the cost of these programs are also added, the cost per student would be much greater.

The cost of developing and implementing affirmative action and equal employment opportunity programs constitute a substantial share of the total cost of Federal regulation. The impact is substantial on both large State universities and small junior colleges. For example, at the University of Illinois, equal employment and affirmative action requirements consume 64 percent of all funds spent to comply with Federal mandates and at Miami-Dade Junior College, 40 percent of all compliance funds are used for that purpose. Simply developing an affirmative action plan can cost hundreds of thousands of dollars. For example, a single affirmative action plan cost $400,000 to develop at the University of California at Berkeley, while the one developed at the University of Michigan cost $350,000.

The total amount of money actually spent by such institutions to comply with all regulations usually runs into the millions of dollars. In 1975, the University of Illinois spent $1,302,545; Georgetown University spent $3,603,243; and Duke University spent $3,618,070. And according to the report of the American Council on Education, the cost impact of affirmative action programs "has only just begun to be felt."

Not only do compliance requirements cost millions of dollars, but they also divert existing resources from their intended purposes. At the University of North Carolina at Greensboro, compiling 10 reports required by HEW "swamped" the University's computer facilities. The director of institutional research recalled: All other uses of the computer stopped. For a 6-month period we did nothing but HEW reports.

AFFIRMATIVE DISCRIMINATION VIOLATES THE CONSTITUTION

I have described at some length the ways in which discrimination through the use of numerical goals and quotas in affirmative action programs work to the disadvantage of people of all races and both sexes. I oppose affirmative action discrimination, because of the real hardships it imposes on innocent individuals and on society as a whole. I oppose it also because the granting of special privilege and other forms of discrimination violates the fundamental principles of American constitutional law.

The 14th amendment of the U.S. Constitution reads:

> . . . nor shall any state deprive any person of life, liberty or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

When Federal bureaucrats require colleges and universities to adopt different criteria on the basis of race in determining their admission or hiring policies, that is a violation of the Constitution's guarantee of equal protection of the laws. As the U.S. Supreme Court stated several years ago:

> Few principles of law are more firmly stitched into our constitutional fabric than the proposition that a state may not discriminate against a person because of his race . . . (398 U.S. 144)

Proponents of affirmative action discrimination mistakenly rely upon Supreme Court decisions regarding the elimination of discrimination. These cases do not hold that the Government may implement a system of special privilege based upon the principle of nondiscrimination. The Supreme Court has never formulated the principle that certain members of a majority race may be denied equal protection of the laws for the benefit of minority races. The Court has never held that it is constitutionally permissible to eliminate discrimination against one race by creating discrimination against another race. And it is also a fundamental principle of constitutional law that Government officials may not induce, encourage or promote "private" persons to accomplish what they are constitutionally forbidden to accomplish.

The more radical advocates of affirmative action discrimination argue that legal principles articulated by various Federal courts in dealing with elementary and secondary schools must now be applied to State systems of higher education. In the present case of Adams against Califano, currently pending in the Federal district court for the District of Columbia, the extreme position has been argued that affirmative discrimination mandates the elimination of standards for student admission, the reassignment and distribution of staff and faculty, and the abandonment of duplication of programs at neighboring black and white institutions. These proponents of affirmative action argue that such programs can become effiective only when responsibility for student admission, teacher and staff hiring, scholarship aid and educational programs is taken out of the hands of individual institutions and exercised on a statewide basis.

These proponents of affirmative discrimination maintain that the principles articulated in *Brown* v. *Board of Education*, 347 U.S. 483 (1954); 349 U.S. 294 (1955) and those cases following it, such as *Swann* v. *Charlotte-Mecklenburg Bd. of Educ.*, 402 U.S. 1 (1971) and *Keyes* v. *School Dist. No. 1 Denver*, 413 U.S. 189 (1973); which relate to elementary and secondary education be applied to higher education. This is a position held by a narrow minority and one that is opposed by many black educators. The National Association for Equal Opportunity in Higher Education—a voluntary independent association of presidents of 110 predominantly Negro colleges and universities—has spoken out against the proposed application of Brown and its progeny to higher education.

In a brief filed in the case of *Adams* v. *Califano*, (see also *Adams* v. *Richardson*, 480 F.2d 1159 (D.C. Cir., 1973) the National Association for Equal Opportunity in Higher Education opposed this assault upon the independence of colleges and universities. It argued that the problems of discrimination in higher education are different than problems of discrimination in elementary and secondary institutions.

The problems of discrimination in these school systems are different as a result of substantial differences in the systems themselves. While colleges and universities vary considerably in their academic functions, elementary and secondary schools have a more uniform academic role. Education at the elementary and secondary level is, of course, compulsory, while attendance at colleges and universities is voluntary. Attendance at secondary and elementary schools is determined by specific attendance zones, whereas attendance at college is voluntary and based on a number of factors. Elementary and secondary schools are administered by school boards with authority over many schools within a school district; however, institutions of higher education are much more independent. The traditional development of American education and the recent decisions of the U.S. Supreme Court dealing with education has brought about the situation where elementary and secondary public educational institutions should be more or less "fungible," while institutions of higher education offer students the greatest possible freedom of choice regarding educational and athletic programs, faculty, size, and many other variables.

The national association clearly realizes that affirmative discrimination to achieve an artificial racial composition at every college and university will result in black institutions being "assimilated out of existence."

It maintains that:

> Any activity by the federal or state government to undermine the supportive role which these institutions presently perform is of itself discriminatory and contrary to the intendment of the (Fourteenth Amendment). To remove the compensatory bridge which Blacks now have to any hope of equality of educational attainment is violative of the constitutional guarantees.

AFFIRMATIVE DISCRIMINATION VIOLATES THE CIVIL RIGHTS ACT OF 1964

Federal bureaucrats impose affirmative action quotas and goals upon colleges and universities receiving Federal funds. Such federally assisted institutions fall directly within the terms of title VI of the Civil Rights Act of 1964, which provides:

> No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance.

Contrary to this civil rights mandate, affirmative action requires, by the use of quotas and goals, that certain persons be denied admission to colleges, excluded from advance degree programs and employment opportunities by reason of their race in order that persons of other races can be given specific privileges. Proponents of this affirmative discrimination argue that although the language of the Civil Rights Act clearly prohibits discrimination on the basis of race, its intent is to protect only members of minority races. In this belief they are clearly mistaken. Federal courts have rejected this interpretation of the civil rights statutes. The equal protection af-

forded under the recent landmark civil rights legislation applies to people of all races. For example, a Federal court in 1969 stated:

While the Court recognizes the fact that these statutes were passed primarily to insure the rights of non-white Americans, nothing in the statutes limit their application to cases where the civil rights of non-whites are being violated. Indeed, it would be unfair to deprive white Americans of the benefit of these sections when their constitutionally-protected rights are being violated. *General Presbyterian Church v. Black Liberation Front*, 303 F. Supp. 894 (1969).

BUREAUCRATIC DISTORTION OF TITLE IX TO IMPOSE AFFIRMATIVE DISCRIMINATION

Title IX of the Education Amendments of 1972 prohibits, with certain exceptions, discrimination on the basis of sex in any educational program or activity which receives Federal financial assistance. Title IX also directs administrative agencies which administer such Federal funding to develop regulations to implement the title's prohibition against set discrimination. In 1975, the Department of Health, Education, and Welfare issued regulations under the authority of title IX which were reviewed briefly by the 94th Congress. Several Members should recall that during that review, I introduced Senate Concurrent Resolution 46 to disapprove of these regulations under the procedures established by the General Education Provisions Act. I introduced that concurrent resolution, because I believed at that time—and still believe—that those regulations constituted an unwarranted intrusion by Government into American society and an unauthorized invasion of academic freedom. Although the supporters of Senate Concurrent Resolution 46 received assurances from members of the committee to which it was referred that it would receive prompt attention during congressional review of these regulations, this was never done.

Title IX directs Federal bureaucrats to enforce its provisions among institutions of higher learning "receiving Federal financial assistance." Hence, what constitutes a "recipient institution" under the regulations adopted pursuant to and within the scope of title IX determines, in large part, the extent of the bureaucracy's power under the statute. HEW has interpreted the word "receive" in such a fashion as to gain control over almost every aspect of university life in almost every college in the United States. It has done so in disregard of the limited language and purpose of title IX, and the intent of Congress.

The HEW regulations provide that not only does "Federal financial assistance" include grants and other funds given directly to the institutions themselves or to one of their programs or activities, but also scholarships, loans and other funds made directly to students. Title IX provides that Federal agencies administering its provisions may withhold or teminate "Federal financial assistance" to institutions which do not comply with their implementing regulations. The immense power such a provision grants Federal regulators is obvious. HEW and other Federal agencies have used this power to impose affirmative discrimination by requiring quotas and goals under the threat of the termination of Federal funds for noncompliance. However, the Federal bureaucracy has not found this provision sufficient to implement many of its regulations which have proved widely unpopular and of questionable legality.

In 1975, HEW adopted regulations implementing title IX which took the position that all educational programs and activities of a "recipient institution" benefited from Federal financial assistance to any program or activity. The regulation defines "recipient" as any institution that "operates an education program or activity which receives or benefits from such assistance." This assertion by HEW, that it may regulate all aspects of all education activities of an institution of higher education which receives Federal funds for any program, has allowed HEW, without congressional authorization, to direct almost every aspect of university life in almost every college in the United States. According to Dr. Dallin Oaks, president of Brigham Young University and director of the American Association of Presidents of Independent Colleges and Universities, the effect of this HEW action is such that—

...if an educational institution has received, even indirectly, a single dollar of federal money, every decision, activity, facility, educational policy or communication of that institution is subject to review and regulation by the Department... The Department has therefore taken the position that if a college or university receives some direct or indirect financial assistance for its department of chemistry it must accept government supervision of all of its other academic departments, its dormitories, its admissions and financial aids policies, and every other aspect of its operations.

HEW has adopted a philosophy of regulation regarding higher education described by Kingman Brewster, president of Yale University, as "now that I have bought the button, I have a right to design the coat." Many private universities have refused Federal assistance in the form of grants and other aid on the grounds that such assistance must necessarily entangle them in Federal controls. They hold that the Constitution's first amendment freedoms create a wall of separation between Government and academia. Indeed, the U.S. Supreme Court has recently stated that—

The right of freedom of speech and press includes not only the right to utter or print, but... the freedom of the entire university.

Many colleges have never accepted Federal assistance and, therefore, fell outside title IX enforcement provisions regarding the loss of Federal funds. To overcome these obstacles, HEW has gone beyond the intent and scope of title IX.

Thus, HEW interpreted a "recipient institution" to include an institution whose students receive Federal assistance in the form of scholarships, loans, grants, or other funds. Under the HEW formulation a college with a student who receives Federal assistance, also "receives" such assistance. Such a holding not only distorts the purpose of such assistance, but it also distorts the meaning of the word "receive" itself. According to the legal encyclopedia, "Corpus Juris Secondum," volume 72, page 643, the word "receive" is defined in reference to "a change of possession, as when one parts with the control of a thing and another takes and accepts it." Clearly under the conventional and legal definition, the act of receiving Federal financial assistance is complete when the student receives the assistance, whether it be in the form of veterans educational benefits or national student defense loan. The impropriety of HEW's application of the term is evident when applied to other situations. Applying HEW's interpretation, Nobel Prize winner, Prof. Milton Friedman has pointed out:

The corner grocer and the A & P are "recipient institutions" because some of their customers receive social security checks. The New York Times and The Chicago Tribune are federal contractors because welfare recipients buy papers.

As Professor Friedman concludes:

No argument is too silly to serve as a pretext for extending still further the widening control over all of our lives that is being exercised by government.

Yet the results are anything but funny. Many private colleges and universities have, as a matter of academic or religious principle, refused Federal assistance suspecting that Federal control would soon follow. In the case of title IX, administrators of religious colleges like Dr. Willis Weatherford of Berea College, observe that HEW's implementing regulations would force the college to violate its religious principles in regard to the subjects of marriage, abortion, and pregnancy. Others agree with Dr. George Roche of Hillsdale College, that—

Rather than allow such a federal takeover of our campus, we are prepared to refuse compliance with the government edicts.

However, this position should not underestimate the power of the Federal Government to harass and even destroy institutions which refuse to comply. There are many institutions with such a large number of students receiving Federal assistance, that should this regulation be allowed to stand, their only alternatives, according to Prof. Virgil Mitchell will be to "obey the Federal Government or cease to exist."

AFFIRMATIVE DISCRIMINATION PREMISED UPON STATISTICAL DISTORTIONS

The slavish and facile reliance of advocates of affirmative action quotas upon statistical analysis of the racial and sexual composition of academia breeds cynicism and disillusionment among administrators, teachers, and students. Bureaucrats have seized upon the statistical approach to prove discrimination within a particular institution, because of the ease in which the desired result of finding discrimination can be obtained. A simple adjustment in the methodology of the statistical analysis, the exclusion of a single variable, can produce the desired conclusion of pervasive and substantial discrimination.

If discrimination means the dissimilar treatment of similar individuals, then the comparison of such individuals within a statistical study must include the variables considered by the employer in the hiring decision. For example, in the case of discrimination in employ-

ment of college faculty members, any statistical study should take account of those variables which determine employment, pay, and promotion. As Professor Sowell correctly points out:

> One of the perverse aspects of this residual method of measuring discrimination is that the more determining variables that are overlooked or ignored, the more discrimination there seems to be.

All of us are familiar with the claim that women in the American work force earn considerably less than do men. Often this fact is simply taken for granted by Federal bureaucrats and the burden in them shifted to the employer to prove that he is an exception to the rule. However, studies which allow for the inclusion of variables which normally govern the hiring, salary, and promotion decision of employers, produce unexpected results for the proponents of quota hiring.

In 1971, the median annual earnings of women were only 40 percent of those of men. However, when the study compared only year-around, full-time employees the median annual earnings of women rose to 60 percent of those of men. When the study compared single women and single men between the ages of 30 and 44 with continuous work experience, the 1973 economic report of the President found that "single women who had worked every year since leaving school earned slightly more than single men."

In regard to academic employment, the American Council on Education reports similar findings. At institutions of higher learning, academic women who have never married again earn more than their mail counterparts who have never married. This suggests that marriage often adversely affects the careers of academic women and that if their is a difference of treatment of men and women in the academic world, it is between married women and all others. Certainly marriage places substantial responsibilities upon a wife and mother which are normally different than those which it places upon a husband and father. The recognition of this fact and its consideration in making a hiring, salary, or promotion decision of an employer is not normally considered discrimination. At least it cannot be said that such consideration was intended by Congress to be construed as discrimination under the civil rights and equal opportunity legislation it has recently passed.

Not only does this bureaucratic reliance upon statistics create a distorted picture of academic institutions, but it also greatly distorts the institution's employment procedures for the future. Often when a university has a faculty vacancy, it is not unusual for the proponents of affirmative action quotas to demand that since there may be hundreds of minorities and women holding doctorates in that subject, it is presumptively discrimination for the university to hire a nonminority person. This analysis misunderstands the needs and nature of a university. For example, an economics department or a history department with a job opening is not looking for an "economist" or a "historian," or even a "qualified" one. They may need an international trade specialist with an econometrics background or a medieval historian with a concentration in medieval political theory. Statistics concerning the number of "qualified" minority or female "economists" or "historians" who are available is meaningless. Such an analysis also overlooks the fact that even within such fields as economics and history, minorities, and women are not proportionally distributed. For example, Myra Strober, in a recent article in the American Economic Review, reports that female economists and male economists are not distributed in the same proportion among the various economic specialties. Furthermore, such hiring guidelines overlook possibly the most important factor of all: How many persons holding advance degrees in that subject desire an academic career? The present use of statistics to determine the number of "qualified" minorities and women places burdens upon institutions of higher learning which completely distort their role and that of their faculties.

Similarly the use of statistics to determine the "availability" of minorities and women cannot take into account enough individual variables to reveal the realistic employability of such persons. For example, assume that a university chemistry department's faculty consists of 19 males and 1 female—a situation where females make up only 5 percent of the department's work force. Proponents of affirmative action quota requirements maintain that the sufficiency of current "utilization" of females can be achieved only by relating this present hiring situation with the "availability" of females who possess the requisite "qualifications." Even in light of the above discussion, assume that the simple possession of an earned doctoral degree in chemistry provides the requisite qualification for inclusion within this national "availability" pool. Also that 10 percent of those holding doctorate degrees in chemistry are women. Proponents of affirmative action quota hiring argue that no further refinement of this data is necessary to determine "availability" and that other variables are unnecessary to determine the university's past compliance with affirmative action mandates or the establishment of remedial hiring goals. The university would thus be under an affirmative action obligation to increase the number of females in its department in proportion to the proportion of women holding such degrees nationwide.

Whether this formula is employed as a means to determine past "deficiency" or for developing remedial goals and quotas, the consequences of such a simplistic test are apparent. Under this proposal all university-level institutions would be subject to affirmative action plans requiring that the number of women in their respective chemistry departments match the nationwide proportion of women to men holding doctorates in chemistry. To seriously assume that such perfect representation can exist in every university in a free society is, as some have recently suggested, "to court delusion of the most extreme variety." Indeed, William Bowen, president of Princeton University, suggests that—

> If the distribution of employment in a university were to conform exactly, department by department, to the distribution suggested by availability data, it would be powerful evidence of the presence of discrimination.

Such a simplistic understanding of "availability" fails to take into account other important factors. Not all persons holding advance degrees desire careers in educational institutions. Many minorities and women who hold such degrees, especially seek out employment opportunities with Government and private industry. Thus, statistics as to the number of persons holding degrees in chemistry or other fields is no indication of the number of persons available for academic employment. As mentioned before, such statistical data does not provide information on the number of persons holding advanced degrees who also have the necessary subspecialties for the particular requirements of a department seeking to fill a vacancy. Furthermore, such statistics fail to take into consideration the percent of the "qualified" employment pool, who are presently employed and who, for any number of reasons, are not interested in changing their employment.

The result of this bureaucratic obsession with statistics is, in the words of the 1976 report of the University of North Carolina:

> A growing monolith of prescribed processes, involving data collection, evaluation, and reporting, which are excessive, burdensome, and largely irrelevant to any demonstrable legitimate purpose.

AMERICAN ASSOCIATION OF PRESIDENTS OF INDEPENDENT COLLEGES AND UNIVERSITIES ENDORSES THE ACADEMIC FREEDOM ACT OF 1977

Mr. President, I am pleased to announce that the Board of Directors of the American Association of Presidents of Independent Colleges and Universities has endorsed the Academic Freedom Act of 1977.

Although the provisions of this bill are not restricted to private colleges and universities, it is apparent from many of the examples which I have just discussed that the adverse impact of Federal regulation is often most greatly felt by these schools. Unlike their counterparts in the public sector, private colleges do not have the ability to pass along to the taxpayers of their State the increased costs of Federal regulation. Recently, many small private colleges have closed their doors and gone out of existence, in part due to the spiraling costs of Federal intervention.

Additionally and perhaps most importantly, private colleges and universities are least likely to possess the resources necessary to withstand this Federal assault and preserve their institution's independent existence. Dr. Dallin H. Oaks, president of the American Association of Presidents of Independent Colleges and Universities, stated this March in an address to the Western College Association, in regard to academic freedom, that—

> An institution which lacks freedom from government interference in the management of its educational functions cannot protect its faculty from government interference in theirs.

On April 15, 1977, the Board of Directors of the American Association of

Presidents of Independent Colleges and Universities adopted the following resolution:

The proposed Academic Freedom Act of 1977 is a sound legislative corrective for serious problems that beset the private sector of higher education. We support it in principle and request congressional hearings in which AAPICU and its members can give suggestions on specific phraseology.

CONCLUSION

Mr. President, the Academic Freedom Act of 1977 is an eightfold solution to the problem of Federal entanglement in higher education. First, it requires that any Federal agency issuing a rule affecting institutions of higher education must adopt an education impact statement which shall determine whether any information sought under the rule is already available from or being gathered by another Federal agency, and also assess the cost and time involved by institutions in complying with such rule. Second, it provides for the maintenance of educational standards by prohibiting a rule which would directly or indirectly require, promote, or encourage the abandonment or reduction of academic requirements for admission to any undergraduate or graduate degree program. Third, it provides an exemption from Federal regulation for any institution which, during the last fiscal year, does not receive more than $300,000 or 5 per centum of its annual current funds budget in Federal assistance. Fourth, it provides that Federal regulations may apply only to those educational programs or activities which are direct recipients of Federal financial assistance. Fifth, it limits the power of a Federal agency to terminate financial assistance only to a program which is in noncompliance with a lawful regulation and prohibits that program from being used as the basis for terminating assistance to other programs of the institution which are in compliance with that regulation. Sixth, it provides that noncompliance with regulations promulgated under certain equal opportunity legislation shall not constitute sufficient grounds for the termination or withholding of any institution's tax exempt status under section 501(c)(3) of the Internal Revenue Code of 1954. Seventh, it provides that scholarships, loans, grants, wages, or other funds extended to an institution on behalf of students or extended directly to students shall not be construed as Federal financial assistance to that institution. And eighth, it provides that no Federal financial assistance shall be terminated, withheld, or otherwise encumbered on the basis that the institution is in noncompliance with a Federal regulation when the institution has sought judicial review and until all appeals of such action have been exhausted.

Mr. President, I ask unanimous consent that the Academic Freedom Act of 1977 be printed at this point in the RECORD. I also ask unanimous consent that the remarks of a cosponsor of this bill, the Senator from Idaho (Mr. MCCLURE), which were printed in the RECORD on April 19, be reprinted at his request, following the text of the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1361

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Academic Freedom Act of 1977".

FINDINGS

SEC. 2. The Congress finds that—

(1) the excessive demands on time which administrators and teachers of institutions of higher education must utilize in order to responsively reply and conform with regulations, reporting requirements, compliance proposals and other administrative regulations adversely affects the financial resources of such institutions and the educational quality of such institutions;

(2) increasing Federal intrusion into the curricula and grading, admission, and hiring policies of institutions of higher education in the United States is endangering the academic freedom of such institutions;

(3) Federally mandated goals, timetables, and quotas for the admission of students and the appointments of teachers and administrators constitutes a substantial invasion of the freedoms of the citizens of the United States guaranteed under the First and Fourteenth Amendments to the Constitution of the United States of America;

(4) the diversity and independence of higher education in the United States, founded on the philosophy of local autonomy and service to a local community, offers Americans the greatest freedom to pursue their education and exercise their First Amendment freedoms; and

(5) it is necessary and proper that the Congress, pursuant to the powers granted to it by the Constitution of the United States, including, but not limited to, the First and Fourteenth Amendments thereof, should take action to enhance and to promote its long standing protection of academic freedom among institutions of higher learning.

DEFINITION

SEC. 3. As used in this Act the term—

(a) "regulation" means any rule, guideline, interpretation, order, or requirement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy and includes record-keeping or reporting requirements imposed by any agency or authority of the United States.

(b) "institution of higher education" means an educational institution in any State which—

(1) admits as regular students only individuals having a certificate of graduation from a high school, or the recognized equivalent of such a certificate;

(2) is legally authorized within such State to provide a program of education beyond high school;

(3) provides an educational program for which it awards a bachelor's degree, or provides not less than a two-year program which is acceptable for full credit toward such a degree, or offers a two-year program in engineering, mathematics, or the physical or biological sciences which is designed to prepare the student to work as a technician and at a semiprofessional level in engineering, scientific, or other technological fields which require the understanding and application of basic engineering, scientific, or mathmetical principles or knowledge;

(4) is a public or other nonprofit institution; and

(5) is accredited by a nationally recognized accrediting agency or association listed by the Commissioner of Education pursuant to section 601(e) of the Elementary and Secondary Education Act of 1965 (79 Stat. 27).

(c) "Federal financial assistance" includes, but is not limited to, grants, loans, and any other payments made out of appropriated funds including funds made available under any contract to which the United States is a party or with respect to which the United States is a beneficiary.

EDUCATION IMPACT STATEMENT

SEC. 4. Notwithstanding any other provision of law, no regulation affecting any institution of higher education in the United States, promulgated on or after the date of enactment of this Act, shall become effective unless such agency causes to be published in the Federal Register a copy of such proposed regulation together with an educational impact assessment statement which shall—

(1) determine whether any information required to be transmitted under such regulation is already being gathered by or is available from any other agency or authority of the United States; and

(2) assess the cost and time involved in complying with such regulation by institutions of higher education which would be affected thereby.

Notwithstanding the exception provided under section 553(b) of title 5, United States Code, such statement shall be based upon the record established under the provisions of section 553 of title 5, United States Code, compiled during the rulemaking proceeding regarding such regulation.

MAINTENANCE OF EDUCATIONAL STANDARDS

SEC. 5. No agency or authority of the United States shall promulgate or enforce any regulation under any Act of Congress or pursuant to any Executive Order which directly or indirectly requires, promotes, or encourages, the abandonment or reduction of academic requirements for admission to any program or activity, or to any undergraduate or graduate degree program of such institution of higher education.

HIGHER EDUCATION FINANCIAL ASSISTANCE LIMITATION

SEC. 6. (a) As used in this section the term "current funds budget" means all anticipated operating revenues, expenditures, transfers, and allocations applied to all operations and activities for the educational and general functions and auxiliary enterprises of any institution of higher education, including anticipated uses of current funds revenues for purposes other than current operations and restricted current funds.

(b)(1) No institution of higher education shall be deemed to be the recipient of Federal financial assistance under any equal employment opportunity law or order, when the total Federal financial assistance received by such institution during the last fiscal year does not exceed $300,000 or 5 per centum, whichever is greater, of such institution's annual current funds budget.

(2) Nothing contained in this subsection shall prohibit the maintenance and filing of records in compliance with laws governing the normal financial administration of such Federal financial assistance.

(c) No officer or employee of the United States shall have the authority to issue any regulation pursuant to any Act of Congress or Executive Order with respect to educational programs or activities of any institution of higher education which is the recipient of Federal financial assistance unless such educational program of such institution is the direct recipient of such Federal financial assistance.

(d) Termination of, refusal to grant, or to continue Federal financial assistance to education programs or activities of any recipient institution of higher education or to any such institution pursuant to the provisions of any Act of Congress or any Executive Order shall apply only to the specific program or activity in which a finding of noncompliance with a lawful regulation with respect thereto has been made. A finding of such noncompliance in one program or activity of such an institution to which Federal financial assistance has been extended does not empower or otherwise authorize any officer of the United States administering such assistance to terminate such assistance to oth-

er education programs or activities conducted by the recipient institution of higher education to such recipient institution itself.

(e) A finding of noncompliance with respect to any lawful regulation adopted under the authority of title VI and VII of the Civil Rights Act of 1964 (78 Stat. 241) or title IX of the Education Amendments of 1972 (86 Stat. 235) or pursuant to any Executive Order relating thereto, by an officer of the United States with respect to any institution of higher education which is the recipient of Federal financial assistance under such provision of law shall not constitute adequate or sufficient grounds for the termination of or the withholding of any such institution's exemption from taxation under section 501(c)(3) of the Internal Revenue Code of 1954.

(f) For purposes of this section, scholarships, loans, grants, or wages or other appropriated funds extended to any institution of higher education for payment to or on behalf of students admitted to such institution, or extended directly to such students for payment to such institution, shall not be construed as Federal financial assistance to such institution for any purpose under any Act of Congress or any Executive Order, even where such assistance to such institution constitutes a reimbursement for the administration of other funds or other substitutable funds.

JUDICIAL REVIEW

SEC. 7. No Federal financial assistance granted to any institution of higher education which is a party to any action in the courts of the United States alleging in whole or in part the failure of such institution to comply with any regulation or that any regulation is unlawful or otherwise improper in its substance or in the administration or application thereof may be terminated, withheld, or otherwise encumbered until all appeals of such action have been exhausted.

REMARKS OF MR. MCCLURE

Mr. MCCLURE. Mr. President, today I join my friend, Senator HELMS, in introducing legislation which, if enacted, would bring some needed rationality to the application of Federal rules and regulations affecting our Nation's institutions of higher learning. The constant deluge of rules, regulations, and guidelines, and the unavoidable flood of paperwork accompanying them inevitably result in the diminution of educational quality and the effectiveness of institutional research and service as money and manpower is diverted to complying with Federal requirements never contemplated by Congress.

Just as the heavy hand of Federal intervention and regulation has stifled business development and growth in the United States, so the effect on our colleges and universities is in the long run detrimental to the very institutions and citizens we seek to serve.

As far as I am concerned Federal aid to higher education should promote the functions of teaching, research, and service traditionally associated with academic endeavor; it should enable greater numbers of our citizens to reap the benefits of these functions, not hinder them by forcing compliance with rigid guidelines dreamed up by mid-level bureaucrats to promote some ill-defined social goal.

It is inordinately unfair that support of any university activity often subjects the entire institution to requirements and guidelines unrelated in scope to the particular area of aid, and effectively adds to the institution's operating expense even where the Federal Government is providing no monetary assistance. A case in point is the application of title IX even to those institutions receiving no direct Federal funds merely because students receive Federal aid through such things as federally insured loans. Last fall, during consideration of the Higher Education Amendments of 1976, I proposed an amendment limiting the applicability of title IX to those institutions directly receiving Federal aid; however, the Senate chose not to accept my amendment. I am especially pleased to point out the bill introduced today again addresses itself to clarifying the issue.

Unfortunately, the problem of Federal intervention and regulation of education is not limited to higher education alone. The excesses of the title IX regulations have been discussed at length before, but the fact these excesses continue is well illustrated by an editorial from the Washington Star, dated April 16, 1977. I ask that it be included as part of my remarks in the RECORD. It congratulates HEW for its decision that title IX does not prohibit the boys' choir in a public school in Connecticut; but the question which comes to my mind is how in the world HEW presumes to have the authority to prohibit such an activity in the first place. I certainly remember no discussion of that subject when I voted in favor of passage of the provisions of title IX in 1972.

The point is this: The time is long overdue for Congress to reassert its responsibility to write the laws of this Nation. It, not the executive, is the policymaking branch of Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Apr. 16, 1977]

TITLE IX FOOLISHNESS

If you wonder why the Equal Rights Amendment has been taking its lumps here and there, there may be a clue in the damnfool controversies that have sprung up since Title IX of the 1972 education act was added to the armory of federal regulators. Does Title IX foreshadow the absurdities to be expected from a constitutional declaration of sexual equality?

Last year, a small Midwestern town was imperiously informed by the HEW commissariat that under Title IX the local school could not hold its customary "father-son" banquet. That edict was so patently silly that President Ford summarily reversed it.

Father-son banquets are of less than earth-shaking importance—so little so, in fact, that it had probably occurred to almost no one to be outraged until HEW stepped in.

Far more serious, in our view, is the Title IX controversy involving the public school boys' choir of Wethersfield, Conn., which that city disbanded last summer. There had been a grim warning from HEW that choral music, to be legal, must henceforth be unisex.

After a prolonged correspondence, Rep. William R. Cotter, who represents Wethersfield, succeeded in getting the edict rescinded. Now, by the grace of HEW's office of civil rights, "a distinction may be made between boys' and girls' voices either on the basis of range or quality."

Congressman Cotter was generous in victory. Last year's HEW intervention, he declared, "may illustrate what happens when well-meaning but overzealous bureaucrats get hold of a good law and make it absurd." He is, in fact, too generous. The edict against boys' choirs was not just an exercise in misguided zeal. It was a menacing exercise in the political control of the performing arts. Any law that makes such exercises possible, or even imaginable, is to that extent not a "good" law but a bad one. Its absurdities are not discretionary; they are built in.

For hundreds of years, more so in Europe than in America, the distinctive timbre of boys' voices has been valued for its own sake. Many of the great cathedrals and, in England, some of the great Oxford and Cambridge colleges are noted for the excellence of their choral music—of which boys' voices are an essential element.

Perhaps it is unreasonable to expect Washington bureaucrats to be sensitive to such musical niceties—which, indeed, is just why they should not enjoy the power to interfere in the cultural choices made by American schools. Title IX, considering the intrusions it has already led to, is indeed our closest approach to what Dwight Macdonald has called *culturbolshevismus:* that is, "cultural bolshevism," political manipulation of the arts.

The power to threaten schools and colleges with a suspension of federal funding unless they meet HEW's half-baked notions of what is culturally permissible or wise is not merely absurd, it is outrageous. Title IX should be amended to prevent episodes of the Wethersfield sort. If that is impossible it should be stricken from the books.

ADDITIONAL COSPONSORS

S. 528

At the request of Mr. WILLIAMS, the Senator from Indiana (Mr. BAYH) was added as a cosponsor of S. 528, relating to collective bargaining contracts.

S. 987

At the request of Mr. ANDERSON, the Senator from Hawaii (Mr. MATSUNAGA) and the Senator from Illinois (Mr. STEVENSON), and the Senator from New Jersey (Mr. CASE) were added as cosponsors of S. 987, to amend the Immigration and Nationality Act.

S. 1021

A the request of Mr. BAYH, the Senator from Hawaii (Mr. MATSUNAGA) and the Senators from Alaska (Mr. GRAVEL and Mr. STEVENS) were added as cosponsors of S. 1021, a bill to extend the Juvenile Justice and Delinquency Prevention Act of 1974, for 5 years.

S. 1218

At the request of Mr. BAYH, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1218, a bill to extend the Juvenile Justice and Delinquency Prevention Act of 1974, for 3 years.

S. 1230

At the request of Mr. BAKER, the Senator from Kentucky (Mr. HUDDLESTON) was added as a cosponsor of S. 1230, the Emergency Highway Repair Act of 1977.

S. 1324

At the request of Mr. LONG, the Senator from New Jersey (Mr. WILLIAMS) was added as a cosponsor of S. 1324, the Regional Rail Reorganization Act.

SENATE CONCURRENT RESOLUTION 18

At the request of Mr. EAGLETON, the Senator from Minnesota (Mr. HUMPHREY), the Senator from Montana (Mr. MELCHER), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Tennessee (Mr. SASSER), the Senator from Maryland (Mr. MATHIAS), the Senator from Massachusetts (Mr. KENNEDY), the Senator from South Carolina (Mr. THURMOND), and the Senator from New York (Mr. MOYNIHAN) were added as cosponsors of Senate Concurrent Resolution 18, relating to a commemorative postage stamp in honor of Saint Elizabeth Ann Seton.

SENATE CONCURRENT RESOLUTION 20—SUBMISSION OF A CONCURRENT RESOLUTION PROVIDING FOR ADDITIONAL PRINTING

(Referred to the Committee on Rules and Administration.)

Mr. EAGLETON (for himself and Mr. DANFORTH) submitted the following concurrent resolution:

SENATE CONCURRENT RESOLUTION 20

Resolved by the Senate (the House of Representatives concurring), That there shall be printed six hundred additional copies of the document entitled "Jerry L. Litton, Late a Representative from Missouri, Memorial Addresses Delivered in Congress". Five hundred and fifty of such copies shall be for the use of Mr. Charley Litton, of Chillicothe, Missouri, in the administration of the Jerry Litton Family Memorial and fifty of such copies shall be for the use of Mr. E. Thomas Coleman, successor in office to the late Jerry L. Litton.

SENATE RESOLUTION 144—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL COMMITTEE EXPENDITURES

(Referred to the Committee on Rules and Administration.)

Mr. TALMADGE, from the Committee on Agriculture, Nutrition, and Forestry, reported the following resolution:

S. RES. 144

Resolved, That in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Agriculture, Nutrition, and Forestry, or any subcommittee thereof, is authorized from July 1, 1977, through February 28, 1978, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $325,318, of which amount (1) not to exceed $17,302 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1978.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

SENATE RESOLUTION 145—SUBMISSION OF A RESOLUTION AUTHORIZING THE PRINTING OF A REPORT

(Referred to the Committee on Rules and Administration.)

Mr. RANDOLPH submitted the following resolution:

S. RES. 145

Resolved, That the annual report of the Secretary of Transportation to the Congress of the United States (in compliance with section 144, title 23, United States Code), entitled, "Special Bridge Replacement Program," be printed, with illustrations, as a Senate document.

SEC. 2. There shall be printed 500 additional copies of such document for the use of the Committee on Environment and Public Works.

SENATE RESOLUTION 146—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL COMMITTEE EXPENDITURES

(Referred to the Committee on Rules and Administration.)

Mr. WILLIAMS, from the Committee on Human Resources, reported the following resolution:

S. RES. 146

Resolved, That in holding hearings, reporting such hearings and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Human Resources or any subcommittee thereof, is authorized from July 1, 1977, through February 28, 1978, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $1,648,000, of which amount not to exceed $45,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1978.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 147—SUBMISSION OF A RESOLUTION AUTHORIZING ADDITIONAL COMMITTEE EXPENDITURES

(Referred to the Committee on Rules and Administration.)

Mr. CHURCH (for himself and Mr. DOMENICI) submitted the following resolution:

S. RES. 147

Resolved, That the Special Committee on Aging, established by section 104 of Senate Resolution 4, 95th Congress, agreed to February 4 (legislative day, February 1), 1977, is authorized from July 1, 1977, through February 28, 1978, in its discretion, to provide assistance for the members of its professional staff in obtaining specialized training, in the same manner and under the same conditions as a standing committee may provide such assistance under section 202(j) of the Legislative Reorganization Act of 1946, as amended.

SEC. 2. In carrying out its duties and functions under such section and conducting studies and investigations thereunder, the Special Committee on Aging is authorized from July 1, 1977, through February 28, 1978, to expend $432,000 from the contingent fund of the Senate, of which amount (1) not to exceed $50,000 may be expended for a study or investigation of health related issues, (2) not to exceed $20,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (3) not to exceed $1,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1978.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

AMENDMENTS SUBMITTED FOR PRINTING

HEALTH SERVICES EXTENSION ACT OF 1977—H.R. 4975

AMENDMENT NO. 210

(Ordered to be printed and to lie on the table.)

Mr. TALMADGE. Mr. President, I send to the desk an amendment to H.R. 4975, the Health Services Extension Act of 1977. This act would extend funding for 1 year for a whole series of programs contained in the Public Health Service Act.

The House bill was referred to the Senate Committee on Human Resources which had jurisdiction over the vast mapority of material in the bill. The bill, however, did contain two amendments to the Social Security Act which the Human Resources Committee stripped from the bill on the grounds that they should more properly be considered by the Finance Committee.

I am introducing these two social security provisions of the House bill as an amendment to the version of H.R. 4975 reported by the Senate Human Resources Committee.

My intent is to raise the substance of these two social security amendments before the Senate Finance Committee next week, and recommend that the Finance Committee approve the amendment.

When H.R. 4975 is considered on the Senate floor, I would then plan to propose my amendment as a Finance Committee amendment to the bill.

The two social security provisions contained in my amendment are the following:

The first amendment would increase the authorization for the maternal and child health program. The maternal and child health program is a formula grant program which provides funds to States in order to extend and improve services for reducing infant mortality, for promoting the health of mothers and children, and for serving the needs of crippled children.

For the past 5 years, authorizations under this program have been set at $350 million per year. For fiscal year 1977 the appropriation for the program was $347,703,000.

Since the appropriations have essentially reached the authorization ceiling, my amendment would increase the authorization level to 115 percent of the

fiscal year 1977 appropriation, thereby allowing an increase in appropriations to reflect the inflation which has occurred in health care costs and prevent what otherwise might be a decrease in services provided.

The second provision in my amendment would extend the authority for 100 percent Federal financing of medicaid skilled nursing and intermediate care facility inspection, and enforcement costs.

Section 249B of the Social Security Amendments of 1972 authorized temporary 100 percent Federal funding of expenditures under medicaid for the survey and inspection costs of skilled nursing and intermediate care facilities participating in the medicaid program.

In 1974 this authorization was extended to June 30, 1977.

Because of the importance of State inspection programs to the health and safety of the thousands of individuals in long-term care institutions, and the need to assure that sufficient well-trained inspectors are available, this amendment would extend the authority for full financial support to September 30, 1980.

When the Finance Committee considers medicare and medicaid reform amendments later this year we will look toward a more permanent solution to this funding problem.

TAX REDUCTION AND SIMPLIFICATION ACT OF 1977—H.R. 3477

AMENDMENTS NOS. 211 AND 212

(Ordered to be printed and to lie on the table.)

Mr. BARTLETT (for himself, Mr. TOWER, and Mr. BELLMON) submitted two amendments intended to be proposed by them jointly to the bill (H.R. 3477) to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

Mr. BARTLETT. Mr. President, President Carter has taken a half-step in the right direction in proposing a change in the tax treatment of unincorporated oil and gas producers.

In suggesting that these operators enjoy the same intangible tax benefits as major corporations, the President has proposed a repeal of the minimum tax on intangible drilling costs paid by independents. This action represents a shift toward more reasonable application of intangible tax credits as a means of attracting capital for exploration and development by independent producers.

However, the President's action does not go far enough. The minimum tax on intangible drilling costs, contained in the Tax Reform Act of 1976 and applied retroactively to the 1976 tax year, was also imposed on outside investors in independent drilling ventures. President Carter has made no provision for replacing the minimum tax for these investors.

In stating that "profiteering through tax shelters should be prevented" the President has revealed an unfair and inaccurate perception of the role outside investors play in the production of oil and gas by independent operators.

These small, independent businessmen drill more than 90 percent of the high-risk, exploratory, "wildcat" wells in the United States. Because they are small, they depend to a large degree on outside investors for operating capital. To deny outside investors the same intangible tax credits extended to the operators themselves and to major corporations will severely inhibit the ability of independent producers to attract the capital necessary to finance their ventures.

While major corporations may use every avenue open to them for the formation of operating capital, unincorporated producers often have only one method and that method will be denied them by the imposition of the minimum tax on outside investors. It is impossible to measure the impact this tax will have in drying up sources of capital ventures by unincorporated producers.

Far from being a matter of profiteering, financing by outside sources should be considered a welcome and essential investment in greater domestic production of oil and natural gas. Such investments are just as legitimate, and, in my opinion, far more constructive than the various investments in conservation so highly recommended by President Carter.

I am hopeful that the President's action regarding intangible tax credits for unincorporated producers will then be carried through to the logical and necessary extension of these credits to outside investments.

Today I am introducing, as amendments to the Tax Simplification and Reform Act, two proposals which address this need. One amendment would simply strike from the Tax Reform Act of 1976 the section providing a minimum tax on intangible drilling costs.

As an alternative, my second amendment would delay for 1 year the imposition of this tax. Passage of the second amendment would allow time for a thorough study of the implications of this tax on oil and gas production by unincorporated operators.

AMENDMENTS NOS. 216 AND 217

(Ordered to be printed and to lie on the table.)

Mr. BARTLETT submitted two amendments intended to be proposed by him to the bill (H.R. 3477), supra.

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—S. 7

AMENDMENTS NOS. 213, 214, AND 215

(Ordered to be printed and referred to the Committee on Energy and Natural Resources.)

Mr. HARRY F. BYRD, JR. Mr. President, I am today introducing three amendments to S. 7, the Surface Mining Control and Reclamation Act of 1977.

The purpose of these amendments is simple. It is to prevent the destruction of the surface mining industry in the State of Virginia.

This is not a melodramatic exaggeration. It is a plain statement of fact, documented by evidence which I shall place in the RECORD at the conclusion of my remarks.

The amendments which I am introducing today have been drawn up in close consultation with the Virginia Department of Conservation and Economic Development. They are designed to permit the continuation of surface mining of coal in Virginia under the same kind of strict and carefully drawn standards as are now imposed by State authorities.

These standards do not permit the reckless scarring of mountainous landscape which characterized the early days of surface mining and which left a bitter legacy of disfigured lands in so many areas of Appalachia. Virginia's standards today require carefully supervised reclamation, and the resulting land uses—agricultural, residential, recreational, and other similar uses—are uniformly beneficial.

Under the provisions of S. 7, mining in steep terrain such as we find in southwest Viriginia—and in parts of southern West Virginia, eastern Kentucky, and northern Tennessee—is singled out for special restrictions. Among the burdensome requirements imposed upon operators in such mountainous areas is restoration of mined land to "approximate original contour."

This is a requirement which sounds fine in theory but which has no basis in experience or fact. No one can say with certainty that restoration of the original contour is the best form of reclamation.

Indeed, there is evidence that it is not.

A study commissioned by the Environmental Protection Agency and carried out by Hittman Associates has this to say:

> Slope design should be based on the erodibility of the surface soils as well as stability against landslides. Restoring the approximate original contour may not be desirable in all cases. A reduction in relief and an overall flattening of the topography may be desirable from an erosion and sediment control standpoint. It must be remembered that shorter or flatter slopes are less erodible.

A similar conclusion was reached in a 1977 study by IFC Inc., performed for EPA and the Council on Environmental Quality.

These studies commissioned by the Federal Government show forcefully that there is a need for flexibility in establishing rules for surface mining in the mountains. It is flexibility which is missing from S. 7, and it is flexibility which my amendments seek to restore.

If the rigid requirements of S. 7 are imposed upon southwest Virginia, the economic impact will be disastrous.

Estimates prepared by the Virginia Department of Conservation and Economic Development show that enactment of S. 7 as originally drawn would result in loss of up to 11.5 million tons of low-sulfur coal—the kind most needed to preserve clean air—and up to 4,320 jobs.

Such rigid standards as are contained in S. 7 fly in the face of national policies designed to develop domestic energy resources and cut the rate of unemployment. More than that, these rigid standards are not needed to protect the environment.

I hope I do not need to assure the Senate that I would not condone any damage to the land in Virginia. Nor would the

officials of my State, who are four-square in support of the principles behind the amendments I am submitting today.

All I am asking is that the Senate apply a rule of reason to surface mining in steep terrain.

I must add that the amendments I am submitting apply to S. 7 as originally drawn. I recognize that changes in the bill have been made by the Committee on Energy and Natural Resources, and that adjustments in wording would be needed to achieve the objectives of my amendments.

I am sure that the committee will understand the thrust of these amendments—to give the state regulatory agencies sufficient rein to regulate surface mining on steep slopes in such a way as to preserve jobs and extract a needed resource, without sacrifice of environmental values.

I ask unanimous consent that the text of my amendments to S. 7 be printed at this point in the RECORD.

Further, I ask unanimous consent that several items supporting the contentions which I have made be printed in the RECORD following the text of my amendments.

First are two position papers from the Virginia Department of Conservation and Economic Development, entitled "Impact of Returning to Approximate Original Contour in Steep Slopes in Virginia," and "Production and Employment Impact of H.R. 2 on Virginia."

Parenthetically, I should point out that H.R. 2 is the House version of the surface mining bill. The regulatory provisions are almost identical and the points made in the studies apply to both bills.

Second is an excerpt from the testimony of J. Jack Kennedy, Jr., a young miner and college student in southwest Virginia, before the House Interior and Insular Affairs Committee. I found the testimony of this young Virginian particularly cogent and moving.

Third is a letter from the members of the executive board of the United Mine Workers of America to President Carter, setting forth their opposition to imposition of rigid Federal standards on surface mining of coal.

Fourth is the testimony of Mr. Daniel W. Gregory, vice president of the First State Bank of Wise, Va., before the House Interior and Insular Affairs Committee. Mr. Gregory's statement shows clearly the horrendous financial consequences that would follow upon adoption of provisions such as those in S. 7.

Fifth is a resolution of the General Assembly of Virginia approved on February 1, 1977, calling for regulation of surface mining in accordance with standards of the States.

Sixth, and last, is a letter to me from Chairman Preston C. Shannon of the Virginia State Corporation Commission, which also urges that the States be permitted to handle the regulation of surface mining within their boundaries.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 213

On page 69, delete all following the colon in line 4 through line 21 and insert in lieu thereof the following: *"And provided further,* That in surface coal mining where the volume of overburden is large relative to the thickness of the coal deposit and where the operator demonstrates that the amount of overburden and other spoil and waste materials cannot be economically restored to the approximate original contour, the operator shall backfill, grade, and compact (where advisable) the overburden and other spoil and waste materials to the maximum extent possible in accordance with regulations of the regulatory authority and shall cover all acid-forming and other toxic materials in order to achieve an ecologically sound land use compatible with the surrounding region in accordance with the requirements of subsection (c)(1)(B) and that such overburden or spoil shall be shaped and graded in such way as to prevent slides, erosion, and water pollution and is revegetated in accordance with the requirements of this Act;".

AMENDMENT NO. 214

On page 78 delete all after line 5 and all through page 81, line 16, and insert in lieu thereof the following:

(c)(1) Where the mining operation will remove an entire seam or seams running through the upper fraction of a mountain, ridge, or hill by removing all of the overburden and creating a level plateau or a gently rolling contour with no highwalls remaining, and capable of supporting postmining uses in accord with the requirements of this subsection, the requirements of restoring the mined area to approximate original contour as provided in subsection 415 (b) (3) of this section shall not apply where—

(A) the reclaimed area will be suitable for an agricultural, industrial, commercial, residential or public use (including recreational facilities);

(B) after consultation with the appropriate land use planning agencies, if any, the potential use of the affected land is deemed to constitute an equal or better economic or public use, as compared with the premining use and is—

(i) compatible with adjacent land uses;

(ii) obtainable according to data regarding expected need and market;

(iii) assured of investment in necessary public facilities;

(iv) supported by commitments from public agencies where appropriate;

(v) practicable with respect to private financial capability for completion of the proposed development;

(vi) planned pursuant to a schedule attached to the reclamation plan so as to integrate the mining operation and reclamation with the postmining land use;

(vii) designed by a registered engineer in conformance with professional standards established to assure the stability and configuration necessary for the intended use of the site; and

(viii) consistent with adjacent land uses, and existing State and local land use plans and programs,

(C) the regulatory authority provides the governing body of the unit of general-purpose government in which the land is located and any State or Federal agency which the regulatory agency, in its discretion, determines to have an interest in the proposed use, an opportunity of not more than sixty days to review and comment on the proposed use; and

(D) all other requirements of this Act will be met.

(2) In granting a permit pursuant to this subsection the regulatory authority shall require that—

(A) the resulting plateau or rolling contour drains inward from the outslopes except at specified points; and

(B) all other requirements of this Act will be met.

(3) The regulatory authority shall promulgate specific regulations to govern the issuance of permits in accord with the provisions of this subsection, and may impose such additional requirements as he deems to be necessary.

(4) All permits granted under the provisions of this subsection shall be reviewed not more than three years from the date of issuance of the permit, unless the permittee affirmatively demonstrates that the proposed development is proceeding in accordance with the terms of the approved schedule and reclamation plan.

AMENDMENT NO. 215

On page 82, delete all through pages 83, line 3, inserting in lieu of the deleted text the following, and renumbering succeeding sections accordingly:

(1) Insure that when surface coal mining is performed on steep slopes, no debris, abandoned or disabled equipment, spoil material, or waste mineral matter be placed on the downslope below the bench or mining cut, except that where necessary soil or spoil material from the initial block cut of earth in a surface coal mining operation can be placed on a limited and specified area of the downslope below the initial cut in accordance with regulations adopted pursuant to the provisions of paragraph 415(b) (3) if the permittee demonstrates that such soil or spoil material will not slide and that the other requirements of this subsection can still be met: *Provided,* That spoil material regulated under the provisions of paragraph 415(b)(3) or 415(d)(2) or excess spoil from a surface coal mining operation granted a permit under subsection 415(c) may be permanently stored at such offsite spoil storage areas as the regulatory authority shall designate and for the purposes of this Act such areas shall be deemed in all respects to be part of the lands affected by surface coal mining operations. Such offsite spoil storage areas shall be designed by a registered engineer in conformance with professional standards established to assure the stability, drainage, and configuration necessary for the intended use of the site.

IMPACT OF RETURNING TO APPROXIMATE ORIGINAL CONTOUR IN STEEP SLOPES* IN VIRGINIA

H.R. 2, Section 515(b)(3) requires that "all surface coal mining operations backfill, compact, . . . and grade in order to restore the approximate original contour of the land with all highwalls, spoil piles and depressions eliminated . . ." Section 515(d)(1) also states that in steep-slope coal surface mining no spoil material can "be placed on the downslope below the bench or mining cut, except that where necessary spoil or spoil material from the initial block or short linear cut . . . can be placed downslope. . . ."

An analysis by U.S. Geological Survey indicates that 95 percent of Virginia's strippable coal reserves are located in areas with slopes greater than 20 degrees. In 1976, the average degree of slope being surface mined in Virginia was 25 degrees. The following table is a summary of the surrounding states including Virginia, showing the percentage of the strippable reserves that would be affected by Section 515(d)(1).

TABLE 1

Percent of reserves affected

State:	
1. Kentucky:	
East	75
West	0
2. Ohio	1
3. Pennsylvania	6
4. Tennessee	40
5. Virginia	95
6. West Virginia	43

Source: Data from "Slope Angle Distribution of Coal Beds with Strippable Reserves" by K. J. England, U.S.G.S.

*Greater than 20 degrees.

Mathtech and Ford, Bacon and Davis Utah, Inc. in the report, Evaluation of Current Surface Coal Mining Overburden Handling Techniques and Reclamation Practices, Phase III Eastern U.S. prepared for the Department of Interior, Bureau of Mines, in 1976 divided the overall area into three regions as follows:

1. Northern Appalachia: eastern Ohio, western Pennsylvania, northern West Virginia and Maryland;

2. Central Appalachia: southern West Virginia, southwestern Virginia, east Kentucky and northern Tennessee;

3. Southern Appalachia: central and southern Tennessee and northern and central Alabama.

Members of the House Committee on Interior and Insular Affairs suggest that the impact of Federal legislation will be similar for all Eastern States. However, Mathtech's description of the general topography of the entire area would not support this conclusion:

"Topography in the Appalachian Coal Region ranges from gently rolling in central Alabama and northeastern Ohio to mountainous in southern West Virginia, southwestern Virginia, and east Kentucky. As a general rule, the steepest slopes and greatest relief occur in Central Appalachia, which is mountainous, followed by Northern Appalachia, best described as rolling-to-hilly, and Southern Appalachia, where gently rolling terrain predominates. Topographic relief for the region ranges from 2,500 feet in southwestern Virginia to 300 feet in parts of Ohio and Alabama.

"Qualitatively speaking, most mining in Central Appalachia takes place on steep slopes, defined here as natural ground slope angles greater than 17 degrees. Natural ground slope angles as high as 35 degrees were observed at some active mines in southern West Virginia. Slope angles in Northern Appalachia are more gradual, with angles of 10–18 degrees being the rule at active mines visited during the field survey. It should be noted that there are some very steep slope areas in the Northern Appalachia coal region, but available data suggests that most of the surface mining activity takes place in rolling and hilly terrain. Topography at mines visited in south-central Tennessee and central Alabama is best described as gently rolling with natural ground slope angles less than ten degrees being the general rule."

The latest published information regarding the price for strip and auger mined coal for these States is set forth in the following table:

TABLE 2

State:	*Average value in dollar/per ton FOB Mines*
1. Kentucky—East	$15.46
West	12.00
2. Ohio	13.43
3. Pennsylvania	19.21
4. Tennessee	17.63
5. Virginia	20.70
6. West Virginia	17.75

Source: Data From "Coal-Bituminous and Lignite in 1975." Division of Fuels Data and Division of Coal, U.S. Department of Interior, February 10, 1977.

To determine the increased mining cost as a result of the requirement to return to approximate original contour and the provision which allows no spoil to be placed downslope is a difficult process in view of the complex combination of physical, economic and management characteristics affecting various operations. However, it has been estimated that the increased cost for backfilling without completely eliminating the highwall in contour mining versus area mining is as follows:

TABLE 3

Description	*Total increase in reclamation cost per ton*
Contour/backfill	$2.70–4.74
Area	1.02–2.34

Source: Data from Bureau of Mines Information Circular, IC 8695.

The difference in reclamation cost between area and contour mining methods is the result of being able to use large-scale overburden handling equipment in conjunction with the efficiencies of being able to place overburden in the previously mined cut in area mining operations. Another factor which influences the cost of coal production in Virginia is that in 1976 there were only two mines that produced more than 250,000 tons. According to the U.S. Bureau of Mines, mining operations of less than 500,000 tons per year have an increase in cost of $0.42 per ton more than those operations mining more than 500,000 tons a year.

A report entitled "Energy and Economic Impact of HR 13950," dated February 1, 1977 was prepared for the Council of Environmental Quality and Environmental Protection Agency by IFC Incorporated. This report discusses surface mining cost as follows: "In Appalachia, cost increases are generally between $0.50 and $2.00 per ton except in Alabama and Virginia where costs for some mine types could increase by over $4.00 per ton." One of the assumptions upon which the above conclusion is drawn by ICF is that equipment performance standards for operational efficiency in past studies* are incorrect. Therefore, ICF utilized performance standards from manufacturers representatives and not actual field exprience which was utilized in the Oak Ridge Study. If more realistic performance standards reflecting actual field experience as contained in the Oak Ridge study were factored into the ICF study, the increase in cost to return to approximate original contour would be greater than $5.00 per ton for all surface mine operations in Virginia on slopes greater than 20 degrees. Also, the increase of $5.00 ton does not take into acount other incremental requirements of HR 2 or S 7. Other assumptions in the ICF study indicate a possible understated increase of costs associated with the Federal legislative proposals.

CONCLUSION

An analysis of the impact of returning to the approximate original contour in steep slope regions of Virginia would indicate that the increase in production cost per ton of coal will be significant. With 95% of Virginia's strippable reserves in slopes greater than 20 degrees, the provisions of HR 2 could increase the production cost of a ton of coal in Virginia by more than $5.10 per ton. This conclusion is based on the provisions in HR 2 not generating permit delays through additional hearings, etc; the operator not having to operate under different economic and environmental requirements than these currently imposed except for the provision to return to the approximate original contour, but not completely eliminating the highwall. If the highwall must be completely covered, this increase in cost will be higher.

The approximate original contour requirement and the provision not to allow spoil downslope will impose a financial burden on Virginia's coal surface mine operators which they cannot meet. The requirement to cover the highwall completely is physically impossible and in fact, environmentally unsound in many instances. These provisions will require additional off-road haul vehicles and long-term capital investment, neither of which are currently available. The small mines in Virginia average less than 60 acres and produce less than 50,000 tons per year. Because of the lack of long-term contracts and available reserves, investment institutions will not make the long-term financial obligations necessary to purchase the equipment. As a result, a majority of operators will probably discontinue to mine coal because most cannot meet the additional capital costs and other front-end expenses, and therefore, will be out of business.

Another aspect of the impact of HR 2 is that more than 50 percent of Virginia's coal, both deep and surface mined, is utilized by electric utilities because Virginia's surface mined coal is low sulfur steam coal. The impact of HR 2 will make this coal economically and physically impossible to produce.

PRODUCTION AND EMPLOYMENT IMPACT OF H.R. 2 ON VIRGINIA

The estimates of the adverse impact on production and employment that HR 2 will have in Virginia is reflected in the analysis of various state agencies utilizing data generated from in-house studies and from reviews of available literature.

Factors that will influence the estimates of the impact of HR 2 will be interpretations of specific sections of the legislation by the regulatory authority or judicial branch. A low range of estimates will be given that will reflect a less restrictive interpretation. A high range of estimates will be given to indicate the consequences of a strict interpretation of the bill with strong enforcement action by both the administrative and judicial branch.

IMPACT

1. Loss of Coal production (in millions of tons) 7–11.5.

2. Job Losses- (assumes 0.8 additional non-mining jobs lost per mining job loss).

Direct job losses. 1,140–2,400.

Indirect job losses, 912–1,920.

Total, 2,052–4,320.

3. Fee for reclamation per year:

Strip, $2.66 million.

Deep, $3.36 million.

Total Fund, $6.02 million.

Also additional costs will stem from public notices, suits and other provisions of HR 2.

ASSUMPTIONS

The small surface mines of Virginia produce the majority of the surface mine coal. These small mines cannot comply with the provisions of HR 2 relating to bonding and permit application requirements. Specifically, the requirement for collection of extensive hydrologic data, for preparing detailed underground maps, for strata cross sections and various other environmental requirements are beyond the capability of the small operator.

The steep slope requirements could not be met by at least 75% of the operators in southwest Virginia because of the lack of necessary equipment, undercapitalization and the thin seams of coal currently being mined. The siltation structures required by the legislation would result in a loss in production because of operator's inability to construct the necessary diversion ditches and sediments ponds in the steep slope regions of Virginia.

The estimates of loss which could result are from 50% to 85% of the current production of the surface coal in Virginia.

TESTIMONY OF J. JACK KENNEDY, JR.

Mr. Chairman and members of the committee, my name is J. Jack Kennedy, Jr. I am a resident of Wise County, Virginia. Wise County is located in the southwestern sec-

* "Costs of Coal Surface Mining and Reclamation in Appalachia," E. A. Nephew and R. L. Spore, Oak Ridge Laboratory, January 1976. NTIS No. ORNL–NSF–EP–86.

tion of the Commonwealth of Virginia, the heart of the Virginia coalfields. I am twenty years old and a life long resident of Wise County, I am presently a fourth year student at Clinch Valley College of the University of Virginia in Wise, Virginia. My father is a coal miner in Virginia. My grandfather was a coal miner in West Virginia and Virginia. Personally, I have held summer jobs on mining sites. I am knowledgeable about surface mining operations in Virginia.

I requested the time to come before the Committee today to state my major objections to H.R. 2 from the prospective of a young man interested in the future development of the central Appalachian mountain region. I am interested in the future job opportunities for thousands of young people in Appalachia. Furthermore, I am interested in a sound and solid economy in the Appalachian region. The future of the coal industry is the key to the job opportunities and the economy. Coal is the root of our economy in southwestern Virginia. I hope that this Committee will give serious consideration to the amendments being suggested by interested people from Virginia today.

In the present form, H.R. 2 requires that the land be returned to the "Approximate original contour" of the land after surface mining by backfilling, compacting and grading of the land with all highwalls, spoil piles and depressions eliminated.

It is my most honest opinion that this section of H.R. 2 may be completely unnecessary for putting mined land back in a responsible condition after surface mining. Currently many areas are being developed with residential housing projects, mobile home parks, hospitals, cattle grazing lands and many, many other commercial and industrial use after surface mining. In many cases the land is more valuable for development after surface mining than before the mining.

Furthermore, to return the land to the "approximate original contour" after surface mining in southwestern Virginia would be very costly. Hundreds of small coal companies could simply not afford the new equipment and labor costs to return the land to the "approximate original contour". And if the small coal companies put the land back to the "approximate original contour" the cost of doing so would be so great that the coal could not be mined profitably thus forcing the company to fold.

The "approximate orginal contour" section of H.R. 2 should be amended by this Committee to recognize that post-mining use of the land may not be best served by rigid requirements for restoration of the "approximate original contour."

UNITED MINE WORKERS OF AMERICA,
Washington, D.C. February 11, 1977.

THE PRESIDENT,
The White House,
Washington. D.C.

DEAR PRESIDENT CARTER: Certainly one of the most troublesome problems facing our country today is that of our diminishing energy supply. As elected executive board members of the union which produces the bulk of our nation's coal supply, we watched and listened very closely to your campaign pledges related to the increased reliance on coal as a solution to our energy crisis. We were sufficiently impressed, and as you will recall, our union enthusiastically endorsed your candidacy.

With these events behind us, we are now entering into a different period. It is our sincere hope that in the months to come our organization can develop a smooth working relationship with your administration on matters concerning the welfare of the citizens of this country in general and those of coal miners in particular.

One item which is quickly becoming a significant issue to many Americans is strip mining legislation which has already been introduced in both the Senate and the House of Representatives. Inasmuch as it is somewhat of an emotional issue, pitting environmentalists concerned with the aesthetics of landscape in areas which coal is mined versus those who fear that enactment of such legislation will bring about a curtailment of much needed coal production, we fully understand that it presents your administration with a difficult problem.

As far as the United Mine Workers of America is concerned, however, we feel we can safely advise you that we are generally against such legislation. While there has been considerable confusion on this issue in the past, our most recent Constitutional Convention held in Cincinnati, Ohio in September, 1976, at which we had the pleasure of hearing from then Vice President elect Mondale, went overwhelmingly on record in opposition to strip mine legislation. In spite of the clear intent of the delegates at the Convention, we are aware that other elected officials are undermining this mandate. These individuals represent a small minority opinion within our union and are technically in violation of our union's Constitution.

So that this matter can be resolved to the satisfaction of all concerned, we would appreciate the opportunity to meet with you or one of your appropriate subordinates to thoroughly discuss the issue in question. Your prompt attention to this request would be deeply appreciated.

With warm regards, we are
Sincerely yours,

Mike Trbovich, Vice President; Nick DeVince, Floyd Lamb, Robert Edney, Eugene Mitchell, Robert Long, Nick Halamandaris, Lonnie Brown, Franklin Clements, Donald Lawley, Lee Roy Patterson, Arvil Sykes, Francis Martin, J. B. Trout, Andrew Morris, UMWA International Executive Board Members.

STATEMENT OF DANIEL W. GREGORY, VICE PRESIDENT OF THE FIRST STATE BANK OF WISE

Mr. Chairman, Members of the Committee: May I express my sincere appreciation for the opportunity to appear before you today.

I am Daniel W. Gregory, Vice President of the First State Bank of Wise, located in the far Southwestern Virginia County and Town of Wise.

I represent the Board of Directors and the Chief Executive officer of the First State Bank of Wise and the majority of the banking institutions in Lee and Wise Counties Virginia. Our position on S. 7 in its current form is supported by our larger banking correspondents in Virginia and our neighboring states, particularly those in a position to lose hundreds of thousands of dollars in outstanding loans as a result of the impending decline of our surface mining industry. In fact, I have not talked to a single financial institution or banking association representative that does not fear the adverse economic impact of S. 7.

The economic health of the coal mining industry directly affects the economies of our Southwestern Virginia Counties. Any adversity falling upon that industry is felt sharply here, across Virginia and into neighboring states. When a legislative proposal as far reaching as S. 7 is presented, it is incumbent upon us as bankers to make an objective assessment of its probable economic impact upon our banks and the respective communities they serve. That assessment was made independently by our area banks utilizing their knowledge of the mining industry gained over the past several years and their insight into communities they serve, giving due consideration to the requirements of S. 7. Their conclusions are outlined briefly below and very frankly, they are frightening

Approximately 95% of our recoverable surface coal reserves lie in areas having surface slope angles greater than 20°. Thus the majority of our surface mine operators will be required to meet that part of S. 7 relating to steep-slope surface mining in addition to the other standards imposed. It is our opinion as area bankers that the costs of additional equipment to handle spoil placement, of providing for high-wall and bench covering and of securing the necessary engineering and geological services would be more than the smaller operators could bear. This is even more evident when the extensive data collection, surveying, bonding, public hearing delays and other permitting plans and requirements are considered. It must be remembered that our surface mine operators are at this time only beginning to recover from a recessionary lack of market demand and extremely low prices during 1975 and 1976. This adverse market condition was immediately followed by sub-zero weather conditions in early 1977 that completely precluded production.

We conservatively estimate that from 80 to 95% of the surface coal mines in Southwest Virginia will be forced to close if S. 7 becomes law in its present form. The majority of our surface mines are small operations producing on the average, 25–35 thousand tons per annum, employing an average of 5–7 production workers and 2–3 office workers per mine.

If only 80% of our surface mines close, the minimum annual loss of high quality strip and auger coal from Southwestern Virginia would be over 9,800,000 tons. Valued at a conservative $12.00 per ton the annual revenue lost to our area and to the Commonwealth of Virginia would be $117,600,000.00.

We expect over 2,000 surface mine production and clerical jobs to be lost and the resulting decline in annual payrolls to exceed $30,000,000.00. I wish to stress that neither the unemployment figure nor the payroll dollar loss includes another 5,000–6,000 persons in this area employed in providing goods and services directly to the mining industry.

There is no doubt that the expected losses of revenue, jobs and payroll dollars, or even half those amounts would result in economic chaos in Southwest Virginia and its neighboring states. It would surely turn the clock back twenty-five years bringing us again to the brink of economic disaster experienced in the late 1940's and early 1950's. Please remember that the production and sale of coal was and still is the most important factor in the economic health of our area.

Area banks and their correspondents have in good faith made substantial investments in the future of the surface mining industry. We have financed much of the equipment used for extraction, for transportation and for processing of coal. We have extended loans to individuals directly and indirectly employed by the surface mining industry, those loans being for the most part to purchase homes, automobiles, furniture and other needs. We have participated out large commercial mining loans to our Virginia and Tennessee correspondent banks; still other large banks have purchased substantial amounts of mortgage paper from area banks and have otherwise assisted in serving the needs of our people.

The expected closure of the majority of our surface mines after enactment of S. 7 will have a devastating impact upon our banking system. In addition to a heavy run-off of deposits from all sources it is expected that a substantial number of individuals and organizations will be unable to repay their borrowings after the effects of increased unemployment and area revenue are felt. If the results of the previous months establish any sort of guideline, the banks face a major catastrophe.

Upon debtor default with no hope for future repayment, the lending banks will have no alternative to securing all supporting col-

lateral and disposing of it at less than average market conditions. Substantial loan losses are inevitable under these circumstances.

Of course, some banks will be unable to meet this sudden and unusual economic strain caused by S. 7, and will be forced to look to the Federal Deposit Insurance Corporation to absorb the excess losses. Those area banks that may remain would take many years to recover, if ever.

In fact, our outside auditors have now requested a statement on the probable effects of S. 7 to go in our annual report to the stockholders.

In addition to debtor default, we are concerned that S. 7 is unclear with respect to "unreclaimed" or "abandoned" surface mines. We understand the definition of "unreclaimed" or "abandoned" to include any mine that has not had a high-wall removed or has benches remaining. Our banks hold first mortgages on several such properties on which homes, business structures and other improvements have been located. Reclaiming of such properties by the regulatory authorities and the subsequent filing of liens for reclamation expenses would seriously and unjustly deteriorate the collateral position of our banks and of our correspondents purchasing our mortgage paper.

Federal Deposit Insurance Corporation examining personnel have stated that our largest probable loss would in fact be in residential properties.

In the short time allotted I have presented a rather bleak economic picture for our area and State if S. 7 is implemented, but we truly believe it to be most accurate. We know that we do and must have environmental protection, but that must be balanced with economic protection as well. With the jobs and lives of thousands of Virginians at stake in this legislation, we implore you to restudy this bill giving due consideration to the human rights of our people to be employed in an area of their choosing and to our economic health. We would seriously urge you to give consideration to amendments that would compensate our operators, our communities and our banks for losses suffered as a result of enactment of S. 7. Whatever amendments are needed to allow us to survive should be seriously considered.

We are not the economic moguls or powerful and reactionary corporate interest as has been suggested. Rather we are simply common people trying to make a decent living for ourselves and our children, and to provide those children with a better standard of living than most of us had. Most of our operators are local people having their life savings tied up in their mines and equipment; if S. 7 is enacted it will all be lost.

We have recently learned in a most dramatic way the adverse effect upon our communities of stopping the surface mining industry for one month. We simply cannot survive this on a permanent basis.

Thank you for your time and should you have any questions I would be most happy to entertain them.

HOUSE JOINT RESOLUTION No. 270

Memorializing Congress to allow regulation of surface mining of coal to remain in the hands of the States

Whereas, coal is our nation's most abundant fossil fuel; and

Whereas, our nation faces an energy crisis of potentially devastating proportions, with coal being the only reliable and proven energy source available to meet our needs for the foreseeable future, and

Whereas, over one-half of our total coal production now comes from surface mines; and

Whereas, recognizing the necessity to properly control mining and reclamation operations, Virginia and thirty-seven other states, including all major coal-producing states, now have surface mining laws; and

Whereas, these laws are based on the desires and judgments of the citizens of the respective states, taking into account differences in climate, terrain, coal quality and quantity, transportation facilities, and other unique considerations; and

Whereas, there is overwhelming evidence that House Resolution 2 and similar bills before the Congress would result in reduced coal production, greater dependence upon foreign oil, increased unemployment in the coal-producing counties of Virginia and other states, and unnecessary economic disruptions throughout our nation; and

Whereas, the United Mine Workers of America voted overwhelmingly on September twenty-nine, nineteen hundred seventy-six, at their Cinncinnati, Ohio, convention to withdraw their previous support of federal coal and surface mining legislation; now therefore, be it

Resolved, by the House of Delegates, the Senate concurring, That regulation of coal surface mining and reclamation should remain the exclusive responsibility of the several states, and that Congress should refrain from forcing federal intrusion into this area which is, and ought to remain, a matter properly under the control of those citizens directly affected; and, be it

Resolved further, That the Clerk of the House of Delegates is hereby instructed to send copies of this resolution to the President of the United States, the President of the United States Senate, the Speaker of the House of Representatives, the Secretary of the Interior, and the members of the Virginia delegation to the United States Congress as an expression of the sense of this body.

STATE CORPORATION COMMISSION,
Richmond, Virginia, March 10, 1977.

Hon. HARRY F. BYRD, JR.,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BYRD: The Virginia State Corporation Commission is greatly concerned about the provisions contained in H.R. 2 and S. 7. After careful review of these legislative proposals, we have determined that the goal of reclamation of land disturbed by surface mining is good but the approach taken by these bills is extreme and will severely curtail the supply of coal.

Virginia has an excellent land reclamation law drawn to address the particular soil composition, topography, climate and vegetation conditions in our State. The continued strengthening of these laws as needed is much more effective and responsible than complex Federal legislation drawn to meet the conditions in all coal producing areas throughout the nation. It is our understanding that nearly forty states already have strong land reclamation statutes that are rigidly enforced and drafted to meet the needs of their states.

The State Corporation Commission is committed to the ultimate goal of energy independence for our nation. Remote as this goal may be, striving toward anything short of it is contrary to the best interest of the future of the United States. Energy independence can only be achieved through conservation of scarce energy resources and increased dependence on coal and nuclear energy. Every effort must be made to increase production of coal on a substantial scale by surface and underground methods. An estimated one-third of our proven coal reserves can be extracted only by surface mining. At the present time surface mining produces 55 percent of the nation's coal, and 65 percent of the electric utilities' coal supply comes from surface mines.

The State Corporation Commission is responsible for the regulation of financial institutions and utilities. We are convinced that the enactment of H.R. 2 or S. 7 will have a drastic adverse economic impact on both of these entities and their customers.

The vast majority of Virginia surface mining operations are small businesses which are just now recovering from the coal industry's economic disaster of the late 1940's and early 1950's. The coal industry is the backbone of Southwest Virginia's economy, and financial institutions in that area have made substantial investments through financing the needs of surface mining operations. Also, loans have been extended to individuals who are dependent on the soundness of the coal industry. If a fraction of the surface mining operators who say they will have to go out of business because of the enactment of H.R. 2 or S. 7, do in fact go out of business, the banking system in Southwest Virginia and their correspondents may face a major catastrophe of a heavy run-off of deposits and debtor default.

Electric utilities will face major expense if H.R. 2 or S. 7, as presently drafted, become law. This legislation will require an increase in usage of coal from the Midwestern United States and the decrease in the usage of coal from the Eastern United States which would result in significantly higher transportation costs, use of fuel with a higher sulfur content and use of fuel with a lower BTU capability. In other words, utilities will have to use coal which would be more expensive, harmful to the environment and less efficient. Of course, all of this directly relates to Virginia ratepayers who are already paying rates that are much higher than we would like for them to be.

We respectfully urge you to oppose H.R. 2 and S. 7 because they are an encroachment into an area that is being handled well by state governments and it could adversely affect the lives of every Virginian.

Sincerely,

PRESTON C. SHANNON,
Chairman.

NOTICES OF HEARINGS

SUBCOMMITTEE OF GOVERNMENTAL EFFICIENCY

Mr. EAGLETON. Mr. President, the Subcommittee on Governmental Efficiency of the Governmental Affairs Committee has rescheduled its April 22 hearing for Monday, April 25, at 1 p.m. in room 1224, Dirksen Senate Office Building on the General Accounting Office report on weaknesses in the financial controls of the national flood insurance program.

AGRICULTURE SUBCOMMITTEE OF THE APPROPRIATIONS COMMITTEE

Mr. EAGLETON. Mr. President, the Agriculture Subcommittee of the Appropriations Committee has completed its hearings on the fiscal year 1978 budget of the Department of Agriculture and related agencies.

I would like to announce that the hearing record will remain open until Wednesday, April 27, 1977, for the submittal of statements to be included as a part of the record. Please make the necessary arrangements with the subcommittee staff located in room 1320 of the Dirksen Building, or by calling 224-7272.

FOREIGN CURRENCY REPORTS

In accordance with the Mutual Security Act of 1954, as amended, the Secretary of the Senate herewith submits the following reports of the several committees of the Senate, certain joint committees, and special and select committees, concerning the foreign currencies and U.S. dollars utilized during the calendar year 1976 in connection with foreign travel:

CONSOLIDATED REPORT OF EXPENDITURE OF FOREIGN CURRENCIES AND APPROPRIATED FUNDS FOR FOREIGN TRAVEL, COMMITTEE ON AERONAUTICAL AND SPACE SCIENCES, EXPENDED BETWEEN JAN. 1 AND DEC. 31, 1976

Name and country	Name of currency	Per diem		Transportation		Miscellaneous		Total	
		Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency
None.									

Mar. 1, 1977.

FRANK E. MOSS,
Chairman, Committee on Aeronautical and Space Sciences.

Washington, D.C., March 7, 1977.

Mr. Francis R. Valeo,
Secretary of the Senate,
U.S. Senate,
Washington, D.C., 20510

Dear Mr. Valeo: Section 109 of the Legislative Branch Appropriation Act of 1977 (PL 94-440) states:

"Section 502(b) of the Mutual Security Act of 1954 (22 USC 1754(b)) is amended—

(2) by adding at the end thereof the following new sentence: 'In the case of the Select Committee on Intelligence of the Senate, such consolidated report may, in the discretion of the chairman of such select committee, omit such information as would identify the foreign countries in which members and employees of such select committee traveled.'"

Pursuant to the above Section, the attached Consolidated Report of Expenditure of Foreign Currencies and Appropriated Funds for Foreign Travel does not indicate particular countries or foreign currencies. The report does specify continents and dollar expenditures. A full, detailed report is also provided to assure full accountability. I request that pursuant to Section 109 of the Legislative Branch Appropriation Act, the full details not be published.

Aloha,

DANIEL K. INOUYE, Chairman.

ADDITIONAL STATEMENTS

PROCLAMATION IN HONOR OF QUEEN ISABELLA

Mr. CASE. Mr. President, April 22 is the 526th anniversary of the birth of Queen Isabella of Castile who is credited for her contribution to the discovery of the New World, as well as achievements in the Old World, including the unification of the Iberian Peninsula.

In addition, according to the Encyclopedia Britannica, Isabella was much concerned about the well-being of the Indians in the New World, being willing to accord them certain rights. She is said to have continued her interest and worked in their behalf until her death in 1504.

I ask unanimous consent that a proclamation by Gov. Brenda Byrne of New Jersey be printed in the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

Whereas, the enthusiasm and support of a single ruler led to the discovery of America and the resounding effect this discovery had upon the history of the world; and

Whereas, this great ruler, Queen Isabella of Castile, wife of Ferdinand of Aragon, was the sole backer of Christopher Columbus, whose proposed expedition to the New World was contrary to the 15th century concept of the world; and

Whereas, the shrewd intuition of Queen Isabella, as well as the financial support and risk taken by Her Majesty on behalf of Spain, was responsible for uncovering the unknown riches of the Western Hemisphere; and

Whereas, the history of America has direct linkage to the birth of Queen Isabella on April 22, 1451;

Now, therefore, I, Brendan Byrne, Governor of the State of New Jersey, do hereby proclaim April 22, 1977 as Queen Isabella Day in New Jersey, in honor of the great Spanish Queen whose daring vision prompted laying the foundation for contemporary American societies.

TERMINATION OF DIRECT LOANS—TERMINAL FOR IDAHO STUDENTS

Mr. CHURCH. Mr. President, last year the Congress expressed its clear intention not to make major structural changes in college student financial assistance programs. The Higher Education Act amendments enacted into law continue all grant and loan programs, with only fiscal and administrative changes. Despite this solid expression on the need for all of these programs, the Ford administration recommended termination of the direct loan program for the very first year of its renewal by Congress.

Regrettably, the Carter administration has gone along with this termination proposal. The argument advanced is that the indirect grant and loan programs are sufficiently successful so that direct loans are no longer necessary. This is not the case in my State, and it is my understanding that Idaho is far from alone.

The 1976 Higher Education Act amendments do make improvements in other programs, such as basic education opportunity grants. They do make administrative and fiscal alterations in the guaranteed student loan program. They also encourage the furtherance of State guaranteed programs, based upon findings that State-operated programs are much more efficient and less subject to abuse than those run by the Federal Government. But at the same time, Mr. President, the direct loan program is renewed with virtually no amendments at all, thus emphasizing its necessity for the near future.

The administration's recommendation to terminate direct loans has given Congress occasion to reconsider this program. The congressional conclusion is again clear: With passage of the supplemental appropriations bill before the Senate, the Congress has flatly rejected termination of direct loans. The bill contains over $300 million for direct loans, essentially the same amount as last year.

Three hundred million dollars is a lot of money. It is a lot of assistance for a lot of college students. It is also an

appropriation, a debit in the Federal budget. Seen in this perspective, the real purpose of the administration becomes apparent. Federal guarantee programs constitute a contingent liability, not an immediate appropriation; the amount to be guaranteed is not an expenditure in the budget for that year. If guaranteed loans could replace direct loans, an expenditure of over $300 million could be stricken from the Federal budget.

But will guaranteed loans serve students as well as direct loans? Certainly not in my State. The higher education community of Idaho has been emphatic on this point. They describe guaranteed loans as a shrinking program. They relate the reluctance of Idaho banks to participate, and conclude that guaranteed loans are available only to a very small segment of the Idaho college students. I ask unanimous consent that the compelling correspondence to this effect from Idaho education officials be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibit 1.)

Mr. CHURCH. Mr. President, the Congress is keenly aware of the shortfall for students that would occur if direct loans were immediately terminated. Budgetary sleight-of-hand will be of no consolation to students forced to drop out of school for lack of financial aid. There may be a time, in the years ahead, when direct loans can be terminated without impairing educational opportunity. However, as the situation in my State attests, that time is not now.

EXHIBIT 1

UNIVERSITY OF IDAHO,
Moscow, Idaho, March 3, 1977.

Hon. FRANK CHURCH,
Russell Office Building,
Washington, D.C.

DEAR FRANK: We are now aware of the nature of President Carter's budget proposals for student assistance programs in higher education. We are somewhat apprehensive, for the proposals of the new administration fail to overcome the seemingly whimsical, ill-conceived policies of its immediate predecessors.

The executive budget has, for a number of years, placed heavy reliarce on the theory that the Basic Education Opportunity Grant program, augmented by the Federal Guaranteed Student Loan program, should evolve as the principal student assistance programs in higher education. While Basic Grants have been most helpful, they are no panacea for the financial ills of all students. In our case, they supply less than one-quarter of our students' total financial needs and they are not available to graduate students. Only about 800 of our students will qualify for BEOG, whereas there will be well substantiated need in upwards of 2000 cases. The Carter budgt request of $1.9 billion will barely hold BEOG at its present level.

Although emphasized in the executive budget, the Federal Guaranteed Student Loan program provides scant comfort to our students. Lending agencies in Idaho have, year-by-year, shown increasing reluctance to participate. We processed $847,000 in Federal Guaranteed Student Loans at this university in 1972–73. This year we will process about $325,000. Typical attitudes expressed by major Idaho banks are quoted as follows:

BANKING CHAIN "A"

"Our policy pertaining to the Federally Insured Student Loan Program has the following restrictions: the student must be a permanent resident of the State of Idaho, he must be at least a third year student and the maximum amount allowed for an academic year is $1,000."

BANKING CHAIN "B"

". . . it is not currently the policy of the . . . bank to make Federally Guaranteed Student Loans. We do feel responsible for those students who received such loans in the past from us and will consider applications for additional funds from these students only."

BANKING CHAIN "C"

"The (bank) at the present time is not participating in making any loans under the Federal Guaranteed Student Loan program."

INDEPENDENT BANK "D"

"Our present policy on new loans is that they have to be an established or regular customer or an individual we have already committed loans to by granting them prior loans. This year we will be granting very few new loans so do appreciate your informing students when they fill out their applications as it will save them a trip over here."

Lending agencies in sister Northwest states are reluctant to loan to students attending schools outside their own boundaries. Neither do they favor loans to Idaho residents entering schools in their states. Sallie Mae and the Educational Amendments of 1976 notwithstanding, the Federal Guaranteed Student Loan program seems in disarray in our area and may well be terminally ill. This should be acknowledged by Congress as it considers the Carter budget recommendations.

The President's proposals for the funding of institutionally based programs cause us deep concern. These campus-based programs (National Direct Student Loan, College Work-Study, Supplemental Educational Opportunity Grants and the State Student Incentive Grants), combined with Basic grants, provide both marrow and muscle of our student financial aid programs. They are administered by knowledgeable professionals at each institution who are intimately familiar with an individual student's need and with the institutional milieu in which that need must be met. They operate at very low cost. They are efficient and are understood by students. Yet the proposed executive budget cuts CWS funds, holds SEOG and SSIG programs at current levels and reduces NDSL funding by $332M from the current year.

College Work-Study money, for example, produces multiple dividends by:

Meeting the student's dollar need;

Enriching the student's academic experience by providing work in a related field;

Enhancing students' self-respect as they work in support of their education;

Providing solution to the institutional need for a talented work force in laboratories, classrooms, offices, etc.

In a nutshell, we get "four bangs from every buck." Yet the Carter budget recommends $390M for College Work-Study—a reduction of $30M from the current year.

Many graduate students cannot spare the time for employment in College Work-Study. Their principle financial salvation lies in the National Direct Student Loan program. The executive budget proposes no new federal capital for National Direct Student Loans, thus crippling the only reliable source of aid for a massive number of advanced degree candidates. We started the present academic year with a loaning capability of $800,000. Every cent has been used and all of our student loan needs have still not been met. It should be noted that the repayment record of National Direct Student Loans has been vastly better than in the Federal Guaranteed Student Loan program. Continued availability of funds in each institutional account depends on collections. There is no government benevolence to pay off defaults. We must collect (at institutional expense) or *our* future students suffer.

Trying to solve the student financial aid problems with emphasis only on Basic Grant and Federal Guaranteed Student Loan programs is like trying to pull the Budweiser beer wagon with an ox and a sick Shetland pony. We should stick with our Clydesdales—and give them a full ration of oats!

Previous congresses have displayed wisdom and foresight in preserving appropriate levels of funding in the National Direct Student Loan, College Work-Study, Supplemental Educational Opportunity Grant and State Student Incentive Grant programs. We hope this approach will prevail in this session.

With respect and gratitude,
ERNEST W. HARTUNG,
President.

COLLEGE OF SOUTHERN IDAHO,
Twin Falls, Idaho, March 8, 1977.

Hon. FRANK CHURCH,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR CHURCH: I have just been notified of President Carter's proposed FY78 budgets for student financial assistance programs and it has prompted me to write you of my concern.

I have worked in student financial aid for eleven years at the College of Southern Idaho and I have watched these financial aid programs grow each year with your continued support. It seems that each year or so, we in the financial aid community, have to call on you for your renewed support due to the administrations desire to reduce these same programs.

Carter's proposal calls for reduced funding over FY77 funding in the College Work/Study Program and the National Direct Student Loan Program. The Work/Study program would be reduced from $430 million to $390 million and the NDSL program from $332 million to zero! I can understand some reduction in the NDSL program due to repayments being made by former students but not down to zero!

The BEOG program continues to grow by leaps and bounds. This particular program has certainly been very helpful to the financial aid community. Now that the BEOG program is better known nationally and more planning is involved we can better utilize all of the campus based funds in coordination with the BEOG program.

As you probably know, the BEOG grant can only meet ½ of the student's expenses. The other ½ has to come from the other programs of student aid. However, Carter is proposing a cut in these programs of FY78 and an increase in the BEOG program. Where are we, as financial aid officers, going to get the other ½ for the student if these programs do not keep stride with the growth of the BEOG program? We will have hundreds of students getting large BEOG grants but not enough money to get through an entire school year. These students will attempt to make it on the Basic Grant but will probably wind up dropping out of college because of limited funding. This has already happened here, at our college, this present school year. Many people believe the lending community will pick up the other ½ to match the Basic Grant but in reality more and more banks are becoming very reluctant to award FISLoans, particularly to freshmen and sophomore students. The banks will sometimes loan to juniors and seniors if the stu-

dent has some financial strength and has been a client in the past. Most BEOG recipients would not get a Federal Insured Loan from a bank due to their poor financial background.

Our work/study program and National Direct Student Loan programs have been able to help our middle income level students as well as all of our low income level students. I believe we owe some assistance to our middle-income families as they are the principal tax payers of this country and need the assistance almost as much as low income families. These students rarely qualify for the BEOG grants and SEOG grants and therefore need to rely on the NDSL and work/study programs. Yet Carter is proposing severe cuts in these programs for FY78.

The College Work/Study Program has been by far the most popular program for us. The students not only help pay for their education; they learn something from the job and they help colleges and public agencies.

I can safely predict that if Carter's proposals are followed it will mean that approximately 100 students will not be offered financial assistance for that school year at our college and they probably will not attend college for that reason.

Another item that is important but not as critical as the above issue is the funding for the BEOG administrative allowances. Each college in the U.S. currently processes huge amounts of dollars under the BEOG program and we are not allowed any administrative allowances for this. To avoid abuses in this program colleges must check each individual BEOG recipient for place of residence, correct number of college credits, previous academic progress, other amounts of financial assistance, determine amount of BEOG, inform student of award, process 1st half of check and then repeat the entire process the second semester. This administrative allowance for BEOG has been approved but no funding is in sight at this time. We need this allowance to off-set at least some of the administrative expenses each of us realize from the BEOG program so I ask for your support on this matter as well.

To summarize, I feel we need to continue supporting all of the campus based programs to keep stride with the BEOG program. We also need to continue with programs that assist the middle-income students as their financial need can just as easily keep them from attending college.

You have always been a great supporter of higher education and these student financial aid programs. I hope we can count on your continued support in the future. I encourage you to support the funding recommendations of the National Association of Student Financial Administrators as follows:

CWSP—$450 million.
NDSL—$332 million.
SEOG—$350 million.
SSIG—$66 million.

Thank you again for your past interest, attention and support.

DAVID PERKINS,
Director of Student Personnel Services.

THE COLLEGE OF IDAHO,
Caldwell, Idaho, March 22, 1977.

Hon. FRANK CHURCH,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR CHURCH: Recently, the new Administration presented to the Congress its recommended funding levels for programs which provide financial assistance to students attending institutions of higher education. Still more recently, the House of Representatives' Education Committee established its own recommendations.

On behalf of the faculty, staff, and student body of The College of Idaho, I seek your support of at least those funding levels recommended by the Education Committee. If I may impose upon your valuable time, may I review the programs that concern us?

The Supplemental Educational Opportunity Grant Program was established to help exceptionally needy students. At The College of Idaho, students in this category have financial needs ranging from $3,000 to $4,500. This group represents approximately 28% of the student body and 56% of these students who have financial need. By judicious use of the pitifully small funding we received this year, we were able to provide some grant assistance to them. Further aid was provided by generous help from institutional funds and some aid from Basic Educational Opportunity Grants. But, despite these efforts, they all incurred loans ranging from $1,000 to $1,250 for the present academic year. These are huge commitments for persons who are members of low-income families residing in economically depressed areas. If they return to those areas, and many will, improvement in their economic conditions will be slow. It will be even slower if they are hampered by loan repayments over a long period of time, a situation that is developing more fully each year. To preclude and retard this development, exceptionally needy students should receive greater grant assistance and less loan assistance. This goal could not be met from present funding levels nor can it be met from the $240 million level being recommended by the Administration and the Education Committee. To reach this goal, the level must be set at $450 million, as recommended by the National Association of Student Financial Aid Administrators. I support this recommendation.

As the foregoing illustrates, the National Direct Student Loan Program is integral to any financial aid package developed for the exceptionally needy. None of our present grant recipients could have attended the College this year without loans to "beef-up" their packages. Loans are also integral to packages developed for stuednts from middle-income families. They cannot qualify for grants and must, therefore, rely upon loans for assistance. It is improbable that our other 151 loan recipients could have attended this year if loans had been eliminated or significantly curtailed. This is especially probable because, contrary to the Administration's arguments, Federally Insured or Guaranteed Student Loans are not easy to obtain from banking institutions. Only one banking system in Idaho will provide loans on a regular basis, but generally to only third-year, fourth-year or graduate students. Banks in California and Nevada lend sporadically, if at all. Although there is replenishment of National Direct Student Loan monies through collections, it is not sufficient to meet the increasing need for loans, which partially results from the abysmal failure of the other loan program. I cannot—and I doubt that the Administration can—project with any certainty the year when the National Direct Student Loan Program will become self-sustaining, but most assurredly it will not occur in the near future. Yet, despite these realities, experienced by all financial aid administrators, the Administration clung to its unfounded premises and recommended no capital funding. If its recommendation is approved, there are at least 224 students who will be unable to return to the College next year. However, the Education Committee has recognized the Administration's folly and has recommended a funding level of $300 million. This is a $32 million decrease in the current level. In view of the above regarding Federally Insured or Guaranteed Student Loans and collections, a reduction in funding is not justified. Therefore, I recommend that the program be funded at $332 million, the current level.

The College Work-Study Program is in my opinion an extremely useful self-help program. It provides students with funds to meet some of their incidental expenses—books, supplies, toiletries, etc.—provides work experience—some students have never had a JOB; oftentimes provides experience in their chosen vocation; and enables the institution to have many low priority tasks done that it could not otherwise afford and releases staff and faculty from housekeeping and minor administrative chores so that they can concentrate on management and teaching. The Administration recommended that the program be funded at $390 million, a $40 million reduction from the current level. The Education Committee recommended sustaining funding at $430 million. Since this is such an efficacious program, it should be at least funded at the current level and perhaps greater if post-secondary institutions can provide the jobs. As an aside, the program has the effect of removing students from the labor market, thus reducing unemployment and lessening competition for scarce jobs. Reduction of unemployment, of course, is one of President Carter's major economic goals.

Both the Administration and the Committee recommend funding the Basic Educational Opportunity Grant Program at $1.9 billion, which would sustain the maximum grant award at $1,400. The $1,400 maximum has been in effect for three years. I suspect that inflation has eroded its purchasing power considerably. For instance, it represented 67 percent of the College's tuition and 37 percent of its standard cost of education for the 1974–75 academic year. This year it represents 53 percent of tuition and 30 percent of the standard cost of education and next year it will represent 52 percent and 28 percent respectively. Furthermore, this funding level does not provide for an administrative allowance to be paid to institutions. All institutions incur such costs and all find it more difficult each year to obtain the funds to hire people and purchase the supplies and equipment necessary to assure compliance with the myriad of regulations spewing from the U.S. Office of Education, including those for the Basic Educational Opportunity Grant Program. An administrative allowance would eliminate some of the hardship that institutions are now experiencing, especially small schools. The National Association of Student Financial Aid Administrators has recommended a funding level of $2.13 billion which would provide monies for administrative allowances and overcome some of the ravages of inflation by increasing the maximum grant award to $1,600. I support this recommendation.

This has been a long letter which has probably tried your patience, but I strongly feel that the drastic reductions financial aid programs face may well lead to their early demise. If they are eliminated, the nation, and the Government as its spokesman, can never meet the national goal of providing all citizens with the opportunity to obtain a higher education. Consequently, they deserve detailed comment. I urge your support in our efforts to sustain viable national financial assistance programs. After all, if the Federal government can spend $20 billion for welfare programs, it certainly can spend $3.34 billion for programs which will eventually reduce welfare expenditures.

With Respect,

BLOUNT J. HALL,
Director of Financial Aids.

IDAHO STATE UNIVERSITY,
Pocatello, Idaho, March 2, 1977.

Hon. FRANK CHURCH,
U.S. Senate, Russell Building,
Washington, D.C.

DEAR SENATOR CHURCH: While President Carter's programs to reduce federal spending is generally an admirable policy, there

are certain proposals for the reduction of support to higher education which could yield severe consequences for Idaho State University students and surely hundreds of other colleges and universities throughout the nation. Two proposed program cuts in particular have very serious implications:

1. Drastic reductions in the NDSL Loan Funds (100%), the College Work-Study Program (64%), the Supplemental Educational Opportunity Grant Program (54%) and the Veterans Cost of Instruction will eliminate financial aid opportunities for hundreds of our students, including veterans and the services the University provides for them.

2. The reduction or elimination of capitation grants for Pharmacy in which ISU excels will destroy our efforts to maintain current levels of programs and virtually assure that we will not be able to meet the new accreditation requirements for an eventual Doctor of Pharmacy degree enforced by the American Pharmaceutical Association. We have relied heavily on capitation grants to maintain the high quality of our College of Pharmacy and the previous Administration and Congress had assured a three-year continuation of the capitation funds. If this program is curtailed or discontinued, this University and the State of Idaho will lose one more of its excellent programs which will doubtlessly be picked up by wealthier states that do not need to rely so heavily on federal assistance.

Any assistance you can give to preserving higher education support in these two vital areas will be most gratefully appreciated. I am also requesting assistance on these important issues from your three colleagues in the Idaho Congressional delegation.

Thank you for your consideration of this request. It is not only for Idaho State University, nor indeed for our sister Idaho institutions only, but for all colleges and universities which will be seriously affected.

Sincerely yours,

MYRON L. COULTER,
President.

BOISE STATE UNIVERSITY,
Boise, Idaho, February 28, 1977.

Senator FRANK CHURCH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CHURCH: Our Career & Financial Services office has participated in the Basic Educational Opportunity Grant Program from its initial stage in 1973 to now being the largest of the programs which we have to provide direct aid to enrolled students. BEOG's comprise 33% of the aid we administer and the average is $703.00 this year. Basic Grants are working and we are pleased to be involved.

Eighty-nine percent of our students with documented need rely upon the other student aid programs packaged with their Basic Grant to make it through the year.

The administration's proposed cut in College Work-Study Program funds, *if applied uniformly* across the state, would remove 60 students (each averaging $658 gross earnings) from the work roll at Boise State University.

Concurrently, if the administration's recommended cut-off of new capital for the National Direct Student Loans is observed, we would have to *deny* loans averaging $734 to 158 students next year. These students will be forced to compete off-campus in a troubled job market for enough subsistence to continue their studies.

We believe that there should be *no* reduction in College Work-Study funds. We support our National Association of Student Financial Aid Administrators' studies that recommend adding 20 million dollars to the Fiscal 1978 requests. We believe this to be consistent with President Carter's announced goals to increase employment opportunities.

Your views on the FY '78 appropriations are important. I should like to respond to questions you and your staff may have about student aid in Idaho and the Northwest, Region X.

Yours concernedly,

F. RICHARD REED,
Coordination, Student Financial Aid Programs.

INTRODUCTION TO MILTON FRIEDMAN'S ARTICLE

Mr. BARTLETT. Mr. President, I have spoken many times in the Chamber about the inherent dangers to our political freedoms of allowing the Federal Government to become the major determinant of our citizens' economic prerogatives. Today, I shall introduce into the RECORD an article by one of the most articulate and respected spokesmen of the dangers we are allowing ourselves to be led into. Milton Friedman is the United States most recent recipient of the Nobel prize in economics. He has been a vigorous advocate of the efficiency and justice of free market economics.

The following article very clearly demonstrates the consequences of allowing the Government to become the predominant factor in national income. I commend this article to all our colleagues in Congress and to every citizen, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PATH WE DARE NOT TAKE

(By Milton Friedman)

America is at a crossroads, warns this Nobel Laureate economist. Will we redirect our course toward fiscal responsibility? Or will we spend our way down the ruinous path taken by Chile, Great Britain and New York City?

Those of us fortunate enough to have been born in the United States in the 20th century take freedom for granted: it seems to us the natural state of mankind. But that is a misconception. Freedom is an extraordinarily unusual situation. If one looks back through history, one finds that the natural state of mankind in most periods has been tyranny and misery.

There was a free society in ancient Athens, but it was free only for the citizens, not for the slaves. And there was a brief spurt of freedom in Europe during the Renaissance. But the most extended period of freedom has occurred in the 18th, 19th and early 20th centuries in Western Europe and the United States. Yet look at how fragile that freedom has been. During that time, only a handful of English-speaking and Scandinavian countries have been able truly to maintain something approaching a free society.

This fragility of freedom was brought home to me in 1975 when I spent a week in Chile considering that country's economic problems—problems which we are likely to have in the future. Chile, of course, is much poorer than the United States; yet, of all South American countries, it had the longest history of reasonably democratic government.

Today, Chile has lost its freedom and is governed by an authoritarian regime. Its problems had their origin, in my opinion, some 50 or 60 years ago, when Chile became one of the first countries in South America to institute welfare-state measures. Those measures, introduced by good people for good objectives, led to an expansion in the role of the State and to an increasing accumulation of areas in which government controlled what people could and could not do. The economic counterpart of this was an increase in government spending until, by the time Salvador Allende came to power in 1970, government spending had reached 40 percent of the national income.

Since Chile was a poor country, it was difficult to impose explicit taxes to generate revenues of 40 percent of national income. As a result, taxes were imposed indirectly in the form of inflation (reaching as high as 900 percent annually). Allende, clearly seeking to turn Chile into a communist state, actually introduced very little that was radically different. He only carried out the laws enacted by his predecessors during the preceding 30 to 40 years. However, the end result was the tipping point at which the willingness of the public to put up with increasing involvement in their own lives was exceeded. To control the people, the Allende regime threatened a left-wing dictatorship. A counter-revolution followed, at the end of which an authoritarian junta was established by the military. In either case, Chile lost its freedom.

Now cast your eyes across the Atlantic to the home of most of the ideas of freedom that we cherish—to the United Kingdom. Britain is a much richer country than Chile, with a far stronger tradition of freedom and democratic rights. Yet the U.K. is going down the same path as Chile. It is almost impossible for any one of us brought up in the great traditions emanating from Great Britain to think that Britain is in danger of losing its freedom and democracy. And yet it is a fact!

Although government spending in Great Britain today amounts to 60 percent of national income, there is enormous pressure for still more. Nobody is satisfied; society is being polarized. In a recent year the inflation rate reached something over 25 percent and the government budget was enormously in deficit. Britain has been able to survive primarily by borrowing from overseas, but I fear very much that within the next five years British freedom and democracy, as we have known it, will be destroyed.

Now let me come closer to home. Consider New York City.

Like Chile and the United Kingdom, New York City has been following a policy of ever-growing governmental involvement in the affairs of its citizens. Wherever this path has been followed, whether in Chile or in the U.K. or in New York, it has two consequences: financial crisis, and loss of freedom. New York's financial crisis is obvious; its loss of freedom only slightly less so.

The city today is no longer solely governed by its citizens or by people elected by the citizens; it is governed by a committee of overseers appointed by the State of New York with power to overrule the elected city officials. In fact, there is only one important difference between New York City and Chile or the United Kingdom: New York cannot print its own money. Chile and Britain could issue their own money and therefore their financial crises took the form of inflation. In New York, the crisis degenerated more promptly to virtual bankruptcy.

From the founding of this country until 1929, leaving aside periods of major wars, our total government spending (federal, state and local) never exceeded 10 percent of the income of the people. State and local expenditure was twice as large as federal, which in 1929 was only 3 percent of national income. In the years since, total governmental expenditures have risen to 40 percent of national income, and federal spending is twice as high as state and local, something like 25 percent of national income—almost ten times as large as in 1929.

Clearly, we have been moving in the same direction as Chile, Great Britain and New

York City. We have already experienced signs of financial crisis—higher and higher inflation. We have also been experiencing the second effect: loss of freedom.

Where has freedom been reduced? Well, for one thing, the spending of 40 percent of our income for us by government is certainly a restriction of freedom. But aside from the question of income, consider freedom of speech. How often does one read in today's papers any statement on public issues by a major businessman or industrialist except where it immediately concerns his own enterprise? The head of a great corporation must think three times before he speaks out on a major public issue. He looks over his left shoulder and sees the Internal Revenue Service getting ready to audit his accounts, and he looks over his right shoulder and sees the Department of Justice standing only too ready to launch an anti-trust suit against him. And then he asks what the Federal Trade Commission is going to do about his advertising; and what the Food and Drug Administration is going to do about the products he produces; and what the Safety Commission is going to do about this and that. You don't feel free to speak if you are in that position.

Every academic institution in the United States is threatened in exactly the same way. The Department of Health, Education and Welfare in Washington seeks to impose requirements on them that, in my opinion, seriously interfere with scholarly performance. Do they object? Only to a very limited extent. Their dependence on federal funds has a "chilling effect" on their freedom of speech.

Why does this happen? In its simplest form, the fundamental fallacy of the Welfare State lies in the attempt to do good at somebody else's expense.

First, nobody spends somebody else's money as carefully as he spends his own. That is why trying to do good at someone else's expense leads to financial crisis.

Second, if you are going to do good at somebody else's expense, you have to take the money away from him. So coercion and destruction of freedom are at the very source of attempts to do good at somebody else's expense.

Some years ago, in an article in *New York* magazine, John Kenneth Galbraith was quoted as saying, "I have no doubt that nearly all of the problems of New York could be solved by the single device of spending enough money." In the interim the city government's budget has doubled, and so have the problems. And the reason is straightforward. While the city government had more to spend, the citizens had less to spend because the government can get the money only by taking it away from somebody else.

More fundamentally, what is at the base of our problems is the failure to recognize the distinction between the "political market" on the one hand, and the economic market on the other. For the political system is a kind of "marketplace" just like the economic system—except that it employs a different kind of market mechanism, with very different consequences. In the political market, all decisions have to be yes or no. The result is that there is often very little relation between what you vote for and what you get.

Suppose the question at issue is whether neckties should be red or green. If that is decided by a political mechanism, and 51 percent vote that ties shall be red, 100 percent of the people get red neckties. In the economic market, each of us goes to the shopping center separately. If 51 percent of the people vote that ties shall be red, 51 percent get red neckties, and 49 percent get green neckties. Everybody gets what he votes for.

There are some things for which the vote has to be Yes or No. For example, there is no way in which 51 percent of the people in the United States can be at war and 49 percent of the people can be not at war—that is the kind of a decision that has to be decided through a Yes/No vote. The problem is that we have extended the political market beyond things of that kind into areas where it is possible for each person to get what he votes for.

If you have a Yes or No decision, then there is almost always only a loose, relation between your vote and the result; you do not have much incentive to examine thoroughly the issue you vote on. This leads to weighted voting in favor of special interests. If some piece of legislation is going to benefit a small group a great deal, they have a real incentive to lobby for it in Washington. The rest of us? It may mean 50 cents extra on our tax bill. Why bother?

President Nixon once tried to eliminate a program under which the federal government had for many years been subsidizing people who tasted tea. The government graded tea for the benefit of importers, and we paid taxes to hire people to grade it. Nixon made the simple, obvious proposal that we should eliminate the service. We still have that program because the people in the tea industry fought to keep it. Is there anyone in the vast American electorate who would take his vote away from a Representative simply because that Representative voted to keep the tea-tasting arrangement?

This, then, is the fundamental defect of the political mechanism: it is a system of highly weighted voting under which special interests have a great incentive to promote their own interests at the expense of the general public. Each of us separately tries to use the government mechanism to get special benefits. The benefits are concentrated; the costs are diffused; and that produces a bias which leads to ever greater expansion of government and, ultimately, to ever greater control over the individual.

The characteristics of the economic market are very different. In this market—in which individuals buy from and sell to one another—each person gets what he pays for. If you are paying out of your own pocket for something and not out of somebody else's pocket, then you have a very strong incentive to see whether you are getting your money's worth. In addition, nobody can get money from you unless you agree. Thus, paradoxically, the economic market is a more effective means for achieving political democracy than is a political market.

Which way will America choose? Like other Western societies, we are coming to a crossroads. In going from 10 percent of national income being spent by government to 40 percent, it was possible to maintain a large element of individual liberty. But we cannot continue along that road. Chile, a poor country, tipped over at 40 percent. Wealthier Britain appears on the verge of tipping over at 60 percent. Where we go from here depends on whether we recognize in time that this is a false road which leads to tyranny and misery, not to freedom. Let me propose that, as we contemplate the future, we take as our major motto what I would like to see as an 11th commandment: that everyone shall be free to do good at his own expense.

MASTER TEACHERS PROGRAM

Mr. HATCH. Mr. President, I am pleased to call to the attention of colleagues the fact that Ms. Earlene C. Mitchell, a member of the faculty at Hillcrest High School, Midvale, Utah, has been selected to participate in the National Humanities Faculty's 2-year master teacher in the humanities program.

The master teachers program is funded by a 2-year elementary and secondary education grant from the National Endowment for the Humanities. It is designed to strengthen teacher mastery of materials in language, history, philosophy, and related disciplines. The project also prepares the master teachers to lead curricular renewal, initiated and sustained by the local school's humanities task force.

Ms. Mitchell was one of only 50 chosen nationwide, and I am extremely proud to see that someone from the State of Utah has been selected for this honor. This committee has chosen well, and I extend my personal congratulations to Ms. Mitchell.

SKI LIFT TICKET PRICES

Mr. HASKELL. Mr. President, yesterday I introduced S. 1338, a bill to reform the system of issuing and administering permits for ski areas and other commercial outdoor recreation facilities and services in national forests. In my statement yesterday, I discussed the purposes and need for the proposal.

However, 2 days ago, I received information which makes the prompt enactment of this bill a much more urgent matter than before. This week the supervisor of the White River National Forest in Colorado approved daily lift ticket rate increases for seven of the ski resorts in Colorado, ski resorts which are giants of the Colorado—and, for that matter, that national—industry. These rate increases—most of which were for $2 or about 20 per cent more than last year's rates—were based not only on secret information provided by the ski area operators, but also on newly designed secret guidelines.

Last year despite the failures of the House to take up my Senate-passed bill, S. 2125, the Forest Service took action in recognition of one of the purposes of the bill—to insure more objective and public consideration of the charges to the public made by ski area operators. The agency contracted for a study of ski pricing. The study was to determine whether competition existed in the ski industry and to develop objective guidelines for the review of rate increase requests. Although the completed study has not yet been submitted to the Forest Service or made public, apparently the guidelines found in a preliminary study draft were used by the forest supervisor to approve the rate increase requests.

It is my understanding that these guidelines recommend that requests by ski area operators on National Forest lands for increases in their lift ticket prices should generally be met with benevolent approval by the forest supervisors. In effect, these guidelines state that, at least for the 1977–78 ski season, the ski area operators will be given a free hand to set their own prices.

Mr. President, I regard this situation as nothing short of scandalous. The Forest Service, stung by criticism over the subjective methods and secret informa-

tion used to review ski pricing in the past. has now apparently established new guidelines for the pricing review task, yet, these guidelines are a travesty. They are secret—privy only to the eyes of the Forest Service.

They have not been afforded the dignity of publication as Federal regulations before their use; therefore, scrutiny of them by the public has been neatly avoided. Instead, the public must accept on faith that the guidelines exist, that they are objective, that they are reasonable, and that they are in the public interest.

These assumptions are difficult to make given the apparent lack of any substance in the guidelines themselves. Guidelines for the review of ski pricing are certainly unnecessary if they fail to guide—if their message is simply "read and concur." It is a waste of the guidelines, a waste of paper, a waste of Forest Service personnel's time—and certainly a waste of taxpayers dollars—for permittees to submit rate increase requests to the Forest Service for review if the agency plans to do nothing but rubber stamp those requests.

What is most extraordinary about this week's rate increase requests is that the ski area operators involved apparently justified the increases on the basis of their need to recoup losses incurred by the poor snow conditions of this last ski season.

Last December, I announced that I would ask for disaster relief for the Colorado ski industry and Colorado ski communities because of the inadequate snowpack. However, I was roundly criticized by these same ski operators who have requested and received these rate increases for even suggesting the need for disaster relief. As a result, many less well-to-do ski resorts and small businessmen in the ski communities were unnecessarily hurt by the drought conditions.

Now, these same fat-cat ski resorts who were not anxious to see other Coloradans receive critically needed and timely relief are asking for their own version of disaster relief for themselves. But their version of disaster relief is better than any which might have been available to others. These wealthy resorts are not apparently asking for relief that is temporary. To my knowledge they have not committed themselves to a reduction in the lift ticket prices as soon as last year's losses are overcome.

Instead, I suspect that they asked for and were given by the Forest Service a permanent subsidy. What is now justified on the basis of relief from poor business conditions will not be altered when those conditions improve. Instead, the increases will be permitted to continue by a pliant Forest Service employing guidelines which do no guiding and which are shielded from scrutiny normally provided to Federal regulations. This subsidy does not help the many small businessmen serving ski communities to recoup their much more severe losses and it certainly penalizes the public upon whose land these operators are conducting their business.

The existence of these new secret guidelines and the effect they have already had on Forest Service decisionmaking in Colorado make prompt passage of S. 1338 necessary.

THE NEW YORK TIMES DISCOVERS THAT THE ARTS FLOURISH IN NORTH CAROLINA

Mr. HELMS. Mr. President, it is always gratifying when others speak well of those things we ourselves are fond of. And so when I noticed the New York Times of March 8 had a rather fulsome report on North Carolina's symphony and our State's receptive climate for the arts, I was especially pleased. You see, we do not get many rave reviews from the brahmins of Manhattan.

It is amazing to note the sometimes patronizing attitude on the part of much of our national press toward the South's contributions in the arts—reminiscent somehow of Dr. Johnson's comment on the "dog walking on his hind legs. It is not done well, but you are surprised to find it done at all."

Actually, though not so well publicized—should I say promoted—as the tradition of the performing arts in the North, the South has every reason for pride in its contribution from the earliest days.

The first American drama "The Prince of Parthia" was written in 1765 in North Carolina by Thomas Godfrey. Indeed the first community theatre in the colonies was established in Wilmington, N.C., as the Thalian Association. By 1855, this group of theatre lovers built the magnificient Greek revival structure Thalian Hall which still stands, and, recently restored, is still in use by the Thalian Association.

And it seems now generally conceded that North Carolina can claim the first chamber music composed in the United States. It was written in 1789 by John Frederick Peter in the little town of Salem, N.C. Salem was a remarkable cultural center: This community in 1783 celebrated the Fourth of July with a full cantata composed and performed by its own citizens, complete with organ, string and brass ensemble, and chorus.

So our more recent efforts in the arts build on a continuing tradition coupled with a determination that access to the arts should enrich the life of every citizen of our State.

This has been no easy task in a State of small towns, with a population 55 percent rural. But we have done our best.

The North Carolina Symphony, for example, under the baton of the great Benjamin Swalin, now Conductor Emeritus, was the first State-supported symphony orchestra. Under Swalin's leadership, the orchestra began a pattern of traveling by bus from one town to another, from the Outer Banks of the coast into the hidden valleys of the Appalachians. The pattern rarely varied: in the day, the orchestra would perform for the school children. At night, it would perform for the adults.

Mr. President, last year almost 200,000 children in the schools of my State had the experience of enjoying a live symphony performance. I wonder if this can be equalled even in the most sophisticated metropolitan centers of our Nation.

It is with real pride, therefore, Mr. President, that I ask unanimous consent that an article appearing in the March 7 issue of the New York Times entitled "Symphony Heading for Carnegie To Bolster 'New Image' of South" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARTS IN AMERICA: NORTH CAROLINA—SYMPHONY HEADING FOR CARNEGIE TO BOLSTER "NEW IMAGE" OF SOUTH

(By Wayne King)

WINSTON-SALEM, N.C.—Why would the North Carolina Symphony, an orchestra whose major endeavor for years has been concert tours for 250,000 North Carolina schoolchildren, decide suddenly to appear at New York's Carnegie Hall in the most culturally competitive city in the country?

"It's part of the new image of the South," said Elissa Josephson, spokesman for the symphony, who is doing advance work for the Carnegie appearance tomorrow night. "It's no longer the Sahara of the Bozarts."

There is, nonetheless, a Southern accent to the effort, with ticket sales directed at the substantial number of North Carolinians in New York, with a cultural tour that will bring a planeload of Tar Heels to the city, and, inevitably, a visit from the new Governor, Jim Hunt, who will mix business with culture by reminding anybody who's interested that North Carolina is a good place to bring up the kids—and locate a business or industry.

The Governor will bring a party of 400 economic leaders from the Northeast to the concert; 1,000 tickets are reserved for contingents from North Carolina colleges and universities, and the North Carolina Society in New York, made up of Tar Heel expatriates, is also selling tickets. Thus, with some local sales, the symphony expects a sellout of the 2,784-seat hall. Among those expected to attend is Juanita Kreps, the new United States Secretary of Commerce.

TRULY PROFESSIONAL

But the event is fundamentally a work of culture-craft, offering the New York premiere of "Assembly and Fall," a work by Ned Rorem that was commissioned by the symphony, on a program that also includes Stravinsky's "Petrouchka," Dvorak's "Carnival" Overture and Poulenc's "Stabat Mater," with the Duke University Chapel Choir and Chorale and Janice Harsanyi, soprano soloist.

The symphony was designated a "major symphony" last June by the American Symphony Orchestra League, the most recent of 31 so designated nationally, and promoters say that a New York appearance should be part of "a truly professional image."

John Gosling, the conductor, is not exactly a household name, but he has achieved favorable critical response—The Washington Star called his conducting "impeccable." The Washington Post applauded his "incisive command"—in sorties outside North Carolina. In five years with the North Carolina Symphony, he has been building a strong financial base for the orchestra, and now feels that it is ready to make a bid for national status.

OTHER COMPANIES

Beyond that, the appearance seems to serve as something of a symbol of the cultural yeasting that has taken place in North Carolina, a rural state—the third most rural

in the nation by census standards—with a conservative tradition.

Besides the state-supported symphony there are thriving civic symphonies and ballet companies in Greensboro, Charlotte and Winston-Salem; a multitude of arts councils and projects, mostly state sponsored, and, most unusual, the highly successful North Carolina School of the Arts at Winston-Salem the only such state-supported school in the country that trains students from seventh grade through college in the performing arts, dance, drama, music, stage design and production. It was at this school that Agnes de Mille set up her Heritage Dance Theater; last week, Alexandra Danilova staged four student performances of "Coppelia."

It is something of a measure of the state's exceptional progress to recall that when the school was first proposed, in 1963, a rural legislator took one look, popped his galluses, and promptly took strong exception to spending tax money "to teach these people to toe-dance, pick banjos and sing in foreign languages."

But the bill survived—triumphed in fact, by a vote of 80 to 18, helped along by the promise of a $1.5 billion Ford Foundation grant—and the school has subsequently grown from 200 students in 1965, when it opened, to 600 today about half from the state, half from elsewhere around the country.

Moreover, under the umbrella of the state's five-year-old Department of Cultural Resources, directed by a full-time secretary with cabinet status, North Carolina has developed an extensive program to "bring the arts to the people," 55 percent of whom live outside towns of 2,500 or more. Under challenge grants, for example, the state matches local community contributions to develop dance, drama, and other arts programs. In three years, such programs have grown from 16 to 95, two-thirds of them in towns with less than 10,000 population.

SIX TO CITY BALLET

The North Carolina Museum of Art in Raleigh, fully supported by the state, with a current appropriation of about $900,000 a year, was established in 1947 and will move to a new building in several years. It has a strong collection of Dutch and Flemish Baroque painting, Spanish still lifes, and works of the Italian Renaissance. It is growing rapidly in the areas of ancient and ethnographic arts.

A three-year-old theater-arts program provides $75,000 to communities, which in turn have attracted $300,000 in foundation grants, to make professional theater available throughout the state. The money helps support 18 professional theater companies, including three regional Equity companies.

The state's most conspicuous success, however, has been the aforementioned School of the Arts, both in terms of its graduates and in cultural contributions to the state.

Its School of Dance, for example, has placed graduates in all the nation's major ballet companies. Six dancers—all of them male—are members of the New York City Ballet. Other graduates are with such companies as the Dance Theater of Harlem, the Elliot Feld, American Ballet Theatre, the Joffrey and the Alvin Alley Dance Theater.

"We have more dancers come out of the North Carolina School of the Arts than any school except the School of the American Ballet, and we send many dancers to them," said Robert Lindgren, the dean of the School of Dance, whose own experience includes Ballet Theatre, the Ballet Russe de Monte Carlo and the New York City Ballet.

The school's dancers—who, like most of the students, live on campus—enroll as young as 12, usually with previous training, and may be of professional caliber by 17 or 18.

Male dancers can begin later. "But it's harder for men," said Mr. Lindgren. "If a young boy wants to dance, his family is suspicious. We have to convince parents that dancing is o.k., that you can earn a living and have a good life doing it."

Graduates in the school's other disciplines—music, drama and stage design and production—have also done well. The school's musicians hold chairs in symphonies across the country, and most of its actors and actresses have found work in their profession, from a current job as understudy in "Equus" to a two-year role in television's "Guiding Light" to posts as directors of community theaters.

The school is relentlessly "performance oriented," moreover, which means that its students spend as much time as possible in front of audiences. Each year, in all areas, the school produces 300 separate performances before an aggregate audience of more than 140,000 in a dozen states. These range from small recitals to lavish productions of "The Nutcracker," an annual event, or this year's Brecht's "The Caucasian Chalk Circle," with a cast of 70, more than 160 costumes and a stage that at one point floats into the air.

The school sponsors two professional affiliates, the Pidmont Chamber Orchestra, composed of faculty members and young professions and directed by the school's dean of music, Nichols Harsanyi, and the North Carolina Dance Theater, a 15-member professional company directed by Mr. Lindgren. East year, a 70-piece School of the Arts orchestra performs summer concerts in Europe.

The school's accomplishments have been such that its per-student support from the Legislature now exceds that of any of the 15 other institutions in the state university system and private gifts total upward of $1 million a year.

"Suddenly," said Robert Suderburg, the school's chancellor, himself a composer, "It is politically attractive to support the school."

The students are not abashed. For a football game between a team from a local fraternity from another college and the Arts School's unofficial varsity squad (called, for obscure reasons, the Pickles), the Art School men, in tights, warmed up by performing plies at a portable dance-exercise bar set up beside the gridiron. The score was not recorded.

THOMAS HUDSON CROSS, A MUCH BELOVED CITIZEN OF GADSDEN, ALA.

Mr. ALLEN. Mr. President, in these days when so many people and groups are petitioning the Federal Government to help them carry out ideas for personal success, I get a lift from reading of someone who reaches success by his own abilities, his own acumen, his own drive and personality and willingness to work.

Such a story has just come to my attention, and I am happy to report that it has happened and is happening in my own hometown, Gadsden, Ala., and to a longtime friend from our boyhood days and a public school classmate, Mr. Thomas Hudson Cross. This story, entitled "No One A Stranger, All Are Fed Well—To Thomas H. Cross," was written by David Royal, staff writer for the Gadsden Times, and appeared in the Sunday, April 3, edition of that fine newspaper.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Gadsden Times, Apr. 3, 1977]

NO ONE A STRANGER, ALL ARE FED WELL—TO THOMAS H. CROSS

(By David Royal)

What would you do if you had more mouths to feed and strangers knocking at your door than you could shake a stick at, or would dare to?

If you were Thomas H. Cross, vice president and director of sales at the Downtown Motor Inn, you'd be on the phone calling or visiting all parts of the Southeast to bring them some company.

And you'd be good at it, too . . . carefully laying the groundwork to make those folks interested in visiting, happy when they get here, and leaving with a want to come back.

Tom, as most folks call him, returned to his native Gadsden, where he graduated from high school with Sen. Jim Allen, when his company assumed control of the then Rich Hotel in 1970.

"Back then, there were three or four conventions a year that were being hosted," Cross recalls. "We decided we wanted to have that business and went after it."

Cross, affable, with a personality that endears him to an acquaintance almost immediately, cites two reasons for the increase in number of conventions.

"We try to please. That means from the chef, his staff, to those who serve food and carry out the arrangements. We all work as a team," Cross said.

Cross said a second factor has been the efforts of local civic groups, the Chamber of Commerce, the Mayor, and city and county commissioners.

"After all, our local people must want the convention here for us to be successful," he added.

As a result of those efforts, he said, the inn now has 30 different groups booked for conventions this year—some of them repeaters from past years.

"We have come of age in conventions," Cross said.

That's not just good news for the Downtown Motor Inn, he pointed out.

"About $50 a day, according to figures compiled by the Chamber of Commerce, is spent by hotel guests on gifts and clothes—things that are purchased in town," Cross said.

"About $30 is spent at the hotel also, and that means a total of about $75 to $80 spent each day by an average of 250 attending the conventions for a two-day visit," he said.

Added to the convention visitors are local groups that meet weekly and monthly.

The weekly average in number of visitors is about 275, Cross estimated, with about 500 in once-a-month meetings.

Those, plus the normal amount of transients, brings through the hotel doors a lot of people to entertain.

But the public relations man par excellence isn't intimidated. He has a lot of experience to draw on since his school days at Vanderbilt and Northwest University.

He has been employed at Swift and Company in their sales promotional department, based in Memphis, Tenn., employed at Pioneer Life Insurance Company, and later the Life Insurance Company of Alabama, which he is currently with.

Cross is married to the former Lola Ralls,

daughter of Dr. and Mrs. A. W. Ralls of Gadsden. He hints he and his wife have 17 children, but then he readily admits many are his children's mates and his grandchildren.

"We Crosses have no in-laws," he explained with tongue in cheek.

The Crosses, or at least Tom, have never met a stranger, either.

"I enjoy working with people, and that's what it takes. Here at the Downtown Motor Inn, it's akin to grand central station because of the different people—from civic club meetings to wedding receptions.

"There are sad times—such as meetings of veterans who must take note of those missing from past conventions. But you get a broad look at the funny side of life, and a broad look at the social side.

"You get a kaleidoscopic view of people," he summarized.

MECKLENBURG COUNTY BOARD OF ELECTIONS COMMENTS ON "UNIVERSAL REGISTRATION" PLAN, S. 1072

Mr. HELMS. Mr. President, the President has proposed that this Nation adopt the principle of "universal registration" of voters up to and including election day itself. There has been a great deal of comment on this topic, but mainly it has been by those who are merely expressing hopes or opinions about the American electorate. What is needed is comment from those who have actually dealt with the process of voter registration, and who can speak on the basis of fact.

The Mecklenburg County Board of Elections has recently written to me expressing its views on universal registration. Mecklenburg County, of course, is the most populous county in North Carolina, and the county in which the city of Charlotte is located. The board's views, therefore, are quite pertinent to the problem of registering large numbers of voters quickly and efficiently.

In this letter, the board details the extensive steps which were taken to make voter registration accessible and convenient to the voting-age populace. As a result of intensive and commendable efforts by the board, some 80 percent of the Mecklenburg County voters were registered. Yet only 70 percent actually voted. The board concludes, therefore, that the problem is not one of registration, but of motivation.

I commend the Mecklenburg County Board of Elections for their fine record and the conscientious efforts that they have made in this matter. I especially want to thank them for the fine analysis and comments which they have sent to me, and I am sure that my colleagues will want to study their remarks with care.

Mr. President, I ask unanimous consent that the letter from the Mecklenburg County Board of Elections be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MECKLENBURG COUNTY,
BOARD OF ELECTIONS,
Charlotte, N.C., April 12, 1977.

Hon. JESSE HELMS,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HELMS: The Mecklenburg County Board of Elections respectfully requests that you consider our reasons for opposing the "universal registration" concept offered to Congress by President Carter. We are of the unanimous opinion that this proposal is unnecessary and will present the voters of North Carolina with a contradictory and confusing situation.

We have attempted to provide accessible voter registration for all the citizens of Mecklenburg County through a variety of techniques. For example:

(1) Voter registration in all sixteen public libraries during regular hours (utilizing library personnel).

(2) Mobile City Hall that sets up in a different location each day and provides a long list of services including voter registration.

(3) Town Halls in Davidson, Cornelius, Pineville during regular office hours.

(4) Community Registration Units to respond to specific requests from special interest groups. Units are set up during evenings, weekends, or any reasonable time period requested.

(5) Prior to major elections we also set up Shopping Center Registration to accommodate the large number of citizens who need to register or transfer.

Through these and other methods we have registered over 80% of those eligible within Mecklenburg County. It is our contention, since only 70% of those registered actually voted in the 1976 General Election, that the problem is motivation and education rather than voter registration.

We are greatly concerned about the confusion that will be created on election day by this proposal. We experience many problems now with long lines and misinformed voters, but this new proposal will place additional stress and pressure on those entrusted with the integrity of the election process. We have eliminated fraud and corruption in the election process, but those who would cheat are always ready to try again if the opportunity presents itself. This legislation will create an atmosphere in which the process will be overburdened and all of us will suffer the consequences.

We urge you to oppose the "universal registration" concept and instead urge increased availability of registration opportunities. This is the only way to insure the integrity of the election process and meet the obvious needs of some citizens who find it difficult to register.

During the next few months we will continue our study and correspond with you on specific suggestions to alter or amend this proposal. Please inform us of any area in which we can be of assistance or furnish information on voter registration.

Sincerely yours,

LOUIS D. STUBBS,
Chairman.

WILLIAM B. A. CULP, Jr.,
Executive Secretary.

GOV. HUGH CAREY CALLS FOR PEACE IN NORTHERN IRELAND

Mr. KENNEDY. Mr. President, today in Dublin, Gov. Hugh Carey of New York has delivered an excellent and deeply moving address calling for an end to violence in Northern Ireland and for a new effort toward peace and reconciliation in that troubled land.

In his address, Governor Carey sends a strong signal to both the Protestant and Catholic communities of Northern Ireland. As he states:

The people of the North—both Protestant and Catholic—should know that the vast majority of the Irish American community have no desire to intrude upon any future form of government democratically arrived at.

In addition, Governor Carey expresses the great hope, which I share, that political leaders of the two communities of Northern Ireland will be able to summon the courage to make a fresh start toward ending the violence and destruction and beginning a new political life for Northern Ireland.

In this effort, Governor Carey expresses his readiness to work with other leaders in the Irish American community to see that any request for assistance from persons of peace and justice in Northern Ireland will not go unheeded by Irish Americans in the United States.

I join Governor Carey in this pledge, and I commend him for his leadership in this address and its important message to both the Protestant and Catholic communities in Northern Ireland.

In March of this year, I joined Governor Carey, Senator MOYNIHAN and Speaker O'NEILL in a statement appealing to organizations engaged in violence in Northern Ireland to renounce their campaigns of death and destruction. We also appealed to our fellow Americans to renounce any action that promotes the current violence or provides support or encouragement for organizations engaged in violence.

Mr. President, I was honored to join Governor Carey in that statement last month. I believe his courageous address in Dublin today is an important additional step in the long journey toward a peaceful solution to the conflict in Northern Ireland, and I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF REMARKS BY GOV. HUGH L. CAREY

I am proud and grateful to have been invited here this day to the Royal College of Surgeons to deliver the Harry O'Flanagan lecture. Proud because I am a citizen of the United States, and the first to be so honored. Grateful, because I love this College, the City in which it sits, and the Country of which Dublin is the heart.

The Royal College is a personal place to me. The rooms and the corridors in this building's magnificent and pitted facade and the green place across the street—all bring back the pieces of conversation, the smiles and concerns of the last joyous visit I made here with my wife Helen, before her young death. And this is the place in Ireland that my children and I have chosen to memorialize her, for she loved it so, the people in it and their work.

This is the College that has allowed my colleague and dear friend, Kevin Cahill, to devote so much time, and energy, and affection to its growth. I constantly hear of your deeds and achievements, the successes of your students, their dreams and your dreams for humanity and the science you serve so well. In all of his life, this is Kevin's place.

So I am no stranger in spirit to the Royal College—I am as comfortable in this building and in your presence as I am in the great halls of my own State Capitol across the sea. I am grateful to you all for that, and I shall attempt in the thoughts I express today to be guided and inspired by my deep personal affiliation with this institution.

We have other bonds as well, less distinct but no less strong; that bond of belief that in the healing process lies the greatest potential to show human love, and by so doing confound the voices of hate throughout the world.

As a young man, in the Congress of the United States, my closest friend and mentor was John Fogarty of Rhode Island—a man who created health systems and institutions through his use of the law-making process, a man who was blessed with the ability to bring dreams of adequate health care for all into being through sheer determination and the proper use of political power. Throughout his active life John and I worked together, and the product of our efforts can be seen in our Government's research institutes and programs delivering health care to the needy in both my country and abroad. Over 130 years ago, the first academic post in public health in the English speaking world was created at this very College. The title given the post was "Professorship in Political Medicine," and while I did not have the opportunity to take the course, I can only hope that by my life's work to date, I can be counted as a student in the field—thus furthering the ties I feel to the College of Surgeons.

To return to Ireland is always an experience that is uniquely moving to me as it is to most of my countrymen of Irish descent. Those of you who have lived your lives here must understand and be patient with some of us—for we come back with our heads full of stories and myths acquired at the kitchen tables of our youth. We know the poems, the songs, the heroes of old. We know the sacrifices, the valor, the counties, by heart. Those of us who are Roman Catholic were taught by the priest and nuns that you sent. And we have family and civic traditions that reinforce all of these things—no matter how distorted by time, no matter how far from reality. For we live in a country that is young, transient and quiet impersonal—little wonder that we hope to find an Ireland that conforms to our view of what is stable and traditional in life.

But there is no such Ireland of story and song. The Ireland I see and know is a mature and growing nation, a land no different than other western countries struggling with the burdens of its past, straining to emerge into its promising future, and questioning the rules established by still cherished institutions. And I find Ireland as vibrant in that activity as I did in the tales of its past.

Even one, however, who understands the difference between fable and fact is moved upon return to this country—for no matter how far removed by distance in space or time, the bond remains. When Ireland progresses, we share in her joy, when Ireland is suffering we suffer, and as a people there is the tie of common traits and quite similar emotional responses to the problems of life. When thinking of my own grandparents, I often reflect that I do not owe them so much that they came to America, but that they were born in this place—allowing me to be a part of that segment of the human family called Irish.

Yet on my trip here for this occasion, I know I owe them more—whatever courage they displayed in uprooting their lives and moving to an often hostile country, calls upon me to speak with candor, not only here, but in my own beloved city and State, on the questions that currently surround Ireland.

For me, a government leader, to be worthy of them and of you, I must follow my conscience. Therefore, I cannot stand here today and utter polite, meaningless words while children die in violence on this very soil.

I am here to fulfill my moral responsibility, my genetic commitment to the country to which I owe my tongue and my laugh and my tears, the country which I love very much.

I am not here as an outsider to interfere. I am here as the Governor of a State of the United States, a State of 18 million people, with a city of eight million people, a place containing more Irish than there are in all of Ireland.

And it is a State, New York, which always embraced the great Irish leaders when they came to us for strength and refuge and support.

Wolfe Tone came to our City.

As did O'Donovan Rossa and Davis and Devoy and Parnell. And James Connolly and DeValera. And Patrick McCarten, a graduate of this college, who combined the worlds of medicine and politics at a critical juncture in your history.

They came to America, to the City that is the womb of my country, my City of New York.

I stand here as a political leader in the United States well aware of the torment in the North, well aware of the fact that children—both Catholic and Protestant—are called upon to die in Northern Ireland by those who debate and actively deal in the politics of death.

To be in a school of medicine and to speak of death as a political instrument may seem incongruous. To ask those who have contracted for a lifetime of work for life to listen to a man speak out against death seems hardly a proper request. But those fascinated by death as a political weapon are surely as sick as people can be, and I have a history of looking to people of medicine for their abilities to be employed far beyond their chosen careers. The fact that this college holds the distinction of being the most international medical school in the Western world, with students from over 35 newly independent and developing countries, bears out the point that in medicine and its development, lies so much of our hope for future peace in this world. So I will speak to death—and its brother violence—only to condemn it in my own land and yours.

One cannot have been in American political life since 1960 and not be a student of this subject. For myself, I was drawn to public life by the candidacy of John F. Kennedy. I worked long and hard for his success in achieving office. What sickness killed him, but the disease of another man's mind? His brother, Robert, was my political leader, friend and indeed my neighbor. What disease did he die of but that contracted by a man who thought he had a cause—a holy cause stretching back to the religious differences of the Middle East? I knew Martin Luther King and was inspired by his total commitment to non-violence and love among people who seek change through the political process. He died from fear and hate, from those who see no future if the past must submit to change. To men of medicine, I submit these are diseases and no less cancerous than those described in your texts.

And during the sixties my nation went to war. We attempted and we succeeded, at killing people who would not respond to our vision of an orderly and balanced world. It was a national disease spread by jingoism, a disease not treated because of apathy or the fear of speaking out. My children were raised in the presence of nightly news broadcasts that always began with the day's body-count in Southeast Asia. And in this setting, all protest tended to violence, for whatever the cause; all protest became more righteous than men could bear—and campuses closed, and some of our cities were put on fire, and people died.

To what end? To what end did all of the violence and all of the deaths bring us. At the violent death of our President, commentators said that perhaps some good would flow for America—not so, we went on to war. When Martin Luther King died, it was hoped that the cause of civil rights would advance—not so, we still await the day for true equality for all races in America. When my friend Robert Kennedy died, we were told that American Presidential politics would forever be different—not so, for in his absence we had a Watergate and the first Presidential resignation in our history. And in the wake of Vietnam, that war filled with political but devoid of moral purpose, we have only a populace more distrustful of governmental acts abroad regardless of merit.

To what end then do the apostles of death and violence lead us? To no end, I say, worthy of human consideration. Is the assassin the best hope for positive political change? Is the bomber to be trusted to end economic or religious persecution? Is it human rights that flows from the barrel of a gun? Just what is this mad fascination with killing and maiming and burning?

This activity is, I would suggest, the politics of death. The politics of death that allows gains to be made in the short run by those who call for it, who revel in it, who can easily judge others by their adherence to its use. It is my belief that whatever gains there are for those so stricken with this disease, it is only because our own fear or apathy allows them their moment, not in the sun, but in the mania of fearful night. The criminal who kills for lust or money is frightening enough, but the political act of killing is a reflection of the deepest and darkest tendencies in mankind. And the slightest indication that it is condoned by any member of any society is the encouragement upon which that tendency feeds. No matter how strong the argument to differentiate the cause, no matter what the history of the dispute, no matter how deep the frustrations that give rise to the act, the political pillar is to be condemned. For literally thousands of years the best in mankind have sought to repress this darkest side of human behavior to little avail, and this rough beast, this politics of death, each time feeling "its hour come round at last, slouches toward Bethlehem to be born."

Is this to say that on no occasion may men of good will arm themselves, defend themselves and resort to force? Of course it is not, and to answer otherwise is to deny our own sophistication to detect a true peril to human life from one concocted in the sick and selfish interests of a few. I have no desire now to enter into a discourse on the "just war" or the ability of people to defend their lives and loved ones. I have been involved in war, I have been decorated in war, I have buried my friends in war—including my brothers from Britian, Ireland and Canada. I believe I know war and when its horror can be justified in a man's heart. Suffice it to say therefore that I believe most conflicts that arise in the human experience lend themselves to the politics of accommodation, compromise and ultimate peaceful settlement. Those that do not are readily apparent to the vast majority of informed opinion and call for different acts. But all of this is different from those who play at death, who always call upon violence in the first instance, and who seeek to enhance themselves by these means in a society that has otherwise denied them respect and status. They, to me, are the leaders in the politics of death. They, to me, are the most reprehensible—and they must be stopped.

I dwell upon my experiences from the United States because I am somewhat reluctant to speak as an expert on the dif-

ficulties in the North of Ireland. I have studied the problem, I know of the history, I have been to Belfast, and I have friends with strong opinions. Yet none of this makes me expert in the affairs of Ireland, except on the broadest philosophic level. I would appreciate the moment, however, to express some views that are strongly held.

On March 17th of this year, I signed a public statement along with Thomas P. O'Neill, Speaker of the House of Representatives, Senator Edward M. Kennedy of Massachusetts and Senator Daniel Patrick Moynihan of New York. This is the first time in my memory in the United States that four elected officials at the State and Federal level have joined in a call for peace and reconciliation in Northern Ireland. The response to that statement was favorable among Americans of Irish descent. From all across the country, from every walk of life, I heard not only sentiments of concurrence, but received statements of active support for the stand that we took. Naturally, there were some letters of rebuke, threats of reprisals, and even the interruption of a public meeting that I was conducting. I have not responded to those communications, for I have determined that those who approve of violence and death will never, God willing, approve of me.

I recount this only to make the point that I am convinced that in the United States there is an overwhelming sentiment among Irish citizens that the havoc wrecked by the violence on both sides in the North must cease. There is a recognition that to whatever extent violations of human rights continue to exist, to whatever extent crass economic discrimination prevails, to whatever extent denial of political involvement is prevalent, no further death will right the wrongs. There are no bombs nor guns available to mankind that will cause the creation of the new political institutions that are needed for a peace and a future in the North. There has been enough bleeding by far, and too many children's lives destroyed or warped to be eager for any more.

Those, in the United States, who really love Ireland, love all of it, all of the people who live there, and only hope for its well being and the well being of its future generations. The people of the North—both Protestant and Catholic—should know that the vast majority of the Irish American community have no desire to intrude upon any future form of government democratically arrived at. We have full faith in the people of goodwill on both sides to create their own institutions and laws in the making of an equitable society. And the people of the North should know, as all people in Ireland should know, that we are sickened by the violence, the waste and the wrecking of human lives in a land, and on an island, that we all hold dear in our hearts.

We have no simple solutions to offer. We Americans now know the danger of that. We have hopes, however, that I must express as a friend who is mindful that he is a guest in your land.

Our hope for the North is not based on the quick or easy answer that lends itself to the slogan. For we know of the centuries of distrust between the two traditions there, we know that many minds are frozen shut to the ordinary acts of compromise by which brothers usually settle their political differences. Our hope is that among the leaders of the Protestant community and among the Catholic leaders there will arise—in the best Irish tradition—those with the moral courage to make the first moves to end death and start a new political life. And we hope such people will be actively encouraged by the rest of Ireland and her leading voices of Church and State. In this hope I pledge that those men and women of both traditions who seek to find the way, who seek to create the new political institutions that will guide and govern the North of the future, will receive whatever assistance they should ask from the American Irish community.

If our goodwill and voice of support is enough—those with the courage to compromise have it now If support is needed in organized world forums, those committed to the end of death in the North need only ask—and they will have it. If any peaceful material resource would be of assistance, or any direct moral or political suasion would assist—we pledge ourselves to it. This is my pledge—my personal pledge—that I will bend every effort in dealing with other leaders in American life to see that any request of assistance from men of peace and justice in the North will ever go unheeded. It is our view that the day is gone when those on either side who call for "ourselves alone" will be listened to—for now we in America hear the new voices, we are taken with the men of new courage—men of worth who say "Without brotherhood we will have only soil. Without brotherhood, that Irish soil will form only our common Irish grave".

And for all of the people of this land we have our hopes. We hope for an Ireland that successfully seeks her economic future in the European community, an Ireland of growth and prosperity that finds her rightful industrial and technological place in the Western world of the future. Not simply the Ireland of the past that gave to the world by sending her sons and daughters to teach, heal and labor—but an Ireland that now receives, keeping her gifted children at home and welcoming those who wish to come to her and participate in the new day.

Finally, in keeping with this future, we hope for an Ireland that is sensitive to the demands of the new age. The moderation of tradition is hard and we all seek change that does the least harm to the long held values of the past. Too slow has been the emergence of women in America as an equal partner in all social economic activities, but great and inspiring has been the result.

But ultimately in my own land we have discovered that all human hope is in the mind of the child. While a painful process in the United States, we have fought to see the races educated in unison, we have fought against chaining the child to the wall of our own prejudices, be they religious, racial or regional. We believe our future demands no less and we are committed to it. We hope for the same here.

And so it is that while the Ireland of yore is in my heart, the Ireland of today and tomorrow is on my mind and lips. Between that past and this future, however, there is the dark creature of unreasoned hate and violence, of misguided righteousness and fear—that plague, that from time to time affects all mankind but in the modern Western world is peculiar to the land of my family.

I pray for its removal, I speak to men of medicine to help seek its cure, I shall work and dedicate myself to those who pledge to speak against it. As a politician, I shall fight against the politics of death so that the people I love will live, finally freed of the curse of past religious differences that the true Christ had no hand in making.

I come from across the sea to the home of my forebears and hold out one single human hand to the others gathered here who hate death. And I ask that I be permitted to join in the true humane effort of our time. I want to be a part of that attempt, in the sentiment of Yeats, in calling down the hawk from the air, and hooding or caging him until his yellow eye has grown mild.

AUTOGENOCIDE IN CAMBODIA

Mr. CHURCH. Mr. President, one of the most important developments in American foreign policy is the renewed interest in the subject of international human rights. I have found this reassertion of the moral dimension in our relations with other nations heartening, for surely we drifted away from our basic values in the years following the Second World War.

But our enhanced awareness of human rights has been uneven. As Columnist Anthony Lewis writes about Cambodia in his New York Times editorial of March 21, 1977, entitled "Where Terror is King":

> Those of us in the West who are particularly concerned about human rights may naturally incline to exert influence where it may have an effect: in countries sensitive to our criticism or dependent on relations with us. But utility cannot be the only standard in these matters.

We cannot ignore the appalling disregard for human life in Cambodia. If they have not yet done so, I urge my colleagues to read Mr. Lewis' editorial an autogenocide in Cambodia. The outrage of world public opinion must be focused on these practitioners of mass murder.

Mr. President, I ask unanimous consent that the editorial on Cambodia be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE TERROR IS KING

(By Anthony Lewis)

BOSTON, March 20.—Communist Vietnam and Laos welcomed President Carter's commission on Americans missing in Indochina, but the Government of Cambodia would not allow a visit. It was a decision to be expected from "the most tightly locked up country in the world, where the bloodiest revolution in history is now taking place."

That description of Cambodia today comes from an article by Jean Lacouture in the March 31 issue of the New York Review of Books. It is an article whose painful honesty lends ghastly conviction to its terrible conclusions.

"Genocide," Lacouture writes, "usually has been carried out against a foreign population or an internal minority. The new masters of Phnom Penh have invented something original—auto-genocide. After Auschwitz and the Gulag, we might have thought this century had produced the ultimate horror, but we are now seeing the suicide of a people in the name of revolution; worse; in the name of socialism. . . .

"A group of modern intellectuals, formed by Western thought, primarily Marxist thought, claim to seek to return to a rustic Golden Age, to an ideal rural and national civilization. And proclaiming these ideals, they are systematically massacring, isolating and starving city and village populations whose crime was to have been born when they were."

There have been many reports of mass killing and brutality in Cambodia since the Khmer Rouge took over in April, 1975. A book on the subject, "Murder of a Gentle Land" by John Barron and Anthony Paul, was condensed in the February Reader's Digest.

The smell of horror was too strong to be ignored by any fair-minded person, and it

has not been ignored. But in this country, and the West generally, there has been less outcry about the savagery in Cambodia than its dimensions might have suggested. Why?

The reports from a sealed country were necessarily second-hand—largely from refugees—and may have seemed exaggerated. Americans generally were weary of everything about Indochina. And those of us who had been critics of the war may have felt skeptical about some of the Cambodian reports because they came from right-wing quarters that had been indifferent to the misery inflicted on Cambodia by American bombers. When Henry Kissinger cries for Cambodia, there is reason for skepticism.

But those explanations wither in the presence of Jean Lacouture. He is a leading French expert on Indochina. And he was a profound critic of the American war. He has no reason of ideology or ignorance to exaggerate the crimes committed by the Khmer Rouge.

Lacouture's article is in form a review of "Cambodge, année zero," a book just published in Paris. It is by François Ponchaud, a priest who was in Cambodia for 10 years, until three weeks after the Khmer Rouge took Phnom Penh—an informed and sympathetic witness.

Among other things, Ponchaud quotes from orders by the revolutionary government itself. Texts it distributed to local officials, he says, urged them to "cut down" corrupt elites and "carriers of germs," including "their offspring until the last one." Lacouture comments: "The strategy of Herod."

Cambodia may have lost as many as 1 million to 7 million people in the war. Some have estimated, on the basis of both refugee accounts and statements by Khmer Rouge leaders themselves, that another 1 million have been killed since. Lacouture sees that scale of killing when he asks: "What Oriental despot or medieval inquisitors ever boasted of having eliminated . . . one-quarter of their own population?"

American policy helped bring disaster on Cambodia, and Lacouture knows it. Today's reality, he says, should shame "those in the Nixon Administration who bombed and laid waste Cambodia, undermining Sihanouk's regime, and refused to pursue negotiations with him in Peking, making an unmitigated Khmer Rouge victory all the more likely." But he rightly sees that as no reason for silence about Cambodia today.

It is true also that there is not much hope of affecting the Cambodian Government. Among the world's tyrannies, it may be the least likely to be moved by outside protest. Those of us in the West who are particularly concerned about human rights may naturally incline to exert influence where it may have an effect: in countries sensitive to our criticism or dependent on relations with us. But utility cannot be the only standard in these matters.

To remain silent in the face of barbarism as enormous as Cambodia's would be to compromise our own humanity. It would be to say that hundreds of thousands of Cambodians do not count in the human scale. It would be to repeat the West's corrupting mistake in 1972 of ignoring tribal genocide in Burundi. In today's world, we ignore mass murder anywhere at our own peril.

JUDGE MILTON B. CONFORD: A DESERVED TRIBUTE

Mr. WILLIAMS. Mr. President, recently there appeared in the Star Ledger of Newark, N.J., an editorial honoring Judge Milton B. Conford who served as a member of the New Jersey Supreme Court on an acting basis while at the same time he continued to serve in his permanent role as presiding judge for administration of the appellate division of the supreme court.

The editorial most eloquently reflects the outstanding service of Judge Conford on our State's highest court. However, the praise could be equally applicable to Judge Conford's entire career which is a truly distinguished one. He is a man of great legal ability, unimpeachable integrity, and genuine human understanding.

I am proud to know him and, even more, proud and happy that New Jersey has persons of this caliber in our courts.

Mr. President, I ask unanimous consent that the full text of the Star Ledger editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FITTING TRIBUTE

The "permanent" acting justice of the New Jersey Supreme Court has served his final official working day on that tribunal, an emergency assignment that was filled in an effective, conscientious manner by Milton B. Conford, the senior judge in the state appeals court.

For the first time in almost two years, the vacancy on the state's highest court will be occupied on a permanent basis by Alan B. Handler, who was sworn in this week as a justice.

The Supreme Court is now at full strength, but it was evident in the unusually protracted period in which it operated with a temporary member that the court did not suffer any debility in performance or fall-off in quality.

It represents a mark of the professional competence of Judge Conford, a thoroughly experienced jurist (he has been on the state bench for 22 years) who is highly regarded as a legal craftsman with a capacity to deal with intricate, complicated issues.

Judge Conford's dual service as a member of the Supreme Court and as presiding judge for administration of the Appellate Division was duly noted by Chief Justice Richard J. Hughes, who commended him for his "faithful, industrious and able service."

It should be noted, too, that Mr. Hughes discussed his commendatory evaluation with his colleagues and they agreed there was "no possible dissenting opinion," a rare concurrence for the high court, but one no doubt fully justified.

A PLEDGE ON AGING HONORED BY ROSALYNN CARTER

Mr. CHURCH. Mr. President, last September at a meeting of the National Council on the Aging in Chicago, it was my good fortune to be present when Rosalynn Carter addressed a large crowd.

She spoke directly from personal experience about her concern for older Americans. As first lady of Georgia she had known of people in need and programs designed to meet such need—programs which did only part of the job that had to be done. She spoke, too, of elderly individuals she met along the campaign trail, many of them fighting desperate daily battles with the cost of living.

And she pledged that she would not forget aging if candidate Carter were to become President Carter.

On Monday of this week, again before the NCOA, Rosalynn Carter let another audience know that her pledge was not made lightly.

She announced plans for a White House meeting with national organizations and individuals on May 10. She said she would help develop new means for exchanging information about aging. She also expressed her obvious personal concern about problems of older Americans described in many of the 3,000 or so letters she receives every week.

Mrs. Carter spoke movingly about persons who wrote to tell her of their struggle to stay warm during the winter, of an elderly homeowner who pays one-third of his income on property tax, of a 76-year-old widow who finds that her prescription drug costs are terribly high and of a New Hampshire woman who would like to see group living by older persons on farms now so often abandoned in that State.

All in all, Mrs. Carter gave a very welcome and timely assurance that problems and progress in aging would be noticed directly in the White House. Her leadership is indeed welcome to the Senate Committee on Aging and, I think, to everyone who cares about the overall strength of the American family, including its grandparents and great-grandparents.

Mr. President, the New York Times and the Washington Post have provided useful summaries of the First Lady's comments in stories appearing on April 19, and I ask unanimous consent to have them printed in the RECORD at the conclusion of these remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. CHURCH. Mr. President, I would also like to note that Mrs. Carter's talk was preceded by another significant address which certainly bore a direct relationship to the theme of the NCOA's 27th annual conference: "Aging-77: A Time for Setting New Goals."

Arabella Martinez, Assistant Secretary for Human Development at the Department of Health, Education, and Welfare, called for a national policy on social services which would address the needs of whole persons to replace the present situation in which private and public efforts so often meet only pieces of need distorted to fit program categories.

She explained that the Administration on Aging within her Office of Human Development will closely monitor an elaborate network of area agenices on aging in terms of direct impact upon the well-being of older Americans. She also called for greater involvement of older persons themselves in decisionmaking for the programs meant to serve them.

Mrs. Martinez noted that there is much talk about zero-based budgeting, but she also asked for "zero-based thinking" in the development of a comprehensive service policy for older persons. Her talk was a refreshing and informative survey of the current scene, together with chal-

lenging concepts for future change. I believe that the Congress will welcome the opportunity to work with her in innovative efforts to bring people and programs together.

EXHIBIT 1

[From the New York Times, Apr. 19, 1977]

MRS. CARTER PLANS WHITE HOUSE CONFERENCE ON AGING

(By Nancy Hicks)

WASHINGTON, April 18.—Rosalyn Carter said today she would be the host at a White House conference on aging next month to help "personally spotlight" the problems of old people in America.

The May 10 meeting will be a roundtable discussion involving experts in the field and groups representing the elderly. Mrs. Carter said she hoped the meeting would help her find answers to problems such as forced retirement and high health care costs outlined in the 3,000 letters a week her husband received from older citizens and their families. "I am determined that the White House will be a place where people can turn for help," she told the opening meeting of the National Council on Aging, a group of professional workers.

"I have searched for a way I could be helping personally spotlight and call attention to problems," she added. "There are many programs already, but the problem is that they don't reach the people they are supposed to reach."

SPECIAL TOURS PLANNED

As a gesture she said she was working on a plan that would allow older people to take White House tours without having to wait in the long lines that form each day.

But there are far more serious problems, she said, citing the case of a California man who wrote the President to complain that his property taxes had risen by one-third this year and that it would take five of his $221 a month Social Security checks—his sole source of support—just to pay them.

Last week, the Senate Special Committee on Aging issued its annual report which showed that poverty among the elderly was rising steadily. Some 3.3 million of the 22 million Americans over 65 are living below the poverty line.

"The likelihood of being poor among elderly blacks is almost three times as great as for aged white," the report said. "Nearly three out of every eight older blacks were impoverished in 1975. And over half of all blacks 65 or older lived in poverty or near poverty."

LOW FIXED INCOMES CITED

"Inadequate income in retirement is the number one problem affecting older Americans" according to the report. It called for a general increase and a cost-of-living escalator in the Supplement Security Income program, which is the basic support for the elderly poor.

Low fixed incomes make old poor people much more susceptible to economic hardships such as the increased cost of home heating fuel, according to the report.

Home fuel expenses for the elderly rose almost 40 percent for the nation as a whole and almost half again as much for those living in the Northeast. Old people were paying as much as 30 percent of their income for fuel, according to the committee chairman, Frank Church, Democrat of Idaho.

Problems such as these are magnified as the number of older Americans increases, the report noted. By 1980, 25 million people are expected to be 65 or older, and the number will continue to rise into the next century, through the life cycle of the post World War II baby boom.

[From the Washington Post, Apr. 19, 1977]

LAUNCHES CAMPAIGN TO AID ELDERLY, MENTALLY DISABLED—MRS. CARTER BEGINS FULFILLING HER PLEDGE

(By Donnie Radcliffe)

Armed with the influence of her husband's position and a determination that the White House will be "a place that people can turn to for help," Rosalynn Carter set out yesterday to focus attention on two fields of particular concern to her—the elderly and the mentally disabled—and the problems unique to each.

It was her first major move toward keeping some campaign promises of her own.

In a mid-morning address to 1,100 delegates to the 27th Annual Conference of the National Council on Aging, the First Lady announced a May 10 "roundtable discussion" on the aging at the White House, which she called "a first step" in her campaign pledge "to help personally."

Reading excerpts from four of the 3,000 letters she receives weekly on such subjects, she said their elderly authors represented old people everywhere who "struggle to stay warm, have decent clothes, decent food to eat, try to pay their bills and not be a burden to anybody."

She told of inviting representatives and experts from 17 lay and professional groups "to discuss the problems and also to seek solutions. I know there are many programs already for the elderly but the concern I have is that these programs do not reach the people they are supposed to reach."

She said she will seek greater coordination through "an agenda for channeling information about valid programs. I am determined that the White House will be a place that people can turn to for help. I am determined that the White House will be open and available for help."

Later, at the Department of Health, Education and Welfare, she participated in a meeting of the President's Committee on Mental Retardation, exhorting its 25 members to provide specific recommendations that could provide a basis for legislation her husband may propose.

She wanted recommendations on how to help families of the mentally retarded through programs similar to those offered families of alcoholics. She called for suggestions on training professionals to work with those families, ways to dispel the stigma of retardation and illness, and ideas on educating the public to "understanding and acceptance."

She had a word of advice, while she was at it. Knowing from experience that "if you give Jimmy specific, brief, understandable recommendations," the likelihood of results was better than if he is presented "reams" of text.

She wanted some answers herself, she indicated during presentations by heads of the committee's seven task forces.

"It distresses me to see funds cut," she told Dr. Cecil B. Jacobson, head of research and prevention. "I don't think we had enough in the first place."

"I don't think that's the major problem," Jacobson replied. "I think the major problem is in applying what we already know."

Eunice Kennedy Shriver, a special guest at the session, said later that Rosalynn Carter had made "a good point but she didn't get a very good answer. In fact, less than $2 million goes into research on prematurity . . . Research and reproductive biology are important for prevention (of mental retardation) but nobody is really very interested."

HEW Secretary Joseph A. Califano Jr., however, was hopeful that "the next few years are going to mean to the handicapped and retarded some turmoil but the kind of progress the blacks made in 1960."

As for Rosalynn Carter, Califano, who is automatically chairman of the committee, which was established in 1966, was equally optimistic.

"It may be the best thing that's happened in this area isn't the direct election of Jimmy Carter," he said, "but the indirect election of Rosalynn Carter."

STAFF ECONOMIC ANALYSIS

Mr. MUSKIE. Mr. President, the Senate Budget Committee met this morning to reassess the status of the third budget resolution for fiscal year 1977 and the first budget resolution for fiscal year 1978. We undertook this reassessment as a result of the recent decision of the administration to withdraw its support for its original proposal for the $50 rebate and business tax credits, the actions of the Senate on the pending tax bill now under consideration, and the appearance of new economic information in recent weeks. These recent actions pose severe problems for both the maintenance of a steady congressional fiscal policy and for the future of the congressional budget processes.

The committee decided that it required more information before it could reach an informed and responsible decision on the desired revision, if any, of either of the two budget resolutions. We decided we needed more information from the administration on the economic circumstances which led to its abrupt reversal policy, since it did not see fit to discuss the matter with the Congress before hand. We decided we needed new information on estimated budgetary authority outlays and receipts, especially in light of recent statements that the budget deficit for fiscal year 1977 might be as much as $23 billion lower than that projected in the administration's original budget revisions.

We were assisted in our deliberations this morning by an analysis of the present economic situation and recent economic data by the economists from our staff. Both majority and minority staff economists indicated that, in their judgment, the current state of the economy and the economic information which has appeared during the first quarter of 1977 would not, in themselves, justify the change in fiscal policy which has been proposed.

Because much of the information on which this economic analysis was based has appeared very recently, and because the Members of the Senate are presently considering tax legislation which affects fiscal policy for both fiscal year 1977 and 1978, I ask unanimous consent that the economic analysis presented by the staff economists of the Budget Committee be printed in the RECORD so that it will be available for consideration by Members.

There being no objection, the staff analysis was ordered to be printed in the RECORD, as follows:

STAFF ANALYSIS

Chairman MUSKIE. Is this the proper time to get your total economic evaluation at this point before we hear the rest of it?

Senator MCCLURE. Well, was the administration right ten days ago or were they right four days ago?

Chairman MUSKIE. I am sure those are the questions Van has prepared to address himself to.

Mr. OOMS. Thank you, Mr. Chairman. I am going to argue that the recent economic data does not support the kind of change which we have seen. Before doing that, however, I would like to make three very brief remarks with respect to the fact that I think the change was inappropriate even if the economic data for this brief period did suggest a very clear strengthening for this brief period.

I still think the change would have been inappropriate. I would like to indicate why that is so. The first, Senator McClure has already said very eloquently and I simply want to underline, you should not try and fine-tune the economy on the basis of a month's or even a quarter's worth of data. I think economists learned through the 1960's and early 1970's, and in a painful way, not to try to promise too much with respect to the ability of the economic policy to fine-tune the economy.

I think most economists now recognize that we simply do not know enough to try to adjust policies on a short-term basis in that way. Therefore, even if the first quarter did unambiguously show strengthening of the economy, fundamentally and over a longer term basis, which I don't think it did, I still think the policy would be inappropriate. I simply want to underline as many times as possible what Senator McClure said in this respect.

The second reason why I think it would have been inappropriate is that it is quite unclear to me what the administration means when it argues that the stimulus which it previously had argued was necessary is now "unnecessary." The only economic interpretation I could put on that remark would be that—that is to say, the only interpretation I could put on it with the unemployment rate still at 7.3 percent, is that the likelihood of inflation was increased or that there would be crowding out, that there would be some other unfortunate economic effects that would result from that.

The administration itself has indicated that it does not think the rebate was inflationary. So it is simply unclear to me, with about 7 million Americans out of work, what it means to say a stimulus proposal is not necessary. Put slightly differently, when we marked up the First Concurrent Resolution for fiscal 1978, we pointed out that the administration forecast, we thought, was slightly optimistic with respect to the amount of growth that they would get out of their budget and out of the stimulus package. But we said there was a possibility that they would get it because the economy might, as their forecast suggested, be somewhat stronger, stronger than we expected on a conservative basis that it would be.

We applauded that and we said that that is fine. If that is what results, that is well and good. That will create more employment.

Suddenly we have a situation in which the administration interprets the evidence as showing some strengthening is taking place and they turn around and they change the policy, the very policy they were hoping would produce that kind of strength. It simply doesn't make sense to me.

The third point I would like to make, which was dramatized in a headline in the Washington Post on Wednesday, which read, "U.S. Plan to Bolster Worldwide Economy Quietly Laid Aside," is that we are not simply engaged in an attempt to fine-tune the American economy. However inappropriate that would be, we were giving very clear signals to our trading partners and to the rest of the world of the determination of the administration in this country to undertake a worldwide leadership role with respect to reflation; not only that, we were leaning rather hard on some of our trading partners to get them to follow along in that direction.

Suddenly we turn around. But we cannot expect them, if we change signals on them in that way, to believe in the credibility of our steady fiscal policy. So there are international implications of this, some of which this committee addressed in hearings in January, which are very important.

We have only begun, I think, to understand what some of the implications of those are.

Chairman MUSKIE. Are you prepared to more explicitly discuss your view of what lies ahead for the economy?

Mr. OOMS. Yes, sir, and I would like to do that by remarking, first, on what I think the recent economic data in fact, mean.

As I said, I don't believe that what the data we have for the first quarter clearly indicate a stronger economy in any sort of permanent sense of that term, which would have important implications for 1977 and 1978.

There has been a lot of attention given to the fact that we were expecting a relatively low growth rate in the first quarter, for perhaps 3 percent revised upwards to 4 percent in real terms, and it suddenly came in at 5.2 percent. One would have thought all of our economic goals had been reached given the amount of attention given to that number.

The main thing to note about that number is that although it does represent a somewhat higher rate of GNP growth than we were expecting, final sales—that is to say, the sales that reflect the underlying strength of final demand in the economy—apart from inventory accumulation, in fact, fell from 5.7 percent rate of growth in the fourth quarter to 3.9 percent rate of growth in the first quarter.

Now, what that means is that you should not look just at single quarter growth rates because the changes in inventory accumulation tend to dominate the total growth rate of GNP. It means that inventory growth lopped 3 percent off the fourth quarter and added back a point to the growth rate in the first quarter.

This was true even though the rate of accumulation of inventories in the first quarter was only 60 percent of the 1976 average; in real 1972 dollars the inventory accumulation was $4.9 billion, where the 1976 average was $8.1 billion.

What does this mean? Well, I can summarize it perhaps in the easiest way by saying that it means that the fourth quarter was so bad that you had to look good in the first quarter. You could look good in the first quarter even by having a very moderate rate of inventory accumulation because it was zero in the fourth quarter. That is really what we are seeing in these numbers.

To underline that, I would like to look briefly at a couple of the components of it. We heard a lot about retail sales and how strong they were and how the administration had to change its policy because of the strength in retail sales.

Senator MCCLURE. Wouldn't it be fair to say that the fourth quarter looked so bad because the second and third quarters looked so good relatively?

Mr. OOMS. Well, the slowdown tended to take place for GNP as a whole over a good part of the year. Really the first quarter was the only strong quarter as to the GNP growth.

Senator MCCLURE. All right.

Mr. OOMS. As I said, we heard a lot about the administration changing its policy on the basis of retail sales. Consumption growth at 6.2 percent in real terms in the first quarter was again down from 7.6 in the fourth quarter. This was so in spite of the fact that the savings rate fell to 5.0 percent.

Now 5.0 percent savings rate is extremely low by recent historical experience. It means that it is very likely that consumption is not going to expand rapidly over the next couple of quarters because the savings rate is almost surely going to go back up. So there is nothing in the retail sales figures and the consumption figures that suggest that dramatic strengthening of the economy.

What we were seeing was a rebound from the very bad month of January and the effects thereof. If you look at the investment sector, take housing first of all. Now it is true there was a dramatic rebound in March in the housing start numbers and we saw thousands, but if you take the first quarter as a whole, housing starts were almost identical with the fourth quarter. There was no discernible difference between the two.

Again we ought to look at broader numbers. As Senator McClure said, you were trying to indicate that policy should be made on the basis of one month's set of numbers today.

If you look at expenditure on residential construction, its growth was lower in real terms in the first quarter than in the fourth quarter.

If we look at business investment, it is true that the rate of business investment growth was up in the first quarter over a very bad fourth quarter. However, again if you take the two quarters as a whole, you come out with a 7.5 percent real growth rate, which is not an investment boom by any stretch of the imagination.

Yesterday it was announced that nondefense capital goods orders in March fell for the second consecutive month, which is an indicator of relatively weak investment—what we can expect from the investment side. So the investment boom is still light at the end of the tunnel as far as I am concerned.

I don't see the clear indications that it is about to come off.

Real exports fell again in the first quarter after declining in the fourth quarter. Those are the fundamental underlying components of GNP.

Now, what does this really mean? What it means is if you take the last two quarters as a whole, GNP grew at 3.9 percent on the average. Final sales grew at 4.8 percent. Both of those numbers are well under the target of a 5½ to 6 percent real growth rate which this committee addressed in the Third Concurrent Resolution for fiscal '77.

I find nothing in those numbers that indicates that a change in fiscal policy was necessary, and desirable at this time.

I would like to close by referring to a remark which the Director of the Congressional Budget Office, Alice Rivlin, made in her testimony on March 2 before this committee.

This was referred to in an April 5th forecast update by the CBO which I should point out was before the change in the administration's policy and before some of the most very recent economic data had come in.

But Dr. Rivlin said the following, "A rebound from the weather caused reductions and a move towards rapid inventory accumulation are very likely with double digit rates of growth in real GNP or industrial production in the spring, a distinct possibility. Last year many forecasters including those at CBO were misled by a similar inventory spring in the late winter and spring and failed to anticipate the return to a slower rate of recovery later in the year. We may

need to guard against making this similar error this year."

I would argue that the administration was so misled and the administration has changed its policy in a way which invites a similar result.

Thank you.

Senator CRANSTON. Your conclusion would be that we should keep the same stimulation we had in the First Concurrent Resolution, I gather.

Mr. OOMS. In the Third Concurrent Resolution.

Senator CRANSTON. In the third? What about the first for 1978?

Mr. OOMS. As I argued at the time of the markup for the '78 budget, I felt that if there was any appropriate adjustment in the 1978 budget it would appropriately be in a degree towards modestly more stimulus, but very modest. It does not appear that any revision in the 1978 budget would be required at this time. As Sid Brown pointed out before, the economic effects of the policy changes take place largely in 1977 rather than in 1978 although there are some 1978 effects.

I don't believe that the revision of the '78 budget would be in order on economic grounds.

Senator CRANSTON. Thank you.

Mr. OOMS. I could perhaps just indicate very briefly and the figures are only quite crude as to what one might expect if the administration's change in policy were to be implemented and we had both the rebate and the business tax cuts removed.

You would expect as far as the change in GNP is concerned—that is to say the change in total product and income to our society—you lose about $9 billion in 1977 and about $7 billion in 1978. Those are not trivial numbers; they are not large in terms of total GNP, but when we think in terms of what we could in fact do with $9 billion worth of resources this year and another $7 billion next year, it seems a shame to throw them away.

With respect to unemployment, we could expect a rising unemployment rate in the fourth quarter of '77 of about .2 percent, a loss of something on the order of 200,000 to 250,000 jobs. By 1978 the effects are less strong, as we said, by the end of '78 we would expect an increase of .1 percent which would be on the order of 100,000 jobs.

The update of the estimates that I have made and those made by CBO suggest that the effects on inflation and the effects on the interest rate would be essentially negligible. You might get a change on the inflation rate or interest rate of a tenth of one percent in '77 and '78, but that sort of change is so small in relation to the estimating difficulties and the way in which those numbers bounce around that you have to argue that it was economically negligible.

Chairman MUSKIE. Can I ask both you and Sid to address the budget implications, budget-wise and economy-wise of the President's energy proposals with respect to, I assume—I would doubt if it would affect '77; are you far enough along in your evaluation to give us those?

Mr. OOMS. Senator, I am really not. I think it is going to be a lengthy process to get any sound estimates of the President's proposals. I think we can develop crude estimates in a few days when we have had time to look over them but I don't think it would be responsible to try to comment off the wall on those at this time from the economic point of view.

Senator BELLMON. Mr. Chairman, would it be in order to ask Ted Haggart if he has any comments?

Chairman MUSKIE. Yes.

Mr. HAGGART. Thank you. I think Van has very clearly represented what the first quarter data means and I think all of it is such that we expect to be looking at this as an averaging of the two quarters which is very useful. I agree fully that there is no reason to change our underlying forecasts. One perspective that I think is useful for the committee is when we look at the Third Concurrent Resolution in January and February, we were talking about economic policy over a two-year span, 1977 and 1978.

It looked at that time that if we continued the Second Resolution current policies we would have real growth in the 4½ to 5 percent range on the average over that two-year period.

I don't think that the underlying forecast is changed any based on the recent data. We fully anticipated at that time that as compared to the very poor performance, reasonably poor performance in the latter part of '76 that the first quarter of '77 and probably the second quarter would be fairly strong.

The 5.2 percent real growth may be a little stronger than we had expected especially in light of the weather effects, but still I don't think it is justification for a major revision in the estimates, especially when you look at the period 1978. The policies that we considered were in the context of a stimulus package for a two-year period and much of the concern was with the necessity of continuing the recovery through the latter part of '77 and on into '78.

The scenario that we foresaw without a stimulus package was that a fairly good first and second quarter of '77 with real growth tapering off thereafter.

The latter part of '77 and '78 is still a very real concern and I think that the general dimension of the policies that the committee adopted are still appropriate.

Now, that does span the Third and First Concurrent Resolutions which is embedded in both of those. I think there was good agreements at the time as to the approximate magnitude of the stimulus needed from our witnesses and among the committee discussions. Of course, there were differences of opinion as to the timing and expenditure and outlay components but the basic judgment about a policy that expands that spans that two-year period has not changed, I don't think, on the basis of recent data.

Chairman MUSKIE. Is there significant disagreement in your analysis among other economists?

Mr. HAGGART. I have not heard any feedback just based on a two or three-day period to indicate there are major revisions of the two-year forecasts by the major econometric forecasting services. I am sure on a month-to-month basis they tend to feed in a little more data and it does affect the quarter by quarter statistics that they are predicting, marginally. But I think it's unlikely that you will see a significant change from any of the major forecasting services. That is speculation but I have not seen any revisions at this point.

For instance, Data Resources was anticipating 4.5 real growth in the first quarter. It turns out to be 5.2. They may go back and reestimate some of the future anticipations in light of that.

One further thing I think should be mentioned, an afterthought, if you look at the release from the Commerce Department they point out that in the back that these data are revised in subsequent months and what we can really say based on the numbers we have now which are preliminary and incomplete is that with about 50 percent surety, we can say real growth in the first quarter was between 4.2 and 6.2, and it remains to be seen for several months to see how those numbers are revised. There is uncertainty at this point.

Mr. OOMS. Mr. Chairman, I would like to make two points. First of all, I think the point that Ted made is fundamental and again underlines what Senator McClure said earlier, given the enormous forecasting difficulties that we have and also given the uncertainty about the statistics themselves in the preliminary estimates when we don't have complete data for March in several areas, to make a broad policy change on the basis of that kind of evidence really doesn't make sense.

In response to your question economists that I have talked to I think are in agreement that an abrupt policy change of the magnitude that was made with that kind of information simply does not make sense. We should have learned our lesson by this time.

With respect to the forecasts, I would like to make one point which Dr. Oken made when he testified before the committee on the First Concurrent Resolution for 1978.

He pointed out at that time that a critical factor in the forecast for 1978 in particular was business investment. Now there could be disagreement about what the factors are which eventually will bring on strong business investment. But he pointed out that it was his analysis that you stimulate business investment by business in 1978 by having a stronger economy in 1977. It wasn't until, as he said it, you sent customers to the people that were not investing that they were going to begin to raise their investment plans and you get the business investment expenditure.

Econometric models are not very good at picking up the relationship between the strong economy one year and investment in the next year. There have been instances in which they have clearly underestimated that relationship. Therefore, when the econometric models tell us that removal of the President's stimulus package will have some fairly important, not enormous but fairly important economic effects in 1977, but that these tend to fade out so that they are smaller by the end of '78 and they disappear by 1979, those econometric models are not picking up the exact thing that the administration was hoping for and hoping for a stronger economy. They were hoping for a stronger 1977 consumption behavior and a stronger 1977 economy which would kick off an investment boom by 1978 and which would give that optimistic forecast validity.

This is precisely the sequence of economic change, it seems to me, which the change in administration policy has now made less likely to take place.

Senator MCCLURE. Could I ask a question on that, Mr. Chairman?

Chairman MUSKIE. Yes, Jim.

Senator MCCLURE. It seems to me that one other thing the econometric models don't really reflect and find very difficult to reflect, and that is the psychological effect of political estimates, the psychological effects of the climate, climate of confidence or whether they lack confidence. While the President may have reduced stimulus by reducing certain portions of the spending package, he may have increased stimulus by increasing confidence by telling people and persuading them that things are going to be good. So there may be an offsetting effect in what he has done by convincing people that indeed things are going to be better, they are better now and they will go right out and spend more money and go right out and invest more money, as a matter of fact the reduction in spending may be offset by an increase in confidence.

How is that measured and how sure are we of its effect?

Mr. OOMS. We are sure that its effects are important and we really do not know very well how to measure them except that there are some attempts made as you know in the consumer surveys and we have referred previously to some of those done at the University of Michigan by the survey research institute there.

One of the interesting things they show in the February survey was that consumer confidence was much stronger among people that expected that there would be a tax rebate than among those who expected there would not be a tax rebate. It is through that part of the business community and the financial community indicated some skepticism about the rebate. I think one could argue about whether that was justified or not. But I am not sure how comprehensive a survey was taken of the opinion of lower and middle income Americans who were expecting their $50 or indeed many of whom had already spent their $50 for heating bills—I don't know how much of a survey was taken of those people to see what happened to their confidence in economic policy when the change of this sort was made.

(This concludes additional statements submitted today.)

CONCLUSION OF ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that morning business be closed.

The PRESIDING OFFICER. Without objection, morning business is closed.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, what is the pending business before the Senate?

The PRESIDING OFFICER. The pending business is the committee amendment to the table of contents, as amended by the Haskell amendment to the tax bill.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will please call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CHURCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR THE RECORD TO REMAIN OPEN UNTIL 5 P.M. TODAY

Mr. CRANSTON. Mr. President, I ask unanimous consent that the RECORD be left open until 5 p.m. for bills, statements, insertions, and so forth.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL MONDAY, APRIL 25, 1977

Mr. CRANSTON. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 12 o'clock noon on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS ON MONDAY

Mr. CRANSTON. Mr. President, I ask unanimous consent that on Monday, after the two leaders or their designees have been recognized, that there be a period for the transaction of routine morning business of not to exceed 20 minutes, with statements limited therein to 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. I also ask unanimous consent that on Monday no resolutions come over under the rule at the conclusion of morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

RESUMPTION OF THE UNFINISHED BUSINESS ON MONDAY

Mr. CRANSTON. Mr. President, I address the following inquiry to the Chair: Is it the case that at the conclusion of morning business on Monday, H.R. 3477 will automatically be the pending business?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will please call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, I ask unanimous consent that when the Senate returns to the pending business on Monday, the Senator from Missouri (Mr. DANFORTH) be recognized for the purpose of carrying on a colloquy on that subject.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Committee on Rules and Administration may meet while the Senate is in session on April 27 and May 2, 3, 4, 5, 6, and 11.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, reserving the right to object, and I am not objecting on this matter, but on the unanimous-consent request propounded just a moment ago, to conduct a colloquy on this measure, referring to the recognition of the Senator from Missouri (Mr. DANFORTH), will the Chair advise whether that would include the right on the part of the Senator from Missouri to propose an amendment to the pending business at that time?

The PRESIDING OFFICER. Only to the pending committee amendment, until that is disposed of.

Mr. BAKER. Yes; but nothing in the unanimous-consent agreement would diminish or otherwise affect the right of the Senator from Missouri to offer an amendment?

The PRESIDING OFFICER. He would have that right, yes.

Mr. BAKER. I thank the Chair.

Mr. CRANSTON. Mr. President, I ask unanimous consent that all committees may meet on Monday and Tuesday while the Senate is in session.

The PRESIDING OFFICER. Is there objection? The Chair hearing none, it is so ordered.

RECESS UNTIL 12 NOON ON MONDAY

Mr. CRANSTON. Mr. President, if there is no further business to come before the Senate at this time, and I gather there is none, I move, in accordance with the previous order, that the Senate now recess until 12 noon on Monday.

The motion was agreed to; and at 3:55 p.m. the Senate recessed until Monday, April 25, 1977, at 12 noon.

EXTENSIONS OF REMARKS

THE ARMY'S SUPER SALESMEN ARE "MAKING" THE OBJECTIVE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. STEIGER. Mr. Speaker, one of the least understood, best run, and most unfairly criticized aspects of today's Volunteer Army is its recruiting force.

The U.S. Army Recruiting Command, under the positive, inspired leadership of Maj. Gen. Eugene P. Forrester, has done a superb job of attracting quality young men and women into today's Army. Without the coercive influence of the draft as a lever to encourage recruitment, the Army's recruiters have met or exceeded almost everyone's expectations.

Top priority has been given by the Department of the Army to insure both high quality and sufficient quantity of personnel assigned to recruiting duties. The recruiting force is young, well-educated, highly motivated, and dedicated to bringing the best young men and women available into the Army.

General Forrester wrote an excellent article, "The Army's Super Salesmen Are 'Making' the Objective" which ap-

peared in the January 1977 edition of Army magazine. It gives some very good insights into qualifications of a good recruiter and the tools recruiters have to work with to attract enlistees.

His piece is one that deserves thoughtful attention by all who read the RECORD. I commend it to your attention:

RECRUITING COMMAND MOVES OUT—THE ARMY'S SUPER SALESMEN ARE "MAKING" THE OBJECTIVE

(By Maj. Gen. Eugene P. Forrester)

George Bernard Shaw had a tongue-in-cheek recommendation for Americans back in 1931. He said:

"Every person who owes his life to a civilized society and has enjoyed since his childhood its very costly protections and advantages should appear at reasonable intervals before a properly qualified jury to justify his existence, which should be summarily and painlessly terminated if he fails to justify it."

For the past three years, the volunteer Army has done exactly what Mr. Shaw suggested—except that our appearance before the public jury occurs at weekly intervals through an accessions management system.

In the more than 156 weeks of the volunteer Army's life span, our existence has never been placed in jeopardy because of an occasional failure to meet recruiting objectives. But there have been some anxious moments along the way.

When the last draftee left the Army in November, 1974, the Army reverted back to an all-volunteer force for the first time since 1950. No one said, "Let's form a volunteer force," but in the political campaign of 1968 many championed the end of the draft.

We had, therefore, to eschew old cumbersome and expensive methods of recruiting and look toward more sophistication and institutionalization in order to meet the inevitable challenge of raising a volunteer Army. Nothing was more institutionalized than the draft.

Its epitaph reads like the Mexican expression John Wayne wants carved on his tombstone: *"Feo, fuerte y formal"*—ugly, strong and with human dignity.

Thus, when the induction authority ended on 30 June, 1973, volunteers and recruiters became synonymous with soldiers and salesmen.

Make no mistake about it. Recruiters are salesmen up against some of the stiffest competition imaginable. Besides rival recruiters they encounter other factors.

The recruiter's prime market is the slightly more than 10½ million 17- to 21-year-old male population in the United States. But everybody and his brother and sister seeks the same people for employees or students. To make matters worse, almost half the ten million prospects are, for some reason or other, unqualified for military service.

For example, if a recruiter were to locate 62 prospects outside a bowling alley or high school gymnasium, chances are that 26 would be disqualified for military service and 20 would already be veterans or have pledged to continue their civilian education. That would leave 16 available. Of those left, Department of Defense recruiters would have to sign up two, of which one would have to be obtained by Army recruiters.

To handle this tough job, the U.S. Army Recruiting Command (USAREC) has been given the highest DA priority in quantity and quality of personnel assigned to recruiting duties. Officers are graduates of schools commensurate with their ranks. More important, they have successfully served as commanders before assuming leadership roles in the Recruiting Command.

Enlisted recruiters, the backbone of the force, are all volunteers and high school graduates. Many have completed higher levels of education. Their average age of 34.6 years drops steadily with the infusion of young sergeants into the force. Most have served 12 years in the Army and have attained a GT score of 110 or higher.

In brief, they are dynamic, intelligent, young and experienced professional noncommissioned officers.

Recruiting no longer has the luxury of the draft to take up the slack in filling the Army's needs. Current recruiting calls for top-notch recruiters and guidance counselors who can obtain quality applicants to match the particular job to the title and priority skills required by the Army. It is the job of the more than 4,600 Army field recruiters to fill these needs.

People who say the modern, peacetime Army is without heroes should see these super salesmen in action. They weekly fill the Army's ranks with quality soldiers and get 106 cents' worth for every tax dollar invested in their efforts.

Their families pitch in, too. Often Mom addresses envelopes for her recruiter husband while the kids wait to deliver his direct mailings to the post office.

Army recruiters are walking billboards in the communities they serve and their families help keep them glued together through pressures and demands that no other soldiers face in peacetime.

When Sgt. Maj. Hiawatha Smith, of Montgomery, Ala., retired after more than 30 years' service, most of it in Army recruiting, his wife was at the ceremony. She told his colleagues that out of habit she would still call the District Recruiting Command (DRC) office each week to see if it were "making" its objective.

The Montgomery DRC commander replied, "Mrs. Smith, if we aren't making our weekly objective, we'll be calling you."

G. B. Shaw's requirement for "justification" appears satified, but what are some of the costly projections and benefits Army recruiters enjoy? First, they usually end up with "personalized" assignments, which means they can pick their assignments—within reason. They also receive professional sales training that can be parlayed into a civilian second career.

Other incentives include special duty assignment proficiency pay, stable tours, special awards programs and the challenge and competition of recruiting duty.

Through steady improvement and updating of content in the Army Recruiting Course (ARC) at Fort Benjamin Harrison, Ind., the Army helps recruiters learn the art of selling. There are also professional development programs for guidance counselors, station commanders and DRC commanders that help to increase productivity.

Effectiveness of these development programs is substantiated by a lower relief rate for ineffectiveness throughout the command.

Another rate that continues a downward trend is that of recruiter malpractice. There is no quicker way for a recruiter to lose his or her job than to deceive potential enlistees, provide them with test answers, conceal facts about their backgrounds or engage in other dishonest actions.

Every specific allegation of such practice is formally investigated and reviewed. When there is substantial evidence that a recruiter has committed deliberate malpractice, he is, without exception, reassigned outside the Recruiting Command, regardless of past recruiting and performance records and in addition to any disciplinary actions which may be taken under the Uniform Code of Military Justice. As Mr. Shaw would put it, "his existence" (as a recruiter) is "summarily" (and not too painlessly) "terminated."

Since the beginning of 1976 to date, only .06 of one percent of all enlistments have resulted in substantial allegations of recruiter malpractice. This compares to .13 of one percent in 1975 and .18 of one percent in 1974.

Thus, it is something we constantly watch. Placed in perspective, recruiter malpractice falls far short of being our biggest problem.

While there is no single critical factor (outside USAREC control) which alone affects recruiting success, budget restraints, reductions in military benefits, restrictions on how recruiting dollars can be spent and reductions in recruiter strength all have an impact.

To a lesser degree changes in the marketplace (such as the employment posture) also affect recruiting success. Some of these outside factors include:

LOSS OF THE G.I. BILL

Surveys indicate that this means a reduction of at least ten percent of the Army's high school graduate accessions. It is estimated that the substitute bill involving a voluntary monthly contribution may cut this reduction in half, but it is too soon to tell—we'll just have to wait and see.

THE FAMILY EDUCATIONAL RIGHTS AND PRIVACY ACT

It has created some difficulty in certain areas in obtaining the names of leads for vocational testing in high schools and the necessary follow-up of potential applicants.

ENLISTMENT BONUS

Any erosion or change in this bonus reduces its effectiveness as a selling tool. This may create a loss of combat arms and other critical skills and cause a definite reduction in four-year enlistments.

RESOURCES

Fewer dollars, recruiters and support personnel are available as a result of cuts in the Recruiting Command's budget.

On the economic side, a recent analysis by General Research Corp. indicates that a reduction in overall unemployment from 7.7 percent to 7.1 percent could decrease high school diploma graduates enlisting in the Army by 1.5 percent to two percent annually.

Why the emphasis on high school diploma graduates as a measure of quality? Because it has been shown that a person who finishes high school has a higher probability of staying with something until completed. Our experience shows the loss rate among diploma graduates is much less than among nonhigh school diploma graduates.

Also, the high school diploma graduate is often more trainable because of his or her higher educational level. No doubt about it, taxpayers' money is saved if we can avoid higher drop-out rates among our soldiers.

The number of nonprior service male enlistees with high school diplomas increased from some 78,000 in fiscal 1974 to more than 91,000 for fiscal 1976. Since mid-fiscal 1976, the high school diploma graduate enlistment rate has been on a downgrade, but the CAT IV—the lowest mental category we can accept—content has steadily decreased since fiscal 1974.

Generally, the present recruit compares quite favorably to his predecessor of the draft era. He is as intelligent and probably slightly better motivated because of his volunteer status.

An insight into the character of today's soldier is attained through our advertising program which focuses on the individual, his loyalties and his lifestyle. Our soldier ads are authentic, undoctored testimonies. USAREC's, advertising agency works hard to portray the soldier on the job.

The voices on the radio and the words on the printed page belong to bright, articulate and outgoing soldiers who are photographed in their company areas, with their peers standing by to insure authenticity. Each candidate selected for an Army ad is interviewed by a writer who comes away with some amazing pearls of contemporary language.

An example is Sp. 4 Bill Robenson, of Fort Carson, Colo., discussing his definition of "country." He said:

"A soldier doesn't think a lot about his country. Not while he's doing his job. You think about doing the best you can. About not disappointing your friends. About the man next to you who expects your help. You think about home, or some little place that means something to you. Oh, sure, you sometimes feel that spark of spirit your country stands for. But later."

How effective is the national advertising program? Recent surveys among recruits indicate that Army advertising is believed generally or partically by 69 percent of those engaged in basic combat training or advanced individual training.

Moreover, parents express the opinion that from what they have heard, the Army is changing and becoming more selective in its choice of enlistees. They regard this as a plus because it makes them feel that there are good quality young men and women going into the Army with whom their sons and daughters would associate, instead of those they feel are troublemakers.

Congress has helped in this area by lifting previous constraints on paid broadcast advertising. But rather than leap into broadcast advertising we are compelled at this stage to walk slowly and deliberately. Down the pike we hope to improve our radio and TV advertising programs as we gain experience and our allocated resources.

We have started at a modest level, with our major thrust in spot radio in selected markets where recruiting has failed to measure up to potential.

More help is on the way with a recently instituted program of recruiter aides. These young men and women, who have recently completed advanced individual training (AIT), fan out into their home communities before their first permanent duty asignments. For about 30 days they work with local recruiters, generating leads and discussing Army opportunities with their peers.

Although we place a great deal of hope in our advertising and recruiting aides programs for generating leads, our faith rests with the serving soldiers and their friends who can put the Army over the top in the days of challenge ahead.

Unabashedly, we seek support in an AIDES program that anyone can tackle:

A—Ask a young person to consider an Army career.

I—Invite Army recruiters to participate in your activities.

D—Develop leads on quality prospects.

E—Encourage the hometown media to tell the Army story like it is.

S—Sell the Army in every forum.

If every soldier or friend of the Army would assume the recruiter's mantle as continued, it would be no problem to match the more than 650,000 young men and women who have entered the Army since 1 July, 1974. With the hardest years still to come, the Army can take pride in three successful years; but it would be folly to rest on our laurels at this point.

Recruiting needs the very active assistance of everyone who believes in a strong Army.

Gen. Bernard W. Rogers, Army chief of staff, said, "The challenge of making the volunteer Army work doesn't fall only on Recruiting Command . . . it falls on every one of us leaders. We need your help."

For our part, we will continue to get the right person in the right job at the right time—the three "Rs" of recruiting. We will also strive to increase the numbers of high school diploma graduates and make the most of every recruiter, every employee and every tax dollar.

In sum, the volunter Army is alive and struggling to stay that way with strength and human dignity. G. B. Shaw's alternative is unacceptable.

BEHIND MOSCOW'S "NYET"

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by William Randolph Hearst, Jr., editor in chief of the Hearst newspapers. Mr. Hearst's commentary analyzes the recent American initiatives on arms control during Secretary Vance's trip to Russia and the Soviets' reaction to them:

BEHIND MOSCOW'S "NYET"

(By William Randolph Hearst, Jr.)

NEW YORK.—Although Secretary of State Cyrus Vance said he was "greatly disappointed" over the refusal of Soviet leader Leonid I. Brezhnev to give further consideration to two specific arms-agreement proposals advanced by the United States, I suspect that he was not greatly surprised.

Cy is a hard-headed and pragmatic man—or so he has appeared to me over the years I have known him—and any long-term appraisal of the policies of the Kremlin by a pragmatist would indicate that the Russians would not negotiate, at this time at least, on a cutback of their most advanced weaponry. It is simply not the Russian nature.

There was value in his trip to Moscow, however, if it revealed to the starry-eyed liberals and the Carter administration (in what the New York Times poetically calls the "springtime" of its diplomacy) the solid, unshakeable nature of Russian strategy. Now, perhaps, the President and those around him, will see the Soviets with clearer vision, unclouded by wishful thinking.

Soviet policy is really quite simple. It is to achieve and maintain military supremacy. It will not settle for military equality with the U.S. or any other nation.

Without going into all of the details, the Carter proposals, as delivered to Brezhnev by Secretary Vance, would have cut back on a wide variety of strategic and tactical weaponry on both sides, but would have left to future discussions the controls on the U.S.-owned Cruise missile and the Soviet-owned Backfire.

The Cruise is the most advanced weapon in the world's arsenal. It is unmanned, capable of flying beneath radar detection, and delivering an advanced nuclear warhead. The Russians' Backfire is their most advanced weapon. It is the fastest strategic bomber ever built, capable of leaving Moscow, bombing the East Coast of the U.S., and landing in Cuba. It is the equivalent of what our B–1 bomber would be. So, clearly, they are not going to agree to cut back its production or its deployment until they can develop a weapon that matches or supersedes the Cruise missile.

The Kremlin has not forgotten the lesson learned in Cuba during the missile crisis: When we told them to back off or suffer the consequences, they were forced to comply. At that point they resolved never again to rank second in weaponry. At that time, like now, we had a new president, evolving his own foreign policy, and the Russians had hoped to bluff and crowd him a bit for the sake of world prestige. It didn't work, and the ploy backfired.

The Soviets do not seem to fear nuclear war as much as we do. As realists they know that both of our nations have so much sophisticated nuclear capability that we are both in position to administer enormous overkill, either on a first strike basis, or in retaliation. Therefore they consign the nuclear threat to that semi-limbo where abide the threats from poison gas or from bacterial warfare.

Nuclear arms, in reality, are principally for saber-rattling purposes. They are too fearsome for anything else.

On top of that, the Russians have what amounts to supreme confidence in the nonwarring nature of the American people and American policies. They know we will not initiate war. They know that when we had sole possession of the nuclear bomb we did not use it or threaten to. They look, with great comfort, at our long history as peacemakers.

The discussions now revert to "working groups" composed of both Russians and Americans and they will meet in continuing sessions during the next few weeks until a resumption of the SALT talks in Geneva early in May. At that time, presumably, the basic issues again will be considered. Then, however, our chief negotiator—will not be Secretary Vance, but Paul Warnke, who has said that he believes in unilateral arms reduction on the part of the United States. If we cut back, he believes, the Russians will respond with cuts of their own. That alone seems to me like an inducement to Brezhnev to postpone the talks.

The Kremlin strategists believe in an ancient maxim—having the second best military machine is like having the second best hand in a poker game. You lose.

The Soviets with this as their policy are achieving their goals with Angola-like steps in Africa and elsewhere by feeding on the world's unrest.

Thus there may be benefits to us in the long haul if Soviet leader Brezhnev has taught us this lesson. It appears that he might have, for President Carter has stated bluntly that if Moscow balks at further talks he will be "forced to consider" acceleration of American weapons development.

The United States does not want an arms race. It is not only futile, it is wasteful and costly. However, Russia can better afford it than we can, for in many respects the Soviets benefit militarily from their totally-controlled economy; they need only print more rubles to build or buy all of the armament they need or want. We have taxpaying voters to check with.

It stretches reason to believe that President Carter's declamations about human rights in Russia had no bearing on Brezhnev's attitude, even though Secretary Vance went to elaborate lengths to claim otherwise.

Our seasoned reporter, John P. Wallach, White House correspondent and former State Department reporter for The Hearst Newspapers, who accompanied Mr. Vance, reports that there is considerable official resentment in Moscow over what they regard as Mr.

Carter's meddling in Soviet internal affairs. Wallach's interview with Georgy Arbatov, member of the Communist Party Central Committee and director of the U.S.A. Institute in Moscow, reveals deep feelings about Mr. Carter's position.

The Russians are angry, too, Wallach reports, because of President Carter's off-hand remark to the effect that everyone jumps when Brezhnev sneezes—which just happened to follow a major policy speech by Brezhnev. Again, as we pointed out last week, it shows Mr. Carter shooting from the hip in the dangerous area of foreign diplomacy.

These, however, are but details. The important thing to bear in mind is that when it comes to conventional weapons—ships, submarines, tanks, planes, artillery—the Russians far outstrip us. The same holds true for trained men under arms. That, it seems to me, should be our first concern.

MISS AMERICAN TEEN-AGER

HON. BALTASAR CORRADA

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. CORRADA. Mr. Speaker, Miss Widalys Romero López, 14, of Calle Pedro Arcielago, Levittown, Cataño, Toa Baja, Puerto Rico, won the title of Miss American Teen-Ager of 1977 in the 17th annual pageant held at the Sheraton Heights Hotel in Hasbrouck Heights, N.J.

A sophomore at the Albizu Campos High School, Widalys, who is known to her friends as "Gigi," is 5'4" tall, weighs 110 pounds, has brown hair and black eyes. She is an honor student and received certificates of merit in drama and other subjects. She was the winner of an essay based on "The Community." For the past 3 years she participated in such extracurricular activities as drama, chorus, dancing and sports at school. In her spare time, she helps care for her disabled grandmother.

"Aside from the fact that human beings enjoy giving of themselves," she explains, "I wish to develop all of my abilities to the best of my capacity to understand the sorrows and happiness of my people and others—and to project all my love and peace to mankind."

Widalys describes Puerto Rico as historic, appealing, and picturesque. She describes the United States of America as scientific, powerful, and cooperative and herself as humanistic, dynamic, and persistent. She was the first winner of the Miss American Teen-Ager title ever to come from off the mainland of the United States, the first title winner to win the Miss Congeniality Award, an award voted by her sister contestants themselves and also the first Miss American Teen-Ager of Hispanic ancestry.

Judges for the Miss American Teen-Ager Pageant included Virginia Gottermeir, of Teen Beat magazine and Ideal Publications, of New York City; Susan Charney, of Ford Model Agency; Shirley Sinclair, of the Sheraton Heights Hotel and former fashion model; Victor K. Brown, noted New Jersey attorney; Dock Ellis, pitching star of the New York Yankees; and London Lee, popular TV and nightclub comedy star.

Runnerups were Marika Dicklich, 16, of San Gabriel, Calif.; Ronda Pierson, 17, of Zion, Ill.; Julie Ann Gordon, 17, of Gaithersburg, Md.; Deborah Ann Denomme, 15, of Las Vegas, Nev.; Lisa Felicia Masse, 14, of West Hartford, Conn.; and Lora Lee Hall, 14, of Sarasota, Fla.

Forty-three finalists representing as many States and the Commonwealth of Puerto Rico, coming from as far as Hawaii and Alaska competed in the televised finals. Widalys was crowned by her predecessor, Cindy Lee, now 18, of St. Paul, Minn., who won the title of Miss American Teen-Ager last year.

An estimated 250,000 girls between the ages of 13 through 17 entered the Miss American Teen-Ager Pageant in 1976.

As winner of the pageant, Widalys will receive among other prizes, a 1977 Dodge Aspen, the official car of the Miss American Teen-Ager Pageant; a $1,000 Norwegian blue fox pant coat from Flemington Fur Co., a Hollywood, Calif., dream trip, with opportunities for roles in ABC-TV's "Happy Days" and "General Hospital."

The Miss American Teen-Ager Pageant was founded to honor the American teenage girl and the role she plays in her community, including her family and home, her house of worship, her school and community organizations.

SUPPLEMENTAL IRA NEEDED NOW

HON. ROBERT J. CORNELL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. CORNELL. Mr. Speaker, today, on behalf of Representatives FISHER, STEERS, CORNWELL, and HOLTZMAN, I am reintroducing my bill to permit working men and women the opportunity to have a more secure retirement. The legislation would allow employees with low employer-financed pensions the opportunity to supplement such annuities by establishing so-called "supplemental individual retirement accounts." With the addition of these four Members, I am pleased to report that 72 of my colleagues have joined me in endorsing this proposal.

I am sure that most Members of Congress hear daily from their constituents about the inadequacy of social security benefits or other forms of annuities. The supplemental IRA approach holds out the promise that these citizens will be able to prepare adequately for their retirement by establishing tax-sheltered accounts for their later years.

The concept is not a new one. Last year the House approved a similar provision as part of the Tax Reform Act of 1976. Although the section was ultimately deleted from the bill, the Joint Committee on Taxation was directed to conduct a study of the supplemental IRA concept. This study is now underway. I trust the Joint Committee will conclude as 72 of my colleagues have: We should pass this legislation now.

EXPORT ADMINISTRATION ACT AMENDMENTS

HON. THOMAS A. LUKEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. LUKEN. Mr. Speaker, on April 20, 1977, I joined an overwhelming majority of my colleagues in voting for a bill which will make it a crime for American companies and citizens to cooperate with the Arab boycott.

The economic boycott of Israel by Arab League nations has spread to include in some cases their requiring companies in third nations to abide by their boycott as a contractual prerequisite for commerce with Arab nations. The Commerce Oversight and Investigations Subcommittee, of which I am now a member, found last year that in the face of a threatened trade limitation, American companies complied with boycott demands in more than 90 percent of all cases.

It is shocking that foreign interests can so boldly dictate trade practices to American businessmen—even to coerce them into tertiary boycotts of other American companies which trade with Israel or have executives of the Jewish faith. The Oversight Subcommittee reported that at least $4.5 billion of goods in 1974 and 1975 were subject to Arab boycott provisions.

The existing antiboycott policy of the United States has proven to be alarmingly ineffective, with the Commerce Department actually obstructing the spirit of the law by taking no action to stop American companies from having to make a decision on compliance with foreign interference. The companies which have refused to cooperate with the boycott are blacklisted and suffer competitive penalties for their decision. Only by restricting all American businesses, banks, and individuals from honoring the boycott will all be placed on a fair and equally competitive base for seeking business in the Middle East.

By mandating an end to American complicity with the Arab boycott, the House has asserted the principles of fairness and open trade, declaring that the United States will not tolerate discrimination against its Jewish citizens. I would urge my colleagues to insist on this strong stand if the bill must come back before us for a final vote.

PITTSBURGH. REVAMPED AND REVITALIZED

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. MOORHEAD. Mr. Speaker, for too many people the image remains that my home city of Pittsburgh still is the "Smoky City" of the early 1950's.

William Stevens, writing in the April 16 New York Times, puts to rest many of these popular but misguided beliefs as well as many other raps that Pittsburgh has had to bear.

Instead, Mr. Stevens paints a picture of Pittsburgh as a thriving northeastern city which has learned to live with a dwindling population, learned to adjust to tight city budgets, learned to adapt to changing industrial patterns, attracted new industry, and in the process may have established the standard of survival for America's large older urban communities.

Stevens' Pittsburgh, my Pittsburgh, is a delightful city, filled with hardworking, proud people, whose civic pride can be seen in its safe streets and attractive neighborhoods.

Pittsburgh is not without its problems, as Stevens points out, but our city has set sail on a course of rehabilitation and rejuvenation that few cities in the world can match.

For the information of all, I would like to included in the RECORD at this time, Mr. Stevens' article on Pittsburgh:

PITTSBURGH, REVAMPED AND REVITALIZED, SHEDS ITS STEEL-TOWN IMAGE

(By William K. Stevens)

PITTSBURGH, April 15.—In all urban America there may be no more dramatic spectacle than the wonderland that bursts suddenly into view as one emerges from the Fort Pitt Tunnel and sees downtown Pittsburgh, the Golden Triangle, glittering across the Monongahela River.

On a clear night, the impact is almost physical (so close are the skyscrapers, sharp, dark presences aglow with soft yellow light from thousands of windows. The steel-and-aluminum towers are guardians of a resurrected downtown where the safe streets, compact walkability and general warmth have lately been compared to the ambience of San Francisco before World War II.

That may or may not be an exaggeration. But the Golden Triangle is widely perceived as a true gem, a triumph in the city that Charles Dickens is said to have described as "hell with the lid lifted." More important, however, the Triangle is one symbol of the new industrial society that seems to be emerging in what used to be the Steel City.

ECONOMICS FORCED CHANGES

Steel is now only one part, and in some ways, not the most important part, of Pittsburgh and its metropolitan era today. The rebirth of the downtown is also only part of the city's new image.

Metropolitan Pittsburgh has been forced to change by the harsh imperatives of economics. Faced with a steady contraction of the steel-mill workforce in the last 20 years, and a loss of population for at least the last 15, metropolitan Pittsburgh was forced to either change or stagnate. As a result, it is no longer mainly a blue-collar town and no longer a metropolis that depends solely on iron and coal.

"Pittsburgh affords us our first example of zero population growth on a large scale," says Dr. Wilbur Thompson, an urban economist at Wayne State University in Detroit. Pittsburgh seems to be demonstrating that it is possible not only to stay alive, but even to thrive, in a no-growth setting.

And in doing that, Pittsburgh and surrounding counties may provide at least a glimpse of a possible future for the Industrial Crescent of which they are a part—that vast region of 35 million people, containing the bulk of the nation's heavy manufacturing, that sweeps around the southern rim of the Great Lakes from Buffalo to Milwaukee and Green Bay, Wis.

The entire Crescent has entered an age of cutting back as manufacturing has declined in the total economy, and as the competing Sunbelt attracts money, industry and talent. Many of the Crescent's metropolitan areas, not merely the aging central cities, are losing population.

Metropolitan Pittsburgh is leading the way. It has been losing population since the 1960s. The United States Census Bureau calculates that the population of the four counties of greater Pittsburgh fell by 85,000 between 1970 and 1975. The four-county population for 1975 was estimated at slightly more than 2.3 million.

HEAVY DROP IN POPULATION

Downtown renaissance notwithstanding, Pittsburgh proper had an estimated population drop of 8.4 percent between 1970 and 1975, to 476,354, a full 128,000 fewer people than in 1960. Retrenchment has been the watchword of central city Pittsburgh in the 1970s. For every new house that is built in Pittsburgh today, it is reported that four are torn down.

Mayor Peter Flaherty has made Pittsburgh famous for belt-tightening. He has cut city employee rolls by 25 percent since 1970, reduced the uniformed police and fire departments, and, in general, pursued a policy of austerity. He has made many enemies along the way, but he is also widely credited with having saved Pittsburgh from the incipient financial disaster that other cities are facing.

Some steel mills have closed here in the last two decades and automation has caused the workforce to further decline. When new mills are built, they are usually built elsewhere. Consequently, in greater Pittsburgh, only one worker in 10 is now a steelmaker.

The reigning symbol of Pittsburgh today would not be the smokestack or the blast furnace. It may not even be the Golden Triangle, which has the third biggest collection of corporate headquarters.

Instead, it could be the great gothic skyscraper called the Cathedral of Learning, jutting up from the middle of the bustling Oakland section of the city. The university is now the city's biggest single employer, a sign, perhaps, that metropolitan Pittsburgh can survive largely because its sheer size makes it a regional opportunity center.

Another symbol might be any of the small, modernistic research-and-development centers in the hills and valleys of the city's outskirts. Research and development is now the area's third largest economic activity.

The symbol might be the 30-odd European companies, making a variety of products, that have been persuaded by energetic industry-hunters to locate in the nine counties of the Pittsburgh region. Or it might be the Thorn Hill Industrial park in the far nothern suburbs, where modest brick buildings have recently sprouted as headquarters for enterprises ranging from electronics to food processing to the Society of Automotive Engineers. The society moved here from New York in 1974 because it was less expensive to operate.

SHOPPING CENTER AS SYMBOL

Or even Monroeville Mall, the flashy shopping center 15 miles from downtown, a climate controlled small-town center under one roof, with 135 different stores, restaurants, an ice rink, fountains, waterfalls and live foliage.

Before about 1950, Pittsburgh was notorious for its dirt and ugliness and for the general harshness of its existence. Ramshackle buildings, 12-hour work days, lives brightened by little leisure or grace, and above all, the smoke were the characteristics of that era. Photographs showed that the reports of the city were true: The heavy smoke from the mills made it dark at noon.

Pittsburgh emerged from World War II exhausted and rundown, a perfect candidate for the remedy that Frank Lloyd Wright, the architect, is said to have prescribed: Abandon it.

The rise from decrepitude began in the late 1940s, when stiff smoke-control ordinances went into effect. In the 1950s, strong flood-control measures liberated the downtown from periodic inundations. And by the 1960s, the rebuilding of downtown was far advanced.

STEEL INDUSTRY IN DECLINE

Penn's Southwest Association, a nonprofit industry-hunting organization backed by a variety of Pittsburgh interests, estimates that between 1952 and 1962, the nine-county region lost 105,000 jobs all but 5,000 in manufacturing.

From 1962 through 1973, the same region regained 136,000 jobs, of which only 10,000 were manufacturing. This seems to be a clear measure of the variety and diversity of economic effort, and of the shift to white-collar dominance in an area long famous as a blue-collar preserve.

The biggest industry-hunting coup of the Penn's Southwest Association was promoting the establishment of a Volkswagen assembly plant in Laurel Highlands, 40 minutes southeast of the Golden Triangle. The location of the plant, which is to begin operating in a few months, is one aspect of the shift in urban geography that has accompanied the shift in Pittsburgh's economy. Decentralization and dispersal are the key characteristics. The old, centralized metropolis, like a cosmic mass, has broken into swirling submasses that are now congealing around new centers of gravity.

The decentralization of the Pitsburgh area goes beyond conventional suburbanization. Instead, the outer rings are developing into clusters of "mini-cities," usually at the crossroads of major superhighways.

Perhaps the best example is Monroeville, with its mall, about 20 minutes from downtown Pittsburgh. No fewer than five research centers underpin the town's economy, and it keeps growing and growing. Its population is 30,000 and climbing, and already it rates nearly equal billing with Pittsburgh on the road from the airport.

The new Pittsburgh is hardly problem-free, of course. The smoke is mostly gone, but the burning of coal still generates one of the highest concentrations of noxious sulfur dioxide in the country. The rivers are less polluted than they were and gamefish in the Monongahela have multiplied astronomically in recent years, but are hardly pristine.

STILL SOME COMPLAINTS

Pittsburgh proper is ridding itself of substandard, aging housing. But leaders among the city's blacks, who make up about 20 percent of the central-city population, main-

tain that conditions for the minorities is little better than it was a decade ago.

And the new Pittsburgh is built on the availability of energy. The climate-controlled malls, the transportation system that makes dispersal possible, indeed the whole urban structure, is vulnerable to energy shortages. Some authorities believe that because of that vulnerability, the outward spread has gone about as far as it can.

It is problematical whether other cities in the Industrial Crescent can adjust as Pittsburgh has to the era of contraction. Pittsburgh began its downtown renaissance early, perhaps before it was too late. It is renowned for a concerned, committed civic leadership that some other cities may find lacking.

And because its economic shrinkage began early, it did not attract the great post-war waves of Southern migrants as did cities such as Detroit and Cleveland. Consequently, now that industrial decline has reduced opportunity for the unskilled and semi-skilled, Pittsburgh does not now have as many unemployed and unemployable persons as some other cities.

It could be argued, as some Pittsburghers are arguing, that "levelling-off" is the best thing that could happen to any big city in the North. It makes the problems manageable, those city residents say.

In that context, Jay D. Aldridge, executive director of Penn's Southwest Association, might have been expressing the new Pittsburgh philosophy when he said:

"Population growth for the sake of population growth is absolute folly."

THE B–1 BOMBERS

HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. KOSTMAYER. Mr. Speaker, I rise today to speak about one aspect of the Defense Department authorization which we will consider this afternoon. It has not gone unnoticed this authorization includes $1.1 billion for the construction of five B–1 bombers.

The B–1 is yet another example fitting the pattern of similar projects advanced by the Defense Department in the past.

The estimate of the B–1 has more than doubled from an original $46 million per plane to the latest estimate of $95 million per plane.

And, as with many other military program estimates, as the price has gone up, the performance claims have gone down. Originally championed as being able to travel at three times the speed of sound—we now discover the top speed is actually half that.

The Congress is as much to blame for the continuance of such profligate waste as anyone. The habit around here has been to accept Defense Department requests without sufficient scrutiny of the implications for our budget and other national priorities.

The action we take today to authorize $1.1 billion for the B–1 is not an appropriation—it provides merely the authorization and the time the President requested while he fulfills his campaign pledge to conduct an indepth review of the project.

I hope neither the President, nor the country, will interpret our actions today to be any more than that. In no way should our votes be misconstrued to suggest approval for the B–1 by any of us who grant the President his request.

In fact, quite the opposite is so. Were the President to terminate the B–1, there would be widespread support in Congress. It would be a way for us to send a message to the big spenders at the Pentagon: The Congress will no longer blanketly accept wasteful programs for weapons we do not need and whose contribution to the military superiority which America must maintain is questionable.

GEORGE MEASER, DEDICATED PUBLISHER AND CIVIC LEADER, TO BE HONORED FOR DISTINGUISHED SERVICE

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. KEMP. Mr. Speaker, on May 3, one of the most outstanding citizens of New York State will receive the coveted and prestigious Daemen College President's Award.

The recipient will be Mr. George J. Measer, the highly respected publisher of Bee Publications, Inc., one of my constituents and, I am proud to say, a personal friend.

During my years as a resident and as a representative of western New York, it has been my privilege to witness and to enjoy the benefits of George Measer's civic leadership, his studious counsel and his concerns.

These concerns and George Measer's outstanding abilities as a newsman and small business person have not only been invaluable assets to our Niagara frontier community but also to our State and our country. He and his family are dedicated Americans.

It is an honor to join Dr. Robert Marshall, the eminent president of Damaen College, and other friends and guests in honoring George for his numerous contributions to higher education and his consistent service to the broader community.

At this point, I include the contents of a news article concerning the forthcoming award and Mr. Measer's meritorious activities and honors.

George J. Measer, publisher of Bee Publications Inc., has been selected as the recipient of the Daemen College President's Award.

The Award is given annually to a person who has distinguished himself or herself in service to Daemen College, higher education and the community.

Dr. Robert S. Marshall, President of the College, said Mr. Measer will be honored the evening of May 3 at the third annual President's Scholarship Dinner. The event raises scholarship funds solely on the basis of academic excellence.

Mr. Measer, whose firm publishes five suburban weekly papers, the Amherst Bee, Cheektowaga News, Depew Herald, Clarence Bee, Lancaster Enterprise and Suburban Bee, is president of Western New York Offset Press Inc.

He is a member of the Council of the University of Buffalo, the Citizens Advisory Council of the University of Buffalo, the Journalism Council of St. Bonaventure and the Public Information Committee of the Cancer Society.

Mr. Measer is past president of the New York Press Association, past president of the Western New York Publishers Association, past director of Sigma Delta Chi, Greater Buffalo Chapter, and is currently a Director, National Newspaper Association, and a member of the Suburban Newspapers of America.

He was the chairman of the Village of Williamsville's 175th anniversary in 1975 and Bicentennial Chairman for the Town of Amherst in 1976. He is past president of the Amherst Chamber of Commerce, a member of the Liaison Committee of the Millard Fillmore Suburban Hospital, where he also serves as a director, and a member of the Buffalo Area Chamber of Commerce.

Mr. and Mrs. Measer have three children and live on Oakgrove Drive in Williamsville.

Prior recipients of the Annual President's Award are Willard Genrich, and Mrs. Marie Corcoran.

DIVESTITURE EDITORIAL

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. UDALL. Mr. Speaker, I would like to share with my colleagues an editorial from the Fort Wayne Gazette-Journal. I believe it is important for us, as we analyze the President's fine energy program, to remember the importance of increasing competition in all energy markets.

I believe that in the long run prices are best set by the free market system. Unfortunately, a free and competitive market does not now exist in the energy industries. I have joined with a number of my colleagues in proposing legislation to create competition in energy markets. The following editorial, written by Lou Wein of the Gazette-Journal's staff, provides a succinct evaluation of divestiture:

BREAKING UP THE ENERGY INDUSTRY

Rep. Morris Udall of Arizona recently introduced what the late Sen. Philip Hart of Michigan would have called a "modest little bill" to break up the oil industry's vertical and horizontal structuring. Mr. Udall's Energy Industry Divestiture Act is a promising little bill too.

In just three and a half pages, the divestiture legislation neatly handles the immensely complicated job of reorganizing the nation's energy giants over a five-year period. The bill's objective is to promote competition in an industry which exhibits many typical trappings of anti-competitive behavior, but which doesn't always fit into the classic mold of monopoly.

Mr. Udall's bill is straightforward, and its intent is crystal clear. It doesn't leave room for the courts to second guess the Congress. The measure contains five well-conceived provisions to restructure the energy industry.

First, during the next five years, the bill would phase out the energy companies' horizontal control of the nation's three primary energy sources—petroleum and natural gas, uranium and other fissionable mineral and coal. Each company would be allowed to control only one of these energy resources. Second, in the same time frame, the bill would separate the vertically integrated oil companies into production, refining, transportation and retail marketing entities.

Third, the bill would make the Federal Trade Commission the referee to monitor industry compliance with the horizontal and vertical divestiture schedule.

Fourth, the bill would prohibit the major oil companies and their affiliates from undertaking joint energy ventures unless the attorney general certifies they are beneficial to competition.

Fifth, the bill would outlaw any individual from joint participation as a director, officer or employe of two or more companies involved in coal, oil and gas, or uranium and other fissionable minerals.

Divestiture is an issue the Congress should not place on the legislative back burner, as many energy industry interests would of course prefer. The Congress should pride itself as the national forum where the merits of both sides of a great issue prevail over everything else. Both sides should concede that the structure of the nation's energy industry is directly related to, and probably the key factor in, the development and use of energy. It's a relationship that played a major contributing role in the nation's energy crisis. It will largely determine the success or failure of President Carter's national energy policy.

The Udall bill, for example, limits the industry's role in fossil and fission fuels, but doesn't restrict entry into geothermal, ocean-thermal and solar energy. That redirection of private-sector initiative may harmonize with the President's expected long-range emphasis on thermal and solar energy in his national energy policy.

Focusing strictly on divestiture's non-energy policy implications, the case for a vertical breakup alone is strong but not overwhelming. Yet as the oil companies vigorously expand their operations horizontally into coal and uranium, the case for vertical divestiture gains new strength since the horizontal or classic monopoly power is transmitted directly up the vertical structure into the marketplace.

That dynamic makes a potent argument for divesting both horizontally and vertically at the same time. And that's why Mr. Udall's legislation is considerably stronger than earlier measures addressing only vertical divestiture.

FINANCING PUBLIC INTEREST LAW

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, from our student days to the present, when we sit as representatives of the people, you and I have witnessed and appreciated the vitality and viability of our constitutional system of checks and balances. It is that dynamic which has helped safeguard our federal system from the overreaching grasp of any of our three separate and coequal branches of government.

Our citizens, too, must serve to check and balance governmental power. Yet, in recent years, many Americans have felt helpless in the presence of a growing and pervasive bureaucracy, like woeful Davids confronting a faceless Goliath. Few slingshots could overcome those odds.

Since the late 1960's, a new force of public-spirited lawyers has assisted many citizens—particularly those with the least access to the legal system—address their grievances. The relatively small number of these public interest lawyers belies their accomplishments. In the following article from the March edition of the American Bar Association Journal, Mitchell Rogovin details their achievements and suggests new methods for financing public interest advocacy. As I am sure you know, Mr. Rogovin has served with distinction in and out of government, always as a defender of the public interest, and his views are worth our consideration:

PUBLIC INTEREST LAW—THE NEXT HORIZON

(NOTE.—Public interest law can point with pride to some remarkable contributions to the political process, but now steps must be taken to assure that public interest lawyers become a permanent part of the legal community. A dues checkoff system within the American Bar Association would give lawyers a chance to support public interest, as would broader legislation for the allowance of attorneys' fees.)

Of the four hundred thousand lawyers in the United States, only about six hundred work for the nonprofit, tax-exempt groups that have "public interest law firms." While they constitute only one thousandth of 1 per cent of the profession, these public interest lawyers have had a significant effect on the American legal system. Just what have they done, and why has their impact been so great?

Public interest law is the name that has been given to efforts to provide legal representation to groups and interests that have been unrepresented or underrepresented in the legal process. These include not only the poor and the disadvantaged but ordinary citizens who, because they cannot afford lawyers to represent them, have lacked access to courts, administrative agencies, and other legal forums in which basic policy decisions affecting their interests are made.

A recently completed study by the Council for Public Interest Law, *Balancing the Scales of Justice*, revealed that there are nearly one hundred public interest law centers in operation today. That number, however, does not include the scores of legal aid societies, public defenders, and neighborhood legal services offices across the country that are providing important day-to-day services to needy clients. It includes only policy-oriented groups that are concentrating on broad impact cases in which the decision will affect large numbers of people or advance a major law reform objective.

These policy-oriented public interest law centers got their initial impetus from lawyers working to provide equal treatment under the law for those who could least afford the financial costs—racial minorities and the poor. The progress achieved by minorities and the poor since the early 1960s in education, employment, housing, voting rights, and public accommodations has been in significant part the result of actions undertaken by the public interest bar.

But as many social commentators have pointed out, it is not just the nation's disadvantaged and poor who often feel helpless in our society. Millions of middle class Americans, faced with governmental and institutional conduct they do not like but cannot seem to change, feel frustrated and overpowered. They read in the newspapers about impure drinking water and unsafe products, about sky-rocketing utility bills and corrupt politicians, and they feel they can do nothing about these problems. What public interest law has shown is that sometimes something can be done—that with effective legal representation citizens can often make their voices heard and help shape the public policy decisions that affect their lives.

It was in the late 1960s that the first public interest law centers concentrating on issues affecting broad segments of the public, such as consumer and environmental protection, began operations. These centers were established in response to the problem that policy formulation in our society is too often a one-sided affair, a process in which only the voices of the economically or politically powerful are heard. While special interest groups with substantial financial resources typically are able to marshall teams of lawyers and other experts to plead their case before courts and government agencies, ordinary citizens, because they are poorly organized and without financing, are unable to purchase the legal representation necessary to make their interests known, too. As a result, legal rights and regulatory schemes established by Congress and the states to protect the public interest have been undermined and citizen interests have suffered.

Public interest law centers, by giving voice to citizen views in public policy deliberations, have made great strides in correcting this imbalance and assuring that government works for everyone, not just the rich and powerful. Because of their work, our political system is functioning not only more equitably but more efficiently and responsively as well. This can be seen and documented in a number of important areas.

PRODDING FOOT-DRAGGING AGENCIES

To begin with, public interest lawyers are helping to ensure that governmental agencies are implementing statutes as Congress and state legislatures intended. Many a well-drawn law has remained mere words on the statute books because of ineffective enforcement. By carefully monitoring administrative agency activity, these lawyers have substantially improved administrative enforcement of statutorily mandated rights and programs.

Take, for example, a case involving enforcement of a federal drug safety program. In 1962 Congress passed a law requiring the Food and Drug Administration to remove all ineffective drugs from the market. Despite the findings of National Academy of Sciences-National Research Council review panels that a high percentage of drugs on the market were ineffective, the F.D.A. took little action. Engaging in what a federal court later called "intolerable procrastination" and undue "solicitude" for the industry, the F.D.A. would typically conclude that a drug was ineffective and then grant the manufacturer additional time to bolster the record on effectiveness, meanwhile allowing the manufacturer to continue selling the drug.

Disturbed by this foot dragging, which had gone on for eight years, the American Public Health Association and the National Council of Senior Citizens turned to the Center for Law and Social Policy, which filed suit on their behalf to compel the F.D.A. to

speed up its enforcement. That suit was won in August, 1972, when the court ordered the F.D.A. to act immediately to remove all ineffective drugs from the market. American Public Health Association v. Veneman, 349 F.Supp. 1311 (D.D.C.). But even before that decision was handed down, the F.D.A., apparently in response to the center's challenge, had increased the manpower working on safety and efficacy reviews from three to fifty and speeded them up significantly. One former F.D.A. official commented, "The center's suit resulted in the F.D.A.'s timetable being reduced from forty years to four."

Another area in which vigorous monitoring of agency action has been crucial to effective enforcement of the law is protection of the environment. In 1972 Congress passed amendments to the Federal Water Pollution Control Act that made it the nation's first tough, comprehensive clean water law. The act's goals of restoring all the nation's waters to "fishable and swimmable" quality by 1983 and of completely ending water pollution by 1985 were highly laudable, but the question was whether administrative enforcement would be vigorous enough to meet those goals.

To ensure strong enforcement, the Natural Resources Defense Council set up a project on clean water to serve as a watchdog for the Environmental Protection Agency's application of the law and to work with interested citizen's groups around the country. When E.P.A. missed fourteen rule-making deadlines in the first few months after the act was passed, the council brought a suit that resulted in a court-ordered schedule for publishing those regulations. *Natural Resources Defense Council* v. *Fri*, 5 Envir. L. Rep. 20173 (D.D.C. 1974). When E.P.A. missed its deadline for issuing regulations to set limits for the discharge of industrial pollutants, N.R.D.C. brought suit again; as a result, the regulations were finally promulgated. *Natural Resources Defense Council* v. *Train*, 510 F. 2d 692 (D.C. Cir. 1975). These actions have led E.P.A. Deputy Administrator John Quarles to hold up N.R.D.C.'s project on clean water as an example of an effort that has had an "astonishingly effective impact on the conduct of [federal] environmental programs" aimed at pollution.

Another important area in which public interest law centers have sought to guarantee that public agencies are serving people in the way that legislators intended is health care, especially for children and the poor. Centers have been instrumental in forcing effectuation of two significant health programs that had been virtually dormant because of administrative lassitude. In one case Congress had enacted in the 1967 Child Health Act a provision that required states to include periodic screening, diagnostic services, and treatment programs for poor children in their medicaid programs in order to assure the early identification and treatment of health problems. The program was designed to make available preventive health care to the roughly thirteen million children whose families cannot afford regular medical checkups.

Despite the clear congressional requirements that this care be included in state medicaid programs, years passed, and the Department of Health, Education, and Welfare still did not issue regulations directing the states to begin the services. After unsuccessfully trying to prod H.E.W. at the administrative level, the Children's Defense Fund decided to restort to the courts. In the fall of 1972, on behalf of the National Welfare Rights Organization, C.D.F. won an out-of-court settlement in which H.E.W. finally agreed to issue regulations. C.D.F. and the National Health Law Program then followed up by assisting legal services attorneys in about a dozen states to file lawsuits to force states to set up screening programs. As a result of these efforts, approximately three million children have been screened through the diagnostic program, about half of whom have required follow-up treatment for health problems that probably would have remained neglected.

Again taking legal action to transform paper programs into real benefits for people, lawyers at the Food Research and Action Center have gone to court several times to force the Department of Agriculture to put into motion a federal child nutrition program authorized by Congress in 1972. The program, called "Women, Infants, Children," was designed to provide twenty-five dollars worth of especially nutritious food each month and regular medical screenings to low-income pregnant mothers and to children up to the age of five in order to stop the brain and growth damage that malnutrition causes in infants and young children.

But the W.I.C. program remained only an empty promise because U.S.D.A. officials refused to spend appropriated money to draft the regulations needed to put the program in motion. So in 1973, the F.R.A.C. sued the U.S.D.A. and won a court order requiring the agency to implement the program. Dotson v. Butz, unreported, D.D.C. in 1973. When the U.S.D.A. continued to lag, F.R.A.C. went to court again, eventually seeking and obtaining several additional court orders directing the department to stop delaying the program. As a result, the W.I.C. program is now in operation, serving up to 550,000 children and mothers each month.

WORKING WITH AGENCIES AND LEGISLATURES

Conscious that court actions are a last resort to improve agency performance, public interest lawyers, whenever possible, have tried to make their case at the administrative level by participating in agency proceedings and co-operating with agency officials: bringing new ideas or information to their attention, assisting them in analyzing scientific data and interpreting technical aspects of the law, and, most important, providing key support for agency officials when they are under siege from recalcitrant industry interests.

The Center for Auto Safety, for example, has sometimes served as a crucial ally to the National Highway and Traffic Safety Administration, which is responsible for setting automobile safety standards. In one case the agency proposed a standard limiting the flammability of car upholstery materials to a burn rate of four inches a minute. The industry was arguing for a burn rate of up to fifteen inches a minute. The center, pointing to a study showing that fifteen inches a minute is a burn rate roughly equal to that of paper toweling, argued for a zero-inches-a-minute rate, helping the agency to overcome industry criticism and to stick with its four-inches-a-minute standard.

Although much of what public interest law has accomplished has been done by making certain that public officials are properly carrying out statutes, in some cases it has been the work of the centers themselves that has inspired the passage of new legislation. For example, in 1974 the Environmental Defense Fund released a study done by its scientists that linked the presence of a number of cancer-causing substances in Mississippi River drinking water to higher cancer rates among the populations using that water. Wide publicity ensued, including a Columbia Broadcasting System television report for which E.D.F. did the research, that raised serious questions about the safety of the nation's drinking water. The furor caused by E.D.F.'s findings, coupled with similar findings by the E.P.A., forced a previously uninterested Congress to pass the Safe Drinking Water Act in December of 1974.

REFORMING PUBLIC INSTITUTIONS

Another major role of public interest law has been to assert new constitutional theories in order to achieve reforms of public institutions such as schools, mental hospitals, and persons. In several cases court actions brought by public interest lawyers won changes after all previous attempts at reform had failed.

In 1975, for example, lawyers from the Mental Health Law Project and the American Civil Liberties Union—asserting that the Constitution gives involuntarily confined mental patients a right to treatment—won a landmark Supreme Court ruling that a state cannot, under the Constitution, continue to confine against their will mentally ill persons who are not dangerous to themselves or others and who are receiving only custodial care. *O'Connor* v. *Donaldson*, 422 U.S. 563 (1975). That case, which potentially affects more than two hundred thousand persons who are involuntarily confined in mental institutions, arose in 1956 when Kenneth Donaldson, at the age of forty-eight, was involuntarily committed to a Florida state mental hospital because he purportedly suffered from harmless delusions. The judge told him he would be there "for a few weeks," but almost fifteen years later he still remained in locked wards against his will and receiving no treatment. Finally, his public interest attorneys obtained his discharge and subsequently won the Supreme Court ruling. By forcing the treatment or release of nondangerous mental patients the lawyers hope to provide leverage to convince localities to set up community-based treatment centers to give those patients the care they need.

Earlier cases brought by public interest lawyers, often using constitutional arguments, led to important court rulings requiring local school systems to give suitable educational opportunities to physically or mentally handcapped school-age children. In one of those cases it was found that the District of Columbia Board of Education had illegally failed to provide access to formal education for as many as 80 per cent of the estimated twenty-two thousand district of Columbia children who have speech or learning disabilities or are blind, deaf, retarded, or emotionally disturbed.

FUTURE OF PUBLIC INTEREST LAW

These are but a few of the cases that demonstrate the value of public interest law in making governmental institutions more accountable and responsive to citizens' needs. But of these centers are to continue to make important contributions to our political process, steps must be taken to assure that they become a permanent part of the legal community. There is currently one major roadblock, however, to the continued viability of public interest law; lack of adequate and stable sources of funding.

The funding of public interest law centers has increased steadily as their accomplishments have become known, growing from $25.8 million in 1972 to $40.1 million in 1975. Their resources, however, are still far from adequate—indeed, meager in comparison to those of the private bar. The $40.1 million attracted by public interest law centers in 1975, for example, is roughly equal to the annual billings of but two of the largest Wall Street corporate law firms. According to the Bureau of the Census, the gross receipts of the private bar in 1972 alone were $10.8 billion.

The principal sources of funding for public interest law have been foundation grants, government funds, and contributions from the general public raised through direct mail appeals. While many private lawyers and bar associations have contributed time and moral support to public interest law programs, financial support from the private bar has been negligible. It is time that the legal profession itself begin to pay for these programs—programs that are taking the profession's concept of justice for all and translating it into concrete reality.

An American Bar Association voluntary dues checkoff system, in which members could make donations in support of public interest law activity through the annual dues process, could help provide these groups with the regular, institutionalized funding base they so critically need. The State Bar of Arizona has instituted a dues checkoff system, and it is a model that should be emulated by other state bars as well as by the American Bar Association.

Because public interest law centers are so heavily involved in the monitoring of government, it is crucial that their major support continue to come from non-governmental sources, but there are steps the government itself could take to strengthen the funding of these centers and not compromise their independence.

The Federal Trade Commission last year instituted a program to provide financial assistance to citizen representatives who wish to participate in F.T.C. rulemaking proceedings but could not afford to do so. According to the former bureau chief in charge of this program, the $500,000 the F.T.C. has given in grants so far has resulted in "rave reviews" for citizen participation from the agency's staff. A bill to authorize all federal agencies to fund public interest representation in their proceedings, as well as to permit court awards of attorneys' fees in judicial review of agency actions, was introduced in the last session of Congress. It was reported out of the Senate Judiciary Committee but died on the Senate floor. Its sponsor, Senators Kennedy, Democrat of Massachusetts, and Mathias, Republican of Maryland, have promised to reintroduce it this year. The American Bar Association's endorsement of this legislation could be the key to its passage in the new Congress.

Taken together, these proposals for new funding through the bar and government would help to build into the American legal system permanent mechanisms for assuring that citizens views are heard regularly by policy makers and that the entire legal process functions with the fairness and equity that the canons of our profession demand.

ACTION IS NEEDED NOW ON THE DEFENSE COOPERATION AGREEMENT WITH TURKEY

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. TREEN. Mr. Speaker, last week several members of the House Armed Services Committee visited Turkey. We had the opportunity to meet with Ambassador Macomber, Gen. William Knowlton, Commander of Land Forces, Southeast, for NATO, as well as other United States and Turkish military leaders. The effects on NATO readiness of the U.S. embargo of arms and equipment to Turkey is very serious indeed. Our delegation will be issuing a report to the Congress on our findings and impressions, so I will not go into detail at this time.

However, I believe that I speak for most, and possibly all, of the members of our delegation that visited Turkey in saying that we should do everything possible to have the defense cooperation agreement with Turkey, which was negotiated by the previous administration, approved by the Congress at the earliest possible time. Our NATO readiness is at stake, and the political implications for our relationship with Turkey, if we fail to take action soon, are most worrisome.

The issues arising from the several conflicts between Greece and Turkey are complex and every effort must be made to resolve them. But we should not defer approval of the defense cooperation agreement to the solving of those problems. In this connection, I found the Rowland Evans and Robert Novak column, which appeared in this morning's Washington Post, an excellent statement on this subject. The article follows:

TURKEY'S TROUBLED "U.S. CONNECTION"

(By Rowland Evans and Robert Novak)

ANKARA.—Prime Minister Suleyman Demirel, the foremost Americanist in the bitter election campaign being fought out here, received a fluffy, no-comment reply when he asked President Carter earlier this year for an end to U.S. pressure on Turkey and restoration of the old intimacy.

Declining to discuss details of his letter or the reply, Demirel nevertheless left no doubt in an interview with us that the break between the two countries—triggered by the 1974 U.S. arms embargo and Turkey's closing of U.S. bases here—was having a profound impact on Turkish politics.

Demirel may be able to defend his two-year record as prime minister against increasingly harsh attacks from his main opponent, left-leaning Bulent Ecevit, on such traditional issues as the economy, growing student terrorism, soaring unemployment and inflation. His real vulnerability in the June 5 election, however, will be his inability to explain why the United States has subordinated its NATO alliance with Turkey to the relatively inconsequential Greek-Turkish dispute over Cyprus.

"I cannot defend the U.S. in this campaign," Demirel said, "and our relationship with the U.S. is certain to become a very big issue. All I can do is defend myself and my feeling for the U.S. I can say this is a good—was a good—relationship."

Demirel wants Carter to take one positive step: Persuade Congress to approve the U.S.-Turkey defense agreement signed with fanfare 13 months ago. That does not mean simply talk about the administration's hope that Congress will approve the new defense pact and its provision for grant military aid, as expressed by Vice President Mondale Wednesday. It means a sustained White House commitment to moving the agreement through Congress. Lacking that, Demirel can be painted into a corner by Ecevit—accused of signing a meaningless agreement that he cannot persuade the United States to carry out.

Beyond this surface political fact, a psychological shift in Turkish politics is building that transcends any agreement: a potential shift of the political base, dominated by strongly pro-American forces for more than two decades, to something not yet definable but deeply foreboding for the United States. In short, the growing perception here that the U.S. connection apparently cannot surmount the issue of Cyprus has provided an opening for political trends that see Turkey's future in wholly different modes.

It would be a mistake to overstate this danger, but historical facts point straight to it. When modern Turkey, one of the few remaining democracies, was founded on the ruins of the Ottoman Empire by Ataturk after the First World War, it followed conscious neutrality until just before the end of World War II. As one of the world's foremost Moslem states, it has deep cultural and historical ties to the Middle East. Contacts have been growing between youthful military officers in Turkey's superb army and such rabid, anti-Western radicals as Libya's Quaddafi.

Serious Turkish politicians now warn privately that with the American connection coming into question, a new political movement founded on Moslem nationalism and looking east and south cannot be ruled out. An experienced British diplomat put it grapically to us: "What is your country doing? My God, if the Soviets could detach Turkey from NATO the result would be catastrophic."

Ecevit himself suggested that political change stimulated by U.S. punishment for the Cyprus invasion could lead Turkey down new roads. In an interview with us last week in Istanbul (where he was campaigning in a white, all-purpose campaign bus topped with loudspeakers), he said he believes Demirel to be "very vulnerable" because of U.S. failure to approve the new defense agreement.

"The Turkish people are not adventurers," he told us, "but they know they can no longer rely exclusively on American military aid and cooperation. We must learn to take care of ourselves but without upsetting the balance in the world. We know the world is not what it was more than 20 years ago [when Turkey joined NATO] and that we can afford to follow a more flexible policy." Referring to the Greek lobby in the U.S. Congress, he said: "I do not criticize ethnic politics. That is for you to decide. But we must evaluate it realistically."

During the last two years of decay in the American connection, the Soviet giant to Turkey's north has conducted an impeccably correct policy here, waiting for the "realistic evaluation" to ripen. The Kremlin's program to exploit the bitter feelings here for the United States—and what Moscow hopes to accomplish—will be discussed in a final report from Turkey.

HARVEST IN VIETNAM

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. HILLIS. Mr. Speaker, I found the following article, "Harvest in Vietnam," as printed in the Wall Street Journal of April 21, 1977, to be of great interest. This is the first information I have seen in the press dealing with the denial of human rights of South Vietnamese by North Vietnamese.

In keeping with the present administration's position on the issue of human

rights, I feel the proper congressional committees should look into this situation. If the information contained in the article is correct, it must be determined what the appropriate response of the Congress should be.

The article follows:

HARVEST IN VIETNAM

During the last months of Lyndon Johnson's presidency, when our national debate over the Vietnam war had entered its ugliest phase, Mr. Johnson sometimes used to defend his policies by warning about the Communist tyranny that would descend on South Vietnam if we withdrew our war efforts. His opponents would reply that his picture of Communism was a paranoid fiction, that the harsh conditions of North Vietnam were hardly likely to be replicated in the south, or that it was hard to imagine anything worse than the repressive South Vietnamese regime that the Americans were already supporting.

For better or for worse, history has given us the opportunity to judge the debate; and in recent months even some of the most vocal antiwar protestors of a decade ago have shown signs of now knowing that Mr. Johnson's prediction was not so paranoid after all.

A few weeks ago The New York Review of Books reprinted without editorial comment an interview given to the French newspaper L'Express by Andre Gelin, a priest expelled from Vietnam by the new regime after he had lived and worked there for 28 years. Father Gelin told in some detail how the South Vietnamese revolutionaries had been displaced by rulers from the North. He described a regime without even the remnants of shame about its complete lack of political liberties. He recounted massive violations of human rights—imprisonments, forcible deportations, executions, forced migrations and their attendant deaths. And he described an economy in ruins, with the South Vietnamese reduced to physical misery.

It was remarkable that such a document should appear in the New York Review, a journal that had printed some of the most violent of the opposition to the American anti-Communist effort in Vietnam. But the latest issue of Worldview Magazine makes clear that this article was only one sign of the distress in the old antiwar movement.

Worldview gives us another description of life in postwar South Vietnam—this one by Theodore Jacquency, who quit the State Department in protest over continuing American support of Nguyen Van Thieu. Mr. Jacqueney describes the conditions in South Vietnam's "re-education" camps for the politically retrograde and dangerous. The camps house some 300,000 souls, at a widely accepted minimum estimate, and their guests include many of the prominent opponents of the Thieu regime. By now, reports are numerous and reliable enough for one to conclude that conditions in many of the camps are nothing less than disgusting, and that those who run them must be called despicable.

We also learn from an article by James Finn in this same issue of Worldview that such reports have come to disturb more and more of those who protested our involvement in Vietnam. Mr. Finn says that antiwar concern over human rights violations by the Communists began to show effect about six months ago, when several antiwar activists started writing private letters to the Vietnamese observer to the UN to ask for an accounting of all the stories of arrests and detentions. There were no answers. Finally the activists made their request public in a petition signed by a collection of antiwar luminaries, including Joan Baez, Daniel Ellsberg and Staughton Lynd.

The petition was no denunciation of the new regime; it was merely a request for an inquiry. And the Vietnamese, needless to say, did not make a cooperative response. But this public act was enough to touch off a controversy among doves that is still growing. On one side, some from the antiwar movement—Richard Falk, Cora Weiss—replied that the present suffering of the Vietnamese people should be laid at the doorstep of America and its war. On the other, movement participants have produced more news of atrocities and more protest against them.

The present awakening is not without its interest to those of us who watched antiwar protest grow during the 1960s. One sees, first of all, that many of its leaders were well-meaning men and women who are now willing to voice their doubts about the new regime despite a certain embarrassment to some of their past political declarations.

But one sees even more clearly that the embarrassment—and more—is richly deserved. These atrocities in the new Vietnam are not universally surprising accidents of history; these were things that were predicted and could have been known. Our experience of the postwar years has quite clearly been that Communist regimes practice repression on a larger, more irreversible and thus more monstrous scale than that of less ideologically inspired tyrants; one could not have trusted this experience and at the same time reviled America and American motives in Vietnam as the antiwar movement came to do. Perhaps next time around in our debates about foreign policy, we can be spared this particular kind of blindness about the nature of the world we have to deal with.

INDEXING OF FEDERAL TAX LIENS

HON. KENNETH L. HOLLAND

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. HOLLAND. Mr. Speaker, the Tax Reform Act of 1976 added a provision to the Internal Revenue Code that requires the Internal Revenue Service to maintain in each of its district offices an index of the notices of tax lien that have been filed with the appropriate State or local office. The provision was enacted in response to a court decision holding that a purchaser of a residence from a delinquent taxpayer took the property subject to a prior tax lien where the notice of the tax lien had been filed by the IRS but had not been indexed or recorded by the clerk for the local recording office.

The Federal indexing requirement has caused a number of problems. First, implementation of the new system has been costly to the Federal Government. On a long-range basis, I have been informed that the cost of maintaining the index may run to nearly $1 million a year. This is a significant cost to provide a public index that is repetitious of the public index that is maintained in some form in every local jurisdiction in the country. Second, the indexing requirement will impose a significant burden in searching titles in connection with real estate sales. The title searcher will have to check the records at the local courthouse and also at some distant district IRS office for Federal tax liens. The extra cost will eventually be passed on to the consumer in the form of higher fees to search a title.

My amendment would eliminate these problems by repealing the costly IRS indexing requirement and providing remedies that are specifically targeted for the situation involved in the court decision. Under my amendment, the IRS would be required to discharge a tax lien against a personal residence if the notice of tax lien was not properly recorded at the time of purchase in the office designated for filing these notices. In these cases, the purchaser could request a discharge of the tax lien under an administrative procedure within the IRS and he could have his right to receive the discharge adjudicated in a U.S. district court.

I believe this approach will specifically deal with the problems raised by the court decision in a manner that is far less costly to the public and the IRS. In addition, it is estimated that this provision will not result in any revenue loss.

My amendment provides essentially the same solution suggested recently by the Acting Commissioner of the IRS to the staff of the Joint Committee on Taxation.

THE EQUAL RIGHTS AMENDMENT

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mrs. CHISHOLM. Mr. Speaker, the equal rights amendment has suffered three serious setbacks recently when the legislatures in Florida, North and South Carolina failed to ratify it. This amendment, which states simply that no individual's constitutional rights can be denied or abridged on the basis of sex, is a modest and appropriate first step in our efforts to end the pervasive discrimination against women. It is a concept whose value no thinking American can deny.

Yet, the campaign against ratification throughout the country has been emotional and bitter, and the opponents of the ERA have distorted both the purpose and the potential of this amendment to the extent that few Americans realize what the ERA would do. In the meantime the disparity in pay, in social security benefits, credit practices, and property laws affecting women, is still in evidence in this country. If we are going to be serious about fully extending individual rights to all Americans, then it becomes necessary that we secure those rights legally; and it is time—past time—that women be recognized as equals under the law.

Ellen Goodman's insightful article in today's Washington Post details how necessary the ERA is and how, ironically, many of our citizens do not yet recognize how much discrimination women at all levels in our society face. I would like to insert her article in today's RECORD:

SOUTHERN WOMEN IN THE ERA

(By Ellen Goodman)

BOSTON.—I was in Virginia on the day they opened debate in Florida on the Equal Rights Amendment.

I was riding through the lush Southern countryside, overwhelmed by the peak season of azaleas and dogwood, when Lori Wilson, of Cocoa Beach, closed the Florida Senate's debate with a plea: "ERA is going to be ratified, so just one time let it be because of the South, not in spite of it."

My destination was a small college founded by Baptist women at the beginning of the century. A college of 700 women students, mosty white and nearly all Southern. The average income of the families that send their daughters to this contained brick campus in the country is $30,000.

I was invited there to talk with the seniors at their last class dinner, two weeks before they left the womb of the college (in the 16th year of their prepackaged school lives) and took their first steps out of the shelter.

The dean had cheerfully introduced me as "an emissary from the real world."

The escort was a senior with curly brown hair, a smile and a bright printed skirt. Her teaching degree was about to be signed, sealed and delivered. We talked about jobs, and we talked about her mother, a woman in her mid-40s who was trying to change her own life, now that the children were grown.

Maybe, I thought, the South wasn't that different. At least not on its northern border. By the time we sat down for dinner in the wood-beamed dining room with 150 seniors and alumni, the ERA has been defeated in Florida.

My topics were life choices and change, some of the new conflicts and opportunities there were for men and women in this society. They were some of the same things that had been discussed recently at Yale and the University of Minnesota.

But this audience was different. Quiet. Not merely polite, but both intense and subdued. I wasn't able to understand it until later. It was clear from the questions that the 22-year-old almost-graduates on this Virginia campus were hearing fresh, "new" information.

It appeared that they didn't know that half the mothers in the country are working outside the home. They didn't know that the average work-life of the American women is 25 years. They didn't know that fewer than 10 per cent of American families are still "typical"; a daddy at work, a mommy at home, and two kids. They didn't know that the wage gap between men and women has increased in the last five years. And they didn't know that a divorced homemaker can lose her Social Security.

Only the emissary from the real world seemed to know the odds: That these seniors would have to take care of themselves and possibly their families, for much of their lives.

Of course, there had been changes on this manicured campus. There was a new "lifestyle" committee. There were thoughtful administrators and some very astute students. The almost-graduates worried more about jobs and less about wedding rings than the alumnae had at their age. It seems that their basic life plan had at least adjusted to a delayed timetable.

But there were so many who were so obviously unprepared.

I didn't read about the Florida defeat until the next morning on my return flight. Then, somewhere over New Jersey, I wondered about the crucial importance of the "New" South, that big blank on the ERA map: 10 states, and not one of them for the amendment.

Will it be a minority of men in a minority of states who deny equal rights to the women of the entire country? Will they do it in the name of protection? Will the ERA be defeated because of the South, not in spite of it?

The South "protects" women—from reality, from planning their futures—while they stay in duly appointed shelters. It may well be the South that keeps all women as unprotected in the real world as the eager and pretty and bright and naive almost-graduates of a small women's college in Virginia.

PAGING RUBE GOLDBERG

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. MICHEL. Mr. Speaker, many of us fondly remember the cartoons of the gifted and zany Rube Goldberg. His fantastically complicated machines became so well known that the very name "Rube Goldberg" conjures up an image of needlessly complicated methods of achieving relatively simple needs.

I thought of Rube Goldberg as I studied the President's energy proposals. The President has created a plan, that much is certain. But precisely what the exact nature and effect of that plan would be no one seems quite certain, even the President's chief aides. Today we read that his energy program will have no significant effect on economic growth, despite a statement in a fact sheet released by the White House that the plan would have small but generally positive impacts on the economy. The President in his speech said that what we needed was an independent information system to give us reliable data on energy.

Yet, as New York Times columnist James Reston points out, the President has put forward his program and asked for sacrifices without such a source. And what about this Central Intelligence Agency study the President refers to and which has been used to back up his fundamental thesis which is that we are running out of energy? For years now we have been hearing criticism of CIA studies on subjects in which that organization presumably has competence—but now we are asked to swallow a study in a subject about which the CIA has as little expertise as any non-energy-related organization.

The President's plan, then, resembles one of Rube Goldberg's masterpieces: an intricate and increasingly complicated series of devices including rebates, taxes, taking money out of one pocket to put into another, a bigger bureaucracy in the name of efficiency and a lack of emphasis on production and research and development. And no one can say just what, in the long run, this machine, to be run by an army of bureaucrats, really will do.

Today's Chicago Tribune carries two splendid editorials which are the most clear and most convincing statements I have seen outlining the inherent problems in the President's plan. I include these editorials in the RECORD at this point.

ENERGY: TOO LITTLE ON SUPPLY . . .

President Carter's proposals for a national energy policy rely too much on curbing demand and consumption and too little on increasing domestic supplies of natural gas and petroleum. The President should have called for the gradual deregulation not only of natural gas prices, as he promised in his campaign, but also of petroleum prices.

That would help achieve conservation by allowing prices more nearly to reflect the true cost of replacing present supplies. Market-oriented prices would also provide producers with the capital and the incentive for more drilling. A sensible policy would also insure that producers plow increased profits back into petroleum, natural gas, and other forms of energy production. Profits not used for energy development could be taxed away.

Instead, Mr. Carter's plan would tax petroleum producers so as to raise prices to world levels—set by the foreign oil cartel—and would pass the revenues on to the government, which would then return part of them to the public through rebates. That is backwards, since it is neither the government nor the public that needs the money for exploration and drilling. The Carter proposal is regressive also on natural gas. It would regulate the heretofore unregulated intrastate price and do little to increase supplies.

The demand side of the President's scheme, on the other hand, has several good elements. Taxing gasoline, "gas guzzling" autos, and other energy-inefficient machines and appliances might succeed in restricting the growth in U.S. demand for energy. It might insure a little more time than will perhaps actually be needed to bring into use energy sources to replace finite supplies of petroleum and natural gas. That would be desirable for this nation's economy.

But the program is so one-sided as to be self-defeating. It contemplates stiff taxes to conserve gasoline, but nowhere suggests that the resulting revenues might be used to improve alternatives to the highway—such as mass transit—or railroad trackage.

But very likely the chief failing of Mr. Carter's plan is that, by concentrating so heavily on holding down demand rather than increasing supply, it may end up paradoxically making us even more dependent on foreign energy sources. That could drive up the cost of nearly everything and could jeopardize our economic growth without the compensating promise of increased domestic oil and gas supplies.

. . . AND A BIGGER BUREAUCRACY

Thanks to what appears to be a paranoid fear of the free market, the Carter administration has produced an energy bill that would not only do little to encourage the development of new sources of energy, but would inevitably depend for enforcement on a gigantic, costly, and oppressive new bureaucracy.

And so we find an administration which was elected on a promise to streamline the federal government proposing a plan which would have the very opposite effect. In fact, the White House staff has already grown by about 30 per cent since Mr. Carter took office.

Oh, we know that Mr. Schlesinger, the federal energy administrator, and other White House spokesmen deny that a new bureaucracy would be required. But if there is not to be an increase, then how are all the new controls going to be policed?

To say that a bigger bureaucracy won't be necessary is to suggest that the new controls won't really be enforced at all—that people will go through all of the prescribed motions and fill out all of the required forms and that their work will then be filed away in warehouses, never to be seen again, or perhaps even thrown away like the dividend reporting forms which corporations have been submitting to the Internal Revenue Service at great expense.

Instead of moving toward the free market, as industry and most sensible economists have been urging, the Carter administration is inviting the worst of both worlds: tough and politically unpopular conservation meas-

ures plus tough and unpopular controls which may end up making the conservation measures futile.

For example, Mr. Carter is not calling for the deregulation of the price of natural gas, even though he once promised to do so. On the contrary, he is calling for a new ceiling on the price of gas which, though higher than the present one, links the price of gas to the price of fuel oil and applies the new ceiling to gas sold within the producing state as well as beyond its borders. Does anybody seriously believe this can be enforced without thousands of new payrollers?

Similarly, the incentive to produce new oil is based not on the free market, but on another intricate formula based on world prices. Who would police this? And who would police the complicated schedule of taxes and rebates attending the purchase of new cars, based on the fuel consumption of the cars? Who would determine the fuel consumption?

We're told that much of the suffering caused by higher fuel prices would be offset by higher credits for the poor on income tax returns and by direct payments to those who don't file income taxes. This sounds alarmingly like a reincarnation of the late and unlamented tax rebate—a scheme to distribute alms about the country without any apparent relationship to whether the beneficiaries pay for gasoline or heating oil.

In short, Mr. Carter has called courageously for temporary sacrifies and would now impose a new array of agencies and controls whose long run effect, we suspect, would be to make those sacrifices permanent. And once again, the country is asked to suffer in order to gratify the ego of planners who think they can outsmart the free market.

TAX INCENTIVES FOR ENERGY CONSERVATION

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. GILMAN. Mr. Speaker, on February 24 I introduced H.R. 4029, a measure which would provide tax incentives to promote taxpayers to invest in energy conservation and renewable energy equipment.

Under this proposal, a homeowner or apartment renter would receive a maximum tax credit of 30 percent or $225 of insulation expenses not exceeding $750. Insulation includes installing a storm or thermal window, or any other device designed to reduced heat loss and has a useful life of at least 3 years. Individuals installing solar heating and cooling equipment in their residence would also be eligible for a maximum credit of 25 percent or $2.000 of the cost of equipment and installation not exceeding $8,000. Installation of this type of equipment prior to the enactment of this measure would also qualify for a tax credit. Further, solar energy equipment installed in a building used as a business would receive investment credits as depreciable property.

Further, a taxpayer would be entitled to a deduction for amortizing for 60 months equipment that: First, uses, processes, or recycles waste into fuel; second, reaches, converts, or extracts oil shale into oil or gas; or third, uses geothermal energy or solar energy equipment to heat or cool a building, or to provide hot water or steam for the building.

Subsequent to the introduction of H.R. 4029, several of my colleagues expressed an interest in this legislation. Accordingly, today I am reintroducing this measure which has been cosponsored by 12 colleagues:

Mr. BEDELL of Iowa.
Mr. EDWARDS of California.
Mr. GEPHARDT of Missouri.
Mr. GLICKMAN of Kansas.
Mr. JENRETTE of South Carolina.
Mr. KINDNESS of Ohio.
Mr. LAGOMARSINO of California.
Mr. MADIGAN of Illinois.
Mr. MURPHY of Pennsylvania.
Mr. PURSELL of Michigan.
Mr. SCHEUER of New York.
Mr. STEERS of Maryland.

The full text of this legislation appears in the February 24, 1977, CONGRESSIONAL RECORD on pages 5378–5381. I welcome the support of all my colleagues of this legislation, which would help to encourage the investment in energy saving devices in every State.

I am pleased that the President endorsed this general concept of providing tax incentives for energy conservation in his recent energy policy message to Congress.

THE BOY WHO CRIED "WOLF"

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. PATTISON of New York. Mr. Speaker, we all recall the story of the boy who cried "wolf." You will recall that the moral of that story is that if you give out false reports when there is no danger, no one will pay any attention when you really need them. It is the ancient equivalent of what we today call a "lack of credibility."

On the other hand, it should be remembered that, in part, when the boy who cried wolf did so the last time, there really was a wolf who proceeded to make a meal on the unfortunate boy.

So the fact that many Americans may not believe that there is an energy shortage to be dealt with from now on, and base that view on the fact that they have been misled by erroneous Government pronouncements over the years, like those who decided not to come to the aid of the boy who cried wolf, is understandable but unfortunate both for themselves and the country.

Recently, I was given an article written by Dr. Arthur M. Bueche, vice president, research and development, of the General Electric Co. It is well written, well reasoned, and very convincing both as to the problem and the remedies. Of course, I cannot vouch for the validity of many of the underlying assumptions of the author. If they are not accurate, then the conclusions are also not accurate, and vice versa.

However, due to a cost in excess of $1,000, it is impossible to reprint this article in this RECORD. If you would like a copy of Dr. Bueche's article, please contact my office, or write directly to: Mr. R. Ned Landon, manager, communications branch, GE RND Center, P.O. Box 8, Schenectady, N.Y., 12301. I would be extremely interested in an analysis of those assumptions by anyone taking the time to read the article I have mentioned above.

PLEASE, MR. PRESIDENT, SPARE US THOSE RHODESIAN HOMILIES

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. McDONALD. Mr. Speaker, it is interesting to learn in recent days that attempts are being made by our Government to "gag" the Rhodesian Information Office here in Washington, D.C., by means of harassment by Federal agents. This certainly recalls to mind the early 1960's when poor Michael Strulens, as an agent of Moise Tshombe, was hounded out of the country when he tried to present to the American people the facts about the Congo—Zaire and Katanga that our Government was hiding from view.

Later, of course, Tshombe headed the Congo for a while and Strulens came back as his Ambassador. This censorship and hounding of the Rhodesians is perhaps more appropriate to the Soviet Union than the United States. Mr. Smith Hempstone has written a column showing the hypocrisy of our policy and I commend it to the attention of my colleagues. The column appeared in the Richmond Times-Dispatch of April 7, 1977.

PLEASE, MR. PRESIDENT, SPARE US THOSE RHODESIAN HOMILIES

(By Smith Hempstone)

WASHINGTON.—At a time when the U.S. is falling all over itself to establish diplomatic relations with two of the world's nastier dictatorships—Communist Cuba and Red Vietnam—the Carter administration is preparing to gag the small voice of white-ruled Rhodesia here.

The U.S. has let it be known that it will support a United Nations resolution that will make it impossible for Rhodesia to fund its Washington information office. This office, which is manned by two officers, was favored with visits for the last 10 days of March by teams of Justice Department lawyers and FBI agents, apparently seeking evidence that the Foreign Agents Registration Act had been violated.

On March 15, at the administration's urging, Congress repealed the Byrd amendment that for the past five years had made it possible for the U.S. to buy Rhodesian chrome in defiance of a U.N. embargo regularly breached by many members of the international organization. The U.S. now will buy its chrome from such pillars of civil liberties as the Soviet Union and South Africa—at a higher price, of course.

The administration, naturally, has cloaked its moves with lofty rhetoric about legitimacy, civil rights and freedom. But the truth is a little more cynical: Washington is trying to ingratiate itself with the black

guerrillas fighting to "liberate" Rhodesia from its white-minority government.

Of course, one man's liberty is another's tyranny. The guerrillas, who are supported by the neighboring African states and the Soviet Union, have threatened reprisals against those blacks who make up the majority of the Rhodesian armed forces, murdered white missionaries, abducted black schoolchildren and rejected the notion of a plebiscite to determine who the Rhodesian people want for their black leaders.

Prime Minister Ian Smith, in contrast, at considerable political risk to himself, last spring accepted the Kissinger plan for black rule of Rhodesia within two years, and since has moved to do away with many forms of racial discrimination.

The Smith regime is far from perfect and, in some respects, has been its own worst enemy. It has had more than 11 years since Rhodesia's unilateral declaration of independence to win the loyalty of the country's 5.5 million Africans by dealing fairly and generously with them.

Until relatively recently, however, it did very little in this respect, and a great opportunity was lost. Yet the fact remains that the Smith regime, with all its faults, emerges as positively Jeffersonian when compared with those in power in Cuba and Vietnam—or in most of Africa, for that matter.

Bloody and tyrannical as they are, one does not quarrel with the notion of establishing diplomatic relations with Cuba and Vietnam. The establishment of such relations, in diplomatic practice, implies neither approval nor disapproval of a regime. It amounts only to acceptance of the fact that a regime exists and is in control of its territory. The bloody repression of the opposition in both countries had indeed established the control of these regimes over their territories.

But if we can have relations with Vietnam, which has tortured American prisoners of war, and with Cuba, which has sent its soldiers half a world away to teach new nations that power grows out of the barrel of a gun, where is the equity in treating Rhodesia as if it were the world's polecat?

It is true that the Rhodesian regime is "illegal" in the sense that in 1965 it unilaterally declared itself independent of Britain. So did another country 189 years before that.

It can be said that Rhodesia declared its independence to defend white privilege, not to proclaim the brotherhood of man. But those who were slaves in this country in 1776 might find a certain irony in that criticism.

Despite President Carter's rhetoric about returning morality to the conduct of foreign policy, diplomacy—which involves the balancing of interests with ideals—remains an essentially amoral game.

And recognizing the emotional appeal of the Rhodesian issue to the American black leaders who helped put him in the White House, one does not urge—or expect—the President to rush out and recognize the Smith government.

But it is at least arguable that *neither* equity nor the national interests of the U.S. lies in berating Rhodesians of both races who are willing to give moderation a try and encouraging Soviet-backed guerrillas who promise to bring only violence and repression to a small land.

Nor does it further discussion of the merits of the case to harass and threaten to gag a two-man office with the temerity to speak for the other side.

Yet if against equity and the national interest the deed must be done for political reasons, then the President, out of a decent respect for the truth and the people's intelligence, ought to spare us those homilies about the lofty ethics and morality involved.

NEWTON, MASS.—ALL-AMERICAN CITY

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. DRINAN. Mr. Speaker, I am proud to announce that Newton, Mass., which lies within my congressional district, has been selected by the National Municipal League as one of the 10 All-American cities of 1976-77.

The residents of Newton, a city of some 90,000, certainly deserve this extraordinary honor. Their participation in community services and cooperation with local government in the effort to solve community problems can serve as a model for other municipalities.

The civic-minded nature of the residents of Newton is exemplified by the following three major accomplishments.

Faced by the deterioration of the commercial district within their neighborhood, the residents of Newton Highlands amended the city's charter to establish the Newton Highlands Neighborhood Council. The council obtained a grant from the U.S. Department of Housing and Urban Development and set about to rejuvenate the ailing commercial area. With the input of 1,500 Highlands residents, the council will continue to establish future neighborhood priorities.

In an effort to expand Newton's educational system and to strengthen the bond between the community and its schools, parents of elementary school-aged children established afterschool programs for both children and adults. The success of the original programs quickly prompted other parents to initiate similar workshops. At this time, all but one of the 23 elementary schools in Newton offer afterschool programs.

The historic and esthetic concern of Newton's residents rescued an historic landmark from neglect and abuse. When the 19th century Bigelow House designed by famed architect Henry Hobson Richardson, was abandoned after the school of which it was a part closed, a group of Newtonites organized to save the building. With the help of Newton CETA workers, the group has begun renovation of the valuable structure as a public service project.

Newton is a city which has provided its residents with a maximum of human services at a minimum of cost. This achievement would have been impossible without the active participation of Newton residents who volunteer their time, energy, and concern for the well-being of the city as a whole.

Although citizenship participation has been the indispensable element which made Newton, Mass., one of the 10 all-American cities, the leadership of public officials has also been essential. The mayor, Theodore D. Mann, the president of the aldermen, Joseph M. McDonnell, and the chairman of the school committee, Alvin Mandell, have all—along with their colleagues in government—contributed immeasurably to the latest honor which has come to a city whose governance has always attracted able leaders.

I commend the National Municipal League for recognizing the merits of an outstanding city.

GOVERNMENT INSPECTIONS UNDER SCRUTINY

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. HANSEN. Mr. Speaker, the fourth amendment fight against the Occupational Safety and Health Act—OSHA—has now officially reached the U.S. Supreme Court.

As a longstanding leader in this fight against OSHA and as chairman of the American Conservative Union's National Stop OSHA Campaign, my office has for over 2 years been developing and coordinating efforts to put an end to OSHA's highhanded practices.

This has been done through legislative procedure in committee and by action on the House floor, as well as through the special activities of the Republican Research Committee's Government Executive Agency Review—GEAR—Task Force of which I am chairman.

Our efforts have had some positive impact on the executive department, as well, in their administrative procedure, particularly in enforcement attitudes, thrust of emphasis, and restrained agricultural policies and implementation timetables.

However, the greatest success has been achieved in the courts as a matter of preserving basic constitutional rights. I have coordinated a highly successful nationwide uprising of court cases at both Federal and State levels against OSHA's abuse of fourth amendment rights which is now before the Supreme Court for a final decision.

Courts in a dozen States in the past 16 months have unanimously come down against the warrantless searches of OSHA, the most telling blow being dealt by a Federal three judge panel in my own State of Idaho which declared the inspection section of the law "unconstitutional and void."

As the case comes to the Supreme Court for final review American businessmen and farmers should continue to refuse to waive their constitutional rights—they can and should reject inspections by OSHA. OSHA has the authority to temporarily continue inspections in all areas of the Nation, but this does not prevent each individual with proper legal advice from rejecting an OSHA inspection based on the abundant court precedent now established. Thus the OSHA inspector can knock, but the businessman and farmer can refuse to let him in on fourth amendment grounds. The point is that OSHA's inspection provisions have been declared unconstitu-

tional and that is the brass ring to grab for anyone willing to assert his rights.

Mr. Speaker, I include for the RECORD at this point an article in the April 19, 1977, Washington Star newspaper by staff writer Lyle Denniston which describes the recent Supreme Court activity.

COURT TO SAY IF OSHA CAN USE SURPRISE

Federal inspectors' authority to make surprise safety checkups on 6 million places of work will remain intact—but in doubt—for the next year.

Yesterday, the Supreme Court agreed to review a lower court decision that would force so-called "OSHA" inspectors to get a judge's permission before they could enter any private business to look for safety hazards to workers.

It probably will be next spring before the court reaches a final decision.

In the meantime, inspectors will have the right to decide for themselves to go ahead with their surprise visits. That's because Justice William H. Rehnquist gave temporary permission for such visits pending the outcome of the test case.

The only place such a visit cannot be made is Barlow's Inc., a plumbing and heating firm in Pocatello, Idaho—the company whose challenge produced the test case.

Twice, in September 1975 and January 1976, Barlow's turned away inspectors from the Occupational Safety and Health Administration, thus setting the stage for a ruling on their authority.

The inspectors had received no complaints about Barlow's, but simply wanted to look at its facilities as part of a routine investigation.

Barlow's complained to a three-judge federal court in Boise that it had a constitutional right to its privacy, and inspectors could come in only if they had convinced a federal judge that they had cause to do so.

The three-judge court agreed, and struck down the OSHA inspection system nationwide. The government then appealed the issue to the Supreme Court.

OSHA, which is a part of the Labor Department, has some 1,300 inspectors who make about 100,000 visits a year.

Mr. Speaker, the story of Bill Barlow, the Horatius standing guard at the fourth amendment bridge against the inspectors of OSHA who represent the forces who would deprive us of our basic rights, is told well by Kenneth Reich, political writer for the Los Angeles Times in his article of April 17, 1977, which I submit for the RECORD at this point:

INSPECTIONS BY GOVERNMENT SCRUTINIZED IN IDAHO CASE

POCATELLO, Idaho — Important constitutional cases often arise out of rather prosaic circumstances.

And few would have guessed on Sept. 11, 1975, when Daniel Sanger, a young compliance officer with the U.S. Occupational Safety and Health Administration (OSHA), left his office here and walked a half a block to the offices of F. G. Barlow, an electrical, plumbing and heating subcontractor, that such a potentially very important case was about to begin.

Barlow, then 60 years of age, an active member of the John Birch Society and a fervent conservative, met Sanger at the door.

When the OSHA employe told him that he had come to perform a routine, on-site safety inspection of his 30-employe facility, Barlow politely refused him permission to enter. Barlow said Sanger first had to produce a warrant.

In the ensuing legal cases, a three-judge federal court panel in Idaho unanimously ruled that the section of the OSHA enabling act of 1970 allowing warrantless inspections is an unconstitutional violation of the Fourth Amendment, which relates to searches and seizures of persons and private property.

That decision is the latest in a string of federal and state court decisions that have cast doubt on the validity of basic procedures by which a host of government agencies closely supervise business and even individual activities in this country. The case is on Monday's U.S. Supreme Court conference calendar, and the high court within the next few weeks is expected to announce that it is setting it for formal hearing later in the year.

In the meantime, Barlow's place of business goes uninspected.

"A man should be capable of inspecting himself," he asserted last week in an interview. "As strong as the unions are and as restrictive as the insurance companies are, you can't go around hurting employees anyway . . . We have a union shop and three different unions involved."

The contractor added that his place of business has an excellent safety record, a fact agreed to by the government.

"This is one thing that helped our case in court," Barlow said. "There had been no complaints to bring Sanger in, no accidents."

So the Barlow case comes to the courts for determination in what is known as a "pure" state. The government is asserting, as OSHA's enabling act did, its interest in making unannounced inspections of businesses where there has been no complaint in order to be sure that safe practices do prevail everywhere.

Barlow and his attorney, John Runft of Boise, counter that such inspections must follow a warrant procedure and that a warrant can only be obtained for "probable cause" of something wrong.

Such cases have been a major preoccupation of the ultra-conservative Birch Society for several years now. But in a striking development in this instance, the American Civil Liberties Union may file in support of the Parlow position.

ACLU attorney Joel M. Gora said in a telephone interview from New York Friday that the liberal-oriented organization has "long been concerned about administrative searches" as "an inroad on privacy" and that there was "a very definite strong possibility" that it will file a friend-of-the-court brief backing Barlow.

Also expected to support Barlow are attorneys for the American Conservative Union, the National Federation of Independent Businessmen, the Idaho attorney general's office, the American Farm Bureau Federation, the Pacific Legal Foundation and the National Center for the Public Interest.

When the Barlow case came to the federal court panel in Idaho last year, government attorneys argued that requiring warrants would put in mortal jeopardy a procedure designed to make American businesses safer and healthier for those who work in them. And they argued that, far beyond OSHA, the requirement would place in doubt all kinds of building inspections, fire inspections, airplane inspections and the like.

The Fourth Amendment declares:

"The right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures, shall not be violated and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

"If the (OSHA) law is to be properly enforced and inspection made effective, inspections without warrant must be deemed reasonable official conduct under the Fourth Amendment," Asst. U.S. Atty. Paul Westberg contended in a March, 1976, brief. "If inspection is to be effective and serve as a credible deterrent, unannounced, even frequent inspections, are essential.

"In this context, the prerequisite of a warrant could easily frustrate inspection . . ."

"Over 70% of initial OSHA inspections reveal safety and health violations resulting in citations," Westberg added. "The Act covers nearly 6 million workplaces and the (agency) is currently conducting tens of thousands of inspections yearly. In these circumstances, requiring inspectors to obtain a warrant before each inspection would place an intolerable burden on its limited enforcement resources, create severe delays in implementing inspections and further undermine the Act's basic purpose of assuming the swiftest possible abatement of occupational hazards.

"More importantly," Westberg concluded, "as a practical matter, the (agency) would not—except in limited circumstances of employe complaints, open violations or suspicious fatal accidents—be able to demonstrate the existence of probable cause to believe statutory violations exist at any particular workplace."

But Barlow's attorney, Runft, declared in his answering brief:

"The ultimate issue of this case is whether a warrantless administrative search may lawfully be made under the authority of an Act of Congress which seeks to dispense with the need for a neutral magistrate's detached examination of the need and justification for a research in an overly broad class of cases. . . .

"OSHA applies to every business affecting commerce in the entire United States, ranging anywhere from a big steel company to a shoeshine shop. The act is applicable to some 60 million employes and five million businesses. (We) respectfully submit that the possibilities of abuse and the threat to privacy are of most impressive dimensions."

In their decision, U.S. Circuit Judges M. Oliver Koelsch and J. Blaine Anderson and U.S. Dist. Judge Ray McNichols, arguing from a long and somewhat divergent line of cases, held for the Barlow side' and the government appealed to the Supreme Court. There have been cases over the years on the validity of administrative searches, but the trend of decisions on them has not resolved the issue definitely.

OSHA has stirred often bitter opposition from the political right and some business circles ever since its inception, while it has generally been supported by organized labor.

But in Idaho, where the Birch Society has been quite active, the opposition has been particularly strong and growing. Even Idaho's liberal Democratic senator, Frank Church, said last year that he thinks the OSHA law goes too far.

"It attempts to cover every business and every farm in America," he said, speaking before Congress amended the act to exclude farms employing less than 10 employes. "Resistance will grow until at last the scope of the law is reduced to the point where there can be equitable enforcement on a reasonable scale."

Actually, despite suggestions in Birch Society literature and broadcasts that OSHA is a Gestapo-like organization, reaching toward harassment and persecution of every business, the indications in Idaho and elsewhere are that it has consistently been understaffed and underbudgeted in relation to its announced mission. It has had enough resources to inspect only about 2% of the nation's businesses annually.

In an interview in Boise last week, OSHA's area administrator for Idaho, Richard C. Jackson, said that, including himself, OSHA has but 13 inspectors in the state to examine

40,000 businesses and thousands of farms. Including follow-up visits, he said, only about 1,000 inspections a year are performed.

Most of these, he added, involve imminent danger or other serious complaints, fatality-disaster cases and other kinds of complaints.

Jackson said only a relatively few of the inspections could be termed fishing expeditions, where the OSHA compliance officers go into an establishment like Barlow's, without receiving any complaints, to see what's what.

In Pocatello, one compliance officer, speaking unofficially, said that in many complaints the informal policy is to suggest to the caller that he seek internal correction of the situation. Only in case of repeated complaints, he said, does an inspector go to see for himself.

Jackson, asked about this, said that it was an accurate statement of the way OSHA operates in Idaho.

Such information tends to suggest that in most present inspection cases in the state, OSHA would have little difficulty securing a warrant, if they were to be required, although, of course, OSHA inspectors would lose the advantage of surprise.

One persistent complaint of OSHA critics is that businessmen are sometimes unjustly and heavily fined without being given a chance to first correct violations. Jackson scoffed at this, saying that during last October, a fairly representative month, total fines amounted to only $11,805 statewide.

But the OSHA director declined for the most part to respond to another series of questions, saying he had been instructed on higher authority not to.

These questions involved a lengthy letter, highly critical of OSHA's fairness and its procedures, that was inserted into the CONGRESSIONAL RECORD recently and that was signed by Sanger, the very compliance officer who had sought to inspect Barlow's plant.

Sanger claimed in the letter that statistics showing a reduction in the industrial accident rate in Idaho since OSHA came on the scene had been gathered on an erroneous basis, that fines and citations were often levied inconsistently and that in his view present OSHA inspection procedures violate not only the Constitution's 4th but the 7th Amendment (the right to trial by jury).

In Pocatello, an associate of the young compliance officer said he was on a leave of absence and could not be reached for comment.

Meanwhile, Barlow goes about his business in a low-key manner these days, although he expressed pride in an interview that his may end up being a landmark case. Birch Society literature is on prominent display in his office and he credits the society with educating him to his 4th Amendment rights.

Coming in from lunch the other day, he answered with an enthusiastic "Great!" when one of his seven children told him the Florida Legislature had just voted down the Equal Rights amendment.

"NONSOLUTIONS" TO THE POPULATION PROBLEM

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. SCHEUER. Mr. Speaker, I am disturbed by some ideas about how we should cope with the world population explosion, which appear to have gained acceptance in certain circles. I am speaking particularly about the subject of triage.

Because I have been active in the population field for many years, I wish to express my profound reservations about this point of view and make it clear that I do not share it.

Briefly stated, if the United States adopted a policy of triage, we would increase aid to those countries which make a genuine effort to reduce the birth rate, and cut off aid to those who do not choose to do so. It is the latter part of this formula that gravely concerns me.

I would hope that our Nation, in its search for viable and long-term solution to the world population problem, would not adopt simplistic and possibly dangerous approaches.

As many of my colleagues know, I have been working for the establishment of a Select Committee on Population whose goal would be to educate and motivate policymakers and the general public, both here and abroad, on the need to understand population dynamics and to respond effectively and in a timely manner to perceived problem areas. Ours would be a positive consciousness-raising mission, not a negative exercise in wielding a meat ax.

I would hope that the Select Committee on Population, should it be established, would be viewed as a positive body, incorporating many constructive ideas and sensitive to the needs and wants of all the people of the world.

OUTSTANDING SERVICE RECOGNIZED

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. PANETTA. Mr. Speaker, Members of the House, I would like to bring to your attention a turning point in the lives of two men who between them have logged over 44 years of dedicated service to their communities. On Monday, the 3d of January, Mr. Herman Botelho and Mr. Jack Vassalo retired from the San Benito County Board of Supervisors.

Jack and Herman will be sorely missed by the members of the board and the people of San Benito for their wit, wisdom, and evenhandedness in dealing with issues that confronted them during their tenure in public office. Fortunately, they will continue to be active as private citizens in the life of San Benito County.

I would like to chronicle for you the fine accomplishments of these men.

JACK VASSALO

Jack Vassalo was born in Sydney, Nova Scotia, and was raised in Boston where upon graduation he worked for the Boston Herald newspaper. In 1940, he first came to the city of Hollister in San Benito County, where he lived for 3 years before the call to duty brought him into the U.S. Army.

It was during World War II that Jack met Edna. They were both stationed in Africa, and upon returning to the United States in December of 1945, they were married and settled in Hollister. For 12 years Jack worked at Tiffany Motors before entering the furniture business in December of 1957. It was in 1964 that he began his distinguished tenure as the the fifth district's representative on the San Benito County Board of Supervisors.

He served as chairman of the Agency Formation Commission, as director of the California Council on Criminal Justice, as a director of health planning, and as a commissioner of the County's Veterans Memorial Park. In addition, he is a member of the American Legion and of the Veterans of Foreign Wars, past president of San Benito County Chamber of Commerce, and past Secretary of the Hollister Rotary Club. Jack, Edna, and their daughter, a teacher in the local school, reside today at the family home in Hollister.

HERMAN BOTELHO

Herman Botelho is a native Californian, born in Santa Clara, and a resident of San Juan Bautista since April of 1920. He and his brother Anthony have been in the growing and shipping industry for many years.

His long history of community involvement started in 1944 when he began what came to be 10 years of service as a member of the San Juan Union School Board of Trustees. During that period he became the city's leading citizen by being elected city councilman in 1946 and mayor in 1949, an office he held until he stepped down in 1962.

It was in September of 1963 that Herman was appointed to fill the unexpired term of Curtis Archibald as county supervisor of District Two. He gave up his positions on the San Benito County Planning Commission and the 33d District Agricultural Association Board of Directors to devote himself to his new duties. As supervisor, he distinguished himself as the board's representative and later chairman of the Monterrey Bay Unified Air Pollution Control Board.

Herman is a member of the Knights of Columbus, the Hollister Elks Lodge, the prestigious Commonwealth Club of California, and is past chairman of the San Juan Service Club.

Jack and Herman have become good friends during their 13 years of joint service on the San Benito County Board of Supervisors. Together they fought the battles and shared the victories and defeats. Their presence on the board will be missed but their accomplishments will be remembered fondly by the people they served. I congratulate them on a job well done.

THE ILLEGAL ALIEN IMPACT EXAMINED

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. BIAGGI. Mr. Speaker, I wish to bring to the attention of my colleagues an excellent column written in the New York Post by Harriet Van Horne. The column discusses the increasingly nega-

tive impact of illegal aliens on the economic life of this Nation.

The simple fact is, our Nation cannot afford to subsidize the illegal aliens who are here. We provided almost 3 million of them with jobs—we provide hundreds of thousands of others with welfare and other public assistance. We allow their children to attend our schools, we allow them to compete with low-income American citizens for scarce public housing.

What we do know for certain is we must close the floodgates to prevent new illegals from entering. I have introduced H.R. 6525 which seeks to accomplish this goal by making it an immediate crime to hire illegal aliens. Employment continues to be the primary magnet which lures illegal aliens into this Nation, and to be successful in keeping new illegals out we must deter employers from hiring them. My bill also provides for an additional 2,500 Immigration Service enforcement personnel to help better patrol our borders to prevent new illegals from entering. Finally, my legislation also increases the penalties for smuggling illegal aliens into this Nation. Estimates show that the numbers of illegal aliens being smuggled into this Nation has tripled since 1972.

We are aware that the Carter administration is contemplating some form of amnesty for illegal aliens who have been in this Nation for a certain time. I am adamently opposed to granting blanket amnesty for illegal aliens. I do feel that certain consideration should be given to avoiding the unnecessary breakup of families through deportation.

The decisions which have to be made with respect to illegal aliens will be difficult ones. We may need a restructuring of our immigration laws. We should, as I have proposed, convene an international conference to discuss the illegal alien problem and its international ramifications. We must be cognizant of the fact that at the present time the population of the 15 major nations supplying illegal aliens is almost five times greater than our own and by the year 2000 the combined populations of these nations will exceed 1 billion persons. It is imperative that we develop both immediate and long-range solutions to this problem.

I feel Ms. Van Horne's article clearly describes both the illegal alien problem and its effects. The illegal alien problem does pose special problems for the city of New York which has one of the largest illegal alien populations of any area of the United States. It is obvious that solutions must be developed. They will cause some hardships but it is time that we gave American citizens and legal aliens better economic protection. Illegal aliens continue to drain the economic lifeblood of this Nation and unless we put an end to it, the economic security of all Americans will be threatened.

Ms. Van Horne's article follows:

THE ILLEGAL ALIENS

(By Harriet Van Horne)

Can you imagine New York without the Public Library?

The library's current appeal for funds asks the question and it may be a chilling portent of things to come.

"Civilization is the making of civil persons," John Ruskin wrote in the 19th century. Now, amid the endangered splendors of the 20th, we are facing a hard truth: civility is giving way to a new kind of barbarism. Literacy is declining, our traditions are falling away. Poverty and crime—those handmaidens of disaster—are worsening every day.

An alarm rings as the great New York Public Library goes begging. But our civic penury is not unique.

In every large city the libraries, the parks, civic orchestras, and museums, along with programs for the handicapped and the elderly, are being cut back. A new Dark Age is falling. And unless we get our priorities in order, it will continue to fall.

A fiscal expert could cite the many reasons our cities are turning into small garrison states. It's the horrendous welfare burden, the erosion of the tax base, the growing subculture of crime.

New York's welfare burden costs a billion dollars a year. But we remain the city of the golden door, welcoming the huddled masses, paying them in effect not to riot in the streets. But we stand by helplessly as they burn down The Bronx and murder the elderly for small change and cheap watches.

We live in a city of dreadful night. The amenities, the simple decencies are going.

One of our basic problems is that we have too many people and too few jobs. The simple, glaring logic of this situation continues to elude Congress, however. And so the tide continues, with some 20 per cent of the population of Mexico said to be among us now.

Economists, social workers, ecologists all agree: there is no more room in the lifeboat. New York has more than a million illegals. They number eight million in the nation as a whole. They contaiinue to arrive at the rate of 500,000 a year. They are largely illiterate, unskilled and wantonly fertile. Among Mexicans, six to eight children is the rule.

This week the Carter Administration is holding meetings to work out a new immigration policy. Issues to be decided include: whether amnesty should be granted illegals who have been here five years or more, whether all workers should be required to carry ID cards, and—the most vital point—should sanctions be imposed on employers who knowingly hire illegal aliens.

Some 50 bills have been proposed that would penalize employers of illegals. But the bills haven't a chance while illegals can be trucked like cattle to pick Sen. Byrd's apples and Sen. Eastland's cotton. It is Sen. Eastland's committee, in fact, that deliberately tables every proposal that might turn back the invasion of illegals.

Until recently it was not generally known how heavy a burden the illegals imposed upon taxpayers.

Being desperately poor, these migrants pay no taxes. But they require services that cost $13 billion a year. One infant, born here to a Mexican family, automatically brings in a weekly welfare stipend.

Being strangers in a strange land, the illegals, who are predominantly Mexicans, for communities whose very existence depends on law-breaking. Some 20 per cent of the inmates in New York's jails are illegal aliens. In Los Angeles, the figure rises to 40 per cent.

"Hundreds of Mexican Children Cross Border to Engage in Crime," a recent headline in The Times informed us. Some of the children are only 12, but they engage in prostitution, purse-snatching, shop-lifting and burglary. Narcotics dealers use children to transport drugs across the Mexican border. The children travel in packs and are known as "lobatos," or wolf cubs.

A Gallup poll has shown 80 per cent of the public favoring a stoppage of illegal immigration. Labor unions fear the inroads illegals are making in the job market. Aliens work for less than the minimum wage. Their fear of deportation keeps them from complaining about violations in health and safety standards.

A Texas sociologist, writing in the magazine Human Behavior last year said that the Immigration and Naturalization Service had orders from "upstairs" not to crack down on wetbacks from Mexico. Agribusiness needs them, and can get away with paying them a pittance.

One of the most sickening stories about exploitation of illegal aliens appeared recently in the magazine New West. In a sworn statement, a worker told how he paid $100 to one Alberto, a smuggler of aliens who transported him and 20 others from Mexico to Arizona. On a desert march of four days and nights one lad injured his leg. "Alberto wouldn't let us carry him" the deposition reads. The boy was left in the desert with one gallon of water. This, authorities admit, is a not uncommon practice.

Historically, we are an open-minded, hospitable nation. But unless we turn back the illegals, we shall one day be a mere extension of Latin America, with English the minority language.

CURBING FRAUD AND ABUSE IN THE MEDICARE AND MEDICAID PROGRAMS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. CRANE. Mr. Speaker, the health subcommittees of the Ways and Means and Interstate and Foreign Commerce Committees of the House are in the midst of marking up H.R. 3, a bill aimed at curbing fraud and abuse in the medicare and medicaid programs. Last month the two subcommittees held 2 days of joint hearings on the bill, during which we heard testimony from a wide variety of medical professionals and organizations. This joint action by the subcommittees has been an unprecedented effort in cooperation, and I commend my colleagues on these subcommittees.

However, I have a great concern that in attempting to put the so-called medicaid mills out of business, we will be doing a great disservice to the overwhelming majority of doctors who are providing quality care under these programs despite the paperwork, delays in reimbursement, and other program redtape. Far more physicians serve these patients at a net loss than realize any profit from providing their care. By singling out those doctors who earn more than a certain income from treating medicare and medicaid patients, we are automatically branding them as criminals without due process of law.

Already we have seen what can happen when overzealous bureaucrats make public the names of physicans that HEW implies have been "ripping off" these programs. The information released was grossly in error and did irreparable harm to the reputations of those physicians who were incorrectly named as receiving more than $100,000 in medicare and medicaid payments.

Because of my concern that these errors be corrected and steps be taken to insure that such an incident is not repeated, I have asked Chairman GIBBONS of the Ways and Means Oversight Subcommittee to call for an investigation of this matter. Unfortunately the damage has already been done, but unless we take some action now, it will reoccur.

At this point, I would like to insert a column by James Kilpatrick which details this deplorable incident:

[From the Washington Star, Apr. 21, 1977]

GRAND ERROR, ERROR TO BE MARVELED AT, BY HEW

(By James J. Kilpatrick)

A month or so ago, the Department of Health, Education, and Welfare released some titillating figures to the press: Approximately 400 American physicians had raked in more than $100,000 from Medicare payments in 1975, and 16 of the doctors had ripped off the taxpayers for upwards of $250,000.

The release, to be sure, did not use such verbs as "raked in" and "ripped off," but these were the clear implications. Inevitably the data suggested that physicians and surgeons were profiteering off a great, humanitarian program. This was the universal interpretation. One cartoonist imagined two surgeons operating on a Medicare patient. "Go on, Joe," says one, "cut on down to the $5,000 layer."

As it swiftly transpired, HEW's facts and figures were wrong. The errors were not few and small. The errors were numerous and massive. This was wholesale error—error on a grand scale—error to be marveled at. Of the 16 top rip-off artists, those identified with earnings of $250,000 or more, HEW had its facts wrong as to 14. That is an error rate of .875. A shortstop who muffed seven grounders out of eight could not stay long even in the bush leagues.

The American Medical Association managed to query 208 of the 407 identified physicians. It turned out that HEW was wrong as to 135 of them. HEW reported, for example, that Dr. Cem A. Bayar of Chicago received $258,139 in 1975; trouble was, Dr. Bayar died in 1974. HEW reported that Dr. Ernest Watson of Elmhurst, Ill., received $233,871 in 1975; trouble was Dr. Watson, a pediatrician, retired in 1965 and moved to Arizona.

In more than a hundred cases, the HEW disclosures dealt not with individual physicians, but with groups and clinics. Starting at the top, HEW identified a New York doctor as Number One, with earnings of $412,757; the figure was for a group of physicians. Number Three on the list, with $315,454, actually was a group of four internal medicine specialists. A doctor in Rhode Island reportedly raked in $307,452; this doctor is in fact a salaried staff member of a hospital. His personal Medicare earnings amounted to $625 only.

So it went, on down the incriminating list. The named doctors suffered immediate abuse. Dr. J. C. Pruitt of St. Petersburg sent the American Medical Association a sample of letters he had received denouncing him as a "medical parasite" and a "disgrace to the medical profession" who should make amends to "those poor souls that you have robbed."

A press spokesman at HEW explains defensively that Secretary Califano didn't intend to embarrass anyone, and didn't release the figures voluntarily. It appears that an amendment to the Freedom of Information Act became effective on March 12. A number of reporters had asked for the figures on Medicare payments to doctors. Califano therefore had no choice. He fed the hungry reporters the figures for release on March 14.

Besides, says the HEW spokesman, the error wasn't exactly human error. This was "computer error." The input was wrong. This is diagnosed in computer practice as the GIGO syndrome: Garbage In, Garbage Out. A corrected list is now being prepared, and will be released as soon as it is ready.

Alas, as all of us in the news business know, the truth will never catch up with the falsehood. Truth plods along in walking boots, while error runs on winged feet. The doctors who have been effectively libeled will go to their graves with a taint of greed still clinging to them.

I say "effectively libeled" as distinguished from actually libeled, for the doctors have no recourse at law against Secretary Califano. If HEW's Medicare spokesmen acted with reckless disregard for the facts, which they did, this is tough stuffsky; sorry 'bout that. The government has a kind of sovereign immunity in these matters. The computers' errors were inhuman; they were also divine.

The whole business is regrettable. The individual doctors are hurt. Their profession suffers. We of the press gain nothing; we were unwitting conduits of error. HEW's reputation for credibility is damaged. Who will believe the next set of government "facts"? Everyone is sorry, but make no mistake about this: It will happen again.

COMPENSATION TO VICTIMS OF CRIME

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. LEHMAN. Mr. Speaker, in the last few years there have been many legislative and judicial reforms to improve the quality of our criminal justice system. This work is of the highest order and is to be commended. Yet it seems that in the midst of massive reforms, the needs of victims of crimes have been all but forgotten. H.R. 3686 is an attempt to deal with this problem by providing for grants to States for the compensation of victims of certain crimes. I am pleased to be a cosponsor of this legislation which was introduced earlier this session by the distinguished chairman of the House Judiciary Committee, Congressman RODINO.

There are two reasons why victims of crime should be compensated for their losses. First, the criminal clearly has some obligation to the victim for loss of property or personal harm. Second, society also has an obligation to the victim since it failed in its duty to protect him.

The idea of compensation for crime is not a new one. It originated after the fall of the Roman Empire to avoid blood feuds which were so devastating. With the rise of the kingship system, a fine was levied against a criminal to be paid to the victim's family. A portion of this was paid to the king as the "kings peace." Eventually the crown received the total portion of the fine. Compensation was again renewed in the late Middle Ages with the establishment of the penitentiary system. While serving their time, criminals would work at specified tasks to earn the money to compensate their victims.

In the United States at the time of the American Revolution, it was common practice to assess the criminal triple the damages or loss he had caused. If he could not afford to pay, he could be given to the victim as a slave or sold for damages. This practice lasted until 1807 when modern penology was first practiced in this country.

In modern times, the first area to set up a crime compensation program was New Zealand, which did so in late 1963. Great Britain soon followed in 1964, and since then several other European countries have adopted such programs. The first State in this country to establish victim compensation programs was California in 1965, and to date there are a total of 22 American States and territories which have compensation programs.

Unfortunately, many of these areas are experiencing difficulties in funding or starting to fund victim compensation programs. H.R. 3686 would alleviate this problem by providing that States meeting the guidelines shall receive grants equal to 100 percent of the costs to the State of compensating victims of Federal crimes, and 50 percent of the cost of compensating victims of State crimes, excluding administrative costs for which the State itself must pay.

The advantages of a compensatory system are many from the viewpoint of society, the individual victims, and even for the criminal. It is a more just system in that the debt to society is paid directly to the person harmed. Under the terms of this bill, the victim must cooperate with law enforcement agencies, thus encouraging swifter justice and prosecution. This has the effect of reinforcing public confidence in the criminal justice system, and enables the system to function more efficiently.

Specifically, money would be authorized for qualifying crimes which involve personal injury. Victims would be compensated for out of pocket medical expenses, lost time from work, and rehabilitative physical or occupational therapy.

Mr. Speaker, H.R. 3686 would set up an Advisory Committee on Victims of Crime under the leadership of the Attorney General, which would advise the Attorney General with respect to administration of this act and the problems of victims of crime. The Attorney General would be responsible for establishing the necessary guidelines to make grants available to those States having a victim compensation program.

In order to qualify, State programs would have to meet the rules set by the Attorney General and the following criteria:

First, compensation for personal injury resulting from qualifying crimes which are designated by the State;

Second, compensation to the surviving dependents of individuals whose deaths were the result of qualifying crimes;

Third, the program must offer indi-

vidual claimants the right to a hearing with administrative or judicial review to any aggrieved claimant;

Fourth, the program must require as a condition for compensation that claimants cooperate with law enforcement authorities with respect to the qualifying crime for which compensation is sought; and

Fifth, there is in effect in the State a requirement that law enforcement agencies and officials take reasonable care that victims of qualifying crimes be informed about the existence of a compensatory program and the procedure for applying for compensation under that program.

Mr. Speaker, with the constant increase in crime, we must either protect our citizens, or compensate them for our failure to do so. I believe that this bill would fulfill this latter need, and I would ask that my colleagues give it their full consideration.

KEMP'S PLAN CUTS TAXES

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. COLLINS of Texas. Mr. Speaker, Congress is looking for a permanent solution to inflation and energy. The soundest economic plea has been before us on the Hill for several years. We call it the Kemp plan and I am proud to join JACK KEMP as one of the many cosponsors.

Down in Texas, we have a great editorial page headed up by Dick West at the Dallas Morning News. Here is the hard hitting statement on JACK KEMP'S plan as written in the Dallas Morning News:

GO, KEMP GO

The 15th of April—better known as the income-tax deadline—being only two days in the past, the time is right to talk of taxes; or, rather, of the only really creative taxation idea that seems currently to be in circulation.

The idea is that Rep. Jack Kemp of New York, the onetime Buffalo Bills quarterback who has become one of the savviest of congressmen. Kemp for four years has been beating the drums in behalf of his proposal to cut all our taxes. Incredibly, he finds only a minority of his colleagues ready to march with him. Yet of late the Kemp plan has been receiving more serious interest than ever—if only because it contrasts so favorably with President Carter's defunct plan to pass out $50 bills.

A permanent tax cut is what Kemp advocates; a rate reduction of approximately 15 per cent. The highest rate would fall from 70 per cent to 60 per cent, the lowest from 14 per cent to 12 per cent. It will be asked: Why does Kemp want to do such an outlandish thing? Why does he want Americans to keep a greater share of their earnings?

For the solid reason that he believes the economy to need stimulus. Stimulus? Surely that is what the President proposes. Kemp differs, however, as to technique. The technique he himself advocates has historical sanction. The Republican administration of Warren G. Harding resorted to permanent tax cuts in order to revive a war-fagged economy. But far more recent is the precedent of—can you guess?—John F. Kennedy.

Yes, Kennedy, who persuaded Congress in 1962 to lop some 25 per cent off the various tax brackets, so that at last the country might get "moving again." "The main block to full employment," reasoned Kennedy, "is an unrealistically heavy burden of taxation. The time has come to remove it." The strategy worked, too. Economic activity increased sharply. Whereas the Treasury had feared the loss of $89 billion in revenue over six years, the rejuvenated economy poured an increased $54 billion into the federal coffers. Not bad.

To talk of duplicating the Kennedy-Harding accomplishment in 1977 is to indulge perhaps in an academic exercise. But not because the nature of economics has changed; rather, because Congress' membership among the members in 1962, as it was the disposition in the White House, was to cut taxes and let the economy rip. But the taxpayers are less trusted nowadays than they used to be. The suspicion among congressmen is deep that the federal government must control and direct any economic recovery.

What a futile notion, to say the least. For such is the volatile character of economics that no one can truly "control" events. Adam Smith taught us this fully 200 years ago, and Congress needs now to relearn the lesson.

Kemp is patiently essaying the re-education process. (Anyone who persists for four years in trying to get the same bill passed is patient.) And who knows, maybe he makes headway. The rebate scheme is discredited and laughed at. No other new schemes jostle with Kemp's for public attention. His stands alone. Sooner or later we ought to catch sight of it.

EMERGENCY ASSISTANCE TO FLOOD AREAS

HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. RAHALL. Mr. Speaker, on Friday, April 22, 1977, I introduced legislation to amend the Small Business Act in hope that it will provide the people of the Appalachian region more appropriate emergency assistance to flood areas.

The States most affected are West Virginia, Virginia, Kentucky, and Alabama.

My bill amends the Small Business Act on a temporary basis, just as it was temporarily amended for Hurricane Agnes.

The Small Business Act would be amended in the following way:

Provides that the SBA make temporary loans at a lower interest of 3 percent between April 1, 1977 and June 6, 1977.

Reactivates the "forgiveness" clause on a temporary basis of the Small Business Act in the amount of $5,000 and 1 percent interest on the balance for disasters occurring from April 1, 1977 to June 6, 1977.

Provides a $5,000 grant to the elderly for immediate relief from the effects of a disaster.

The present crisis is serious. I do not think it is being overstated in any way. In my area of the country as well as in Virginia, Kentucky, and Alabama, people are suffering severe economic hardships as a result of this flood. It is the intent of my bill to enable these people to benefit on a temporary basis from SBA loans at a lower rate of interest.

Many of my friends and neighbors have had all they have worked for their entire lives, destroyed by the waters of the Tug Fork River.

It is estimated that at least 57,470 persons have been assisted by relief operations so far, according to the Red Cross.

A total of 17,854 persons have been sheltered at 171 relief centers throughout the disaster area and 393 homes have been completely destroyed. Another 1,052 have sustained major structural damage, and 3,241 have sustained minor damage, 282 mobile homes have been destroyed; 435 businesses have either been destroyed or have sustained major damage. What is worse, these are only preliminary figures on the wide-reaching destruction.

West Virginians are a proud people. They do not want handouts. They intend to rebuild their homes, their businesses, and their towns: such as Williamson and Matewan, two communities that have for all purposes been washed off the map by the worst flood in West Virginia's history.

The suffering experienced by the people of southern West Virginia over the last 2 weeks, would have been much less I judge, if more personnel had been on hand to guide the victims through the maze of forms and applications they had to complete before obtaining the assistance they were entitled to.

I also feel that the clean up operation would have been taken place sooner if more workers were available. Now much of the mud has turned to rock and the effort is much more difficult.

One can never do enough when such disasters take place, but we must be prepared and we must try. The span of time in which an individual experiences the actual disaster, in this case the flood, and the time it takes for them to put their lives back together, is terrifying.

Federal funds must be available at all times to finance the speedy implementation of a Federal disaster relief operation. The victims do not want excuses as to why help is not readily on hand, and they should not be given any excuses. We owe them answers and immediate results.

It almost tore my heart out to tell some of my constituents, who had just lost their home, all of their belongings, their car and their livelihood, that help would arrive in 2 or 3 days.

I witnessed this type of situation all too often during those 15 days. And I hope none of my colleagues in the House of Representatives or the Senate ever have to face a similar occurrance.

Mr. Speaker, I am asking for my colleagues to take action on this legislation today—the people need and want this now.

WHAT PUBLICATIONS ARE MOST FREQUENTLY QUOTED IN THE CONGRESSIONAL RECORD

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. STEIGER. Mr. Speaker, it is instructive, I believe, to look at the sources of materials which we daily insert into the CONGRESSIONAL RECORD. All of us use the RECORD to "educate" our colleagues. In doing so, we rely heavily on newspaper and magazine articles which relate to issues about which we are deeply concerned.

As one who has studied the RECORD very carefully in my efforts to make it a more accurate reflection of our deliberations, I have had a real interest in looking at what goes into the RECORD daily. It was with considerable interest, then, that I read the fascinating article of Craig Grau, assistant professor of political science at the University of Minnesota, Duluth, which appeared in the Winter 1976 issue of Journalism Quarterly.

The article, "What Publications Are Most Frequently Quoted in the Congressional Record," provides some good insights into the publications we read and rely on for your information. I think you will find his conclusions interesting. The article follows:

[From Journalism Quarterly, Winter 1976]

WHAT PUBLICATIONS ARE MOST FREQUENTLY QUOTED IN THE CONGRESSIONAL RECORD

(By Craig H. Grau) *

More than half the items put in the Record come from the Washington Post and the New York Times, and the proportion from these two papers seems to be rising.

One of the advantages of the printed press is the ease for those motivated to cut out articles they deem important for future reference or placement in prominent locations so that those who initially did not read them will have an opportunity to do so. Churches and schools place these articles on bulletin boards; professors may tape them on their doors; hundreds of congressmen and senators put them in the Congressional Record.

The Congressional Record does not contain merely an account of what transpires on the floors of the United States Senate and House of Representatives. It includes a great variety of items among which are thousands of reprints of articles and editorials from newspapers and magazines along with a few advertisements, interviews, book reviews and letters to the press.

It appears that while some of these insertions may be placed in the Record to impress constituents, they may also represent attempts to persuade fellow legislators. Morris Udall and Donald Tacheron have written: "For most Congressmen, paging through the Congressional Record is one of the first tasks of the working day."[1] Additionally Leroy Rieselbach had indicated that if a legislator "reads articles or speeches inserted in the Congressional Record, his conception of elite opinion may alter."[2] An examination of the newspapers and magazines quoted most frequently, therefore, may suggest which are the most useful to the legislator and possibly the most influential.

METHOD

An attempt was made to examine the most extensively quoted newspapers and magazines in the Congressional Record to see which were used more than others, to determine changes in recent times and get at least an impression of what type of legislators were using them. To accomplish this purpose the index of the Congressional Record was examined and the number of times certain publications were quoted was counted. Using the 1960, 1965 and 1970 indexes, each newspaper and magazine with 10 or more citations and listed.[3] These 158 newspapers and magazines were counted for the 15 years 1960–1974. The top one dozen for each year, which accounted for between one-half and two-thirds of the articles with the mean being 58.6 percent, were then selected and the percentage that each included from the total of the 12 was listed.

RESULTS

Certain newspapers are consistently quoted more than others. (Table 1) The Washington *Post*, the New York *Times*, the Washington *Star-News* and the *Wall Street Journal* are among the top four every year. The *Christian Science Monitor*, the Chicago *Tribune*, the Baltimore *Sun* and the news-magazine *U.S. News and World Report* are also in the top dozen rather consistently. These similarities in rankings occurred throughout a time frame in which there was a greater than 70 percent turnover in Congress.[4]

In addition to these findings three other developments seem to be evident. First a couple of major newspapers have either gone out of business or merged with others—most notably the New York *Herald Tribune* and the Washington *News* Secondly, the Los Angeles *Times* and the Boston *Globe* have been rising in their rankings, especially in the last few years. Thirdly, it appears that the Washington *Post* and the New York *Times* have traded the top two places and especially because of the former, they are getting a higher and higher percentage of quotes in recent years. If one looks at medians in five-year segments, it becomes evident that the Washington *Post* and the New York *Times* have increased their share of the top one dozen. For the period 1960–1964 their median was 44 percent, for the period 1965–1969 it was up to 47.6 percent and by 1970–1974 it had climbed over one-half to 55.9 percent. This may be due to the increased visability they received as a result of the Pentagon Papers and the Watergate crises. Also a rough calculation indicates that the top 12 newspapers and magazines have slowly increased their share of the quotations from the 158 publications examined. The medians for the three five-year divisions were roughly 55.3 percent, 57 percent and 64.8 percent.

These findings compare quite favorably to those of Carol Weiss in her examination of "What America's Leaders Read."[5] In her subset on Congress she asked some senators and leaders of committees in the House of Representatives which publications they read regularly. Of the 45 respondents asked in 1971–72 which newspapers they read 82 percent said the Washington *Post*, 67 percent the New York *Times*, 58 percent the Washington *Star* and 31 percent the *Wall Street Journal*. All others seemed to have one legislator or less responding.[6] Regarding the regular reading of magazines and professional publications, 70 percent of 44 respondents indicated *U.S. News and World Report*, 68 percent *Newsweek* and 66 percent *Time*.[7] While every legislator can put articles in the *Congressional Record*, the similarity to Weiss' sample is in nearly the same rank order.

TABLE 1.—PERCENTAGE OF TOTAL QUOTES FROM TOP 12 NEWSPAPERS AND MAGAZINES [1]

	1960	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971	1972	1973	1974

Baltimore Sun				2.7	1.9	3.4	4.0	3.4	2.7	1.6	2.1	2.0	1.6	1.9	1.8
Boston Globe												1.8	2.0	2.5	2.6
Chicago News		1.9				3.0	2.9								
Philadelphia Inquirer								2.4	2.0						2.1
Cleveland Plain Dealer								2.2	2.3	1.6					
Newsweek										1.6	1.8	1.8	1.3		
Total number of articles	1,785	2,249	2,359	3,025	2,028	2,510	2,480	3,605	2,585	2,940	2,842	3,084	2,421	3,343	3,526

[1] Others include: Milwaukee Journal: 1960–3.7, 1961–2.4; Dallas News: 1962–3.1, 1963–3.0; Chicago Sun Times: 1964–2.6, 1972–1.2; San Diego Union: 1964–2.6, 1970–1.5; St. Louis Post Dispatch: 1960–2.2; Life: 1960–2.1; Saturday Evening Post: 1961–2.5; Newark News: 1962–1.9; Charleston Gazette: 1963–2.8; Honolulu Star: 1966–2.9; Columbia State: 1968–2.2; New York Post: 1973–1.7; Time: 1973–1.7; Business Week: 1974–1.7. The 1972 figures were adjusted for minor errors found in the index.

Given the enormity of the task, the top dozen newspapers and magazines in 1972 only were chosen to see what types of individuals were contributing articles, editorials, advertisements, interviews, book reviews and letters to the various newspapers and magazines for reprint in the Congressional Record. It appears that more senators participate than do House members. Roughly 88 percent of the Senate placed items of this type as opposed to 54 percent of the House.

The type of legislator that uses the Record in this manner more than others is difficult to determine based on the limited data but some tendencies might be suggested. Those ostrasized by their colleagues were a type tending to use the Record this way. They may not accomplish a great deal in the chamber, but they can send reprints of the

Footnotes at end of article.

Record back home where voters might be influenced. Another motive of this type of legislator could be to convince their fellows that their opinions are based on facts and supported by others outside the chamber. A second type of legislator is one wishing to speak out on a national issue to a nation l constituency. This may be for the purpose of gaining support outside his state for a future bid at "higher" office or to convince others of a need for legislation.[8] Senators come to mind here, especially liberals such as Frank Church, Hubert Humphrey, Jacob Javits, Walter Mondale and Charles Percy. Political party leaders such as the majority and minority leaders of the Senate are a third type. Some of their articles may include evidence of support for party members, presidential candidates or issues.

Examination of the 1972 submissions to the Record also indicate that in many instances legislators who submit items to the Record from a particular newspaper live in the area where it is published. There are differences, as might be expected from those familiar with the papers. Nearly three of every four submissions from the Chicago Sun Times and the Chicago Tribune are from Illinois legislators. About half of the items from the Los Angeles Times and the Boston Globe are from their respective state's national legislators. The same is true for about two of every five submitted from the Baltimore Sun. However, for the New York Times and the Wall Street Journal the ratio is only one of six and one of twelve respectively from the state of New York.

The findings using this crude measure indicate, as most have realized, that the Congress seems to rely on certain print media sources from the BoWash megalopolis. It also appears that members of Congress seem to be relying more and more on the big two: the Washington Post and the New York Times. A survey of the first six months of 1975 indicates that generally the same pattern is followed with the Los Angeles Times continuing a trend to increase relative to the second tier of quoted publications.[9] Legislators, of course, have other sources for news, including radio and television programs, but a different methodology will have to be used to pick this type of media input as an information source. More importantly, the influence of particular print media on specific policy is yet to be determined in a systematic way.

[3] For the years 1960–1972 the annual index was used and for 1973 and 1974 the index for the daily edition was employed. Generally articles, editorials, advertisements and interview citations were counted. If an article was placed in the *Record* by more than one member, it was counted only as one as were series and certain sundry articles. This conforms to the method used by the *Record* indexers. Remarks in the chamber regarding the publications were not counted. Using the 1968 index as a guide, articles and editorials accounted for 96.5%, advertisements contained in the publications .5%, interviews .4% and letters 1.8%. The remainder included tables, texts of addresses, statements and book reviews. It should be noted that the index is not without mistakes but had to be employed to make the task manageable. The method also excludes newspapers or magazines that for one or two years had a large number of entries but less than 10 in the three years used for selecting the universe.

DUBIOUS STEP ON NUCLEAR POWER

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. DERWINSKI. Mr. Speaker, one of the points of Mr. Carter's energy proposals that needs constructive review from Congress is the area of nuclear power.

Mr. Carter, for reasons he has stated, looks with disfavor at the expansion of nuclear energy. An editorial in the Chicago Daily News weekend edition of April 9–10, discusses the complexities on this issue in a very penetrating manner. I commend this commentary to the attention of the Members:

DUBIOUS STEP ON NUCLEAR POWER

The necessity of halting the proliferation of atomic weapons under the guise of nuclear power is beyond question. The risk of allowing nuclear capability to spread among unstable and belligerent nations is too great to bear.

But in his statement on nuclear power, President Carter outlined plans that might even assure the proliferation of nuclear technology without any guidance or influence from the United States.

Carter wants the United States to abandon its present leadership in the area of nuclear-fuel reprocessing by unilaterally withdrawing from the field. Specifically he would close down U.S. research and development of breeder reactors, the nuclear power plants that produce more fuel than they consume. Further, he would prevent the export of U.S. technology that permits spent fuel from nuclear reactors to be reprocessed into usable fuel—fuel that might be used in nuclear weapons.

Carter's assumption—and we believe it is questionable—is that a unilateral decision by the United States to halt its breeder-reactor program will persuade other nations to do the same, thus halting the spread of nuclear technology.

What Carter may have misjudged, however, is the need for nuclear-generated energy in the rest of the world and the determination on the part of responsible nations to acquire that capability and sell it to others. Japan, Brazil and Spain, to name but a few of the nations involved, are in desperate need of energy resources and already have turned to conventional nuclear reactors. Their plans for future growth are based on acquiring the means to reprocess their spent fuel of today to make it suitable for use in breeder reactors in the future. Either they will reprocess the fuel themselves—by importing the necessary technology—or have it done for them.

The United States is not the world's sole repository of nuclear reprocessing technology. France, Canada, West Germany and Britain have spent billions on developing their nuclear industries and in some areas rival the United States in expertise. They see themselves as future reprocessing centers and exporters of nuclear technology to meet growing energy needs throughout the world and to help alleviate strains on their domestic economies and their foreign trade debts.

It seems doubtful—and risky—for Carter to assume that any of these nations will surrender their future plans for industrial growth at the behest of the United States. More likely, and more in keeping with their national interests, these nations will attempt to strengthen present international treaties on the safeguarding of nuclear fuel and development. It is in this area of influencing the inevitable spread of nuclear technology that American leadership is needed most, but where, under Carter's plan, it would be totally lacking.

Uranium, which powers present-day nuclear reactors, is no more abundant than petroleum. Chances that geothermal, solar, fusion, coal or any other known energy resource can solve the world's energy shortage are tenuous at best.

For all its risks, nuclear power offers the best hope of meeting future energy needs. And the way to address those risks is to recognize them, minimize them through vigilant oversight and attempt to contain them within acceptable limits. The United States should not abrogate its responsibility of leadership in this critical area.

AIR TRANSPORTATION—HOW SAFE?

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. SHUSTER. Mr. Speaker, the U.S. News & World Report of April 11 had a very informative article on the problem of aviation safety and I commend it to my colleagues for their consideration.

NEW QUESTIONS ABOUT AIR SAFETY

The worst disaster in airline history—a collision of two jumbo jets on a runway in the Canary Islands on March 27 that claimed more than 570 lives—has aroused new concerns over air safety.

Are the risks increasing? What are the greatest dangers? What is being done to improve safety in the air?

Here, from experts both in and outside the Government, are answers to those and other questions.

How dangerous is plane travel?

Flying is a relatively safe way to travel. Statistics indicate it is more than 10 times safer than driving, as measured by deaths per miles of travel. Compared with train or bus trips, however, flying is slightly riskier, as indicated by the chart on page 38.

Are plane crashes increasing?

No. In fact, the safety records of both domestic and foreign carriers have shown a fairly steady improvement. In 1976, the U.S. airline industry had the fewest accidents in its history and the lowest number of fatalities in 20 years, even though a record 2.5 billion miles were logged and the number of passengers hit an all-time high of 220 million. For U.S. commercial air carriers, the

National Transportation and Safety Board recorded 28 accidents, of which four were fatal, killing 39 pasengers and six crew members.

The chart on this page shows the declining trend in the fatality rate in recent years. During the first two years after jets were introduced, 1959 and 1960, these planes averaged one fatal crash for every 150,000 hours flown. Last year, U.S. airlines averaged more than 2.5 million flying hours for every accident.

Are charter flights, such as were involved in the Canary Islands disaster, as safe as regularly scheduled ones?

The Government does not have passenger-mile accident rate figures for charter flights comparable to those it compiles on scheduled airlines.

NTSB records indicate, however, that until the crash in the Canary Islands, U.S. carriers had not had a fatal accident involving a charter flight since 1970.

How safe are private and corporate planes?

These are the least-safe aircraft. In 1976, they averaged 12.5 accidents for every 100,000 hours flown. Commuter airlines had the second worst record with 3.3 accidents for every 100,000 hours; commercial airlines had the best record with 0.457 accidents for every 100,000 hours.

Are foreign airlines less safe than American ones?

Apparently. A recent study done by the *London Sunday Times* indicates that airlines registered in the U.S. are at least four times as safe as the world average and 25 times as safe as airlines in Eastern Europe. The reason: U.S. safety standards are stricter and more stringently enforced. Foreign countries usually adopt each new American safety standard but not until several years after it has been in force in the U.S.

Do accidents involving jumbo jets like the 747s carry a higher risk of fatalities?

Since the first commercial flight in 1970, 747s have flown some 2.25 billion miles and carried 140 million passengers, with only two fatal accidents, killing 76. That was before the Canary Island crash involving two 747 jets operated by Pan American World Airways and KLM Royal Dutch Airlines.

Aviation officials argue that without the jumbo jet, more flights would be needed to carry the same number of passengers. With more planes in the air, risk of accidents would increase, although the toll from one incident would probably be lower.

At what point on a flight is the risk of a crash the greatest?

Almost half of all fatal accidents occur while landing; 1 in 4 takes place in flight, and 1 in 7 during take-off. Landings take complicated maneuvering at a point where there is little time or altitude to deal with a problem.

What causes most crashes?

It is hard to pinpoint the blame since most crashes are caused by a combination of factors, including: misjudgment by pilots, traffic controllers, and other flight personnel; bad weather; faulty instruments, aircraft-engine problems; poor airport facilities, and a breakdown in communications.

According to the latest NTSB statistics of recent crashes that occurred during landing, pilot error was a factor 85 per cent of the time; mistakes by other flight personnel, 43 per cent. Bad weather figured in nearly two thirds of these fatal accidents, while engine failure and faulty equipment accounted for few.

Are risky airports a problem?

Not over all. Officials blame few crashes on airport facilities.

However, the International Federation of Airline Pilots Associations lists 26 airports used by international carriers, as "critically deficient"—so bad that operations should be restricted.

Airports can get the federation's "black star" rating for a variety of reasons: inadequate runway length, insufficient electronic safety equipment, air-traffic-control problems, congestion in the air, terrain hazards, or communication problems—unclear radio frequencies or language difficulties.

Two of the American airports on the "black star" list—Boston's Logan International and Los Angeles International—are rated dangerous by the pilots because of their nighttime noise-abatement procedures that require aircraft to take off and depart "head to head" on the same runway.

The Tenerife airport in the Canaries was a secondary facility crowded with planes from the Las Palmas airport, which was closed because of a terrorist bombing.

Could a Canary Islands type of crash happen at a larger airport with more sophisticated equipment?

Yes. In fact, a similar crash occurred at O'Hare airport in Chicago in 1972 when 10 passengers were killed. There, too, a plane taking off crashed into another plane, taxiing across the runway in foggy weather. Bad weather, errors by the pilot of the taxiing plane and by traffic-control personnel were cited as factors.

Since then, nine heavily used airports, including O'Hare, have installed equipment that gives air-traffic controllers a picture of what is happening on the ground to help them prevent such disasters. The system has some flaws, officials say.

Radar equipment for controllers that would mark each plane's position on a computer-generated map of the airport is being developed. This specialized radar is used now only to identify aircraft and mark their position in the sky.

However, this equipment does not let pilots know of other airport activity.

What else is being done to improve air safety?

Investigation of crashes, such as the one now being conducted in the Canary Islands, plays an important role in improving air safety. In the U.S. federal officials, pilots, controllers, the airlines involved, the aircraft manufacturers and the flight attendants' union all participate to determine what happened, why, and more importantly, what can be done to keep such accident from happening again.

Recent probes have led to a new glossary of air-traffic-control terms, modification of aircraft, and the installation of proximity warning devices in planes and traffic-control towers to alert a pilot when he is in danger of running into a hill approaching an airport.

Is anything being done to improve airports?

The Government has a 500-million-dollar grant program to improve airfield runways, taxiways, lighting systems, and visual-landing aids, and a 250-million-dollar grant program to provide for installation of automation equipment in control towers.

LET US REMEMBER—THE HOLOCAUST

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. GILMAN. Mr. Speaker, 32 years ago, on April 11, 1945, General Patton's tanks rumbled up to the gates of Buchenwald. From the time these gates opened on July 16, 1937, 238,980 victims of Nazi terror were incarcerated there. At first, most were political prisoners. Germans of every religious belief who opposed Hitlers' regime. Then, after the barbaric "Crystal Night" of 1938, when synagogues throughout Germany were looted, burned, and destroyed, thousands of Jews were imprisoned there. Then followed the prisoners of war: Russians, Czechs, Polish, French, and British soldiers.

Today, Buchenwald, as well as Dachau and Auschwitz, the Ravensbrueck camp for women, the Sachsenhausen camp near Berlin, and others, are preserved as memorials—as a reminder to civilization of mankind's brutality. It was at these camps, with their ovens and medical experimentation rooms for humans, that almost 6 million Jewish men, women, and children met their deaths. Countless other Jews died during the heroic uprising of the Warsaw ghetto in Poland, in the hundreds of underground resistance groups formed during the duration of the war, and in the armed forces of the allied nations.

Today, 32 years later, those camps still stand as memorials to the dead; flowers grow over the mass gravesites outside the camp walls and inside, schoolchildren and tourists wander through the crematoriums, staring at the grisly reminders left behind by the Nazis.

April 27 of this year commemorates the "anniversary"—if one can use such a word for such an occasion—of a crime without precedent in history: the systematic, mechanized mass murder of European Jewry and political dissidents of all religions and creeds by Nazi Germany during the Second World War.

The holocaust still haunts our thoughts: perhaps more so today, several generations removed from 1945, when Patton's tanks, rolling up to Buchenwald, were greeted by the liberation banner flying over its entrance.

Mankind will not soon relegate the destruction of so many millions of people to the closed chapters of history. Although those events were unique in their scope and savagery, similar crimes against humanity have been committed against other groups before and are being committed today in the Soviet Union, in Uganda, in Latin America and in Northern Ireland. It is evident that education and culture are not safeguards against inhumanity—for one of the most bizarre things about the German camps are not only the horrors perpetrated inside their walls, but their location.

These places, symbols of the ultimate in human cruelty, were erected in a country which was the seat of Europe's humanist tradition. Here, in the 18th and 19th centuries, Bach, Mozart, and Liszt composed their masterpieces of music; here Schiller and Goethe wrote their poetry. It is difficult to conceive that these condemned were forced to build their own death camps in the very forest where Goethe frequently hiked; that they traveled on a death march on the very roads which Mozart used to travel home. This ambiguous juxtaposition of culture and cruelty stands as testimony to the fact that, given certain circumstances, men can and do perpetrate the most appalling injustices upon

their brothers, even to the point of mass murder and torture.

Humanity must remember, so that similar disasters will not be repeated by our own or future generations. If the people of all nations will work actively to combat injustices against any group, we may perhaps be able to prevent holocausts in our own time and in the future. This is why we must commemorate what happened at Warsaw and in Buchenwald, Auschwitz, Dachau, Treblinka and Bergen-Belsen—if a people forgets its past, it loses the very essence of its personality, for the memory of a people is its character. By the same token, a living memory, a living past, nourishes a people's maturation.

Therefore, to omit any part of our past, particularly a significant portion of recent history, despite the insidious connotation it evokes, diminishes the character of its heirs. To ignore the history of Nazi Germany would represent the grossest injustice to 6 million innocent Jews and countless hundreds of thousands of other victims of Nazi barbarities. And it reflects, particularly when tolerated and prolonged in other nations, an inexcusable indifference to evil.

Warsaw and the German concentration camps stand as symbols to those who suffered and died there to keep the torch of human liberty burning in the darkness of a war that still envelops the hearts and souls of millions who witnessed its horrors. Their stand against the onslaught of the Nazi forces will forever remain a symbol of the indistinguishable prerogative of human liberty, of right against might, of justice against injustice, and of that substance of men's souls which neither bayonet nor the refined torture of an inhuman tyrant can subdue, much less destroy. The Warsaw ghetto, now changed beyond recognition, and the work camps, now converted to museums, will stand as a memorial to the men and women who died there centuries after their oppressors are buried in oblivion.

There is always a threat to the survival to those minority groups that wish to cultivate and perpetuate their religious and cultural heritage. Today, in Uganda, an African dictator voices undisguised approval of Hitler's final solution; in the Soviet Union, work camps have been resurrected to incarcerate Jewish and political dissenters; in North Ireland, the British carry out systematic warfare and torture against the protesting citizenry. Has this generation so soon forgotten the lessons taught us by the martyrs of the Warsaw ghetto? Shall we forget what happened within the walls of the death camps in Poland and Germany?

There are an ever-increasing number of people who do not want to remember what happened in the Polish ghettos and in the German camps, who do not want to see what is repeating itself today in other nations. But anyone who has any sense of responsibility, not only to the memory of the past but to the lives of their fellow men, must settle with his own conscience whether he has reason to feel guilty, to watch and be ashamed of his own inaction. I am proud that our Nation has chosen not to be a silent observer, but has consistently fought bigotry within its own boundaries and is now speaking out against the violation of human rights by other governments.

It is time for us to once again remind the world of the senseless slaughter of 6 million men, women, and children who were the victims of the cruelty and hatred of their fellow men while the world watched in silence. It is time for us to take up their torch and to continue their fight for human liberty and dignity.

In recalling the words of the American philosopher, George Santayana:

Those who cannot remember the past are condemned to repeat it.

Let us vow that we will not forget; that we will not abandon their struggle; that we will remember the men and women who gave a new meaning to the word "freedom."

AMERICANS OPPOSE SURRENDER OF PANAMA CANAL

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 22, 1977

Mr. HANSEN. Mr. Speaker, the question of the disposition of the Panama Canal is indeed an issue which is burning through the minds of all America. Three out of every four Americans who do not favor surrendering any American rights or property to the Republic of Panama.

The Council for Inter-American Security is conducting a national poll and tabulating citizen opinion on the Panama Canal question on a State by State basis. Results are now available and an update on its findings will be forthcoming in a few weeks.

The council also recently published an excellent study by the late Dr. Lazo entitled "Panama Canal Giveaway: A Latin American View," which I urge Members of Congress to analyze.

I commend the council for its important work toward a better public understanding of Inter-American issues and offer for the RECORD and the edification of my colleagues a March 6 news release which announces the results of the council's recent poll concerning a new Panama Canal treaty and diplomatic recognition of Cuba:

COUNCIL FOR INTER-AMERICAN SECURITY SHOWS U.S. PUBLIC OPPOSES SURRENDER OF PANAMA CANAL

At least 70% of the U.S. public opposes giving up U.S. control or U.S. rights of the Isthmian Canal across Panama. There is also widespread concern over growing Communist power on our Country's Southern shore. That is the inescapable conclusion of extensive opinion polls and research by the Council for Inter-American Security, a non-partisan, independent education group dedicated to the freedom and security of the nations of the Western Hemisphere.

President's Carter's clear reversal of his earlier position against any surrender of vital interests in the U.S. Isthmian Canal is deeply troubling.

In his second debate with President Ford, then Candidate Carter said he "would never give up complete control or practical control of the Panama Canal Zone . . .".

Yet, that is exactly what he is about to do, despite the fact that overwhelming majorities of Americans have repeatedly said that they do not favor a Surrender of our Canal.

It is hard to believe that the new President could so soon forget the sound thinking of his countrymen on this issue. The plain fact is that a far greater percentage of the American electorate favors continued U.S. operation and control of the Panama Canal than voted for Mr. Jimmy Carter on election day last November.

Any student of History knows that the Isthmian Canal was built across territory to which the United States was granted rights as if sovereign in 1903. However, there are those who contend we should give up what is ours, even if it is needed for national security.

What the Council for Inter-American Security (CIS) is reminding President Carter, is that the American people oppose what his administration is trying to do in secret negotiations on a secluded island off the Coast of Central America.

CIS reveals that a 1975 poll by the prestigious Opinion Research Council showed that 66% of a scientific, nationwide sample favored continuing U.S. ownership and control of the Panama Canal. By April 1976 a second Opinion Research Council pool showed 75% of Americans took a pro U.S.-Canal position. Gallop polls showed similar results, particularly in President Carter's native South where 68% opposed surrendering U.S. Control of the Panama Canal.

The American public has shown growing concern for the security of the United States Southern-Gulf Coast, and the grave danger that would accompany abandonment of the strategic Canal to the leftist Government of Panama Dictator General Omar Torrijos.

The Council for Inter-American Security's own poll was conducted nationally by direct mail from September through November, 1976. A geographic cross section of over 13,000 participants produced the following response:

[In Percent]

The U.S. Should Maintain Control of the Panama Canal	77
The United States should not grant diplomatic recognition to Fidel Castro's Communist Cuba while that nation exports violent revolution and terrorism throughout Latin America	71

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare such informa-

tion daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

MEETINGS SCHEDULED

APRIL 25

8:00 a.m.

Agriculture, Nutrition, and Forestry

To continue markup of S. 275, to amend and extend through 1982, the Agriculture and Consumer Protection Act of 1973.

322 Russell Building

9:00 a.m.

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee

To hold hearings on proposed legislation authorizing funds for fiscal year 1978 for the Legal Services Corporation.

Until 1 p.m. 4232 Dirksen Building

9:30 a.m.

Appropriations

Interior Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Forest Service.

1114 Dirksen Building

10:00 a.m.

Armed Services

General Legislation Subcommittee

To meet in closed session to consider proposed fiscal year 1978 authorizations for the Defense Civil Preparedness Agency.

224 Russell Building

Banking, Housing, and Urban Affairs

To hold hearings on the nominations of John H. Dadton, of Texas, to be President of GNMA; William J. White, of Massachusetts, to be a member of the Board of Directors of the New Community Development Corporation; and Ruth Prokop, of the District of Columbia, to be General Counsel of HUD.

5302 Dirksen Building

Commerce, Science, and Transportation

Merchant Marine and Tourism Subcommittee

To hold hearings on S. 1250, proposed fiscal year 1978 authorizations for the Coast Guard.

5110 Dirksen Building

Energy and Natural Resources

To resume hearings on S. 9, to establish a policy for the management of oil and natural gas in the Outer Continental Shelf.

3110 Dirksen Building

Environment and Public Works

Subcommittee on Water Resources

To hold hearings on proposed fiscal year 1978 authorizations for river basin projects.

4200 Dirksen Building

Governmental Affairs

Energy, Nuclear Proliferation, and Federal Services Subcommittee

To resume hearings on S. 897, to strengthen U.S. policies on nuclear nonproliferation, and to reorganize certain nuclear export functions.

6202 Dirksen Building

Judiciary

Antitrust and Monopoly Subcommittee

To resume hearings on S. 825, to foster competition and consumer protection policies in the development of product standards.

2228 Dirksen Building

Select Ethics

To hold an open business meeting to discuss committee organization, to be followed by a vote to close the meeting to discuss certain classified business.

1417 Dirksen Building

11:00 a.m.

Foreign Relations

Foreign Assistance Subcommittee

To hold hearings on proposed fiscal year 1978 authorizations for security assistance programs.

4221 Dirksen Building

2:00 p.m.

Armed Services

To continue, in closed session, consideration of S. 1212, authorizing funds for fiscal year 1978 for military procurement.

212 Russell Building

APRIL 26

9:00 a.m.

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee

To continue hearings on proposed fiscal year 1978 authorizations for the Legal Services Corporation.

Until 11:30 a.m. 424 Russell Building

9:30 a.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the FEA.

1114 Dirksen Building

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of Justice.

S-146, Capitol

Energy and Natural Resources

To continue markup of S. 7, to establish in the Department of the Interior an Office of Surface Mining Reclamation and Enforcement to administer programs to control surface coal mining operations.

3110 Dirksen Building

Human Resources

Subcommittee on Labor

To hold hearings on S. 995, to prohibit discrimination based on pregnancy or related medical conditions.

Until noon 4232 Dirksen Building

Select Small Business

To hold hearings on problems of small business as they relate to product liability insurance.

1202 Dirksen Building

10:00 a.m.

Appropriations

Transportation Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Urban Mass Transportation Administration.

1224 Dirksen Building

Commerce, Science, and Transportation

Merchant Marine and Tourism Subcommittee

To hold hearings to receive testimony in connection with delays and congestion occurring at U.S. airports-of-entry.

5110 Dirksen Building

Environment and Public Works

Subcommittee on Water Resources

To hold hearings on projects which may be included in proposed Water Resources Development Act amendments.

4200 Dirksen Building

Foreign Relations

To consider proposed legislation authorizing funds for fiscal year 1978 for bilateral development assistance; S. Res. 94, international cooperation to curb nuclear proliferation; proposed committee budget; and the nominations of Philip H. Alston, Jr., of Georgia, to be Ambassador to Australia; Kingman Brewster, Jr., of Connecticut, to be Ambassador to Great Britain and Northern Ireland; and Wilbert J. Lemelle, of New York, to be Ambassador to the Republic of Kenya and the Republic of Seychelles.

4221 Dirksen Building

Governmental Affairs

To consider pending nominations; S. 826, to establish a Department of Energy; S. 904, to establish a center within OMB to provide current information on Federal domestic assistance programs; and to discuss committee funding resolution.

3302 Dirksen Building

10:30 a.m.

Commerce, Science, and Transporation

To hold a business meeting.

235 Russell Building

Judiciary

To hold a business meeting

2300 Dirksen Building

11:00 a.m.

Select Small Business

To resume hearings on S. 972, to authorize the Small Business Administration to make grants to support the development and operation of small business development centers.

S-126, Capitol

1:30 p.m.

Conferees

On H.R. 11, authorizing funds for public works employment programs.

Room to be announced

2:00 p.m.

Appropriations

Legislative Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Legislative Branch, on funds for the Senate Disbursing Office.

S-128, Capitol

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of Justice.

S-146, Capitol

Appropriations

Transportation Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the National Highway Traffic Safety Administration.

1224 Dirksen Building

Select Intelligence

To meet in closed session to consider proposed fiscal year 1978 authorizations for Government intelligence activities.

SENATE—*Monday, April 25, 1977*

(Legislative day of Monday, February 21, 1977)

The Senate met at 12 noon, on the expiration of the recess, and was called to order by Hon. JAMES R. SASSER, a Senator from the State of Tennessee.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Our Father God, midst all the traffic of our busy ways we are grateful for this sanctuary of the spirit when we contemplate Thy majesty, Thy holiness, and Thy mercy. Forgive us for the littleness of our faith and the feebleness of our prayers. Lead us to the source of spiritual power and moral energy, that our limited wisdom may have Thy divine supplement.

We pray for the President and for the Congress, and for all in every land who bear the responsibility of public office.

Grant us so to know Thee that we may truly love Thee, and so to love Thee that we may freely serve Thee, to the honor and glory of Thy great name. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 25, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. JAMES R. SASSER, a Senator from the State of Tennessee, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. SASSER thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Friday, April 22, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS, MAY 2, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committees on Human Resources and Commerce be authorized to meet during the session of the Senate at 1 p.m. on Monday, May 2, 1977, for the purpose of conducting a joint hearing with respect to S. 1350, the sea-grant college authorization.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

PERMANENT TAX REDUCTION

Mr. BAKER. Mr. President, one of the problems inherent in Congress as an institution, particularly Congress as it has become in recent years, is its inability to formulate policies and plans which look beyond the immediate problems of the present, and which deal comprehensively with the problems of the future. Almost without exception, we legislate to provide the quick fix or the solution, forced by an impending crisis, which is often ineffective, usually inefficient, and which almost always creates even more problems to face further on down the road.

As the President's decision to withdraw the tax rebate proposal indicates, the Nation is enjoying still a gradual, but steady, recovery from the effects of the recent economic recession. Nevertheless, both unemployment and inflation remain very much with us, both as problems of the present and specters of the future. In a sense, we are holding our own; but I am concerned lest improving economic indicators beguile us into the complacent belief that no further action is necessary.

Today we are debating a measure that provides us the opportunity not only to react to the present but to plan for the future. A permanent tax reduction not only addresses the immediate problems of unemployment and inflation, it is one of several proposed measures necessary to deal with these problems over the longer term.

A permanent tax reduction now will have a gradual but important effect on the overall nature of our economy for the next several years. Unlike the temporary and inflationary "fix," a permanent reduction in taxes increases consumer confidence, mitigates the immediate impact of inflation, and directly contributes to sustained economic growth above that necessary merely to hold our own with unemployment.

Because unemployment, inflation, and economic growth are so inextricably intertwined it is important to note that for every percentage point of employment gained by increased economic growth, Federal revenues increase by approximately $14 billion and expenditures decrease by approximately $4½ billion. If we are to have any hope of decreasing the inflationary pressure of the enormous Federal deficit by balancing

the budget by 1981, we must take advantage of this interaction between economic growth and unemployment. A permanent tax reduction is but one step in that direction.

Other steps, of course, are necessary to further encourage production and we will need to provide measures that enhance capital formation and investment without debt financing, we will need to minimize inflationary pressures of energy conservation programs; and, above all, we will need to restrain Federal spending.

I would encourage colleagues, Mr. President, to consider this permanent tax reduction an important and necessary step in the right direction. It is but one of several that we will need to take, but its value cannot be overstated. Moreover, it gives us the opportunity to say to the American people that this Congress can, in a realistic and meaningful way, provide solutions for the problems of the future before they became the crises of the present.

PROJECTION OF SENATE BUSINESS

Mr. BAKER. Mr. President, if I may have the attention of the majority leader, I noticed over the weekend in the press that the majority leader indicated certain things with respect to the schedule of the Senate for the remainder of this session. I wonder if the majority leader at this time is in a position to express an evaluation on the prospects of adjournment.

I am sure many of our colleagues will begin soon to make plans for the remainder of the year. Both of us have expressed the hope that Congress might adjourn sine die on October 7. If there is a growing possibility that may not occur, I wonder if we could explore that at this time.

Mr. ROBERT C. BYRD. Mr. President, I cannot explore that at this time. It is my intention to discuss this matter, however, with the distinguished minority leader in the near future.

I will also want to discuss it with the chairmen of committees and subcommittees of the Senate, and especially with those chairmen of committees and subcommittees which will have under their jurisdiction the various aspects of the energy proposals, together with other important "must" legislation.

THE ENERGY PACKAGE

The energy package by its very nature, by its very urgency, and by virtue of the emphasis which has been placed on it by the President of the United States, will, in my judgment, be one that should be given the very highest priority by both Houses.

I have the impression that the other body will give the energy proposal very high priority.

This is not to say that there is not other legislation which is of a very high priority, likewise. Naturally, there are appropriation bills. There are any number of subjects which I am sure we will agree are of such an important nature that they will require action during this session.

I think I can say no more than that at the moment. I appreciate the question by the distinguished minority leader. It is a matter which I had intended to discuss with him at considerable length and one which I will be talking with him about in the very, very near future. It is a matter which was discussed between the House and Senate democratic leaders on last Friday morning at a breakfast. I would still hope that the Senate and House can wind up their work in October.

We must agree, however, that the energy proposals, being very controversial in some respects, will require some time, in committees, on the floor, and in conference with the other body. It may be that, as we get further down the road, we will want to meet in longer sessions daily and will have to meet on some Saturdays.

As the distinguished minority leader knows, and to which he has made reference on previous occasions, the majority leader has attempted to have sessions of the Senate, as much as possible, convene no earlier than noon each day during the months of January, February, March, and April. I have kept my commitment to Senators in this regard so as to enable committees and subcommittees to have as much time as possible to meet without interruptions from the floor. But as the measures begin coming to the floor in May, June, and July, and subsequent thereto, we will have to have lengthier sessions—and there will have to be some Saturday sessions—if we are going to get our work done in October.

I ought also to say this: If the Congress is unable to complete its work on the "must" legislation—which would certainly include most of the energy proposals—by October, I think we would have a responsibility to readjust our own schedules accordingly.

That is about the most I can say at this time.

Mr. BAKER. Mr. President, I thank the majority leader. I share with him a hope that we can meet our earlier sine die deadline. If we cannot, then I also agree with the majority leader we owe an obligation to stay here and finish the necessary work of the Congress. Certainly, an energy proposal or set of proposals should be fully and thoroughly ventilated and discussed, as they are of extraordinary importance. While I hope we can finish by October 7, I understand the possibility that we cannot, and I understand the necessity to remain. I thank the distinguished majority leader.

Mr. ROBERT C. BYRD. I yield to the Senator from New York.

WELFARE REFORM

Mr. MOYNIHAN. Mr. President, I thank the majority leader for this opportunity to continue the colloquy regarding the Senate schedule for this session.

Over the weekend the press, widely and properly, reported a statement by the majority leader that the Senate will have to devote itself full time to energy this year, so that "welfare reform will simply have to wait."

I think it will be useful to all of us to have his remarks, which seem to be very clear, nonetheless extended for the RECORD to note what I believe to be the case. This is that if welfare reform has to wait its turn, which indeed it must, as far as we know from the President's schedule of priorities its turn is next.

We expect a message from the President proposing a sweeping change in our welfare program, a proposal as large in its consequence as the energy proposal itself.

I spoke this morning with Mr. Stewart Eizenstat, who is the Assistant to the President for Domestic Affairs. He tells me that the President now hopes simply to present to us a set of general principles on welfare reform in May and that he will submit actual legislation to us in the fall.

The thrust of this legislation is clear. In the President's own compilation of campaign promises, he lists six points. The fifth is "enacting one uniform nationwide payment." The sixth is "removing the welfare burden from cities, with welfare costs being paid by the Federal and State Governments." Obviously, sir, we could not expect to enact so large a program within days of receiving it, particularly in terms of the deadline that the majority leader has suggested for our adjournment.

We are not new to this matter. We know what is involved. The family assistance plan took up half the 91st Congress and all the 92d and still was not adopted, but it is still the case that we can have a bill on the floor of the Senate in January if the President's message reaches us in the fall. I think that the Nation would be reassured to hear the majority leader say that he sees it this way.

Mr. Eizenstat noted to me this morning that the President's proposal is not expected to take effect until fiscal 1977. But, sir, two points need to be made. First, we have to establish that welfare is not turning out to be one of those problems which our political system simply cannot resolve and, accordingly, we find an excuse for putting it aside. To the contrary, the Nation, and particularly the cities of the Nation, need to be reassured that welfare reform has not been doomed by the energy crisis; that it becomes more important than ever; that the President's fifth principle of energy matters applies here as well. He said, "We must be fair, our solutions must ask equal sacrifices from every region." Nowhere is the principle of equal sacrifice so much violated as in the distribution of the Nation's welfare burden.

New York City, Mr. President, has a greater number of welfare recipients than the population of 12 States in the Nation. A quarter of our States do not have as many citizens as we have welfare recipients.

It seems to me that if the President is to send his message of general principles to us in May, speaking, as I can, for the chairman of the Committee on Finance, and speaking as chairman of the Subcommittee on Public Assistance, Mr. President, I say that we shall begin holding hearings on the President's principles the day after his message reaches us. We fully expect to be in a position to treat

immediately with his legislative program when it comes in the fall.

I ask the majority leader if he does not think it both possible and desirable that such legislation should be ready for consideration by the Senate in January, when we reconvene in our second session?

Mr. ROBERT C. BYRD. Mr. President, I do think it is desirable, and as I look at it from the vantage point of today, I think it is possible that Congress could begin action on the floor—certainly, I hope, here in the Senate—by next January on a welfare reform bill.

On the points that the distinguished Senator from New York has raised, I assure him that welfare reform is not being put aside by virtue of the energy crisis.

The committees and subcommittees of Congress can be working on the problem in the meantime. It was my understanding from the beginning that the President would not submit his welfare legislative package in May. I was a little bit nonplussed when I saw something to that effect surface recently. It was my understanding originally, and I believe that this was stated in one of our leadership breakfasts at the White House—though I am not absolutely sure that was the precise place—I was under the very clear impression that the President's welfare legislative package would not be sent up to Congress until the fall.

Mr. MOYNIHAN. Which Mr. Eizenstat has confirmed specifically this morning.

Mr. ROBERT C. BYRD. That being the case, I think it is only reasonable to expect that Congress could not really take floor action on such a proposal until January, at the earliest. This does not mean that the Senator and his subcommittees or that other Senators and subcommittees having jurisdiction over welfare matters could not begin holding hearings and study of the problem at any time in the near future, beginning as soon as possible; because, after all, the committees are the small legislatures of this Congress and the work has to be done there first.

Most work is done in the committees, actually, as the Senator knows. I think he is to be commended for not only his concern about the problem—certainly, he is conversant with the desire for urgent action in connection with the problem. But he is also to be commended for his desire to move ahead at the earliest possible date to bring legislation to the floor.

So I say that I support the Senator in his desire to move as quickly as possible. I support him in what I know will be an early scheduling of hearings in connection with this matter and the subcommittees on which he holds membership. I assure him that there is not going to be any desire on the part of this Senator to delay early Senate action on a legislative package in view of the fact that the administration will not send up the package until fall—and I think the administration should be held to its commitment. I think it should send up a package. It should be a well-thought-out, carefully planned package.

However, in view of the fact that the legislation will not be coming up until the fall, I join the Senator in urging that the administration fulfill its commitment to get up a package, not necessarily by a particular day, but in time for the committees to begin their work.

In the meantime, committees do not have to wait. They can call before them the administration officials who have jurisdiction over this matter, have hearings, and help the administration to develop a solution; and then, come next January, hopefully, the legislation will be ready for Congress—certainly for the Senate—to begin work on it.

Mr. CURTIS. Mr. President, in response to the majority leader, I am sure that there will be no disposition to delay the matter—at least, not to delay it unnecessarily. It is a difficult and complicated subject. There will be witnesses from municipalities, from States, as well as from congressional interests, and it will be necessary to explore the many details.

So I think it is something that is going to take time. It so happens that both those committees will be involved in quite a little other legislation that is high on the list of the President of the United States.

Mr. BAKER. Mr. President, how much time do I have remaining?

The ACTING PRESIDENT pro tempore. The Senator has 6 minutes.

Mr. BAKER. Mr. President, I yield 6 minutes to the Senator from Nebraska.

Mr. ROBERT C. BYRD. Mr. President, will the minority leader and the Senator from Nebraska permit the Senator from New York to make a few comments about the matter we have been discussing?

Mr. CURTIS. I yield.

Mr. MOYNIHAN. It is most gracious of the minority leader, as always.

Mr. President, the statement of the majority leader is exactly what my understanding is of his views.

The agenda for those of us involved in welfare reform in Congress is clear. I hope that this clarity is seen with the same precision in the confines of HEW itself—a murky and often inaccessible environ into which many proposals have gone but from which few have emerged.

Mr. ROBERT C. BYRD. I thank the Senator, and I thank the distinguished minority leader and the distinguished Senator from Nebraska.

HUMAN RIGHTS: DO WE REALLY CARE?

Mr. CURTIS. Mr. President, every American is, I am sure, pleased with the Carter administration's recent emphasis on the question of basic human rights. This is an issue that goes to the very heart of the true meaning of America as the greatest exemplar of freedom in the modern world.

I am concerned, however, that the administration has shown a decided tendency to be one sided in its approach to this issue. Without for 1 minute trying to cast even the slightest doubt on the President's intentions, which are, I realize, in the finest tradition of concern for one's fellow man, I would observe that if we are to make our emphasis upon human rights truly effective, we must strive for at least minimal consistency.

It is commendable, for example, to bring pressure to bear on the Soviet Union to ease its emigration restrictions to allow Soviet Jews, victims of the most savage persecution for their beliefs, to leave the Soviet Union to seek freedom in other lands. Indeed, we all agree that religious persecution is particularly offensive and that it must be countered wherever and whenever it raises its ugly head.

It is also desirable that we express concern over possible political persecution in various countries, including the holding of political prisoners by governments that are allied with us. But what is disturbing to me is that, while many people in our Government have decried the holding of political prisoners in, for example, Chile, there has been a noticeable lack of expressed concern for a situation of genuinely horrifying proportions in Cuba, which is far closer to home.

We hear much these days about South Korea, which is also allegedly guilty of political repression; but where are our official government spokesmen when it comes to the nightmare horrors perpetrated by the Communist leaders who control Vietnam?

There is a disquieting pattern in these cases. I note that there has developed a perceptible move toward lessening our aid to such governments as those of Chile and South Korea at the same time we appear to be moving steadily toward so-called normalization of relations with Cuba and Vietnam. Such a policy bespeaks an inconsistency and lack of realistic priorities that is, to put it charitably, cause for severe apprehension.

South Korea and Chile, to use but two examples which are especially prominent these days, are both strong allies of the United States. They pursue foreign policies that are, like ours—or certainly as ours should be, at any rate—anti-Communist and essentially supportive of our position as the obvious leader of the free world. Neither government is, insofar as its internal policies are concerned, pursuing political policies of the sort we have been committed to historically. But one should ask whether that is sufficient reason for us to cut off or reduce our aid when it plainly makes so little difference in our dealings with the Communist powers.

Mr. President, I would suggest that we must pursue the goals of human rights everywhere if we are to pursue them anywhere. If we are going to try to pressure the Governments of Chile and South Korea in the area of human rights, is it not far more urgent that we also try to pressure the Governments of Cuba and Vietnam, both of which are, and have been from their inception, characterized by a blatant lack of regard for even the most rudimentary rights to which all people are, by the very fact of their existence, entitled?

Consider Castro's Cuba. It is a country locked in the grip of a tyranny so savage that it must repel even the most hardened among us. Political prisoners have been languishing in Castro's jails from the earliest days of the present Communist dictatorship. Torture has been institutionalized. In Castro's Cuba, under one of the most ruthlessly efficient Communist dictatorships in the world.

human rights are merely some particularly grim sort of gallows humor.

A revealing look at the denial of human rights in Communist Cuba was provided by the Inter-American Commission on Human Rights in reports made public by the Organization of American States in June 1976. The Commission found that the Cuban Government's treatment of political prisoners has, over the years, far from softened; rather, it has contained to reveal a complete disdain for the dignity of the human being.

This disdain for the dignity of the human being includes arbitrary executions and death by torture or because of lack of medical attention. It also includes the especially appalling practice of experimenting on political prisoners, a phenomenon strongly reminiscent of the more malodorous activities carried on in the Nazi death camps.

A letter smuggled out of a Cuban prison in 1974 contained the following account sent by a group of Cuban political prisoners, who stated they were being experimented upon by Russian, Czech, and Cuban Communist doctors. According to the prisoners:

> The doctors come to the cells to weigh us, they observe us, they evaluate our reactions, they alter our metabolism with unknown substances incorporated in the food. We are not men, we are specters, skeletons covered with skin, human rags . . . We have reflex problems, with coordination, lack of equilibrium; we have nervous and digestive disturbances of all kinds . . . Scurvy makes most of us hemorrhage in the nose just from sneezing.

Such is the inhuman treatment visited upon the upward of 50,000 political prisoners in Castro's Cuba. I shall not dwell upon the many specific devices used to torture these hapless souls. It is enough to say that these despicable practices are carried on in a network of concentration camps and prisons strung across Cuba in the same manner in which the Gulag Archipelago is strung across the Soviet Union.

Human rights in Chile? What about Communist Cuba? Should we not at least try to apply a consistent standard if we are to avoid making a mockery of the entire issue?

And what of Vietnam, that ravaged country in which we made such a heavy investment in material goods and human life? An article in the March-April 1977 Freedom at Issue, a publication of the authoritative Freedom House, reminds us that, by the estimates of the Communists themselves, there are today, in southern Vietnam, some 200,000 people in what is euphemistically called thought-reform camps.

The unmitigated savagery with which the Communists took over all of Vietnam has apparently been forgotten by too many people, including many of our top policymakers, but we forget it only at our peril. I urge all my colleagues to go back to the public record and to reread the available telegrams sent to our State Department from South Vietnam in the final days of the war, as the long Communist night descended on that tragic land and its people.

Stories are today coming out of Vietnam, stories of brutal persecution, summary executions, and bestial atrocities. According to an article in the April 29 issue of National Review written by Le Thi Anh, a member of President Ford's Advisory Committee on Indochinese Refugees, there are, in all, "some 300,000 people * * * detained in re-education camps," with one of every three Saigon families having a member in one of these camps, which surely indicates a systematic attempt to intern anyone even remotely dangerous to the present Communist dictatorship.

One Jesuit priest recently expelled from Saigon estimates that as many as 20,000 Vietnamese have committed suicide since the Communists took power. One father, preferring death to torment under Communist persecution and torture, killed his wife, his 10 children, and his mother-in-law before killing himself. Such are the fruits of Communist rule in Vietnam, with which we are now going to "normalize" relations.

There are entirely credible stories of outright massacres of people being taken to the "reeducation camps." There are stories of torture, of summary execution, of forced relocation, and of dreaded "People's Tribunals," used earlier in North Vietnam from 1956 to 1959, during which time they accounted directly for the deaths of 200,000 people in a mercilessly efficient campaign of political terror and repression.

The available evidence, though unfortunately not widely publicized by our major news media, clearly shows that the Communists in Vietnam are carrying out what can only be termed a bloodbath, surely one of the grossest violations of human rights imaginable. As Mrs. Anh so perceptively observes in her article in National Review:

> The bloodbath is motivated not so much by hatred or revenge as by the necessity for the Communist system to purge itself of undesirable elements. From a Marxist viewpoint, political purge is a necessity in order to achieve political purity, a precondition to the building of socialism. Political purity ensures singlemindedness, which in turn achieves high efficiency. . . . For those who are too old or too stubborn to change, elimination is the only alternative.

That is the reality of Communism in Vietnam and in Cuba: For those who would resist, there must be a Hitlerian "final solution."

Mr. President, let us not be misled by myopia. Let us maintain our perspective and apply our concern for human rights where it is truly needed. It is dishonest to carp about such countries as Chile and South Korea while turning aside from the charnel pits of Vietnam and the concentration camps of Castro's Cuba.

Mr. President, if the United States proceeds to normalize relations with Castro's Cuba and with Vietnam we will be betraying the cause of freedom everywhere in the world.

Mr. President, I yield the floor.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business, for not to exceed 20 minutes, with statements therein limited to 5 minutes each. Is there morning business?

Mr. BELLMON. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PROPOSED IMPROVEMENTS IN THE HEALTH CARE SYSTEM—MESSAGE FROM THE PRESIDENT—PM 71

The ACTING PRESIDENT pro tempore laid before the Senate the following message from the President of the United States:

To the Congress of the United States:

This country spends more on health care than any other nation—$160 billion this year, almost nine percent of our Gross National Product. We have the finest medical facilities and highly skilled, dedicated health professionals. Yet many of our people still lack adequate medical care, and the cost of care is rising so rapidly it jeopardizes our health goals and our other important social objectives.

I am transmitting to the Congress two major pieces of legislation to improve our health care system: The Hospital Cost Containment Act of 1977 to hold down rising health care costs, and the Child Health Assessment Program (CHAP) to improve health services for children of low-income families.

I. Hospital Cost Containment Act of 1977.

First, I am today proposing legislation which will limit the growth of the major component of health cost increases—rising hospital expenditures. The Hospital Cost Containment Act will restrain increases in the reimbursements which hospitals receive from all sources: Medicare, Blue Cross, commercial insurers, and individuals. The limit will be set using a formula which not only reflects general inflation, but also extends to hospitals an additional allowance for improving their quality of care. Based on current trends, the limit for fiscal year 1978 will be approximately nine percent.

The legislation will also impose a limit on new capital expenditures for acute care hospitals. The program will fix a national level for such expenditures below that of recent years and allocate new capital spending among the states by formula. With the assistance of local planning agencies each state will determine which facilities merit new capital expenditures.

Specifically, the Hospital Cost Containment Act of 1977 will:

—Limit the in-patient reimbursements of acute care hospitals, excepting new hospitals, federal hospitals and Health Maintenance Organization (HMO) hospitals.

—Provide an automatic formula to

adjust the nine percent limit for moderate changes in expected patient load. The formula will contain strong incentives to discourage unnecessary hospitalization.

—Include an adjustment for hospitals which provide wage increases to their non-supervisory employees.

—Provide an exceptions process for the small percentage of hospitals which will undergo extraordinary changes in patient loads or major changes in capital equipment and services. The program will require the Department of HEW to respond to any application for an exception within 90 days.

—Disallow in the computation of a hospital's base cost any unwarranted expenditures made in anticipation of the implementation of the program.

—Allow states which operate cost containment programs, and are capable of meeting the federal program's criteria, to continue their own regulatory approaches.

This program will save about $2 billion in fiscal year 1978—over $650 million in the federal budget, over $300 million in state and local budgets, and almost $900 million in private health insurance and payments by individuals. In fiscal year 1980, total savings will exceed $5.5 billion.

These savings will slow a devastating inflationary trend, which doubles health costs every five years. This year health care will cost an average of over $700 for every man, woman, and child. Each worker's share of our Nation's health bill will require more than a month's work.

For the federal budget, rising health spending has meant a tripling of health outlays over the last eight years. Without immediate action, the Federal government's bill for Medicare and Medicaid—which provide health care for our elderly and poor citizens—will jump nearly 23 percent next year, to $32 billion.

Rising health costs attack state and local governments as well. State and local Medicaid expenditures have grown from $3 billion in 1971 to $7 billion in 1976, forcing cutbacks which harm the low income recipients of the program.

Unrestrained health costs also restrict our ability to plan necessary improvements in our health care system. I am determined, for example, to phase in a workable program of national health insurance. But with current inflation, the cost of any national health insurance program the Administration and the Congress will develop will double in just five years.

Finally, uncontrolled medical care spending undermines our efforts to establish a balanced health policy. Medical care is only one determinant of our people's health. The leading cause of death for Americans under 40 is motor vehicle accidents. The leading causes of death for older Americans—heart disease and cancer—are directly related to our working conditions and our eating, drinking, smoking, and exercise habits. We can better confront these broader health problems if we can limit the increase in soaring medical care costs.

Containing hospital cost increases is of central importance. Hospitals absorb 40 cents from each of our nation's health care dollars, and the cost of hospital service is rising faster than the cost of other health services. As in recent years, our country's total hospital bill this year will climb 15 percent—to $64 billion.

Since 1950, the cost of a day's stay in the hospital has increased more than 1,000 percent—over eight times the rise in the Consumer Price Index. Today, the average hospital stay costs over $1,300; just 12 years ago, a slightly shorter stay cost less than $300. This relentless increase places a severe burden on all of us—and strikes hardest at the poor and the elderly.

To control escalating hospital costs, some have proposed to cap Medicare and Medicaid expenditures. Such a federal spending limit would encourage hospitals to reduce their services to low-income and elderly patients and to recoup rising expenses by increasing their charges to all other Americans. In contrast, the legislation I am proposing today reduces the growth in federal Medicare/Medicaid expenditures without imposing such severe new burdens on other purchasers of health services.

This legislation is not a wage-price control program. It places no restrictions on the hospital's ability to determine its charges for any particular service. It places no limit on the size of any wage demand or settlement. The program establishes an overall limit on the rate of increase in reimbursements, permitting doctors and hospital administrators to allocate their own resources efficiently, responding to local needs and individual circumstances.

This proposal relies heavily on the initiatives of the private sector. For it to succeed, businesses, unions, and insurers, working with providers, must continue to pursue innovative techniques for reducing the cost of high-quality health care. The private sector's response to the challenges of cost containment will help decide its future role in our health care system.

The federal sector must also hold down the costs of its own hospitals. The Administration will carefully review the operating and capital expenditures of federal health facilities, to insure that unwarranted increases do not occur. Further, we will eliminate unnecessary federal regulations which lead to increased costs for all hospitals.

Our hospital cost containment system is transitional. It is intended to flow directly into a long-term prospective reimbursement system, which will not accept a hospital's base cost as given. The long-term system will be able to analyze and compare base costs and provide greater incentives to those hospitals which are most efficient. The Congress and the Administration are already at work on this long-range system.

At the same time, I am committed to strengthening competition in the health industry. For example, we should encourage HMOs and other organizational arrangements which give providers an incentive to reduce costs, and we should encourage consumers to become more aware of the charges of different providers.

Finally, all of us—consumers and providers—must work together to reduce the unnecessary use of hospital facilities and services. By cutting down excessive utilization we can help preserve our valuable resources.

II. Child health assessment program (CHAP).

The second piece of legislation I am proposing today, the CHAP Program, will replace Medicaid's Early and Periodic Screening, Diagnosis and Treatment Program (EPSDT) for children. The CHAP legislation, which calls for new expenditures of $180 million, will:

—Raise from 55 percent to over 75 percent the average federal payment to the states for health care provided to children whose health needs are assessed under the program.

—Extend benefits to children under age six whose family income level makes them eligible for assistance but who do not meet additional state eligibility requirements.

—Encourage states to assure the availability of comprehensive health providers for low-income children.

—Assure continuity of treatment by providing care for children six months after the family's eligibility for assistance otherwise terminates.

—Improve the federal program enforcement mechanism.

Like the cost containment program, the CHAP legislation is a crucial first step. Other children's health programs also require significant improvement, and the Administration will take steps to meet these needs. But the CHAP program is urgently needed to assure that more low-income children receive regular, high-quality primary and preventive care.

Currently, twelve million children are eligible for Medicaid, yet the EPSDT program is reaching only two million. Further, only slightly more than half of all children screened actually receive treatment for conditions that are identified. The CHAP program will assist the states in rectifying these deficiencies.

I call upon the Congress to act favorably on both of our new health initiatives.

JIMMY CARTER.

THE WHITE HOUSE, *April 25, 1977.*

ORDER FOR JOINT REFERRAL OF MESSAGE FROM THE PRESIDENT

Mr. ROBERT C. BYRD. Mr. President, in the last two decades, we have made tremendous progress in the medical technology aspect of our continuing battle to improve health care in America. Healing procedures which were unheard of a few years ago are today bringing relief and hope to our ailing. This says much about the potential in our country for an ever-increasing quality of life.

However, major problems remain. Medical progress is not available to all of our citizens. The cost of our health delivery system continues to skyrocket. Over the past 10 years, medical care costs paid by private health insurance companies have jumped 229 percent. During the same period, the costs of

medicare and medicaid have risen 484 percent.

Over the past 10 years the medical care component of the Consumer Price Index has escalated at an average annual rate of 9.5 percent. The index as a whole increased at an average annual rate of 7.5 percent. Between 1974 and 1976, medical care expenses have increased on the average of almost 11 percent per year.

Using January and February of 1977 as a base, medical care expenses would increase almost an additional 17 percent in 1977.

There is a continuing and pressing need for a total review of the provision of health care in our Nation, and of the legislative role in this area. The availability of health services to all sectors of our society—to rich and poor alike—as well as the quality and cost of such services are among the issues which require study and legislative action.

The Hospital Cost Containment Act of 1977 received today from the administration will address one of these issues. The impact of the cost containment provisions will need to be carefully evaluated. Hopefully, these provisions will make better health care increasingly within the economic reach of all Americans.

Mr. President, I ask unanimous consent that the message from the President of the United States dealing with the cost of health care be referred jointly to the Committee on Human Resources and the Committee on Finance.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

CONSIDERATION OF CERTAIN MEASURES ON THE UNANIMOUS-CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are two measures on the Unanimous-Consent Calendar that were transferred over to that calendar last week. They are Calendar Order Nos. 77 and 78. I ask unanimous consent that the Senate proceed to the consideration of those measures.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

DEFERRAL OF WHEAT REFERENDUM

The Senate proceeded to consider the bill (S. 1240) to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978, which had been reported from the Committee on Agriculture, Nutrition, and Forestry, with an amendment to strike all after the enacting clause and insert in lieu thereof:

That section 336 of the Agricultural Adjustment Act of 1938 (52 Stat. 55, as amended; 7 U.S.C. 1336) is amended by striking out the last four sentences and inserting in lieu thereof a new sentence as follows: "Notwithstanding any other provision hereof, the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978, may be conducted not later than the earlier of the following: (1) thirty days after adjournment sine die of the first session of the Ninety-fifth Congress, or (2) October 15, 1977.".

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–97), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SHORT EXPLANATION

S. 1240 would permit the wheat marketing quota referendum for the 1978 crop to be deferred until 30 days after the adjournment of Congress or October 15, whichever is earlier. Congress is presently considering new legislation which would suspend marketing quotas for the 1978 and subsequent crops. If the legislation is enacted, a referendum would not be required.

COMMITTEE AMENDMENT

On page 1, strike out lines 3 through 5 and insert in lieu thereof the following: "That section 336 of the Agricultural Adjustment Act of 1938 (52 Stat. 55, as amended; 7 U.S.C. 1336) is amended by striking out the last four sentences and inserting in lieu thereof a new sentence as follows:".

The committee amendment is technical in nature, deleting from existing law obsolete provisions relating to deferrals of wheat referendums in prior years.

PURPOSE

Since 1965, there have been amendments to the permanent legislation governing the wheat program which suspended wheat marketing quotas, thereby alleviating the need for any referendum. The Agriculture and Consumer Protection Act of 1973 provided for such a suspension; however, the suspension expires with the 1977 crop. Under section 332 of the Agricultural Adjustment Act of 1938, the Secretary of Agriculture is required to determine whether a wheat marketing quota should be in effect for the 1978 crop. A quota must be proclaimed if the Secretary determines that the total supply of wheat will, in the absence of a marketing quota program, likely be excessive.

Secretary Bergland has proclaimed a 1978 national wheat allotment of 61.5 million acres and a national wheat marketing quota of 1,905 million bushels. In order for the marketing quotas to be effective, they must be approved by two-thirds of the producers voting by secret ballot in a referendum. The referendum must be held not later than August 1. If approved, quotas would limit the wheat acreage which a producer could plant for market without penalty.

Congress is presently considering new legislation for the 1978 and subsequent crops of wheat. Should the legislation be enacted, a wheat referendum would not be required. The purpose of S. 1240 is to permit deferral of the wheat referendum and the expenses for preparing for it until Congress has had a further opportunity to develop new legislation.

DEPARTMENTAL VIEWS

In a letter to Chairman Talmadge dated April 7, 1977, Deputy Secretary John White stated that the Department of Agriculture recommended the enactment of S. 1240. The letter from the Deputy Secretary reads as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., April 7, 1977.

Hon. HERMAN E. TALMADGE,
Chairman, Committee on Agriculture, Nutrition, and Forestry, U.S. Senate.

DEAR MR. CHAIRMAN: This replies to your request for our comments on S. 1240, a bill to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978.

If this bill is not enacted into law shortly, it will be necessary to start preparing for a referendum which, under existing law, must be held before August 1, 1977. We estimate that the cost of preparing for the referendum would be approximately $85,000. This estimate includes only the cost of acquiring necessary materials. It does not include the cost of conducting the referendum.

Because the Congress is presently considering new legislation which would not require a wheat referendum, we recommend that the Senate favorably consider the passage of S. 1240.

Sincerely,

JOHN C. WHITE,
Deputy Secretary.

REGULATORY IMPACT EVALUATION

In compliance with subsection 5 of rule XXIX of the Standing Rules of the Senate, the committee makes the following evaluation of the regulatory impact which would be incurred in carrying out S. 1240.

The bill is not a regulatory measure in the sense of imposing government-established standards or economic responsibilities on private individuals or businesses. It creates no additional regulation; it merely extends the time limitation for conducting a referendum which is required by law.

COST ESTIMATE

I

In accordance with section 252 of the Legislative Reorganization Act of 1970, the committee estimates that no additional costs would be incurred in carrying out S. 1240.

The committee estimate is in accordance with the cost estimate of the bill prepared by the Congressional Budget Office.

According to the Department of Agriculture, the cost of preparing for the referendum would be approximately $85,000. This estimate does not include the cost of conducting the referendum.

II

The cost estimate prepared by the Congressional Budget Office, dated April 18, 1977, reads as follows:

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., April 18, 1977.

Hon. HERMAN E. TALMADGE,
Chairman, Committee on Agriculture, Nutrition and Forestry, U.S. Senate, Russell Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has reviewed S. 1240, a bill to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978.

Based on this review, it appears that no additional cost to the government would be incurred as a result of enactment of this bill.

Sincerely,

ALICE M. RIVLIN,
Director.

INCREASE IN CAPITAL STOCK OF THE FEDERAL CROP INSURANCE CORPORATION

The bill (S. 955) to amend the Federal Crop Insurance Act, and for other pur-

poses, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 504(a) of the Federal Crop Insurance Act (52 Stat. 72, as amended; 7 U.S.C. 1504(a)) is amended to read as follows.

"SEC. 504 (a) The Corporation shall have a capital stock of $150,000,000 subscribed by the United States of America, payment for which shall, with the approval of the Secretary of Agriculture, be subject to call in whole or in part by the Board of Directors of the Corporation.".

The title was amended so as to read:

A bill to amend the Federal Crop Insurance Act.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–98), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BACKGROUND AND NEED FOR LEGISLATION

I

The Federal Crop Insurance Act was enacted in 1938 to promote the national welfare by improving the economic stability of agriculture through a sound system of crop insurance and providing the means for research and experience helpful in devising and establishing such insurance.

Federal crop insurance is offered to farmers by the Federal Crop Insurance Corp., a wholly-owned Government corporation. In 1975, Federal crop insurance was available in 1,467 of the 3,066 counties in the continental United States. Policies were in effect for 314,745 crops that year, and premium income totaled $73,416,000. (See appendix A of this report for a brief history and description of the Federal crop insurance program.)

The Corporation obtains working capital through the issuance of capital stocks, all of which is subscribed by the United States of America. The Act authorizes capital stock of $100 million, and the Secretary of the Treasury has advanced $90 million against this amount. Earlier this year, the Corporation requested a supplemental appropriation for fiscal year 1977 for the issuance and subscription of the last $10 million of stock. (See appendix B for an analysis of the Corporation's capital position during fiscal year 1977.)

Over the years, the Corporation's capital stock has periodically been drawn on to meet farmers' indemnity claims and administrative and operating costs not covered by appropriations. This is necessary in years when the Corporation's liability for losses and its administrative and operating expenses not covered by appropriations exceed premiums.

II

During 1976, insured farmers in the upper Midwest suffered catastrophic crop losses due to widespread drought. As a result of the reduction in the capital stock occasioned by paying these loss claims, the Secretary of Agriculture estimates that the Corporation's net capital will be reduced to $7,966,000 at the end of fiscal year 1977—or $17,966,000 if the remaining $10 million in capital stock is subscribed.

Record breaking cold weather hit Florida in January 1977, causing extensive damage to citrus crops covered by Federal crop insurance. There is also the possibility of additional heavy losses to other 1977 crops (such as winter wheat in Kansas, Oklahoma, and Colorado) due to the unusually severe winter.

It appears likely that indemnity payments on winter 1977 crops will substantially exceed premiums, and thus completely exhaust the Corporation's capital.

III

On March 9, 1977, Senator Talmadge introduced S. 955 at the request of the Secretary of Agriculture. The bill would authorize an additional $50 million in capital stock for the Corporation.

The Secretary of Agriculture also submitted to Congress a request that the proposed supplemental appropriation for subscription of capital stock of the Corporation be increased from $10 million to $60 million.

Pursuant to the Secretary's request, the Senate Committee on Appropriations amended H.R. 4877 (the fiscal year 1977 supplemental appropriations bill) to include this increase. However, $50 million of the additional appropriation is to be made available only upon enactment of the authorizing legislation.

The Senate approved H.R. 4877, as amended, on April 1, 1977. The conference report on H.R. 4877, which was filed in the House on April 6, provides, in pertinent part, that "the managers on the part of the House will move to concur in the Senate amendment which provides $60 million to enable the Secretary of Treasury to subscribe and pay for capital stock of the Federal Crop Insurance Corp. instead of $10 million as proposed by the House."

IV

There is, therefore, a clear need to authorize the issuance of an additional $50 million in capital stock. The additional capital is essential to enable the Corporation to meet its obligations to insured farmers who suffer crop losses and to establish a capital reserve for continuation of operations in a business like manner.

DEPARTMENTAL VIEWS

S. 955 is an administration request bill. The letter from the Secretary of Agriculture recommending the enactment of the bill reads as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., February 18, 1977.

Hon. WALTER MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for the consideration of the Congress is a proposed bill to amend the Federal Crop Insurance Act as amended (7 U.S.C. 1501–1520) to authorize an additional $50 million in capital stock.

The Department of Agriculture recommends that the draft bill be enacted.

Presently under the Federal Crop Insurance Act, the Corporation is authorized $100 million in capital stock. Of this amount $90 million is issued and outstanding. A supplemental request for an appropriation for issuance of the remaining $10 million authorized has already been transmitted to Congress.

Catastrophic 1976 crop year losses in the drought-stricken Midwest have drained the Corporation's operating capital. In addition, early estimates of the freeze damage to the Florida citrus crop indicate the Corporation's resources will be all but exhausted when the indemnity payments are made. Should early heavy losses occur on 1977 winter crops, the Corporation would be unable to meet contractual commitments to farmers even with issuance of the additional $10 million in capital stock that has been requested in the form of a 1977 supplemental. The additional $50 million authority would facilitate issuance of additional stock needed to continue operations and provide producers protection on 1977 crops. Additionally, it will avoid the possible necessity of withholding payment of claims pending receipt of 1977 crop year collections. Details of the Corporation's capital position and the effect on budget authority and outlays are shown on schedules attached.

Section 102(2)(c) of Public Law 91–190 does not apply to this legislation; therefore, an environmental statement is not enclosed.

An identical letter has been sent to the Speaker of the House.

The Office of Management and Budget advises that there is no objection to the presentation of this proposed legislation and that enactment of this proposed legislation would be consistent with the administration's objectives.

Sincerely,

BOB BERGLAND,
Secretary.

REGULATORY IMPACT EVALUATION

In compliance with subsection 5 of rule XXIX of the Standing Rules of the Senate, the committee makes the following evaluation of the regulatory impact which would be incurred in carrying out S. 955.

The bill is not a regulatory measure in the sense of imposing Government-established standards or significant economic responsibilities on private individuals and businesses. Participation by farmers in the Federal crop insurance program is voluntary.

The bill amends the present Federal crop insurance program only to the extent of increasing the capital stock from $100 million to $150 million. The amendment will not change the procedures under which the program presently operates. Further, it is not anticipated that any new regulations, instructions, or forms under the existing program will result from the enactment of the bill.

Federal crop insurance is widely used by farmers in areas where it is available. By insuring producers against unavoidable losses, the program improves the economic stability of agriculture and helps assure consumers of an abundance of food and fiber at reasonable prices.

COST ESTIMATE

I

In accordance with section 252 of the Legislative Reorganization Act of 1970, the committee estimates that the increased costs which would be incurred in carrying out S. 955 would not exceed $50 million.

The Committee's estimate is in accord with the cost estimate of the bill prepared by the Congressional Budget Office and the budget projection for the Federal Crop Insurance Corp. furnished the committee by the Department of Agriculture.

II

The cost estimate prepared by the Congressional Budget Office reads as follows:

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., April 6, 1977.

Hon. HERMAN E. TALMADGE,
Chairman, Committee on Agriculture, Nutrition, and Forestry, Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached cost estimate for S. 995, a bill to amend the Federal Crop Insurance Act.

Should the committee so desire, we would be pleased to provide further details on the attached cost estimate.

Sincerely,

ROBERT A. LEVINE,
(For Alice M. Rivlin, Director).

COST ESTIMATE

1. Bill No. S. 955.

2. Bill title: Amendment to the Federal Crop Insurance Act.

3. Bill status: As introduced on March 9, 1977.

4. Purpose of bill: The capital stock of the

Federal Crop Insurance Corporation is utilized when indemnity payments exceed the premiums paid by subscribers. The capital stock is currently authorized at $100 million. Because of heavy crop losses this year and expected future losses, the Corporation has exhausted its premium income and will fully utilize the capital stock still available. S. 955 would raise the authorized level of capital stock from $100 million to $150 million which if appropriated would provide the Corporation with additional working capital.

5. Cost estimate: The additional costs of S. 955 are shown in the table below.

Fiscal year 1977:	Cost (millions)
Authorization	$50
Costs	---
Fiscal year 1978:	
Authorization	---
Costs	50
Fiscal year 1979:	
Authorization	---
Costs	---
Fiscal year 1980:	
Authorization	---
Costs	---
Fiscal year 1981:	
Authorization	---
Costs	---

The costs of this legislation fall within budget function 350.

6. Basis of estimate: If the authorized level of capital stock were increased to $150 million and fully appropriated, new budget authority of $50 million would be provided. It was assumed that this new budget authority would be made available for fiscal year 1977, as indicated in President Carter's budget proposal. Because the existing capital stock is expected to provide sufficient funds for fiscal year 1977, the bill would not affect outlays in that year. However, poor crop conditions are projected for the near future and as a result, the Corporation believes all of the $50 million in new budget authority will be spent in fiscal year 1978.

7. Estimates comparison: None.

8. Previous CBO estimate: None.

9. Estimate prepared by: Bob Gordon (225-7760).

10. Estimate approved by:

ROBERT A. SUNSHINE,
(For James L. Blum,
Assistant Director for Budget Analysis).

III

The budget projection for the Federal Crop Insurance Corporation furnished the Committee by the Department of Agriculture reads as follows:

U.S. DEPARTMENT OF AGRICULTURE

LEGISLATIVE PROJECTIONS

[In thousands of dollars]

	1977	1978	1979	1980	1981	1982
Existing legislation:						
Budget authority	52,000	12,000	12,000	12,000	12,000	12,000
Budget outlays	74,279	18,655	18,385	18,385	18,385	18,385
Proposed legislation:						
Budget authority	102,000	12,000	12,000	12,000	12,000	12,000
Budget outlays	74,279	18,655	18,385	18,385	18,385	18,385
Net change:						
Budget authority	50,000					
Budget outlays						

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider, en bloc, the votes by which the two measures were passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees, and the withdrawal of the nomination of Alex P. Mercure, of New Mexico, to be a member of the Board of Directors of the Commodity Credit Corporation.

(The nominations received today are printed at the end of the Senate proceedings.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1203. A letter from the Chairman of the Indian Claims Commission transmitting, pursuant to law, a report of the Commission's final determination in respect to claim case No. 73-A, the Seminole Indians of the State of Florida, plaintiff against the United States of America, defendant (with an accompanying report); to the Committee on Appropriations.

EC-1204. A letter from the Executive Secretary of the Cost Accounting Standards Board transmitting a response to a petition of Newport News Shipbuilding & Dry Dock Co. which criticized the GAO report entitled "Status Report on the Cost Accounting Standards Program—Accomplishments and Problems" (with accompanying papers); to the Committee on Banking, Housing, and Urban Affairs.

EC-1205. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "Alcohol and Tobacco Excise Taxes: Laws and Audits Need Modernizing" (GGD-76-91) (with an accompanying report); to the Committee on Finance.

EC-1206. A letter from the Secretary of Health, Education, and Welfare transmitting, pursuant to law, the annual report of the Social Security Administration for fiscal year 1976 (with an accompanying report); to the Committee on Finance.

EC-1207. A letter, dated April 22, 1977, from the Acting Assistant Legal Adviser for Treaty Affairs transmitting, pursuant to law, international agreements other than treaties entered into by the United States within the past 60 days (with accompanying papers); to the Committee on Foreign Relations.

EC-1208. A secret communication from the Comptroller General of the United States transmitting, pursuant to law information on Fleet Air Defense (PSAD-77-82) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1209. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act No. 2-18, "An act to authorize the charging of fees for the provision of clinical services at District of Columbia health clinics, and for other purposes" (with accompanying papers); to the Committee on Governmental Affairs.

EC-1210. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act No. 2-29, "An act to establish a 6-month limitation on the payment of benefits under the General Public Assistance Program" (with accompanying papers); to the Committee on Governmental Affairs.

EC-1211. A letter from the Assistant Secretary for Congressional Relations of the Department of State transmitting a draft of proposed legislation to repeal Sections 1735 and 1736 of the Revised Statutes (22 U.S.C. 1199) (with accompanying papers); to the Committee on Governmental Affairs.

EC-1212. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a list of reports of the General Accounting Office for March 1977 (with an accompanying report); to the Committee on Governmental Affairs.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. SCOTT, from the Committee on the Judiciary:

Without amendment:

S.J. Res. 40. A joint resolution to authorize and request the President to issue a proclamation designating May 13 of each year as "American Business Day" (Rept. No. 95-101).

By Mr. INOUYE, from the Select Committee on Intelligence:

S. Res. 148. An original resolution authorizing additional expenditures by the Select Committee on Intelligence; referred to the Committee on Rules and Administration.

By Mr. CRANSTON, from the Committee on Veterans' Affairs:

S. Res. 149. An original resolution authorizing additional expenditures by the Committee on Veterans' Affairs for inquiries and investigations. Referred to the Committee on Rules and Administration.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated;

By Mr. HART:

S. 1363. A bill to promote the recovery of waste heat energy resources and the expedited development and commercial application of dual purpose powerplants, and for other purposes; to the Committee on Energy and Natural Resources.

S. 1364. A bill to provide for the subsistence electrical needs of elderly residential consumers, promote equity in electrical costing through reform of current electric rate structures, and other purposes; to the Committee on Energy and Natural Resources.

By Mr. MATHIAS:

S. 1365. A bill for the relief of Nicholas A. Aguwa; to the Committee on the Judiciary.

By Mr. CURTIS:

S. 1366. A bill to deauthorize the Nebraska Midstate Division of the Pick-Sloan Mis-

souri Basin program, Nebraska; to the Committee on Energy and Natural Resources.

By Mr. DURKIN:

S. 1367. A bill to amend the Small Business Act with respect to loans for home builders;

S. 1368. A bill to amend the Small Business Act with respect to compliance loans;

S. 1369. A bill to amend the Small Business Act with respect to loan moratoriums;

S. 1370. A bill to amend the Small Business Act with respect to displaced business loans; and

S. 1371. A bill to amend the Small Business Act with respect to certificates of competency; to the Select Committee on Small Business.

By Mr. STENNIS (for himself and Mr. TOWER) (by request):

S. 1372. A bill to amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes; to the Committee on Armed Services.

By Mr. INOUYE:

S. 1373. A bill to modify the plan for harbor improvement at Honolulu Harbor, Oahu, Hawaii; to the Committee on Environment and Public Works.

By Mr. INOUYE:

S. 1374. A bill to amend the act entitled "An act authorizing Federal participation in the cost of protecting the shores of publicly owned property," approved August 13, 1946, as amended, to raise the limitation from $1 to $2 million; to the Committee on Environment and Public Works.

S. 1375. A bill to clarify provisions of the Barber's Point Deepdraft Harbor project at Oahu, Hawaii; to the Committee on Environment and Public Works.

S. 1376. A bill to authorize the Secretary of the Army to make a study of the Trust Territory of the Pacific Islands in order to promote improved utilization of water and related land resources; to the Committee on Environment and Public Works.

By Mr. ABOUREZK:

S. 1377. A bill to extend the time for commencing actions on behalf of an Indian tribe, band, or group; to the Select Committee on Indian Affairs.

By Mr. CRANSTON (by request):

S. 1378. A bill to extend the programs authorized by the Child Abuse Prevention and Treatment Act; to the Committee on Human Resources.

By Mr. SASSER:

S. 1379. A bill to amend the Internal Revenue Code of 1954 to suspend the imposition of interest on a deficiency of income taxes which results from an error of an employee of the Internal Revenue Service, and for other purposes; to the Committee on Finance.

By Mr. HATHAWAY:

S. 1380. A bill to amend the Department of Defense Appropriation Act, 1977, to authorize labor surplus area and small business set-aside programs, and for other purposes; to the Committee on Governmental Affairs.

By Mr. MAGNUSON (for himself, Mr. INOUYE, Mr. STEVENSON, Mr. DURKIN, Mr. MOYNIHAN, and Mr. STEVENS):

S. 1381. A bill to provide basic standards for State no-fault benefit plans for the rehabilitation and compensation of motor vehicle accident victims, and for other purposes; to the Committee on Commerce, Science, and Transportation.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HART:

S. 1363. A bill to promote the recovery of waste heat energy resources and the expedited development and commercial application of dual purpose powerplants, and for other purposes; to the Committee on Energy and Natural Resources.

COGENERATION AND WASTE HEAT UTILIZATION ACT

Mr. HART. Mr. President, today I am introducing the Cogeneration and Waste Heat Utilization Act, a comprehensive measure addressing what will be a vital component of our national energy conservation policy—the recovery and utilization of our waste heat energy resources. My proposal facilitates a rapid and orderly transition from our current practice of mindlessly wasting this important energy source to a national policy of recovery and utilization of that abundant resource. At this very moment, this energy resource is escaping through smokestacks into the skies above every city in the Nation. The process through which the Nation can recover this resource and use it to generate electricity is called cogeneration; the process is both painless and efficient.

COGENERATION

Mr. President, many industries require large amounts of steam in their production processes. In fact, about one-fifth of all fuel consumed in the Nation is expended to produce this "process steam." If this steam is used only once, as is normally the case, only about one-third of its potential energy is actually utilized in the manufacturing process, and two-thirds is simply wasted. This means that about 13 percent of all fuel consumed in the United States is presently wasted by this practice alone.

It does not have to be this way. It is clear that our Nation can no longer afford to waste two-thirds of this energy resource when it has been demonstrated over and over again that directing the same process steam through an electricity generating turbine first, and using the excess from the turbine for the required production process, will double fuel efficiency. Waste heat energy is currently being recovered and utilized in Europe for electrical generation and heating with great success.

There are a number of industries currently producing a sufficient amount of process steam to simultaneously cogenerate marketable quantities of electricity at one-half the fuel cost of the most efficient central station powerplant. These include: petroleum refining; stone, clay and glass; paper and pulp; transportation equipment; nonelectrical machinery; chemicals; primary metals; food; textiles; and breweries.

Cogeneration is not an exotic, futuristic, or uneconomical concept. As late as 1960, this country produced 21 percent of its industrial electricity needs by cogeneration. Due to a number of factors, including the artificially low price of fuel and myriad institutional barriers, this percentage had dropped to a dismal 10 percent in 1975. In contrast, however, Sweden is currently producing 29 percent of its total electricity through cogeneration. West Germany produces in excess of 17 percent of its needs via cogeneration. And remember, cogenerating electricity uses 50 percent less fuel per kilowatt hour than the most efficient utility.

Currently, there are two methods of cogeneration—closed cycle systems and open cycle systems. Of the two, the open cycle system has proven to be the most efficient way to use our precious petroleum and natural gas resources. Several recent studies of both systems have demonstrated that cogeneration can:

Save the Nation 1.86 million barrels of oil-equivalent every day by 1985 from only three open cycle system cogenerating industries. Report for the Federal Energy Administration by Thermo Electron Corp. entitled, "Final Report, a Study of Inplant Electric Power Generation in the Chemical, Petroleum Refining and Paper and Pulp Industries, 1976."

Reduce ERDA's estimate for nuclear power needs in the year 2000 by about one-half from only three open cycle system cogenerating industries. Frank von Hippel and Robert H. Williams, "Energy Waste and Nuclear Power Growth." Bulletin of Atomic Scientists, December 1976, Von Hippel and Williams study.

Produce 30 percent of ERDA's total electricity budget for the year 2000 from only three open cycle cogenerating industries with a 50 percent fuel savings, von Hippel and Williams Study.

Reduce required capital investments in electricity production by $5 billion every year during the next decade, even using less efficient closed cycle systems. Report for the National Science Foundation by Dow Chemical Co. entitled "Energy Industrial Center Study," June 1975, the Dow Study.

Save household consumers as much as $3.6 billion every year in electric bills, using less efficient closed cycle systems, the Dow Study.

Reduce consumer electric bills by over 15 percent in 2000, other factors remaining constant, von Hippel and Williams Study.

Reduce air pollution by as much as 50 percent wherever cogeneration is substituted for our present wasteful practices, the Dow Study.

WHY ARE WE NOT COGENERATING

The list of benefits could go on and on, but they all paint the same picture—enormous energy, consumer, capital, and environmental savings can be achieved through cogeneration, an energy conservation practice from which there are widespread and known benefits. So why are we not cogenerating? The reasons are both numerous and complex. Legal and regulatory impediments raise a number of questions. For example, who should own industrial site cogenerating equipment and facilities? How should such facilities be regulated, or should they be regulated at all? How will cogeneration affect the national electrical network? How shall rates be set for backup power which utilities provide to cogenerators? How can we insure that cogeneration will uniformly produce net energy and social savings?

Further, due to today's tight credit market, many industries believe they will obtain greater returns from investing in their product line rather than increasing their energy conservation efforts. But the greatest barrier to cogeneration applications is a reluctance of some electric utilities to purchase surplus cogenerated power from industries at reasonable rates. Beyond this, in some parts of the Nation, it is actually

illegal for industries to employ cogeneration.

During my research into this subject, it became increasingly clear that many of these issues should be resolved by the Congress and the President. But both will continue to be incapable of devising long-term solutions until more information can be obtained through intensive study and analysis.

THE COGENERATION ACT

Mr. President, the bill I am offering today presents a procedure for resolving the complex questions raised by industrial cogeneration and other waste heat recovery practices. It provides immediate incentives which will result in rapid and substantial increases in cogeneration while at the same time leaving all options open for Congress. The Cogeneration and Waste Heat Utilization Act represents an immediate and workable approach to this issue.

First, the bill would direct a comprehensive series of waste heat recovery and utilization policy analyses to be completed within 2 years. The studies will make recommendations on the most practicable means of achieving recovery and utilization of waste heat, and on model legislation and regulations designed to facilitate rapid commercial application of cogeneration by industries and utilities. Each recommendation will be accompanied by at least two alternative proposals. During the investigation, progress reports will be submitted to Congress every 6 months.

In the interim, it is all too clear that we cannot afford to sit idly by. Action is needed now to encourage industries to cogenerate. The Cogeneration and Waste Heat Utilization Act takes a reasonable three-sided approach to the problem.

First, an additional 10 percent refundable investment tax credit is provided for industrial cogeneration facilities and equipment. This incentive will make it economical for industries to cogenerate. Second, utilities must be encouraged to purchase surplus cogenerated power. The bill addresses this problem by removing the investment tax credit for utilities which unreasonably refuse to purchase. This is the most equitable incentive, because purchasing cogenerated power reduces utility capital investment requirements.

Third, State utility commissions will need help in updating their sometimes archaic regulations on cogenerators. My proposal includes provisions for Federal grants which will aid the commissions in this modernization process. All three incentives will automatically expire in about 3 years.

Rather than forcing the Congress and the President into hastily made major policy decisions which may plague us for years to come, this bill delays most major decisions until the Congress has all the facts at hand. Its immediate effect will be to speed up cogeneration efforts by encouraging industries, utilities, and utility commissions to voluntarily resolve some of the major institutional barriers.

In addition, the bill provides for an intensive research program within the Energy Research and Development Administration to improve present cogeneration and other waste heat utilization technologies.

Mr. President, the President's energy message marks our first profound step as a nation toward the efficient use of our finite energy resources—away from our past inexcusable wastefulness; toward a reliance on our infinite energy supplies—instead of those that will soon be depleted; toward establishing the goal of improving the quality of consumption—rather than our past fixation on sheer quantity.

We must act rapidly and deliberately toward these ends, as today might otherwise be remembered as our last opportune moment to begin.

Cogeneration is an essential ingredient of any true energy conservation policy. We must move immediately toward this goal, but we must also insure that the major policy decisions involved in such a program are thoughtfully considered. For this reason, I would urge all of my colleagues to examine this important bill. At this time, I ask unanimous consent that the text of the bill and an accompanying telegram of support from the National Rural Electric Cooperative Association be printed in the RECORD:

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1363

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Cogeneration and Waste Heat Utilization Act."

TITLE I—WASTE HEAT ENERGY RECOVERY POLICY ANALYSIS

SEC. 101. (a) The Administrator of the Federal Energy Administration (hereinafter referred to in this Act as the "Administrator") is authorized and directed to conduct, in consultation with the Environmental Protection Agency, the Federal Trade Commission, and other appropriate agencies, a full and complete analysis of the economic, social, environmental and technological feasibility and consequences of implementing, on a nationwide scale, various waste heat energy recovery and use techniques. The policy analysis shall focus primarily on industrial site and utility site dual purpose powerplant systems, and shall include the development and application of industry-by-industry surveys of existing and projected patterns of steam or heat energy generation, according to steam pressure, size of installation, load curve characteristics and other appropriate criteria, to ascertain the national potential for recovering and using waste heat energy and for the development of industrial and utility site dual purpose powerplants.

At or before the expiration of each six-month period following the date of the enactment of this Act, the Administrator shall submit to the Congress and to the President an interim report on the status of the policy analysis provided for by this Title. A final report, in three parts, shall be prepared and submitted as hereinafter specified.

(b) PART 1: FEASIBILITY AND CONSEQUENCES.—At or before the expiration of the twelve-month period following the enactment of this Act, the Administrator shall submit to the Congress and to the President Part 1 of the Policy Analysis Final Report. The scope of Part 1 shall be the potential benefits and impact of a national policy promoting the recovery of waste heat energy and the development of dual purpose powerplants. Part 1 of the Final Report shall include a thorough examination and assessment of at least the following subjects:

(1) the net potential energy, capital and consumer savings realizable from maximum development of industrial and utility site dual purpose powerplants;

(2) the effects of industrial site electric power generation on the United States electrical network;

(3) the reliability and defense security of multisource versus larger single source systems;

(4) any and all air, water, solid waste or other possible environmental problems associated with industrial and utility site dual purpose powerplants and with various coal-burning technologies such as fluidized bed combustors;

(5) the effect of existing public policies, including subsidies and economic incentives and disincentives, on efforts to recover and use waste heat energy; and

(6) waste heat energy conservation and recovery practices and policies in foreign countries.

(c) PART 2: COMPETITION IN THE ELECTRIC UTILITY INDUSTRY.—At or before the expiration of the eighteen-month period following the enactment of this Act, the Administrator shall submit to the Congress and to the President Part 2 of the Policy Analysis Final Report. Prepared in consultation with the Bureau of Competition of the Federal Trade Commission, Part 2 shall analyze the interrelationship between increased competition in the electric utility industry and the objective of promoting the recovery of waste heat energy and the development of dual purpose powerplants. Part 2 of the Final Report shall include a thorough examination and assessment of at least the following subjects:

(1) appropriate ownership arrangements for equipment, transmission lines and energy required or created by application of cogeneration or waste heat recovery techniques;

(2) the feasibility and consequences, from a regulatory, economic and technological standpoint, of separate ownership and operation of facilities for generating, transmitting and distributing electric energy, and means to promote such separate ownership and operation;

(3) the effect on competition, and on the ability to compete, of tax and other public policies relating to the sale of electric energy;

(4) means to reduce legal and regulatory restrictions on entry into the business of generating, transmitting and distributing electric energy;

(5) means to promote greater use of wheeling and sales of electric energy for resale; and

(6) the feasibility and consequences of separate ownership and operation of facilities for electric energy and for natural gas distribution.

(d) PART 3: PROPOSALS FOR GOVERNMENTAL ACTION.—At or before the expiration of the twenty-four month period following the enactment of this Act, the Administrator shall submit to the Congress and to the President Part 3 of the Policy Analysis Final Report. Part 3 shall identify the legal, regulatory, economic, and social factors impeding the rapid development of industrial and utility site dual purpose powerplants and other waste heat energy recovery techniques. In addition, Part 3 shall contain specific proposals for governmental action designed to reduce or eliminate existing impediments to such rapid development, and shall include a thorough examination and assessment of at least the following subjects:

(1) JURISDICTION.—Identification of the governmental authority or authorities most properly charged with regulating the development and operation of industrial site and utility site dual purpose powerplants and related transmission, distribution, and other facilities, including specifically:

(A) the determination of rates or guide-

lines for rates for sales of electric power from industrial site dual purpose powerplants to utilities and for sales of electric power from utilities to industrial site dual purpose powerplants; and,

(B) the establishment of a forum and procedure for the fair and efficient resolution of disputes between generators, transmitters, and distributors of industrially generated electric power;

(2) REGULATORY MEASURES.—Identification of such regulatory action as may be appropriate to promote increased waste heat energy recovery and use, including:

(A) requiring that electric utility transmission facilities be deemed common carriers, with wheeling services available to all producers of electric power at a published tariff rate;

(B) reducing standby demand charges to industry in consideration of industrial assumption of a portion of the burden of providing electric power;

(C) granting industrial generation of electric power for sale to the utility system a priority use status in any national allocation of fuels;

(D) requiring industrial site dual purpose powerplants to provide auxiliary electric power generation capacity for use during industrial plant shut-down periods;

(E) assessing peak-load pricing as a policy tool for encouraging waste heat recovery and use;

(F) evaluating the effect of proposed rate structure changes such as time-of-day pricing, life-line costing, marginal pricing, and constant industry and residential rates on extensive development of waste heat conservation and recovery practices; and,

(3) INCENTIVES AND DISINCENTIVES.—Identification of measures calculated to encourage private action leading to increased waste heat energy recovery and use, including:

(A) amendments or additions to those provisions of the Federal Power Act, Public Utility Holding Company Act, related federal legislation, and state and local public utility regulations having the greatest effect on waste heat conservation, recovery and use techniques;

(B) employing waste heat charges as a waste heat conservation, recovery and use strategy;

(C) various tax incentives and disincentives such as an increased investment tax credit and accelerated depreciation for properties and equipment dedicated to waste heat energy conservation and recovery uses, and increased taxes on enterprises wasting excessive quantities of heat energy;

(D) regulatory disallowance, in determining just and reasonable rates, of capital costs for the construction of additional electric utility generating capacity where industrially generated electric power is available; and,

(E) fuel taxes on enterprises requiring significant quantities of steam or heat energy that do not adopt measures to conserve, recover and use that energy.

SEC. 102. Beginning one year following submission of Part 3 of the Policy Analysis Final Report and continuing at annual intervals thereafter, the Administrator shall report to the Congress and to the President on the progress made toward definition and implementation of an effective national policy promoting waste heat energy recovery and development of industrial and utility site dual purpose powerplants. The Administrator's annual reports shall include at least the following subjects:

(a) Current forecasts of technological, economic, social and environmental factors bearing upon effective implemenation of the national policy;

(b) Perceived trends and changed circumstances anticipated to effect the national policy;

(c) Effectiveness of policy measures thus far adopted; and

(d) Proposed additions or modifications to the national policy as then constituted.

SEC. 103. The Administrator and the Director of the Bureau of Competition of the Federal Trade Commission are each authorized, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53, title 5, United States Code, relating to classification and General Schedule pay rates, to appoint and fix the compensation of such additional personnel as may be necessary to enable the Administrator and Director to carry out their functions under this Act.

SEC. 104. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this title.

TITLE II—RESEARCH, DEVELOPMENT, DEMONSTRATION, AND TECHNOLOGY TRANSFER PROGRAM

SEC. 201. (a) The Administrator of the Energy Research and Development Administration shall initiate and carry out a research, development, demonstration and technology transfer program for the purpose of (1) improving the efficiency and performance of industrial and utility site dual purpose powerplants and (2) providing industrial and utility site dual purpose powerplants a capability to use effectively coal or fuels other than natural gas or petroleum as the primary energy source. Such a program shall be formulated and carried out to effect a smooth transition from petroleum and natural gas to coal, and to a lesser degree, synthetic fuels derived from coal and oil shale, or alternate fuels derived from nonpetroleum sources. Technology development shall focus on improving the cost effectiveness, performance and efficiency of prime movers and ancillary equipment of the scale required for dual purpose powerplants. Ancillary equipment development shall emphasize heat recovery components with a view to improving existing powerplants and providing the necessary technology base for optimized heat recovery systems in new powerplants. To facilitate eventual replacement of present generation dual purpose powerplant prime movers that normally require distillate or natural gas as fuel, emphasis shall be placed on prime mover technology that will permit durable operation on lower grade heavy petroleum fuels with an ultimate capability for conversion to synthetic or alternate fuels when they are commercially available.

(b) Prime mover alternatives shall also be developed to permit future commercialization of more optimized dual purpose powerplants. These shall include options such as external combustion engines capable of efficient operation with fluidized beds of all scales and other methods for environmentally acceptable coal utilization, fuel cells capable of operation with coal or gasified coal, and topping cycles that can extend the upper temperature operating limit and substantially increase the efficiency of dual purpose powerplants while retaining the capability for virtually complete fuel source flexibility.

(c) The Administrator of the Energy Research and Development Administration shall take such action as may be necessary to assure that a reasonable proportion of the demonstration programs under this title are sited in electricity deficient areas of the United States.

SEC. 202. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this title.

TITLE III—INTERIM INCENTIVES FOR INDUSTRIAL COGENERATION

SEC. 301. INVESTMENT TAX CREDIT AMENDMENTS RELATING TO CERTAIN ELECTRICAL ENERGY GENERATING EQUIPMENT.

(a) ADDITIONAL CREDIT ALLOWED.—Subpart B of part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to rules for computing credit for investment in certain depreciable property) is amended by inserting immediately after section 46 the following new section:

"SEC. 46A. SPECIAL RULES RELATING TO CERTAIN ELECTRICAL ENERGY GENERATING EQUIPMENT.

"(a) IN GENERAL.—In lieu of the amount which would be determined under section 46 (a)(2) with respect to property which is qualified electrical energy generating equipment, the amount of the credit allowed by section 38 for the taxable year with respect to such property shall be an amount equal to 20 percent of the qualified investment (as determined under section 46 (c) and (d) in section 38 property which is (or, for the purpose of applying section 46(d), will be) qualified electrical energy generating equipment.

"(b) ADDITIONAL PERCENTAGE.—In the case of a corporation which elects to have the provisions of this subsection apply, the amount of the credit allowed by section 38 for the taxable year with respect to such property shall be an amount equal to the percentage determined under subsection (a) plus—

"(1) an additional percent of the qualified investment in such property (as determined under subsections (c) and (d) of section 46), and

"(2) an additional percent (not in excess of ½ percent) of such qualified investment (as so determined) equal in amount to the amount determined under section 301(e) of the Tax Reduction Act of 1975.

An election may not be made to have the provisions of this subsection apply for the taxable year unless the corporation making the election meets the requirements of section 301(d) of the Tax Reduction Act of 1975. An election by a corporation to have the provisions of this paragraph apply shall be made at such time, in such form, and in such manner as the Secretary may prescribe.

"(c) Definitions; Special Rules.—For purposes of this section—

"(1) ELECTRICAL ENERGY GENERATING EQUIPMENT.—The term 'electrical energy generating equipment' means any equipment or device of a character subject to depreciation installed in connection with, and as an integral part of, a system of heating, cooling, or providing power for manufacturing goods which, in addition to its principal purpose, generates electrical energy in excess of the user's needs in such a fashion as to produce commercially marketable quantities and durations thereof, as determined by the Secretary after consultation with the Administrator of the Energy Research and Development Administration.

"(2) QUALIFIED ELECTRICAL ENERGY GENERATING EQUIPMENT.—The term 'qualified electrical energy generating equipment' means electrical energy generating equipment (other than public utility property (as defined in section 46(f)(5)) which is used to produce marketable quantities and durations of electrical energy, a substantial amount of which is used by the taxpayer to meet his electrical energy needs or which is sold by the taxpayer to a public utility.

"(d) CONVERSION OF ELECTRICAL ENERGY GENERATING EQUIPMENT TO OTHER USE.—If property with respect to which the credit allowed by section 38 was determined under this section is not used to generate substantial amounts of excess electrical energy in

any taxable year before the close of the useful life which was taken into account in computing the credit, the taxpayer shall be treated, for purposes of section 47, as having disposed of such property on the first day of such taxable year.

"(e) REGULATIONS.—The Secretary shall prescribe such regulations as may be necessary to carry out the provisions of this section. Initial regulations shall be promulgated within 180 days after the date of enactment of the Cogeneration and Waste Heat Utilization Act."

(b) CLERICAL AMENDMENT.—The table of sections for such subpart B is amended by inserting immediately after the item relating to section 46 the following new item:

"SEC. 46A. SPECIAL RULES RELATING TO CERTAIN ELECTRICAL ENERGY GENERATING EQUIPMENT.

SEC. 302. UTILITY INCENTIVE

Subsection (f) of section 46 of the Internal Revenue Code of 1954 (relating to limitation in case of certain regulated companies) is amended by adding at the end thereof the following new paragraph:

"(10) No credit shall be allowed by section 38 with respect to any property described in section 50 which is public utility property (as defined in paragraph (5)) of the taxpayer if the taxpayer—

"(A) is engaged predominantly in the trade or business of the furnishing or sale of electrical power, and

"(B) unreasonably refuses (as determined by the Federal Power Commission under standards prescribed by the Commission)—

"(i) to purchase electricity generated by customers of the taxpayer in excess of their requirements,

"(ii) to establish physical connection of its transmission facilities with the facilities of one or more other persons engaged in the transmission or sale of electric energy, or

"(iii) to sell electrical energy to, transmit such energy for, provide transmission services or wheeling for, exchange electrical energy with, provide pooling services for or coordinate with, such other persons.".

SEC. 303. PARTIAL REFUND OF EXCESS CREDIT.

(a) Section 6401(b) of the Internal Revenue Code of 1954 (relating to amounts treated as overpayments) is amended by adding at the end thereof the following new sentence: "If the amount allowable as a credit under section 38 (relating to investment in certain depreciable property) exceeds the limitation provided by section 46(a)(3), the amount of the excess shall be considered an overpayment to the extent that it is attributable to the amount determined under section 46A."

(b) Section 6201(A)(4) of such Code (relating to erroneous credit under section 39 or 43) is amended—

(1) by striking out "section 39 or 43" in the caption and inserting in lieu thereof "section 38, 39, or 43", and

(2) by adding at the end thereof the following new sentence: "If on any claim for refund of income taxes under subtitle A there is an overstatement of that portion of the credit allowable by section 38 (relating to investment in certain depreciable property) which is treated as an overpayment under section 6401(b), the amount so overstated which is allowed as a refund may be assessed by the Secretary in the same manner as in the case of a mathematical or clerical error appearing upon the return, except that the provisions of section 6213(b)(2) (relating to abatement of mathematical or clerical error assessments) shall not apply with regard to any assessment under this sentence.".

SEC. 304. EFFECTIVE DATE.

The amendments made by this title apply with respect to—

(a) property to which section 46(d) of the Internal Revenue Code of 1954 does not apply, the construction, reconstruction, or erection of which is completed by the taxpayer after December 31, 1976, but only to the extent of the basis thereof attributable to construction, reconstruction, or erection after such date and before January 1, 1981;

(b) property to which section 46(d) of such Code does not apply, acquired by the taxpayer after December 31, 1976, and placed in service before January 1, 1981; and

(c) property to which section 46(d) of such Code applies, but only to the extent of the qualified investment (as determined under subsections (c) and (d) of section 46 of such Code) with respect to qualified progress expenditures made after December 31, 1976, and before January 1, 1981.

SEC. 305. FINANCIAL ASSISTANCE TO STATE REGULATORY AUTHORITIES.

(a) The Administrator is authorized to make monetary grants to state utility regulatory authorities, on an interim basis, for the specific purpose of assisting such authorities in efforts to:

(1) facilitate the recovery and use of waste heat energy;

(2) promote the exchange of electric power between industrial site dual purpose powerplants and electric utilities at reasonable rates; and

(3) encourage electric utilities to transmit electric energy, and provide transmission services or wheeling, to industrial site dual purpose powerplants at reasonable rates.

(b) No monetary grant shall be made under this section unless a formal application therefor has been submitted in such manner as the Administrator may require. The Administration shall promptly review, on a case-by-case basis, each application submitted by a state authority, but may not authorize the issuance of funds to such authority unless:

(1) the Administrator determines that explicit standards satisfying the objectives of this section have been prescribed by the applicant authority; or

(2) the Administrator determines that, although the applicant authority has not yet prescribed explicit standards satisfying the objectives of this section, such standards will be forthcoming in the near future. In such case, however, the Administrator may grant to the applicant authority no more than fifty per centum of the funds that would otherwise be granted, until such time as the authority has submitted, and the Administrator approved, explicit standards satisfying the objectives of this section.

(c) The Administrator may not approve the application of a State authority should the Administrator determine that the State has reduced, or intends to reduce, appropriations for its utility regulatory authority in anticipation of the receipt of funds pursuant to this section.

(d) The Administrator may withhold all or any part of a grant made pursuant to this section should the Administrator determine that the State authority is not diligently carrying out the program described in its application or is failing to abide by assurances given in such application.

(e) There is authorized to be appropriated under this section a sum not to exceed $20,000,000 in grants during any fiscal year. Such grants shall be allocated by the Administrator among the various States on an equitable basis, taking into consideration such objective criteria as population and existing energy deficiencies.

(f) No grant shall be made pursuant to this section after the close of a three-year period commencing with the date of the enactment of this Act.

[Telegram]

APRIL 30, 1977.

Hon. GARY HART,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HART: The National Rural Electric Cooperative Association has supported energy conservation technologies for many years and your bill proposing to study the problems of waste heat recovery and utilization, could be an important strategy to conserve our decreasing supply of energy.

NRECA supports the "Cogeneration and Waste Heat Utilization Act," and will be happy to assist you in any way possible.

Sincerely,

ROBERT D. PARTRIDGE,
Executive Vice President and General Manager.

By Mr. HART:

S. 1364. A bill to provide for the subsistence electrical needs of elderly residential consumers, promote equity in electrical costing through reform of current electric rate structures, and other purposes; to the Committee on Energy and Natural Resources.

Mr. HART. Mr. President, electrical energy is an indispensable necessity of our modern way of life. It is a lifeline which sustains virtually every American household.

For too many Americans today, however, that lifeline is perilously close to breaking because they can no longer afford adequate amounts of electricity. In a nation which has committed itself to affordable electricity for Americans, there are many for whom "affordable electricity" is a thing of the past.

The onset of the energy crisis, the unusually harsh winter of 1977, and inflation have all contributed to record-high prices for electricity. The situation is bad enough for people whose earnings cover most essential needs. But for senior citizens, many of whom are on low, fixed incomes, drastically increased prices spell disaster. For the elderly person, even the smallest increase in the price of a necessary commodity—for which it is impossible to "shop around" or do without—can be terrifying. In regional hearings before the Senate Special Committee on Aging held last month in Denver my distinguished colleague, Senator CHURCH, heard witnesses say that spiraling energy costs may be the greatest concern of older citizens in that part of the Nation.

In a recent report to the Special Committee on Aging, Federal Energy Administrator John O'Leary cited statistics which indicate that fuel expenses for the elderly increased by more than 44 percent between 1973 and 1976. In 1976—a comparatively mild winter—the low-income elderly living in the Northeast spent almost 30 percent of their income on home fuel. The figure was 18.5 percent of income in the Western States.

This problem is exacerbated by the fact that home fuel costs for the elderly are generally higher on a per capita basis than the average of residential heating bills for all ages in the United States. This is due primarily to the special health requirements of many senior citizens who must maintain a warmer home environment in the winter and a moderate temperature in the summer.

The same FEA report demonstrates that increases in retirement, social security, and income support payments, which are often tied to increases in the consumer price index—CPI—have not kept pace with increased energy costs—although they do reflect the overall rate of inflation. The CPI as a whole increased 28.1 percent between 1973 and 1976. While prices for some items increased at rates slower than the CPI, the indexed price of energy products rose at a greater rate: 42.2 percent for electricity, 57.8 percent for natural gas, and 83.3 percent for fuel oil. Thus, while social security and supplemental security income—SSI—benefits increased by about 30 percent between 1973 and 1976, this increase did not adequately compensate the low fixed income elderly for rising energy costs.

Clearly, we must provide affordable electricity for these Americans who are especially dependent on this commodity to maintain health and home.

Today I am introducing the Electrical Lifeline for the Elderly Act of 1977. It would insure that a basic amount of electricity be made available at minimum cost to senior citizens.

This bill would require State or regional regulatory authorities to establish a subsistence quantity of electricity for residences in which the head of household is at least 62 years of age or receiving social security benefits. The subsistence level of electricity would be the minimum amount necessary for cooking, food refrigeration, heating, lighting, cooling, medical, and other essential purposes. The rate charged for this amount of electricity would be equivalent to the lowest rate charged to any consumer served by a given utility on the date of enactment of this bill. Amounts of electricity in excess of the subsistence amount would be priced at the regular rate.

Mr. President, "lifeline" rates for the elderly would represent a significant departure from current electric rate schedules. In most States, utilities provide electricity for industrial and other large consumers at a cheaper rate than small residential users must pay. The more electricity used, the lower the unit cost becomes. The elderly, therefore, who are bound to use as little possible, now pay the highest rates.

With the institution of lifeline rates, the householder age 62 and over would get a subsistence amount of electricity at the same rate as the largest industrial user—the lowest rate instead of the highest.

Mr. President, I view this bill establishing "lifeline" rates for senior citizens as an easily administered interim solution to a well-documented problem while Congress addresses the larger issue of electric utility rate reform in the coming months and years. The "declining block rate" structure, which charges quantity discounts to those consumers who use the most electricity and the highest rates to those who use the least, is regressive and should be changed. This practice promotes wasteful consumption by industrial and other large users while residential consumers must bear a larger burden for increases in electric prices. It serves neither the interests of equity nor the goals of a national energy policy.

Although lifeline rates would be equivalent to the lowest rates in the declining block rate structure, this bill is not intended to validate this kind of electric pricing.

As an alternative, the bill requires the FEA to study a comparatively new concept in electrical pricing—incremental costing—which, in my judgment, could do much to promote equity, efficiency and conservation in the use of electricity. Under this rate structure, all consumers would pay a price for electricity based on the incremental cost of supplying it. Under incremental costing methodologies—such as peak-load and long-run incremental pricing—the incremental cost may exceed the average cost of supplying electricity. Thus, total revenues based on such a schedule would exceed total costs of operation.

To bring revenues and costs into balance, the FEA would examine various alternatives for selling subsistence quantities of electricity to residences at a lower rate.

Under such a plan, it is possible that monthly electricity bills could decline for small-quantity consumers and increase for many large-quantity consumers. Because low-income persons are usually small-quantity consumers, this plan establishes a "progressive" electric rate structure.

Such a plan would provide significant incentives for conservation and economic efficiency in addition to potential relief for low-income consumers. Because the electric rates for home consumption above subsistence levels would presumably be increased, consumers will perceive a greater reward for conservation. Businesses and industry will also receive an increase in rates, and thus be similarly inclined to conserve.

Mr. President, this bill enunciates two goals which must be an integral part of a comprehensive national energy policy. The first is the goal of providing senior citizens and all Americans with adequate, affordable, and equitably priced electricity. The second is the importance of conservation and the prudent use of our limited energy resources. If current electric pricing policies remain in effect, they will perpetuate wasteful consumption while failing to provide for the essential needs of an increasing proportion of our population. Lifeline for the elderly is an important first step in converting ours from a consumptive to a quality-oriented society. Only in this way will we be able to provide for the energy needs of all Americans while protecting our limited energy resources from waste and misuse.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1364

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Electrical Lifeline for the Elderly Rate Reform Act of 1977."

FINDINGS

SECTION 1. (1) The Federal Government has long recognized that supplying low-cost electricity to all Americans is a fundamental need which is equal in importance to the nutritional, health, education and other essential needs of our citizenry;

(2) rates for electric energy have increased dramatically in recent years, creating severe hardships for many elderly Americans on low-fixed incomes who often must choose between this and other essential items;

(3) the vast majority of existing electric rate schedules include quantity discount rates and declining block rates which result in large-scale consumers paying less than the full cost of the service they receive;

(4) the inequitable distribution costs in electric rate schedules encourages increased and often wasteful consumption of electricity by large-scale consumers while many individual elderly residential consumers must struggle to pay for limited but essential quantities of power;

(5) therefore, existing electric rate schedules serve neither the interests of equity nor the goals of a comprehensive national energy policy.

PURPOSES

SEC. 2. It is the purpose of this Act to provide:

(1) an interim solution for the subsistence residential electrical needs of the elderly while Congress attempts to construct an equitable electric utility structure which adequately meets the needs of all classes of electrical consumers;

(2) to promote equity in electrical costing;

(3) to demonstrate the effects of lifeline costing on electric utility rate structures, consumption patterns and the operation of electric utilities, and to demonstrate the feasibility and desirability of action by Congress to extend lifeline costing to other segments of American society.

LIFELINE RATES

SEC. 3. (a) No rate schedule of an electric utility shall provide for a rate under which the charge per kilowatt-hour to an elderly residential consumer for a subsistence quantity of electric energy in any month for such consumer's principal place of residence exceeds the lowest charge per kilowatt-hour of any other electric consumer to whom electric energy is sold by such utility (or any electric utility which controls, is controlled by or under common control with, such utility). Such rates shall not exceed the average of residential rates in effect on the date of enactment of this Act. The relevant regulatory authority shall consider seasonal and climatic variations as they affect electric consumption in determining the subsistence electric needs of elderly residential consumers.

(b) for the purposes of this section, the term—

(1) "subsistence quantity" means the number of kilowatt-hours per month which the relevant regulatory authority determines is necessary to supply the minimum subsistence electric needs of elderly residential electric consumers at their principal place of residence for the following end-uses: heating, lighting, cooking, cooling, food refrigeration, medical or other essential purposes as determined by the relevant regulatory authority;

(2) "elderly residential electric consumer" means an individual who demonstrates to the supplying electric utility for such individual that such individual is—

(A) (i) at least 62 years of age; and

(ii) the head of a household or principal income earner; or

(B) is receiving benefits from the Social Security Administration

(3) "relevant regulatory authority" means the regulatory body which has ratemaking authority with respect to electric rate schedules within its jurisidiction.

ENFORCEMENT

SEC. 4. (a) No electric utility may sell electric energy except in accordance with a rate schedule which has been fixed, approved, or allowed to go into effect by a regulatory authority. No regulatory authority may fix, approve, or allow to go into effect any rate schedule which violates section 3.

(b) If any person alleges that a regulatory authority's action, or failure to act, violates subsection (a)—

(1) in the case of a regulatory authority which is a Federal regulatory authority (or which is a State regulatory authority whose action or failure to act is not reviewable by a State of competent jurisdiction), such person may obtain review of such action or failure to act, insofar as it relates to a violation of subsection (a)—

(A) in any statutory review proceeding which is otherwise applicable to such action or failure to act, or

(B) if there is no such statutory review proceeding applicable to such action or failure to act, by commencing a civil action in the United States court of appeals for any circuit in which the utility sells electric energy, which court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United State Code; and

(2) in the case of a regulatory authority which is a State regulatory authority, such action, or failure to act, insofar as it relates to a violation of subsection (a)—

(A) may be reviewed by any State court of competent jurisdiction, and

(B) if such action is reviewable by such a State court, may not be reviewed by any court of the United States, except by the United States Supreme Court on writ of certiorari in accordance with section 1257 of title 28, United States Code.

(C) Any individual found guilty of fraudulently misrepresenting his or her status as a residential electric consumer shall be punished by a fine not to exceed $5,000 or imprisonment for not more than 6 months or both.

FEDERAL ASSISTANCE

SEC. 5. (a) The Administrator of the Federal Energy Administration or his successor in any department or agency established by law to carry out the functions of said Administration, shall provide technical assistance, including grants, or such other financial assistance as he deems necessary and appropriate to State and municipal regulatory authorities to assist these bodies in the establishment of subsistence standards for the elderly.

REPORTING REQUIREMENT

SEC. 6. The Administrator of the Federal Energy Administration or his successor in any department or agency established by law to carry out the function of said Administration, shall submit a report to Congress within 18 months after the date of enactment of the bill on the effects of this Act on electric utility rate structures, electric consumption and the operation of electric utilities.

Additionally, the Administrator shall study the extent to which cost-justified changes in rates will require incremental pricing (such as long-term incremental costing, peak load pricing, etc.) whereby the incremental costs will exceed the average costs of electricity. In cases where the incremental costs will exceed the average costs of electricity, the Administrator shall study the extent to which subsistence levels of electric consumption may be priced at lower levels, so that total revenues and costs are brought into balance.

The Administrator shall also study the extent to which such a pricing schedule would alleviate the difficulties which low income residences have in paying electricity bills.

The Administrator shall also study the impacts of such pricing schedule on the conservation efforts of all classes of consumers.

AUTHORIZATION OF APPROPRIATIONS

SEC. 7. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

EFFECTIVE DATE

SEC. 8. The provisions of this Act shall take effect ninety days after enactment and remain in force for a period of not less than three years thereafter.

By Mr. DURKIN:

S. 1367. A bill to amend the Small Business Act with respect to loans for home builders;

S. 1368. A bill to amend the Small Business Act with respect to compliance loans;

S. 1369. A bill to amend the Small Business Act with respect to loan moratoriums;

S. 1370. A bill to amend the Small Business Act with respect to displaced business loans; and

S. 1371. A bill to amend the Small Business Act with respect to certificates of competency; to the Select Committee on Small Business.

Mr. DURKIN. Mr. President, I am introducing today a package of five bills which will enhance the ability of the Small Business Administration to serve the needs of small businessmen in this country. The economic disaster of the past years has resulted in substantial difficulties for small businesses.

Small business failure in 1974 and 1975 increased 72 percent over 1973. We must recognize the vast importance of the 13 million small businesses for this country, and do everything possible to resolve their pressing difficulties.

This legislation is designed to correct many of the problems which small business concerns presently are experiencing or could experience in the future with respect to their dealings with the Small Business Administration. These bills will:

First, allow SBA to extend its loan authority to small homebuilders and cooperative groups for rehabilitation of blighted areas previously ruled ineligible;

Second, authorize SBA loans to facilitate compliance with Federal laws which were enacted subsequent to enactment of the compliance loan authorization of the Small Business Act;

Third, provide for a moratorium in SBA loan repayments for up to 5 years in specific situations;

Fourth, improve the SBA disaster loan program; and

Fifth, expand the Small Business Administration's certificate of competency program.

The first bill I am introducing will specifically authorize the Small Business Administration to make regular business loans to small homebuilders to finance residential or commercial construction or rehabilitation for sale. The bill would also authorize the SBA to make such loans to individuals and nonprofit cooperative groups with a limit of 75 members which are organized for purposes of rehabilitating blighted urban or rural areas. These loans could not be used primarily for the acquisition of land. This bill will insure that the small homebuilder, like other small businessmen, will be able to obtain SBA loans and assistance.

There are numerous homebuilders who are small businessmen who would benefit from this loan provision. Many small homebuilders cannot obtain loans from banks because of the modest size of their operation. Neither HUD nor any other agency of the Federal Government, presently provides the type of direct financial assistance to homebuilders as the SBA does with other small businesses.

Presently, small homebuilders are precluded from receiving SBA financial assistance as a result of administrative regulation. In times of high interest rates and other adverse economic conditions, the homebuilding industry is often more adversely affected than other segments of the economy, and individual homebuilders needs for loan assistance is often greater. It was intended that the Small Business Administration should meet the needs of all small business concerns in this nation, and the failure to include homebuilders illustrates a severe flaw in the SBA's mission.

My second bill will authorize the Small Business Administration compliance loans under section 7(b)(5). These loans may be provided to a small business concern in order to meet the requirements of a Federal law, or any State law, or regulation which was issued in conformity with a Federal law, without regard to the date on which the law or regulation was adopted.

Section 7(b)(5) of the Small Business Act authorizes the SBA to make loans to small business concerns in order to assist them in effecting additions or alterations in its plan, facilities, or methods of operations to meet requirements imposed upon the business pursuant to any Federal or State law or regulation issued in conformity with the Federal law. Presently, however, the compliance loan authority denies assistance to small concerns which are required to meet federally imposed or authorized standards established by earlier law. Where a Federal law was adopted before enactment of section 7(b)(5), the SBA has refused to make compliance loans for this purpose.

Regardless of the date when a requirement is imposed, the Federal or State law will place a substantial burden on small business concerns who must meet these standards. Suffering the same burden, these small businesses should be eligible to receive the same type of assistance, regardless of the date of enactment of the requirements.

The third bill in this package will authorize the Small Business Administration to assume or suspend for a period not to exceed 5 years a small business' obligation to make the required payments under an SBA loan. This moratorium is limited, however, to situations where without an assumption or suspen-

sion the small business would become or remain insolvent and where with the assumption or suspension the small business would become or remain a viable small business concern. The small business would be required to agree with SBA as to repayment of the amounts that became due during the period of the moratorium. The SBA would be authorized to extend the maturity date of the loan for a period to coincide with the moratorium.

Presently, as a prerequisite to making a loan, the SBA must determine that there exists a reasonable assurance of repayment. Further, there is a maximum maturity date or a maximum term for the loan. Many SBA loans are made for the maximum statutory term. Many small businesses would be able to survive and grow if SBA was granted the specific authority to defer the payments due either to SBA or to a bank which had made a guaranteed loan. This bill will give the Small Business Administration specific statutory authority to grant deferments.

My next bill will authorize the Small Business Administration to make displaced business loans to small businesses which are suffering substantial economy injury as a result of its displacement or location near a project constructed by a State or local government or public service entity which has the authority to exercise eminent domain. These loans would enable the affected small businesses to revitalize or reestablish themselves at the same or a different location.

Under section 7(b)(3) the SBA is specifically authorized to make loans to small business concerns to assist them in continuing in business at existing locations, in reestablishing a new business if the concern has suffered substantial economic injury as the result of its displacement by or location in or proximity to, a project or program constructed by or with Federal funds. These loans are funded through SBA's business loan and investment fund, whereas all of SBA's other nonphysical disaster loans are funded under its disaster fund.

Small businesses sustain just as much financial injury when they are displaced by a project or program by a State or local government or public service entity and need Federal loan assistance to assist in their recovery. This loan assistance provided under this bill, which will carry interest at a rate above the cost of interest to the Federal Government, should be funded under the SBA's disaster loan revolving fund in the same way as are all other nonphysical disaster loans.

The final bill which I am introducing in this legislative package will authorize the Small Business Administration to make all determinations regarding the responsibility of a small business concern to perform a specific Government contract, rather than having such final determination made by procurements officers. The bill also provides that a contract may not be withheld for such reason without referring the matter to SBA for a determination. Further, if the procurement officer believes that an otherwise qualified business is in violation of the Walsh-Healey Act, this finding is referred to SBA which can either dismiss the finding and direct the officer to award the contract or if in agreement it will submit the finding to the Department of Labor for final disposition.

The SBA certificate of competency will be conclusive and the contract must be awarded.

Under present law, section 8(b)(7) of the Small Business Act authorizes the Small Business Administration to issue a certificate of competency. This document "certifies to a Federal procuring activity that a small business concern is competent as to capacity and credit to perform a specific Government contract." Where there is a question as to the capacity and credit of such small business concern, the Government procurement officer refers the matter to the Small Business Administration, and its decision on the issue is conclusive. However, once the certificate is issued, the contracting officer is merely "authorized" to let the contract. Presently there is no statutory requirement mandating that once a certificate is issued the contract must be let to the small business, nor does the statute include other elements aside from a small business' capacity or credit. This has resulted in severe problems for the small business community.

Small businesses have been denied Government contracts because the procuring activity has determined that the small business lacked the requisite "tenacity, perseverance or integrity" to perform a specific Government contract. Such a finding results in the small firm being branded as "nonresponsible." Resort to the certificate of competency procedure in such cases is not available since capacity and credit are, purportedly, not involved.

A further problem arises where a bidder on a Government contract must also show that it is "eligible" to receive a contract award. One element of eligibility is the requirement that all potential contractors must meet the criteria found in the Walsh-Healey Public Contracts Act.

Section 1 of that act requires that in all Government contracts in excess of $10,000 there must be a stipulation "that the contractor is the manufacturer of or a regular dealer in the materials, supplies, articles, or equipment to be manufactured or used in the performance of the contract." Rules and regulations of the Department of Labor require that a procurement officer must reject bids from a bidder who is not a "manufacturer or dealer" within the meaning of the statute. If a small business is deemed ineligible due to this provision of the Walsh-Healey Act, there is no recourse to the certificate of competency procedure.

Mr. President, the importance of small businesses to the Nation's economy should not be underestimated. The 13 million small businesses account for 97 percent of all U.S. businesses, more than one-half of all private sector employment, 43 percent of business output, and one-third of the gross national product. Small businesses, however, have been hit the hardest during the recent period of inflation and recession. Wholesale prices charged by producers to distributors rose 20.9 percent while the Consumer Price Index was rising only 12.2 percent. Prices of construction material, with its tremendous impact on small business, rose 21.2 percent in 1974. I urge prompt consideration of these bills which I believe will provide a partial solution to the pressing problems of this Nation's small businesses.

I urge unanimous consent that the text of these bills be printed in the RECORD.

There being no objection, the bills were ordered to be printed in the RECORD, as follows:

S. 1367

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, section 7(a) of the Small Business Act (15 U.S.C. 636(a)) is amended by inserting the following after the semicolon at the end of the first clause "or to finance residential or commercial construction or rehabilitation for sale, or to provide financial assistance to individuals and nonprofit groups with a limit of 75 members organized for purposes of rehabilitating blighted urban or rural areas: *Provided, however,* That such loans shall not be used primarily for the acquisition of land;".

S. 1368

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, section 7(b)(5) of the Small Business Act is amended by inserting immediately after "any Federal and State law" the words "heretofore or hereafter enacted".

S. 1369

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Small Business Act is amended by adding at the end thereof the following new subsection:

"(f)(1) Subject to the requirements and conditions contained in this subsection, upon application by a small business concern which is the recipient of a loan made under this Act, the Administration shall assume the small business concern's obligation to make the required payments under such loan or shall suspend such obligation if the loan was a direct loan made by the Administration. While such payments are being made by the Administration pursuant to the assumption of such obligation or while such obligation is suspended, no such payment with respect to the loan shall be required by the small business concern.

"(2) The Administration shall assume or suspend for a period of not to exceed five years any small business concern's obligation under this subsection only if—

"(A) without the assumption or suspension of the obligation, the small business concern would, in the opinion of the Administration, become insolvent or remain insolvent;

"(B) with the assumption or suspension of the obligation, the small business concern would, in the opinion of the Administration, become or remain a viable small business entity; and

"(C) the small business concern executes a satisfactory agreement in writing as provided by paragraph (3).

"(3) Notwithstanding the provisions of sections 7(a)(4)(C) and 7(1)(1) of this Act, the Administration may extend the maturity of any loan on which the Administration assumes or suspends the obligation pursuant to this subsection for a corresponding period of time.

"(4)(A) Prior to the assumption or suspension by the Administration of any small business concern's obligation under this subsection, the Administration, consistent with the purposes sought to be achieved herein, shall require the small business concern to agree in writing to repay to it the aggregate amount of the payments which were required under the loan during the period for which such obligation was assumed or suspended, either—

"(i) by periodic payments not less in amount or less frequently falling due than those which were due under the loan during such period, or

"(ii) pursuant to a repayment schedule agreed upon by the Administration and the small business concern, or

"(iii) by a combination of the payments described in clause (i) and clause (ii).

"(B) In addition to requiring the small business concern to execute the agreement described in subparagraph (A), the Administration shall, prior to the assumption or suspension of the obligation, take such action, and require the small business concern to take such action, including the provision of such security as the Administration deems appropriate in the circumstances, as may be necessary or appropriate to insure that the rights and interests of the lender will be safeguarded adequately during and after the period in which such obligation is so assumed or suspended.

"(5) The term 'required payments' with respect to any loan means payments of principal and interest under the loan.".

S. 1370

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, section 7 of the Small Business Act is amended by striking "federally aided urban renewal program or a highway project or any other construction constructed by or with funds provided in whole or in part by the Federal Government" and by inserting in lieu thereof "program or project constructed by or with funds provided in whole or in part by the Federal Government or by a program or project by a State or local government or public service entity, providing such government or public service entity has the authority to exericse the right of eminent domain on such program or project".

S. 1371

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, section 8(b) of the Small Business Act is amended by striking paragraph (7) and by inserting in lieu thereof the following:

"(7)(A) To certify to Government procurement officers, and officers engaged in the sale and disposal of Federal property, with respect to all elements of responsibility, including, but not limited to, capability, competency, capacity, credit, integrity, perseverance, and tenacity, of any small business concern or group of such concerns to receive and perform a specific Government contract. A Government procurement officer or an officer engaged in the sale and disposal of Federal property may not, for any reason specified in the preceding sentence, preclude any small business concern or group of such concerns from being awarded such contract without referring the matter for a final disposition to the Administration.

"(B) If a Government procurement officer finds that an otherwise qualified small business concern may be ineligible due to the provisions of section 35(a) of title 41, United States Code, of the Walsh-Healey Act, he shall notify the Administration in writing of such finding. The Administration shall review such finding and shall either dismiss it and certify the small business concern to be an eligible Government contractor for a specific Government contract or if it concurs in the finding, forward the matter to the Secretary of Labor for final disposition, in which case the Administration may certify the small business concern only if the Secretary of Labor finds the small business concern not to be in violation.

"(C) In any case in which a small business concern or group of such concerns has been certified by the Administration pursuant to (A) or (B) to be a responsible or eligible Government contractor as to a specific Government contract, the officers of the Government having procurement or property disposal powers are directed to accept such certification as conclusive, and shall let such Government contract to such concern or group of concerns without requiring it to meet any other requirement of responsibility or eligibility.

By Mr. STENNIS (for himself and Mr. TOWER) (by request):

S. 1372. A bill to amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes; to the Committee on Armed Services.

Mr. STENNIS. Mr. President, by request, for myself and the senior Senator from Texas (Mr. TOWER), I introduce, for appropriate reference, a bill to amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes.

I ask unanimous consent that a letter of transmittal requesting consideration of the legislation and explaining its purpose be printed in the RECORD immediately following the listing of the bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., April 7, 1977.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: I am pleased to enclose a legislative proposal "To amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes." The proposal is a part of the Department of Defense legislative program for the 95th Congress.

PURPOSE OF THE LEGISLATION

The proposed legislation replaces one senior position in the Department of Defense with another at a slightly lower level with more specialized duties. It also changes the title of another senior Defense position. This is accomplished by eliminating one of the two Executive Level II positions of Deputy Secretary of Defense which now exists, and establishing in its place a new position of Under Secretary of Defense for Policy, with pay grade reduced to Executive Level III.

The proposed legislation is part of an effort to strengthen management, by reducing span of control, to streamline organizational arrangements, and to reduce staffing levels within the Department of Defense. As presently structured, twenty-nine major offices of the Department (plus seven Commanders of the Unified and Specified Commands) report to the Secretary and Deputy Secretary of Defense. Of these, thirteen are within the Office of the Secretary. Virtually every group which has reviewed this Department's organization has concluded that this span of control is entirely too broad for effective management.

COST AND BUDGET DATA

Enactment of this proposal will result in no increase in budgetary requirements of the Department of Defense. It will facilitate a reduction in the size of the staff of the Office of the Secretary of Defense, with concomitant budget savings for the future.

The Office of Management and Budget has advised that, from the standpoint of the Administration's program, there is no objection to the presentation of this proposal for the consideration of the Congress. This proposal is also being sent to the Speaker of the House. It is recommended that the proposed legislation be enacted by the Congress.

Sincerely,

HAROLD BROWN.

By Mr. INOUYE:

S. 1373. A bill to modify the plan for harbor improvement at Honolulu Harbor, Oahu, Hawaii; to the Committee on Environment and Public Works.

Mr. INOUYE. Mr. President, in the review and reevaluation of the navigation improvement project for Honolulu Harbor, during phase I of the design memorandum stage which was completed in July 1976, two very important points were made, which bear directly on the need for modification of the original project authorziation under the River and Harbor Act of 1965.

First, according to the original project authorization, the State of Hawaii is required to make a cash contribution of 2.6 percent of the project first cost based on land enhancement benefits. This contribution is currently estimated to be about $200,000. However, as a result of the recent reevaluation of the project by the Army Corps of Engineers it has been determined that the material dredged during construction of the project will be disposed of at a deep-ocean site and will not be used to create new lands offshore from Sand Island as assumed in the original project document.

The 2.6-percent figure for the State of Hawaii's cash contribution for the navigation improvement project for Honolulu Harbor was established on the assumption that approximately 93 acres of land would be created with the Honolulu Harbor dredged material. The net annual value of this land was estimated to be $471,000 in 1963 dollars. It was then estimated that alternative sources of fill materials could create the same land for an annual cost of $54,100. The annual land enhancement benefit claimed for the project, and used for the determination of the portion of the total first cost of project construction allocated to land enhancement, was the $54,100 figure. The cost allocated to land enhancement was $118,000, which was computed according to the division of the annual land enhancement benefit, $54,100, by the total project annual benefits, $1,042,000, then multiplied by the total project first cost in 1963 of $2,283,000. The State's cash contribution was established as 50 percent of the cost allocated to enhancement, which

was approximately 2.6 percent, or $59,000, of the estimated Corps of Engineers first cost of project construction, $2,283,000, at Honolulu Harbor.

Since it has been determined that the material dredged during construction of the navigation improvement project for Honolulu Harbor will be disposed of at a deep-ocean site and will not be used to create new lands offshore from Sand Island, the State of Hawaii's cash contribution toward the first cost of the project construction should reflect the reduction in land enhancement benefits which originally would have accrued to the State. It is on this basis that I propose that the authorization for the Honolulu Harbor project be modified so as to eliminate the State's cash contribution.

Second, the original authorization for the Honolulu Harbor project included deepening of the main entrance channel, the main harbor basin, and Kapalama Channel, but did not include deepening of Kapalama Basin. In the review and reevaluation of the project in phase I of the design memorandum stage, it was determined that incorporation of Kapalama Basin into the deepening project is essential to accommodate present and future needs of waterborne commerce.

The Honolulu Harbor area is used extensively by container vessels and petroleum tankers, and ship traffic is expected to accelerate when the container facilities on Sand Island are developed. Plans have been underway for some time to develop a second deep-draft harbor for Oahu at Barber's Point in order to alleviate the expected, increased demand for use of Honolulu Harbor. It is estimated that Honolulu Harbor by itself would be increasingly overcrowded in the 1980's and would reach a saturation point by 1995. While I support the construction of a second deep-draft harbor for Oahu, in the interim period without that harbor, it is absolutely essential that plans go forward for the improvement of Honolulu Harbor. It is for this reason that I am deeply concerned about the incorporation of the deepening of Kapalama Basin into the Honolulu Harbor project. Failure to include the deepening of Kapalama Basin would limit unnecessarily the future capacity of Honolulu Harbor to accommodate the increasing amount of oceangoing ship traffic which is projected. Modification of the original project authorization to include the deepening of Kapalama Basin is therefore crucial, if the expected improved capacity of Honolulu Harbor is to be achieved.

I urge expeditious action on the two modifications of the original authorization for the navigation improvement project for Honolulu Harbor, under the River and Harbor Act of 1965, I have proposed in submitting this legislation.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1373

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the plan for the harbor improvement at Honolulu Harbor, Oahu, Hawaii, authorized by section 301 of the River and Harbor Act of 1965 (79 Stat. 1092) is hereby modified (1) to delete the requirement that local interests contribute in cash, prior to initiation of construction, a lump sum amounting to 2.6 percent of the estimated first cost of the general navigation facilities for the project, ascribed to land enhancement through deposition of dredged material; and (2) so that the Secretary of the Army, acting through the Chief of Engineers, shall dredge the Kapalama Basin portion of the project to depths commensurate with the needs of existing and projected commerce utilizing the harbor complex.

By Mr. INOUYE:

S. 1374. A bill to amend the act entitled "An Act authorizing Federal participation in the cost of protecting the shores of publicly owned property," approved August 13, 1946, as amended, to raise the limitation from $1,000,000 to $2,000,000; to the Committee on Environment and Public Works.

Mr. INOUYE. Mr. President, the Army Corps of Engineers has authority to construct small beach erosion control projects, under section 103 of the River and Harbor Act of 1962, as amended, without specific authorization of Congress if the Federal costs do not exceed $1,000,000. The legislation I am introducing today would raise this amount by $1,000,000 in recognition of the inflation in construction costs which has occurred since the enactment of the authority.

Similar legislation, now section 133 of the Water Resources Development Act of 1976, was passed last year to raise by $1 million the limitation on the amount of Federal construction costs that could not be exceeded by the Corps of Engineers in building small flood control and river and harbor projects without specific authorization of Congress. My bill would simply extend that authority to all of the small continuing projects program of the Corps of Engineers by including this provision for small beach erosion control projects.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1374

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 3 of the Act entitled "An Act authorizing Federal participation in the cost of protecting the shores of publicly owned property," approved August 13, 1946, as amended, is amended by striking out "$1,000,000" and inserting in lieu thereof "$2,000,000".

(b) The amendment made by this section shall not apply to any project under contract for construction on the date of enactment of this Act, except in those cases where the authorized project includes periodic beach nourishment in accordance with section 1(c) of the Act approved July 28, 1956.

By Mr. INOUYE:

S. 1375. A bill to clarify certain provisions of the Barber's Point Deepdraft Harbor project at Oahu, Hawaii; to the Committee on Environment and Public Works.

Mr. INOUYE. Mr. President, today I am introducing a bill to clarify certain provisions of the Barber's Point Deepdraft Harbor project for Oahu, Hawaii. One of the purposes in introducing this legislation is to reaffirm that the local cash contribution, which the State of Hawaii is required to give toward the first cost of construction of the general navigation facilities at the Barber's Point Deepdraft Harbor, Oahu, shall be 2.1 percent of that cost, as authorized by section 301 of the River and Harbor Act of 1965. In addition, my bill provides that the material dredged from the construction of the general navigation facilities at Barber's Point shall become the property of the State of Hawaii for disposal.

There is one problem in the eyes of some detractors of the proposed Barber's Point Deepdraft Harbor project that has been of particular concern to me; the State of Hawaii's cost-sharing agreement with the Federal Government has been questioned as inadequate. But before I address this aspect of the present authorization of the Barber's Point Deepdraft Harbor, I would like to emphasize the clear need for a second deepdraft harbor for Oahu to supplement not only the present Honolulu Harbor facilities but the planned improvement of those facilities.

In planning for Honolulu Harbor, a multimodal task force, consisting of members of the maritime and aviation industries, Government and industry leaders, as well as knowledgeable outsiders, after 2½ years of work developed a series of recommendations on harbor development for Oahu to a 1995 time frame. It appears from this study that Honolulu Harbor facilities will prove inadequate in the decade of the 1980's. Some rearrangements and adjustments there may extend this date to the 1990's with completion of work proposed in the navigation improvement project for Honolulu Harbor. But beyond the 1990's, additional oceangoing-vessel facilities will we required on Oahu. By the year 2030, for example, the total Oahu needs for container acreage will be between 400 and 500 acres, or more than twice the area that can ultimately be provided at Honolulu Harbor. It must be realized that the land in and around Honolulu Harbor is the subject of intense competition since this area adjoins the Government and private enterprise financial center of the State. It is estimated, however, that the combination of Honolulu Harbor and Barber's Point Harbor will accommodate Oahu's container facility needs for at least the next 50 years.

I think that it is both fair and proper for the State of Hawaii's local cash contribution to remain, as presently authorized, at 2.1 percent of the first cost of construction of the general navigation facilities for the Barber's Point Deepdraft Harbor. The manner in which the State's local cash contribution was determined by the Army Corps of Engineers created some misunderstandings because the report prepared by the Pacific division of the corps used one average annual value of the material to be dredged in constructing the harbor in calculating the benefit analysis and another average annual value for the cost sharing between the Federal Government and the State. The average annual value of $925,000 was used in the benefit

analysis as the net market return on the sale of the dredged material. The average annual value of $235,000 was used in the cost-sharing computations based on the premise that local interests, the State, could create an equivalent stockpile for an average of $235,000 annually from strip-mining operations nearby. I think that it is entirely appropriate to use two separate values for this dredged material for reasons I will explain in some detail.

The basis for the cost-sharing agreement is the value of the dredged material within the context of construction of the Barber's Point Deep-Draft Harbor. If land is created with dredged material, the value used by the Corps of Engineers in computing the benefits and the cost-sharing requirement is the annual net economic rent expected from the created land or the cost of equivalent fill, whichever is less. The reasoning behind putting the equivalent fill qualifier into the analysis is to prevent local interests from being charged a cash contribution based on a value higher than that they could create for the equivalent amount of land derived from alternative means. The value most appropriate for cost sharing based on dredged material at Barber's Point would be the cost of equivalent fill; that is the cost to create an equivalent stockpile. However, dredged material sold as a raw material or mineral does not change the value of any existing land or create any new land. Dredged material marketed as a raw material does not create any land enhancement benefits. The product does not remain at a fixed place and is not immobile but becomes distributed physically throughout a wide variety of economic activities. The increase of product created by a harbor, such as an increased fish catch, is usually treated as a general benefit and no cost sharing is required. It follows that dredged material should not require cost sharing if it is sold as a raw material. After wide distribution throughout the economy, it is not a windfall to a limited number of beneficiaries as land would be. Because the dredged material before its sale and distribution, is given as property to a single entity, it does seem appropriate that that entity be asked to cost share with the Federal interest. This should be limited, however, to the extent of recoverable value by this entity, or the cost of creating an equivalent stockpile, whichever is less. It is, therefore, appropriate to use two separate values for this dredged material. The value used as a benefit is the increase to the national economy resulting from the utilization of this byproduct as a material or mineral, and is a general benefit. The value local interests are asked to cost share on is the recoverable value by that interest as a first owner of the material, or the cost of an alternative source whichever is less.

As outlined above, the basis for the Army Corps of Engineers' computation of the State of Hawaii's local cash contribution toward the first cost of the construction of the general navigation facilities for the Barber's Point Deep-draft Harbor is both equitable and proper. The reason why I ask that the State's cost-sharing requirement of 2.1 percent of the first cost of construction be reaffirmed is that I believe that the construction of the Barber's Point Deep-draft Harbor project is being delayed due to the dissatisfaction of the executive branch of the Federal Government with the authorized cost-sharing agreement.

The last part of my bill addresses the question of ownership of the material dredged from the construction of the Barber's Point Deepdraft Harbor. It is appropriate, as specified in House Document No. 93, 89th Congress, 1st session, that the dredged material from the construction of the general navigation facilities become the property of the State of Hawaii for disposal. This is advantageous to the Federal Government since it is less costly than disposal at sea and the State then accepts the uncertainties of monetary return, time, and quality of materials that will be available for disposal.

I urge expeditious passage of this legislation and ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1375

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the local cash contribution of 2.1 percent of the first cost of construction of the general navigation facilities at the Barber's Point Deep-draft Harbor, Oahu, Hawaii, authorized by section 301 of the River and Harbor Act of 1965, is hereby reaffirmed. The material dredged from the construction of the authorized general navigation facilities shall become the property of the State of Hawaii for disposal.

By Mr. INOUYE:

S. 1376. A bill to authorize the Secretary of the Army to make a study of the Trust Territory of the Pacific Islands in order to promote improved utilization of water and related land resources; to the Committee on Environment and Public Works.

Mr. INOUYE. Mr. President, today I am introducing legislation which would authorize the Secretary of the Army, acting through the Chief of Engineers, to make a study of the Trust Territory of the Pacific Islands in order to promote improved utilization of its water and related land resources.

Prudent and timely planning for the development, utilization and conservation of the water and related land resources of the Trust Territory of the Pacific Islands will enable the new Government of the Commonwealth of the Northern Marianas to more wisely manage its resources for the benefit of its people. I urge expeditious passage of this legislation to allow the Army Corps of Engineers to assist the Government of the Northern Marianas in developing a comprehensive study of its water and related land resources needs.

I ask unanimous consent that the text of my bill, as well as a letter from Mr. Erwin D. Canham, the Resident Commissioner of the Government of the Northern Mariana Islands, in support of my bill, be printed in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 1376

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Secretary of the Army, acting through the Chief of Engineers, is hereby authorized and directed to make a study in cooperation with the government of the Trust Territory of the Pacific Islands for the purpose of providing a plan for the development, utilization, and conservation of water and related land resources of such territory. Such study shall include appropriate consideration of the needs for flood protection, wise use of flood plain lands, navigation facilities, hydroelectric power generation, regional water supply and waste water management facilities systems, general recreation facilities, enhancement and control of water quality, enhancement and conservation of fish and wildlife, and other measures for environmental enhancement, economic and human resources development, and shall be compatible with comprehensive development plans formulated by local planning agencies and other interested Federal agencies.

GOVERNMENT OF THE NORTHERN MARIANA ISLANDS, OFFICE OF THE RESIDENT COMMISSIONER,
Saipan, Mariana Islands, April 9, 1977.

Hon. DANIEL K. INOUYE,
U.S. Senate, Washington, D.C.

DEAR SENATOR INOUYE: The new Government of the Commonwealth of the Northern Marianas will be placing great emphasis on water and land resources management planning. Contacts have been established with the Army Corps of Engineers, Honolulu Branch, relative to the type of assistance the Corps can provide to the Commonwealth of the Northern Marianas in the above area. We were informed that before the Army Corps of Engineers can provide any assistance to the Northern Marianas, legislation is required.

The purpose of this letter is to request your assistance in passage of an enabling legislation to authorize such studies. The required legislation will authorize and direct the Secretary of the Army, acting through the Chiefs of Engineers, to make a study in cooperation with the Northern Mariana Islands with particular reference to providing a plan for the development, utilization and conservation of water and related land resources. Such study shall include appropriate consideration of the needs for flood protection, wise use of flood plains, navigation facilities, hydroelectric power generation, regional water supply and waste water management facilities systems, general recreation facilities, enhancement and control of water quality, enhancement and conservation of fish and wildlife, and other measures for environmental enhancement, economic and human resources development, and shall be compatible with comprehensive development plans formulated by local planning agencies and other federal agencies.

The Government of the Northern Marianas respectfully solicits your assistance in the introduction of the above-mentioned legislation and also appropriation therefor.

Mr. Clarence Fujii at the United States Army Corps of Engineers, Honolulu Branch, Telephone Number 808/438-9218, can provide all of the required information with regards to their assistance program for the Northern Marianas and the estimate of funds required for appropriation to undertake the planning studies which will outline areas of need for development.

Thank you in advance for your assistance.
Sincerely yours,
ERWIN D. CANHAM.

By Mr. CRANSTON (by request):

S. 1378. A bill to extend the programs authorized by the Child Abuse Prevention and Treatment Act; to the Committee on Human Resources.

Mr. CRANSTON. Mr. President, the Secretary of Health, Education, and Welfare has submitted a draft bill to extend for fiscal year 1978 the authorization of appropriations for the Child Abuse Prevention and Treatment Act, at the fiscal year 1977 appropriation level of $19 million. As the chairman of the Subcommittee on Child and Human Development of the Committee on Human Resources, I am introducing this bill at the request of the Administration.

Our subcommittee will be considering legislation to extend these provisions in a markup on April 28.

Mr. President, I ask unanimous consent that the text of the bill and the transmittal letter be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1378

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Child Abuse Prevention and Treatment Act is amended by inserting ", and $19,000,000 for the fiscal year 1978" before the period at the end thereof.

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
April 12, 1977.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for the consideration of the Congress is a draft bill "To extend the programs authorized by the Child Abuse Prevention and Treatment Act."

The draft bill would extend the programs authorized by the Child Abuse Prevention and Treatment Act for an additional year, in order to enable us to review the ability of the programs to attain their intended objectives, and would authorize the appropriation of $19 million for fiscal year 1978—the amount requested in the budget revisions of February 22, 1977.

We are advised by the Office of Management and Budget that enactment of this draft bill would be consistent with the objectives of the Administration.

Sincerely,
JOSEPH A. CALIFANO, Jr.,
Secretary.

A BILL

To extend the programs authorized by the Child Abuse Prevention and Treatment Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Child Abuse Prevention and Treatment Act is amended by inserting ", and $19,000,000 for the fiscal year 1978" before the period at the end thereof.

By Mr. SASSER:

S. 1379. A bill to amend the Internal Revenue Code of 1954 to suspend the imposition of interest on a deficiency of income taxes which results from an error of an employee of the Internal Revenue Service, and for other purposes; to the Committee on Finance.

Mr. SASSER. Mr. President, today I am introducing a bill that would remove, in many cases, a taxpayer's liability for interest penalties if a deficiency in his tax payment were the result of bad advice or assistance by the Internal Revenue Service employees. The need for this type of legislation is, in my opinion, compelling.

Federal and private studies have shown repeatedly that the advice given by the IRS cannot be counted on to be correct. Error rates of between 25 and 75 percent—depending on the type of assistance sought—have been reported. The IRS itself has subjected its taxpayer assistance program to intense scrutiny, but has still found it impossible to upgrade its services enough to stand by the advice it gives. As stated in the 1040 form instruction booklet:

We are happy to assist you by answering questions to help you prepare your return. But you should know that you are responsible for the accuracy of your return and for the payment of the correct tax. If we do make an error, you are responsible for the correct tax and we are generally required by law to charge interest.

Mr. President, I find it astonishing that the IRS gives such poor advice and then is allowed to exempt itself from responsibility for that advice. I believe in the principle that citizens who deal with agencies of Government should not be subject to later penalties for taking the Government's advice. The best place to begin, Mr. President, is the IRS, with which almost every adult citizen must deal each year.

As many of my colleagues will recall, the distinguished Senator from Florida, Mr. STONE, introduced similar legislation in the 1st session of the 94th Congress. Although this bill, S. 1652, was not enacted into law in its original form, an amendment to the Tax Reform Act of 1976 lets the IRS abate interest if computational errors made by the IRS were responsible for a tax deficiency. This amendment was a legislative compromise which opened the door for the more comprehensive legislation which I send to the desk today.

Mr. President, my bill would prevent the IRS from collecting interest penalties if a deficiency were caused by mistaken advice or mistaken return preparation assistance given by taxpayer service representatives. This provision would broaden the concept of justice embodied in the Stone amendment to the Tax Reform Act of 1976 by extending it to include noncomputational, substantive, errors made by IRS in filling out tax forms, and to cover mistaken answers to taxpayer inquiries as well.

Taxpayers also would be given the legal right to request written confirmation of any advice they receive from IRS taxpayer assistance people. The Service would be required to provide such written confirmation within 10 days. And the IRS would be obligated to inform every taxpayer receiving advice that he is entitled to get written confirmation if he wants it.

I believe that our taxpayers deserve this protection from the mistakes of this agency of Government. Year after year, Americans have been promised true and meaningful tax reform, only to see that political considerations and special interests have gotten in the way. Average taxpayers have willingly suffered an unfair tax burden, even in the face of Government mismanagement of tax money and misplaced Government spending priorities. Their willingness is even more admirable when one considers the trouble we put them through in order to follow the inequitable laws that the Congress has passed.

While the wealthy have certified public accountants and tax lawyers to calculate how much tax they owe and to tell them how to take legitimate advantage of the tax breaks for which they are eligible, average Americans suffer quietly each April and fill out whatever forms the IRS has developed for them. And when these average Americans go to their Internal Revenue Service for help, they involve themselves in a game of governmental "Catch 22"—the IRS says, "Sure, we'll help you, but you can't believe a word we say."

This bill is certainly not the be-all or end-all for tax reform. Broader areas of public policy will be addressed later this year when President Carter submits his tax reform plan to the Congress. I want to stress that my bill does not offer a single new tax break to a single American citizen—each person would still be liable for the tax that he or she legitimately owes. Comprehensive tax reform will not in any way be endangered or forestalled by this bill. What the bill does is to pave the way toward greater tax justice by offering assistance to those taxpayers who need it most and by providing some sort of assurance to our citizens that they will not be penalized unfairly for taking advantage of Government programs that are established for their benefit.,

George Washington once said:

No taxes can be devised which are not more or less inconvenient or unpleasant.

I am sure that my colleagues will agree with this statement. But I think that we owe it to our constituents at least to make these unfair and unpleasant taxes as just and as simple as possible.

CONGRESS SHOULD SET STANDARDS

The taxpayer service programs of the Internal Revenue Service were originated by the Agency, rather than by the Congress. The development of taxpayer assistance has taken place on an ad hoc basis, without the planning or foresight one would expect for a program affecting millions of Americans. According to an internal IRS memorandum cited in the Administrative Conference of the United States "Report on Administrative Procedures of the IRS," in October 1975:

Internal Revenue Assistance to taxpayers probably originated soon after the individual income tax was enacted in 1913. Until 1952, the provision of such assistance was the responsibility of Internal Revenue Collectors whose primary duties were processing returns and collecting delinquent taxes. Over the years, the work of

collectors was augmented by Audit personnel, particularly during the tax return filing season. In 1952 taxpayer assistance was made the responsibility of the Audit Division, where it remained until 1959. Having each had exclusive responsibility for taxpayer assistance, the Collection and Audit Divisions shared the responsibility from 1959 to 1963. This arrangement proved unsatisfactory, and in 1963 taxpayer assistance functions were consolidated within the Collection Division. A national office branch in the Collection Division developed, and in 1971 it became the Taxpayer Service Division under the Assistance Commissioner [Accounts, Collection and Taxpayer Service (ACTS)] in the national office.

I applaud the Service's initiative in setting up these programs. However, I am convinced—by the constant shifts in responsibility and the seeming inability of the IRS to bring its programs into compliance with any reasonable sort of accuracy standards—that the Congress should at this time set workable but tough standards for the IRS to meet. These taxpayer service programs affect millions of Americans and, in spite of their good intentions, subject taxpayers to penalties for participating—they must be subject to the scrutiny and the legislative control of the Congress.

BETTER EVALUATION MEANS BETTER PROGRAMS

In addition to the need for better Congressional control of the taxpayer assistance programs, I feel strongly that the Service itself could upgrade its assistance by performing more rigorous evaluations of the programs. I am distressed that the IRS is unable to break down in a comprehensive manner its error rate for various types of advice. For example, a member of my staff called the IRS and was informed that the Service was unable to determine, from its own internal studies, how many of its errors were made in answering telephone inquiries, how many were made by IRS personel filling out tax returns, or how many were the result of inadequate information supplied by the taxpayer. The IRS had figures that were not based on any sort of statistically meaningful sample size. Instead, their numbers only served to obscure the areas in which assistance could be improved, rather than to clarify them. My bill contains provisions that would mandate that the IRS evaluate its programs comprehensively and report to the Congress suggestions for improving the programs' quality and accuracy.

BILL WOULD NOT CREATE AN UNWORKABLE BUREAUCRACY

This bill would basically mandate the upgrading of the present IRS programs. The only new feature is a system of sending out written confirmation of advice already given—a simple extension of the taxpayer assistance philosophy to those Americans who are limited by lack of time or transportation from participating in the programs directly in the IRS service centers. The additional manpower generated by these written confirmations would be mainly clerical workers to type the confirmations. An efficiently operating program will already have in place employees with the necessary knowledge and legal expertise.

Also, the bill would allow the Service to suggest to the Congress modifications the IRS feels are necessary because of additional costs and administrative changes imposed by the bill. This provision will allow the IRS to upgrade its programs in line with Congressional desires and administrative realities. In order for the IRS to have sufficient time to begin this cooperative process, amendments under section 2 will not apply until the tax year 1978—or, effectively, advice given in 1979.

WORTH THE COST

Although the IRS has always testified that a mandatory or considerably-upgraded taxpayer assistance program would be too costly, I believe that the benefits from improved advice and a more just tax system would be worth the cost. Such an expenditure, while benefiting millions of Americans, would probably amount to less of a cost than just a handful of the tax loopholes that now pervade the Tax Code for the benefit of the few. While the revenue loss to the Government from reduced penalty interest income would be marginal, the amount of interest for an individual taxpayer who has relied on the mistaken advice of the IRS is often substantial. These people—the ones who must rely on the IRS for help—are usually the people who can least afford interest payments.

RESTORING TAXPAYER CONFIDENCE

A taxpayer service program without teeth is only a half-hearted effort. It should be the policy of the Government that the IRS offer true assistance; such help, I believe must take the form of written confirmation upon request and interest abatement when the assistance proves to be incorrect. Adoption of this bill will result in greater accuracy on the part of IRS employees, greater taxpayer trust in their IRS and in their Government, and increased use of taxpayer service programs by taxpayers with no other means of obtaining help.

Mr. President, I ask unanimous consent that the text of this bill appear in the RECORD, immediately following my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1379

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Taxpayer Assistance Fairness Act of 1977".

SEC. 2. (a) Section 6601(c) of the Internal Revenue Code of 1954 (relating to suspension of interest in certain tax cases) is amended to read as follows:

"(c) Suspension of Interest in Certain Income, Estate, Gift and Chapter 41, 42, 43, or 44 Tax Cases.—

"(1) IN GENERAL.—In the case of a deficiency as defined in section 6211 (relating to income, estate, gift, and certain excise taxes), if a waiver of restrictions under section 6213(d) on the assessment of such deficiency has been filed, and if notice and demanded by the Secretary for payment of such deficiency is not made within 30 days after the filing of such waiver, interest shall not be imposed on such deficiency for the period beginning immediately after such 30th day and ending with the date of notice and demand.

"(2) INTEREST ON DEFICIENCY RESULTING FROM INTERNAL REVENUE SERVICE.—In the case of a deficiency (as so defined) of an income tax, if—

"(A) the return was prepared by a taxpayer service representative of the Internal Revenue Service acting under the program established by the Secretary to provide assistance to taxpayers in preparation of income tax returns, or

"(B) the return was prepared by the taxpayer on the basis of written interpretations or advice given directly to the taxpayer by a taxpayer service representative of the Internal Revenue Service under that program, and the deficiency did not result from a failure by the taxpayer to provide adequate information to the taxpayer service representative, or from a willful misrepresentation of information by the taxpayer, interest shall not be imposed on such deficiency (but only to the extent such deficiency is attributable to such confirmation or advice in the case of subparagraph (B)) for any period ending on or before the 30th day after the date of notice and demand by the Secretary for payment of the deficiency.

"(3) SPECIAL RULES FOR ORAL INFORMATION.—

"(A) WRITTEN CONFIRMATION.—In any program established by the Secretary to provide assistance to taxpayers in the preparation of income tax returns, the Secretary shall provide that if a taxpayer service representative gives any oral interpretations or advice to a taxpayer, the taxpayer shall be notified that he may request (but only at the time the oral interpretation or advice is given to him) a written confirmation of such oral interpretation or advice and that such written confirmation shall be sent within 10 days after the date of such request.

"(B) EFFECT OF WRITTEN CONFIRMATION.—For purposes of paragraph (2)(B), if a taxpayer prepares a return on the basis of any oral interpretations or advice received by him for which he has also received a written confirmation, the taxpayer shall be treated as having prepared the return on the basis of written interpretations or advice.

"(C) EXCEPTION.—This paragraph shall not apply to any request for any written confirmation which is made after the 10th day immediately preceding the date (determined without extensions of time for filing) on which the return of income tax is due.".

(b) Section 6404 of such Code (relating to abatements) is amended by striking out subsection (d).

SEC. 3. (a) Each calendar year the Secretary shall report to the Committee on Ways and Means of the House of Representatives and to the Committee on Finance of the Senate with respect to—

(1) the numbers of people requesting and receiving assistance during the previous calendar year under taxpayer assistance programs established by the Secretary;

(2) the amount of the interest suspended during the previous calendar year as a result of the amendments made by section 2 of this Act;

(3) the results of random audits which shall be taken by the Secretary by auditors posing as taxpayers as to the quality and accuracy of taxpayer service representatives' responses; and

(4) the cost of providing taxpayer assistance service.

(b) Within 180 days of the date of the enactment of this Act, the Secretary shall report to the committee referred to in subsection (a) with respect to—

(1) alternative structural, administrative, or filing deadline changes to improve the quality and accuracy of taxpayer assistance programs; and

(2) the classification of taxpayer inquiries which are so complex as to impose an unacceptable cost in complying with the amendments made by section 2 of this Act.

SEC. 4. The amendments made by section 2 shall apply to taxable years beginning after December 31, 1977.

By Mr. HATHAWAY:

S. 1380. A bill to amend the Department of Defense Appropriation Act, 1977 to authorize labor surplus area and small business set-aside programs, and for other purposes; to the Committee on Governmental Affairs.

UNEMPLOYMENT AND FEDERAL PROCUREMENT POLICY

Mr. HATHAWAY. Mr. President, the bill I introduce today would channel a greatly increased number of Government procurement contracts into areas of high unemployment. It is similar to amendments I have offered to Department of Defense appropriation bills during the last three sessions of Congress. Each of these amendments was accepted by the Senate, but was subsequently dropped in conference. The Senate has therefore approved the goals of this proposed legislation 3 years in a row and I am hopeful that these changes will ultimately be enacted into law during the 95th Congress.

MODIFIES MAYBANK AMENDMENT

The bill I propose today would modify language contained in the 1977 defense appropriations bill, and in every DOD appropriation since 1953. The language I wish to modify is the so-called Maybank amendment, named after Senator Burnet R. Maybank who first introduced it. It states that:

No funds shall be used for the payment of a price differential on contracts made for the purpose of relieving economic dislocations.

Senator Maybank's goal was to prohibit the DOD from paying more for textiles obtained from mills in New England than from mills in other parts of the country, particularly the South, where labor costs were lower. At that time the DOD was prone to pay these higher costs in an attempt to stop or slow the trend of many New England firms moving to areas with lower labor costs. The Maybank amendment was intended to counteract this regional favoritism which imposed higher costs for the defense of the country as a whole.

As we all know, most of the mills moved, and therefore the historic phenomenon to which the Maybank amendment was addressed no longer is significant.

LABOR SURPLUS AREA SET-ASIDE PROGRAM
